DNC Chair Debbie Wasserman Schultz Parents Off to Jail for Corruption

Atlas Shrugs ^ | | Pamela Geller

Posted on **1/18/2012, 7:08:05 PM** by **Nachum**

The rotten apple doesn't fall far from the tree. Moochers, looters and destroyers.

DNC Chairâ s parents off to jail for corruption Political Arena

Of all of the most vile, bold face, shameless liars in politics, no one tops acting DNC Chair Debbie Wasserman Schultz. We have videos of her and youtube is rife with them; bloggers have sliced and diced her lies with verifiable sources from one end of the country to the other.

Like Mother like daughter?

Broward-Pal Beach Times:

Richard Rubin Sentenced to Ten Months in Federal Prison Richard Rubin and Diana Wasserman-Rubin

Richard Rubin â husband of former Broward County Commissioner Diana Wasserman-Rubin, who still faces seven felony charges of her own â was sentenced this morning to ten months in federal prison.

Rubin, 66, pleaded guilty in April to federal tax evasion after failing to report $100,000 in fees he received from the town of Davie for a land deal he brokered in 2004.

With attorney David Bogenschutz at his side, Rubin managed to get only ten months up the river â which is in accordance with sentencing guidelines but much less than the maximum penalty of five years.

DOE corruption: appointed and elected officials should face prison time

Marita Noon

An exhaustive review of 350+ pages of leaked emails regarding the Obama administrationâ s handling of the various green-energy loan and grant programs makes several things very clear: they lied, engaged in favoritism, and rushed application approvals to suit the political agenda of the White House. At the same time, worthy projects that went through a complete due diligence process were denied or ultimately withdrawn, as the lengthy approval process â taxed investorsâ patienceâ â as was the case with Aptera Motors, which worked closely with the DOE for two years.

Paul Wilbur, President and CEO at Aptera, didnâ t think they were treated unfairly. He told me, â At the end of the day, we couldnâ t get through the process.â But, he admits, he hasnâ t read the emails.

Aptera was trying to build a very efficient electric vehicle with an under $30K price point. Wilbur met with Secretary Chu who could see the value in the technology. But our research shows that value was not the deciding factor in which projects got funded and which ones didnâ t. Wilbur reports that he didnâ t donate to any candidate. He wanted to keep the whole process clean and do what was â good for America.â

The report from the House Oversight Committee says Aptera first applied for an ATVM loan in December of 2008 and â shut down on December 2, 2011.â The report implies that Aptera was led on: â After numerous negotiations with DOE, in September 2011, Aptera received a conditional loan commitment of $150 million if the company was able to raise $80 million privately.â And: â The loans given to Fisker and Tesla gave Aptera hope that DOE would eventually act on their application. More importantly, since the DOE continued to engage with the company throughout the time period, management was convinced that DOE was interested and willing to provide financing for the company.â

Apteraâ s 100% US technology has since been sold to a Chinese company.

Aptera was applying for an Advanced Technology Vehicle Manufacturing loan (ATVM). Only five loans were given out through the program and all have political ramifications. Christine Lakatos, who has worked with me on the green-energy, crony-corruption reports Iâ ve written, has done thorough research on the topic. She has read each and every one of the 350+ pages of emails released on October 31 and has written a blog post specifically addressing the ATVM program and its hijinks. As she cites, Fisker and Tesla (which Romney referenced in the first debate), got loans in 2010 and then the Vehicle Production Groupâ s loan was the only ATVM loan closed in 2011; all have ties to Obama bundlers. The other two ATVM loans went to Ford and Nissanâ both of which, according to the House report, â were heavily engaged in negotiations with the Administration over fuel economy standards for model years 2012-2016 at the time the DOE was considering their applications. Both companies eventually expressed publicly their support for these standards, which the Administration described as the â Historic Agreement.â â

Armed with the sweeping knowledge of the House reports and subsequent hearings, evidence from DOE staffers (many of whom were appointed by Obama), Lakatosâ research, and personal experience, a different ATVM applicant has now taken its case to court citing â corruption and negligence.â

On November 16, 2012, XP Technologies filed a lawsuit against the federal government concerning the DOEâ s denial of XP Technologyâ s loan guarantee application. The complaint alleges: â criminal activities did take place by DOE staff and affiliates.â A November 23 press release announces that XP Technologies is now represented by Cause of Action, â a nonprofit, nonpartisan organization that uses investigative, legal,

and communication tools to educate the public on how government accountability and transparency protects taxpayer interests and economic activity.â

According to the document filed on November 16, â Plaintiffs' backgrounds include extensive issued patents on seminal technologies in use world-wide, White House and Congressional commendations and an engineering team of highly experienced auto-makers. Plaintiff brought a vehicle design, which was proposed as the longest range, safest, lowest cost electric vehicle, to be built in America in order to deliver extensive American jobs nationwide. No other applicant, or award â winnerâ , has succeeded in meeting, or (is) intending to meet, that milestone. XP Technology developed a patented lightweight, low-cost, long-range, electric vehicle using air-expanded foam-skinned material for a portion of the polymer body and received numerous patents, acclaim and superior computer modeling metrics over any competing solution. XP presented a vast set of letters of support to DOE from pending customers. Major auto-industry facilities and engineers had joined forces to bring the vehicle to the defense, commercial and consumer market.â

Over the weekend, we had an exclusive interview, on condition of anonymity, with a senior official at XP Technologies about the lawsuit and the experience.

He reported: â Staff from within the DOE have provided evidence which is quite compelling.â As Aptera's Wilbur made clear, the individuals within the DOE were very thorough. One of the emails, in the 350+ pages, was from Secretary Chu himself in which he criticized staffers for taking a â principled stand,â which held up the approval process of projects the White House wanted advanced. Another indicated that the pressure to rush was coming from â above the agency.â Overall, the emails show that projects were rushed so that announcements could coincide with visits, speeches, and photo opsâ as well as providing talking points for the president.

Our XP source told us â We experienced, and have been provided evidence of, applicant submissions and reviews being modified in order to benefit some and disadvantage others, and the business connections between the different parties associated with the ones that benefited is quite extraordinary.â The leaked emails support this accusation, specifically regarding the â business connections.â In her post, Lakatos calls it â green fraternizing.â The emails show that certain applicants and decision makers went bike riding together, had coffee meetings, sleepovers, beer summits, parties, dinners, and fundraisers.

While he didnâ t provide us with a name, the XP official said, â We experienced a senior senator blockading our efforts and then providing favors to a competitor, which then benefited his family financially.â The discovery the lawsuit will provide will expose the â senior senator,â but our previous research shows that Senator Harry Reidâ s actions seem to fit the XP officialâ s comment.

XP Technologies believes that â DOE officials changed the first-come-first-served published rules and standards of the funding in order to take applicants in order of who they favored and who had purchased the most influence instead of the order in which they applied, as required.â

Having extensively studied the DOEâ s various loan programs, including the ATVM, Lakatos and I agree with our sourceâ s startling conclusion: â Based on the evidence provided by investigators, and experienced directly by our team, it is hard to imagine that at least one or more elected, or?appointed, officials might not be seeing measures ranging from censure or even federal prison time.â

Time, the lawsuit, and subsequent investigation will tell.

While the House Oversight Committee has been digging deeply into the mismanagement and corruption of the green energy loans, the media has paid little attention. Other than our report, the October 31 release of the emails cited here received virtually no news reporting. Even the Fox News Channel ignored the story. The plight of promising companies like Aptera and XP Technologies would have gone unnoticed if not for the

lawsuit. The legal complaint attracted attention.

On November 16, the Heritage Foundation broke the XP story: â A lawsuit filed in federal court on Wednesday alleges mass favoritism in the Department of Energyâ s decisions to award federal grants to major car companies to develop electric vehicles, according to a legal complaint obtained by Scribe.â

On November 19, Lakatos, whose work is listed as â evidenceâ in the legal complaint, received a call from Fox Newsâ Gary Gasteluâ who reported on the story on November 20. The next day, Fox News covered the lawsuit on Americaâ s Newsroom. Even the Drudge Report picked up on the story.

XP has a litigation website on which the company states: â The case has nothing to do with complaining about not getting the loans. It has everything to do with HOW the applicants didn't get the loans!â They are communicating with other applicants about participating in the lawsuit.

The XP story and subsequent media coverage offers a lesson for othersâ especially industries who have been wronged by the Obama Administrationâ s practices (such as energy). The lawsuit mayâ or may notâ send officials to federal prison, as our XP source suggests, but it could go a long way to winning in the court of public opinion.

At the same time, worthy projects that went through a complete due diligence process were denied or ultimately withdrawn, as the lengthy approval process â taxed investorsâ patienceâ â as was the case with Aptera Motors, which worked closely with the DOE for two years.

Paul Wilbur, President and CEO at Aptera, didnâ t think they were treated unfairly. He told me, â At the end of the day, we couldnâ t get through the process.â But, he admits, he hasnâ t read the emails.

Aptera was trying to build a very efficient electric vehicle with an under $30K price point. Wilbur met with Secretary Chu who could see the value in the technology. But our research shows that value was not the deciding factor in which projects got funded and which ones didnâ t. Wilbur reports that he didnâ t donate to any candidate. He wanted to keep the whole process clean and do what was â good for America.â

The report from the House Oversight Committee says Aptera first applied for an ATVM loan in December of 2008 and â shut down on December 2, 2011.â The report implies that Aptera was led on: â After numerous negotiations with DOE, in September 2011, Aptera received a conditional loan commitment of $150 million if the company was able to raise $80 million privately.â And: â The loans given to Fisker and Tesla gave Aptera hope that DOE would eventually act on their application. More importantly, since the DOE continued to engage with the company throughout the time period, management was convinced that DOE was interested and willing to provide financing for the company.â

Apteraâ s 100% US technology has since been sold to a Chinese company.

Aptera was applying for an Advanced Technology Vehicle Manufacturing loan (ATVM). Only five loans were given out through the program and all have political ramifications. Christine Lakatos, who has worked with me on the green-energy, crony-corruption reports Iâ ve written, has done thorough research on the topic. She has read each and every one of the 350+ pages of emails released on October 31 and has written a blog post specifically addressing the ATVM program and its hijinks. As she cites, Fisker and Tesla (which Romney referenced in the first debate), got loans in 2010 and then the Vehicle Production Groupâ s loan was the only ATVM loan closed in 2011; all have ties to Obama bundlers. The other two ATVM loans went to Ford and Nissanâ both of which, according to the House report, â were heavily engaged in negotiations with the Administration over fuel economy standards for model years 2012-2016 at the time the DOE was considering their applications. Both companies eventually expressed publicly their support for these standards, which the Administration described as the â Historic Agreement.â â

Armed with the sweeping knowledge of the House reports and subsequent hearings, evidence from DOE staffers (many of whom were appointed by Obama), Lakatosâ research, and personal experience, a different ATVM applicant has now taken its case to court citing â corruption and negligence.â

On November 16, 2012, XP Technologies filed a lawsuit against the federal government concerning the DOEâ s denial of XP Technologyâ s loan guarantee application. The complaint alleges: â criminal activities did take place by DOE staff and affiliates.â A November 23 press release announces that XP Technologies is now represented by Cause of Action, â a nonprofit, nonpartisan organization that uses investigative, legal,

and communication tools to educate the public on how government accountability and transparency protects taxpayer interests and economic activity.â

According to the document filed on November 16, â Plaintiffs' backgrounds include extensive issued patents on seminal technologies in use world-wide, White House and Congressional commendations and an engineering team of highly experienced auto-makers. Plaintiff brought a vehicle design, which was proposed as the longest range, safest, lowest cost electric vehicle, to be built in America in order to deliver extensive American jobs nationwide. No other applicant, or award â winnerâ , has succeeded in meeting, or (is) intending to meet, that milestone. XP Technology developed a patented lightweight, low-cost, long-range, electric vehicle using air-expanded foam-skinned material for a portion of the polymer body and received numerous patents, acclaim and superior computer modeling metrics over any competing solution. XP presented a vast set of letters of support to DOE from pending customers. Major auto-industry facilities and engineers had joined forces to bring the vehicle to the defense, commercial and consumer market.â

Over the weekend, we had an exclusive interview, on condition of anonymity, with a senior official at XP Technologies about the lawsuit and the experience.

He reported: â Staff from within the DOE have provided evidence which is quite compelling.â As Aptera's Wilbur made clear, the individuals within the DOE were very thorough. One of the emails, in the 350+ pages, was from Secretary Chu himself in which he criticized staffers for taking a â principled stand,â which held up the approval process of projects the White House wanted advanced. Another indicated that the pressure to rush was coming from â above the agency.â Overall, the emails show that projects were rushed so that announcements could coincide with visits, speeches, and photo opsâ as well as providing talking points for the president.

Our XP source told us â We experienced, and have been provided evidence of, applicant submissions and reviews being modified in order to benefit some and disadvantage others, and the business connections between the different parties associated with the ones that benefited is quite extraordinary.â The leaked emails support this accusation, specifically regarding the â business connections.â In her post, Lakatos calls it â green fraternizing.â The emails show that certain applicants and decision makers went bike riding together, had coffee meetings, sleepovers, beer summits, parties, dinners, and fundraisers.

While he didnâ t provide us with a name, the XP official said, â We experienced a senior senator blockading our efforts and then providing favors to a competitor, which then benefited his family financially.â The discovery the lawsuit will provide will expose the â senior senator,â but our previous research shows that Senator Harry Reidâ s actions seem to fit the XP officialâ s comment.

XP Technologies believes that â DOE officials changed the first-come-first-served published rules and standards of the funding in order to take applicants in order of who they favored and who had purchased the most influence instead of the order in which they applied, as required.â

Having extensively studied the DOEâ s various loan programs, including the ATVM, Lakatos and I agree with our sourceâ s startling conclusion: â Based on the evidence provided by investigators, and experienced directly by our team, it is hard to imagine that at least one or more elected, or?appointed, officials might not be seeing measures ranging from censure or even federal prison time.â

Time, the lawsuit, and subsequent investigation will tell.

While the House Oversight Committee has been digging deeply into the mismanagement and corruption of the green energy loans, the media has paid little attention. Other than our report, the October 31 release of the emails cited here received virtually no news reporting. Even the Fox News Channel ignored the story. The plight of promising companies like Aptera and XP Technologies would have gone unnoticed if not for the

lawsuit. The legal complaint attracted attention.

On November 16, the Heritage Foundation broke the XP story: â A lawsuit filed in federal court on Wednesday alleges mass favoritism in the Department of Energyâ s decisions to award federal grants to major car companies to develop electric vehicles, according to a legal complaint obtained by Scribe.â

On November 19, Lakatos, whose work is listed as â evidenceâ in the legal complaint, received a call from Fox Newsâ Gary Gasteluâ who reported on the story on November 20. The next day, Fox News covered the lawsuit on Americaâ s Newsroom. Even the Drudge Report picked up on the story.

XP has a litigation website on which the company states: â The case has nothing to do with complaining about not getting the loans. It has everything to do with HOW the applicants didn't get the loans!â They are communicating with other applicants about participating in the lawsuit.

The XP story and subsequent media coverage offers a lesson for othersâ especially industries who have been wronged by the Obama Administrationâ s practices (such as energy). The lawsuit mayâ or may notâ send officials to federal prison, as our XP source suggests, but it could go a long way to winning in the court of public opinion.

DOJ Hands Down 11 Counts Bribery, Fraud, Money Laundering In Clinton Backed Uranium One Scheme

January 15, 2018 stbnews 0 Comments

After years of many Americans wanting former Secretary of State Hillary Clinton being held accountable for her many scandals, a top official with ties to Clinton has been indicted in the Uranium One scandal.

An 11-count indictment was handed down on Friday in Greenbelt, Maryland, against 54-year-old Mark Lambert, the â former co-president of a Maryland-based transportation company that provides services for the transportation of nuclear materials to customers in the United States and abroad.â

The Department of Justice revealed that Lambert was charged with â one count of conspiracy to violate the Foreign Corrupt Practices Act (FCPA) and to commit wire fraud, seven counts of violating the FCPA, two counts of wire fraud, and one count of international promotion money laundering.â

According to the DOJâ s statement, there was substantial evidence that a major corruption scheme took place:

> The charges [against Lambert] stem from an alleged scheme to bribe Vadim Mikerin, a Russian official at JSC Techsnabexport (TENEX), a subsidiary of Russiaâ s State Atomic Energy Corporation and the sole supplier and exporter of Russian Federation uranium and uranium enrichment services to nuclear power companies worldwide, in order to secure contracts with TENEX.

TENEX serves as the commercial sales division of the Russian nuclear company Rosatom, which bought out and took control of Uranium One in 2013.

The FBI has specifically focused on whether investors who gave sizable donations to the Clinton Foundation received political favors in return when Clinton was secretary of state.

The Uranium One scandal involved the Clinton Foundation receiving massive political donations in exchange for Clintonâ s State Department approving the sale of 20 percent of the United States uranium to the Russia nuclear company Rosatom.

Officials associated with the sale reportedly donated roughly $145 million to the Clinton Foundation to sway the deal, and former President Bill Clinton was also given $500,000 from a bank with ties to the Kremlin for giving a single speech in Moscow.

While Clinton has skirted charges for many years, we are actually seeing tangible results coming to fruition in the Uranium One scandal. In less than a month since the investigation into the scandal began, we already have one major indictment.

Itâ s more than obvious Clinton broke the law on dozens of occasions, and all roads in the scandal lead back to the Clinton family â leading many to believe the corrupt Clinton family will finally be held accountable for their actions.

- â‘ BREAKING: US Senator Drops Bombshell About Obamaâ s â Secret Policeâ Ring At The White House

HILLARY IN THE CROSSHAIRS AS DOJ PROSECUTORS BEGIN ASKING FBI AGENTS ABOUT URANIUM ONE

1 COMMENT

21 DEC 2017 POSTED BY TYLER DURDEN

Attorney General Jeff Sessions has instructed DOJ prosecutors to begin asking FBI agents for explanations regarding evidence pertaining to a dormant criminal investigation into the controversial Uranium One deal linked to Bill and Hillary Clinton, according to *NBC*.

The order comes as part of a promise made last month by Sessions to examine whether or not a special counsel was warranted in the deal which saw 20% of American Uranium sold to a Russian state-owned energy company in a 2010 transaction allowed by the Obama administration. Prior to the deal, individuals connected with Uranium One deal had donated over $140 million to the Clinton Foundation. Moreover, Bill Clinton gave a $500,000 speech to a Russian bank which issued a favorable rating on Uranium One stock. Clinton and Putin met the same day of the speech at the Russian leaderâ s private homestead.

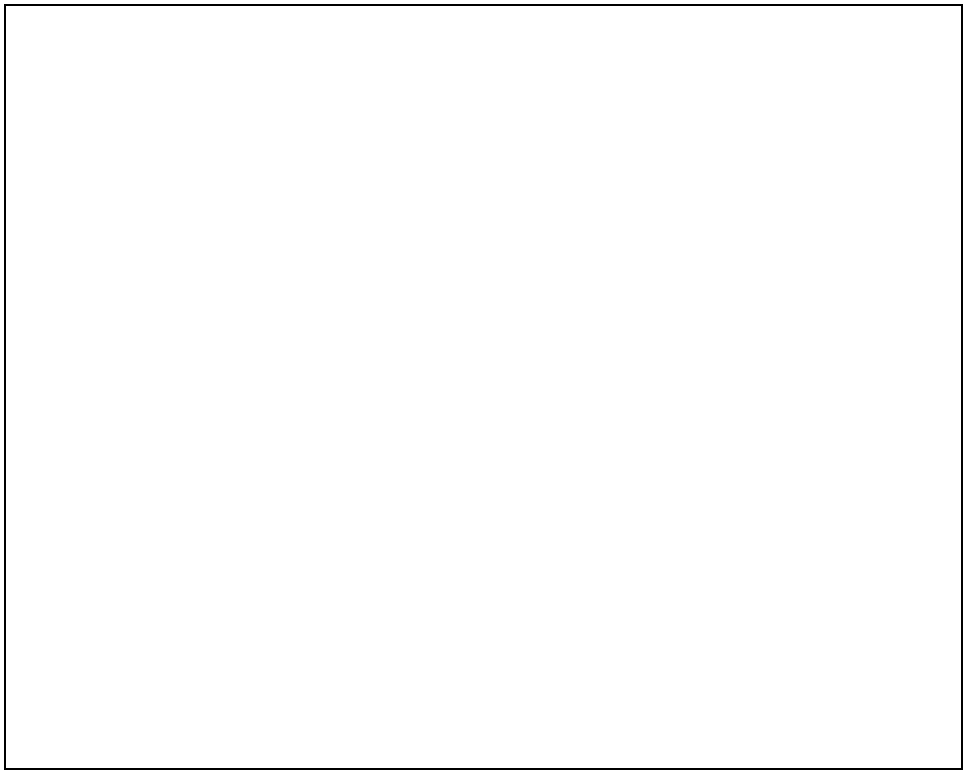
A report by the New York Times and the book *Clinton Cash* by investigative journalist Peter Schweizer in 2015 are said to have convinced the FBI in large part to launch their investigation into the Clinton Foundation over several claims of pay-for-play before and during Hillary Clintonâ s role as Secretary of State, including the Uranium One deal and several international arms sales.

As reported in *International Business Times*:

> The Clinton-led State Department also authorized **$151 billion of separate Pentagon-brokered deals for 16 of the countries that donated to the Clinton Foundation, resulting in a 143 percent increase in completed sales to those nations over the same time frame during the Bush administration.**

As part of the Uranium One approval process, nine agencies which made up the Committee on Foreign Investment in the United States (CFIUS) had to sign off on the deal. The committee has been considered by some to be a â joke.â

> â The committee almost never met, and when it deliberated it was usually at a fairly low bureaucratic level,â Richard Perle said. Perle, who has worked for the Reagan, Clinton and



both Bush administrations added, â I think itâ s a bit of a joke.â â CBS

As discovered in early November by Twitter researcher Katica while looking at FOIA-requested documents, **the FBI made several Preservation and Records requests to various agencies involved in the approval of the Uranium One deal** on August 28th, 2015, as published by The *Conservative Treehouse*. Katica found the requests buried in an FBI file released via the Freedom of Information Act (FOIA).

REVEALING TIMELINE

While the Clinton email investigation was launched in **March of 2015** after it was revealed that Secretary of State Hillary Clinton used a personal server and non-approved email accounts to conduct government business, reports from August, 2015 revealed that the FBI investigation was actually a criminal probe â though most assumed it was simply covering Clintonâ s mishandling of classified information and not the content of her emails.

What Katica discovered is that **weeks after the criminal probe began, the FBI sent notices to every agency involved in the Uranium One approval process to preserve records.**

This is big: the agencies which received the request included the Nuclear Regulatory Commission, the U.S. Dept. of Treasury, the Office of Director of National Intelligence (ODNI James Clapper), The National Counter Terrorism Center, and the U.S. Department of Energy (DOE).

Five days after the initial request, the same FBI agent sent another round of notifications to the same agencies, **adding the National Security Agency (NSA) and the U.S. Secret Service (USSS).**

The next day, September 3rd, 2015, three more agencies were added to the preservation request: The CIA, the Defense Intelligence Agency (DIA) and the Department of Defense (DOD)

At this point, **every single member of the Committee on Foreign Investment in the United States (CFIUS) which signed off on the Uranium One deal was served with a notice to preserve records.**

As The Conservative Treehouse noted in November:

> **It would be intellectually dishonest not to see the very likely attachment of the special agentâ s action**. That is to say **an FBI probe originating as an outcome of information retrieved in parallel to the timing of the â criminal probeâ of Secretary of State Hillary Clintonâ s email use.**
>
> The sequence of events highlights a criminal probe starting [early August 2015], followed by notifications to the â Uranium Oneâ CFIUS participants [late August 2015].
>
> If you consider the larger Clinton timeline; along with the FBI special agent requests from identified participants; and overlay the Nuclear Regulatory Commission as the leading entity surrounding the probe elements; and **the fact that the CFIUS participants were the recipients of the retention requests; well, itâ s just too coincidental to think this is unrelated to the Uranium One deal and the more alarming implications.**

FBI MOLE

An October report in *The Hill* revealed that as early as 2009, **the FBI â led by Robert Mueller at the time, had a mole in the Russian uranium industry**, and that the agency had evidence that â **Russian nuclear officials had routed millions of dollars to the U.S. designed to benefit former President Bill Clintonâ s charitable foundation during the time Secretary of State Hillary Clinton served on a government body that provided a favorable decision to Moscow**â â a deal which would grant the Kremlin control over **20 percent of Americaâ s uranium supply.**

The mole was forced to sign an iron-clad non-disclosure agreement (NDA) which threatened criminal penalties for revealing information, even to Congress. After a request was made by Reps Ron DeSantis (R-FL) and Chuck Grassley (R-IA) calling for the Justice department to invalidate the NDA, the gag order was lifted, and the FBI informant was authorized to speak with congress.

TONY PODESTA AND URANIUM ONE

While one-time Trump campaign manager Paul Manafort turned himself in to the FBI a week ago on charges of money laundering, letâ s not forget what a former Podesta Group executive interviewed by Special Counsel Robert Mueller told Tucker Carlson Tonight: the FBI probe is now focusing on people in Washington who have worked as de-facto operatives on behalf of Russian government and business. To that end, he had quite a bit to say about his former boss Tony and his relationship to the Uranium One deal.

- In late 2013 or early 2014, **Tony Podesta and a representative for the Clinton Foundation met to discuss how to help Uranium One** â the Russian owned company that controls 20 percent of American Uranium Production â and whose board members gave over $100 million to the Clinton Foundation.
- In 2013, **John Podesta recommended that Tony hire David Adams, Hillary Clintonâ s chief adviser at the State Department, giving them a â direct liaisonâ between the groupâ s Russian clients and Hillary Clintonâ s State Department.**

- **â Tony Podesta was basically part of the Clinton Foundation.â**

As far as the current state of the FBI investigation, â They are more focused on facilitators of Russian influence in this country than they are on election collusion,â Carlsonâ s source told Fox.

Tying it together â previous reports of Federal investigations into the Clinton Foundation:

Katicaâ s FOIA discovery corroborates a *New York Times* report from November 1, 2016, which asserts that an FBI investigation was kicked off based on revelations of pay-for-play in the book â Clinton Cashâ written by Peter Schweizer:

> The investigation, based in New York, had not developed much evidence and was based mostly on information that had surfaced in news stories and the book â Clinton Cash,â according to several law enforcement officials briefed on the case.
>
> The book asserted that foreign entities gave money to former President Bill Clinton and the Clinton Foundation, and in return received favors from the State Department when Mrs. Clinton was secretary of state. Mrs. Clinton has adamantly denied those claims. -NYT

The *Wall St. Journal* also reported last October that **five FBI field offices were investigating the Clinton Foundation; New York, Los Angeles, Washington, Little Rock and Miami**, and â were collecting information about the Clinton Foundation to see if there was evidence of financial crimes or influence-peddling, according to people familiar with the matter.â

> The FBI field office in New York had done the most work on the Clinton Foundation case and received help from the FBI field office in Little Rock, the people familiar with the matter said. â WSJ

And in November, as tweeted by WikiLeaks and reported on by the **Dallas Observer, the Clinton Foundation has been under investigation by the IRS since July of 2016**, after 64 GOP members of Congress received letters urging them to push for an investigation. The investigation has been notably held at the Dallas IRS office â far away from Washington.

> The Earle Cabell Federal Building in downtown Dallas is an all purpose office complex, a bastion of federal bureaucracy located at 1100 Commerce St. Most people come for a passport or to get business done in front of a federal judge. But inside, a quiet review is underway that has direct ties to the raging presidential election: The local branch of the IRSâ Tax Exempt and Government Entities Division is reviewing the tax status of the Bill, Hillary and Chelsea Clinton Foundation.

So â while the FBI investigation into Hillary Clinton was sold as a simple matter of mishandling of classified material, we now have proof that the FBI set their sights on the Uranium One scandal weeks after they began looking into Hillary Clintonâ s emails, and that five FBI field offices and the IRS have been investigating the Clinton Foundation on accusations of pay-to-play and other criminal acts.

Perhaps Sessions will see the logic in approving a second special counsel after allâ ¦

The Department of Justice unsealed an 11-count indictment on Friday to a former DoD intelligence analyst-turned uranium transportation executive **who stands accused of a bribery and money laundering scheme involving a Russian nuclear official connected to the Uranium One deal.**

The indictment corroborates a November report by *The Hill* that an FBI mole deeply embedded in the Russian uranium industry had gathered extensive evidence of the scheme.

Mark Lambert, 54, of Mount Airy, Maryland, was charged with **one count of conspiracy to violate the Foreign Corrupt Practices Act (FCPA) and to commit wire fraud, seven counts of violating the FCPA, two counts of wire fraud and one count of international promotion money laundering.**

The charges stem from an alleged scheme to bribe Vadim Mikerin, a Russian official at JSC Techsnabexport (TENEX), a subsidiary of Russiaâ s State Atomic Energy Corporation and the sole supplier and exporter of Russian Federation uranium and uranium enrichment services to nuclear power companies worldwide, in order to secure contracts with TENEX.

> According to the indictment, beginning at least as early as 2009 and continuing until October 2014, **Lambert conspired with others at â Transportation Corporation Aâ to make corrupt and fraudulent bribery and kickback payments to offshore bank accounts associated with shell companies, *at the direction of*, and for the benefit of, a Russian official, Vadim Mikerin, in order to secure improper business advantages and obtain and retain business with TENEX.** *-DOJ*

While the indictment lists Lambert's company as "Transportation Corporation A," a simple search reveals that **Lambert is the co-President of DAHER-TLI,** "the leading front end freight forwarding company dedicated to Nuclear Cargo**," according to its website.**

In 2012, the Nuclear Regulatory Commission **sent a letter** to Lambert with findings that TLI had exported plutonium "in excess of the maximum quantity and type applied for and licensed," and "exported Australian obligated material, which was not authorized under license conditions."

Prior to his 26 year tenure in the transportation industry - 20 of which have been with TLI, **Mr. Lambert was an Arabic Linguist for the Navy for five years, and a Senior Intel Analyst for the Department of Defense** (DoD) for three years.

Lambert also speaks fluent Arabic and Farsi (Persian), along with French and Italian.

The indictment against Lambert corroborates prior reporting by ***The Hill*** that **an FBI mole buried deep within the Russian nuclear industry had gathered extensive evidence of a scheme involving bribes and kickbacks between Russian nuclear officials and TLI - which would have transported the U.S. uranium sold to Russia in the â 20 percentâ Uranium One deal.**

> â ***The Russians were compromising American contractors in the nuclear industry with kickbacks and extortion threats, all of which raised legitimate national security concerns. And none of that evidence got aired before the Obama administration made those decisions***,â *a person who worked on the case told The Hill, speaking on condition of anonymity for fear of retribution by U.S. or Russian officials."*

Based on what the FBI knew â including evidence which purportedly includes a video of Russians preparing ***briefcases of bribe money*** â **the Uranium One deal never should have gone through.** Moreover, both Robert Mueller and current deputy Attorney General Rod Rosenstein were directly involved â and current Attorney General Jeff Sessions and other Justice Department officials appear to be covering for them.

In short, **the FBI had ample evidence of the Russian bribery plot before the Obama administration approved the Uranium One deal thanks to their embedded mole in the Russian nuclear industry.**

The informant â outed as energy consultant William Campbell - was â threatenedâ by Obama admin AG Loretta Lynch to keep quiet with an iron-clad gag order, according to his attorney â former Reagan Justice Dept. official and former Chief Counsel to the Senate Intelligence Committee Victoria Toensing. After Senate Judiciary Committee Chairman Chuck Grassley (R-VA) demanded Campbell be allowed to testify in front of Congress, the gag order was lifted.

Attorney General Jeff Sessions originally tried to claim that there was no connection between Uranium One and the nuclear transport bribery case, however several congressional republicans pushed back:

> â **Attorney General Sessions seemed to say that the bribery, racketeering and money laundering offenses involving Tenexâ s Vadim Mikerin occurred after the approval of the Uranium One deal by the Obama administration. But we know that the FBIâ s confidential informant was actively compiling incriminating evidence as far back as 2009**,â Rep. Ron DeSantis, (R-Fla.) told The Hill.
>
> â It is **hard to fathom how such a transaction could have been approved without the existence of the underlying corruption being disclosed**. I hope AG Sessions gets briefed about the CI and gives the Uranium One case the scrutiny it deserves,â added DeSantis, whose House Oversight and Government Reform subcommittees is one of the investigating panels.
>
> Senate Judiciary Committee Chairman Chuck Grassley (R-Iowa) sent a similar rebuke last week to Rosenstein, saying the deputy attorney generalâ s first response to the committee â largely missed the pointâ of the congressional investigations.

> **â The essential question is whether the Obama Justice Department provided notice of the criminal activity of certain officials before the CFIUS approval of the Uranium One deal and other government decisions that enabled the Russians to trade nuclear materials in the U.S**,â Grassley scolded."

Meanwhile, journalists John Solomon and journalist Sara Carter claim to **have copies of the FBI informantâ s evidence**, while Carter issued an **explosive report** in late November laying out the players, the timeline, and the evidence at hand.

â By the time the sale of Uranium One was approved by the Obama Administration, the FBIâ s investigators had already gathered substantial evidence and the bureau was also aware of Russiaâ s intentions to enter the U.S. energy market and its desire to purchase a stake in American uranium,â Carter writes.

Highlights:

- FBI mole William Campbell was a highly valued FBI asset - paid $51,000 by FBI officials at a celebration dinner in Chrystal City, VA, where Campbell's attorney says they thanked him for his service.
- Campbell **was required by the Russians, under threat, to launder large sums of money - which allowed the FBI to uncover a massive Russian "nuclear money laundering apparatus**"
- Campbell collected over 5,000 documents and briefs over a six year period
- Campbell uncovered a Russian plot to penetrate the Obama administration and gain approval for the Uranium One sale, including a 2010 email which describes "**Russia's intent on expanding its Uranium expansion in the United States."**

â **This is not just about bribery and kickbacks but about a U.S. company that was transporting yellow-cake for the Russians with our approval**,â an unnamed U.S. Intelligence official told Carter, adding â **This should raise serious questions**. At the time everyone was concerned about Russiaâ s ties to Iran, we still are. And of course, Russiaâ s intentions and reach into the U.S. energy market.â

Given Friday's unsealed indictment, however it looks like the DOJ may have changed their tune on Campbell. **If so, perhaps that "briefcase full of bribe money" video will finally see the light of day.**

ITALIAN ARCHDIOCESE ROCKED BY SCANDAL: DRUGS, GAY PROSTITUTION, BLACKMAIL - Catholic CHURCH RATCHETS UP THE PERVERSIONS

NEWS: WORLD NEWS

by Juliana Freitag â ¢ ChurchMilitant.com â ¢ February 28, 2018 1129 Comments

As many as 60 priests implicated

You are not signed in as a Premium user; we rely on Premium users to support our news reporting. Sign in or Sign up today!

An Italian archdiocese is embroiled in scandal as reports are surfacing of a gay priest on trial for allegations of blackmail, embezzlement and other crimes.

Fr. Luca Morini Father Luca Morini, known to his flock as "Don Euro" for his extravagant lifestyle, has recently been scheduled for a hearing in the Court of Massa, the medieval town in Tuscany where he used to run two parishes. The preliminary hearing is set to take place on March 8, where the judge will examine the evidence for accusations of fraud, drug distribution, embezzlement, extortion and self-laundering.

The case began when male escort, Francesco Mangiacapra, decided to go public about services he had been rendering to Fr. Morini, who falsely presented himself as a judge. When the escort found out that his prodigal client was a simple parish priest, he decided to inquire about the financial source for all the lavish dinners and expensive gifts. Mangiacapra suspected the money came from the faithful and decided to report Fr. Morini to the diocese of Massa Carrara-Pontremoli.

Escort Francesco Mangiacapra But the diocese only acted once it found out that national broadcast show *Le Iene* was after the priest, so the bishop suspended him from his activities "due to sickness" and then transferred him to a â”¬200,000.00 house, bought especially for him (monthly utility bills and maid included). These were allegedly obtained from the bishop of Massa Carrara-Pontremoli, Giovanni Santucci, through blackmail, as Morini had "threatened to expose to the public eye unpleasant facts about many diocesan priests." Bishop Santucci also gave Don Euro â”¬4,500,00 from his own personal bank account, as well as â”¬1,000.00 from diocesan funds. The bishop is also currently under investigation.

The episode aired by *Le Iene* shows footage of Fr. Morini snorting cocaine and parading in the company of several male escorts, as well as interviews with many of the parishioners, who testify that the priest was constantly pestering them for money, even during confessions.

One of the priests interviewed by *Le Iene* declared that Morini "arrived to the point of blasphemy: He would choose a member of the faithful and tell them he had seen Padre Pio in the Host, and that Padre Pio had mentioned that person by name. ... He would then request thousands of euros from that person, promising that the offer guaranteed Padre Pio's protection."

Another diocesan priest wrote an anonymous letter to the show's staff: "It hurts me to say that Fr. Morini has behaved this way for approximately 20 years, stealing and deceiving the elderly and those most in need, all seemingly under the protection of the powerful."

Fr. Morini has behaved this way for approximately 20 years, stealing and deceiving the elderly and those most in need, all seemingly under the protection of the powerful.Tweet

When the investigation was concluded last June, the police managed to trace to Fr. Morini â”¬700,000 in cash and â”¬150,000 in diamond investments. He was known in the best restaurants, resorts and five-star hotels in Rome and in Tuscany, and would always provide the drugs.

"The cocaine was always Morini's," said Mangiacapra. "I'm an escort, I'm not a drug dealer."

Last week Mangiacapra handed a 1,200-page dossier to the archdiocese of Naples with documents (including sexually explicit pictures) that prove the escort's involvement with 60 priests from all over Italy. Explaining

his motivations to newspaper *Corriere della Sera*, Mangiacapra said, "The goal isn't to hurt the people I've mentioned [in the dossier], but to help them understand that their double life ... isn't useful to them or to the people who rely on them for guidance."

He continued, "Their behavior is, in many cases, a result of the impunity that the high hierarchy of the Church has made habitual: that unjust tolerance that feeds the idea that it is possible to separate that which is lived from that which is professed, as typical of those who have a schizophrenic, double morality."

Mangiacapra received an anonymous death threat in early January. The letter made references to his book *Il numero uno: confessioni di un marchettaro,*("Number One: Confessions of a Male Escort"), where he mentions many of his adventures with Italian priests (no names were disclosed in the book).

"I am worried because the letter arrived at my home address, which is not public," the escort said. "I am reporting it to the police, because if others letters were to arrive, we can take action."

The initial letter indicates more notes may be forthcoming: "Your popularity makes you very traceable, as you can see now, and will see again in the future."

Allegations about 40 gay priests in Italy sent to Vatican

Associated Press â ¢ March 4, 2018

VATICAN CITY (AP) â The archdiocese of Naples says it has sent the Vatican a 1,200-page dossier compiled by a male escort identifying 40 actively gay priests and seminarians in Italy.

In a statement on the diocesan website, Cardinal Cresenzio Sepe said none of the identified priests worked in Naples. But he said he decided to forward the file to the Vatican because "there remains the gravity of the cases for which those who have erred must pay the price, and be helped to repent for the harm done."

The dossier, containing WhatsApp chats and other evidence, was compiled by a self-proclaimed gay escort, Francesco Mangiacapra. He has told Italian media that he outed the priests because he couldn't stand their hypocrisy any longer.

None of the 34 priests or six seminarians was accused of having sex with minors, Mangiacapra was quoted as saying in the diocesan statement.

"We're talking about sins, not crimes," the escort was quoted as saying in the statement.

It's the latest sex scandal to convulse the Italian church and the Vatican.

Last month, a Vatican judge pleaded guilty in a Rome tribunal to having child porn on his computer after police were brought in when he allegedly tried to fondle an 18-year-old man. Monsignor Pietro Amenta was a judge on the Roman Rota, the Holy See tribunal that hears marriage annulment cases, as well as a consulter to various Vatican congregations. He resigned after the plea deal, the Vatican said.

- This current Marxist pope has made me rethink my allegiance to the Catholic Church. Martin Luther's acts way back make so much more sense to me now. Way to go Jesuits! You built this morally reprehensible institution, own it!

  Look on the bright side. At least they're not pedophiles like most of the catholic clergy

Dead Harry Reid's Corrupt Cleantech Stock Market Crash Scams

When U. S. Senators Harry Reid and Dianne Feinstein realized they could each make billions of dollars, personally, via their family stock holdings and campaign funds, they didn't waste a minute stabbing their own constituents in the back to get at that cash. California and Nevada Green Car Companies, Solar Companies, Energy Technology Companies, Green Builders and Transit Companies were hacked off at the knees because they competed with the stock assets that Reid and Feinstein had acquired in their kick-back deals. These other applicants were all "GREEN COMPANIES": supposedly the Democrat's favorite things. It doesn't matter, though, how green your company was, if it was in the path for the green cash from Tesla or Solyndra. Two of the favored companies who paid the kick-backs to federal officials.

Harry Reid, the corrupt architect of the â nuclear optionâ for judicial appointments, whose dirty, Las Vegas-style politics laid the stage for the current atmosphere of political acrimony in Washington, DC, departed for his final destination Tuesday after a four-year bout with pancreati cancer.

Reid, 82, died â peacefullyâ and surrounded by friends, his wife, Landra, said in a statement.

The combative former boxer-turned-lawyer was widely-acknowledged as one of toughest dealmakers in Congress, who vexed lawmakers of both parties with a brusque manner and this motto: â I would rather dance than fight, but I know how to fight.â

Over a 34-year career in Washington, Reid thrived on backroom wrangling and kept the Senate controlled by his party through two presidentsâ Republican George W. Bush and Democrat Barack Obamaâ a crippling recession and the Republican takeover of the House after the 2010 elections.

He was known in Washington for his abrupt style, typified by his habit of unceremoniously hanging up the phone without saying goodbye.

â Even when I was president, he would hang up on me,â Obama said in a 2019 tribute video to Reid.

But he will best be remembered for lowering the threshold on judicial appointments to 50 senators after being stymied by Republican opposition to Obama far-left appointees.

That precedent allowed his successor, Sen. Mitch McConnell, R-Ky., to do the same for former President Donald Trumpâ s appointees, including three Supreme Court justices who cleared the nomination process with near-unanimous Democrat opposition.

Reidâ s move paved the way for the current Democrat effort to permanently end the filibusterâ one of the lone tools that the Senateâ s minority party has at its disposalâ as part of their bid to pass the controversial HR1 election-stealing bill.

Two other events in Reidâ s declining years helped punctuate his dubious career as Nevadaâ s longest-serving member of Congress to date.

During the 2012 election, he falsely claimed on the Senate floor to have damning evidence that GOP candidate Mitt Romney had cheated on his taxes.

The effort to cajole Romney into releasing his private financial affairs never bore out as intended, but the stigma of it contributed to the moderateâ s perception as an out-of-touch elitist. When pressed about the unethical scheme, Reid unapologetically boasted, â Romney didnâ t win, did he?â

But cosmic justic came to Reid in 2014, when Republicans routed Democrats in the midterm elections, spurring Reid to announce his retirement in 2015.

At the same time, he appeared to wear an eyepatch and announced that he had been the victim of a bathroom mishap involving an elastic exercise band.

Rumors swirled that the episodeâ which blinded him in one eye as well as leaving him with several broken ribs and bones in his faceâ was either Mafia-related or was the result of a domestic tiff with his neâ er-do-well brother Larry during a drunken New Yearâ s Eve brawl.

Although Reid denied the rumors, speculation persisted that he was being less than forthcoming in his explanation for the facial injuries.

Reid in May 2018 revealed heâ d been diagnosed with pancreatic cancer and was undergoing treatment.

Althought his legacy is one of irreparable damage to the institution of the Senate, Democrats continued to celebrate him for his hardball tactics.

Less than two weeks ago, officials and one of his sons, Rory Reid, marked the renaming of the busy Las Vegas airport as Harry Reid International Airport. Rory Reid is a former Clark County Commission chairman and Democratic Nevada gubernatorial candidate.

Neither Harry nor Landra Reid attended the Dec. 14 ceremony held at the facility that had been known since 1948 as McCarran International Airport, after a former U.S. senator from Nevada, Pat McCarran, and today ranks as one of the 10 busiest airports in the U.S.

Reidâ s political machine helped stave off several challenges to his own seatâ notably one in the 2010 elections, when he looked like the underdog to tea party favorite Sharron Angle.

Ambitious Democrats, assuming his defeat, began angling for his leadership post. But Reid miraculously defeated Angle, 50% to 45%.

As dishonest as he was, he also could be disarmingly blunt about his motives and machinations.

â I donâ t have people saying â heâ s the greatest speaker,â â heâ s handsome,â â heâ s a man a town,â â Reid told the New York Times in December that year. â But I donâ t really care. I feel very comfortable with my place in history.â

Reidâ s own personal history also shed some light on his â ends-justifies-the-meansâ political philosophy.

Born in Searchlight, Nevada, to an alcoholic father who killed himself at 58 and a mother who served as a laundress in a bordello, Reid grew up in a small cabin without indoor plumbing and swam with other children at a pool at a local brothel.

He hitchhiked to Basic High School in Henderson, Nev., 40 miles from home, where he met the wife he would marry in 1959, Landra Gould. At Utah State University, the couple became members of The Church of Latter-Day Saints.

The future senator put himself through George Washington University law school by working nights as a U.S. Capitol police officer.

At age 28, Reid was elected to the Nevada Assembly and at age 30 became the youngest lieutenant governor in Nevada history as Gov. Mike Oâ Callaghanâ s running mate in 1970.

Elected to the U.S. House in 1982, Reid served in Congress longer than anyone else in Nevada history. He narrowly avoided defeat in a 1998 Senate race when he held off Republican John Ensign, then a House member, by 428 votes in a recount that stretched into January.

After his election as Senate majority leader in 2007, he was credited with putting Nevada on the political map by pushing to move the stateâ s caucuses to February, at the start of presidential nominating season.

That forced each national party to pour resources into a state which, while home to the countryâ s fastest growth over the past two decades, still only had six votes in the Electoral College. Reidâ s extensive network of campaign workers and volunteers twice helped deliver the state for Obama.

Obama in 2016 lauded Reid for his work in the Senate, declaring, â I could not have accomplished what I accomplished without him being at my side.â

The most influential politician in Nevada for more than a decade, Reid steered hundreds of millions of dollars to the state and was credited with almost single-handedly blocking construction of a nuclear waste storage facility at Yucca Mountain outside Las Vegas.

He often went out of his way to defend social programs that make easy political targets, calling Social Security â one of the great government programs in history.â ³

He even notoriously advocated for junk mail in 2012, declaring, â Seniors love getting junk mail. Itâ s sometimes their only way of communicating or feeling like theyâ re part of the real world.â

Reid championed suicide prevention, often telling the story of his father, a hard-rock miner who took his own life. He stirred controversy in 2010 when he said in a speech on the floor of the Nevada legislature it was time to end legal prostitution in the state.

Democrats grumbled about his votes for a ban on so-called partial-birth abortion and the Iraq war resolution in 2002, something Reid later said it was his biggest regret in Congress.

He voted against most gun control bills and in 2013 after the Sandy Hook Elementary School massacre, dropped a proposed ban on assault weapons from the Democratsâ gun control legislation. The package, he said, would not pass with the ban attached.

Reidâ s Senate particularly chafed members of the House, both Republicans and Democrats.

When then-House Speaker Nancy Pelosi, D-Calif., railroaded Obamaâ s health care overhaul through the House in 2009, a different version passed the Senate, and the reconciliation process floundered long enough for Republicans to turn it into an election-year weapon they used to demonize the California Democrat and cast the legislation as a big-government power grab.

Obama signed the measure into law in March 2010. But angered by the recession and inspired by the small-government tea party, voters the next year swept Democrats from the House majority.

Reid hand-picked a Democratic candidate who won the election to replace him in 2016, former Nevada Attorney General Catherine Cortez Masto, and built a political dynasty in the state that helped Democrats win a series of key elections in 2016 and 2018.

On his way out of office, he repeatedly lambasted Donald Trump, calling him at one point â a sociopathâ and â a sexual predator who lost the popular vote and fueled his campaign with bigotry and hate.â

Reidâ s guileless manner made him political enemies, however, not only in Washington, but also in his home state, a notorious Mafia hotbed.

As head of the Nevada Gaming Commission investigating organized crime, Reid became the target of a car bomb in 1980. Police called it an attempted homicide. Reid blamed Jack Gordon, who went to prison for trying to bribe him in a sting operation Reid participated in over illegal efforts to bring new games to casinos in 1978.

Following Reidâ s lengthy farewell address on the Senate floor in 2016, his Nevada colleague Republican Dean Heller declared: â Itâ s been said that itâ s better to be feared than loved, if you cannot be both. And as me and my colleagues here today and those in the gallery probably agree with me, no individual in American politics embodies that sentiment today more than my colleague from Nevada, Harry Mason Reid.â

The secrecy of ES&S and its competitors has pushed politicians to seek information on security, oversight, finances and ownership. This month, a group of Democratic politicians sent the private equity firms that own the major election vendors a letter asking them to disclose a range of such information, including ownership, finances and research investments.
"The voting machine lobby, led by the biggest company, ES&S, believes they are above the law,â said Sen. Ron Wyden, D-Ore., a member of the Intelligence Committee who co-signed the letter. â They have not had anybody hold them accountable even on the most basic matters.â

ES&S Chief Executive Tom Burt dismissed criticism as inevitable and impossible to answer, but he called for greater oversight of the national election process.
â There are going to be people who have opinions from now until eternity about the security of the equipment, the bias of those companies who are producing the equipment, the bias of the election administrators who are conducting the election,â Burt said in an interview. â I canâ t do anything to affect those peopleâ s opinions.â

â What the American people need is a system that can be audited, and then those audits have to happen and be demonstrated to the American public,â Burt said. â That's what will cut through the noise.â
Supply chain questions

ES&S invited NBC News journalists into its headquarters, the first time it has done so for a national news organization. The walls were decorated with images of the Constitution and inspirational messages about quality control. In glass-walled rooms etched with the companyâ s patents, technicians tested machines under tight security.
Burt, a native Nebraskan, has called for federal regulations that would require voting machine companies to address some of the key questions posed to ES&S. In June, he wrote an op-ed asking Congress for more regulation, which would include requirements for paper backups of individual votes, mandatory post-election audits and more resources for the U.S. Election Assistance Commission to speed improvements.

CEO Tom Burt talks with Cynthia McFadden of NBC News.Scott Morgan / for NBC News NBC News examined publicly available online shipping records for ES&S for the past five years and found that many parts, including electronics and tablets, were made in China and the Philippines, raising concerns about technology theft or sabotage.

During the tour, Burt said the overseas facilities are â very secure.â He said the final assembly of voting machines takes place in the U.S.
Chinese manufacturers can be forced to cooperate with requests from Chinese intelligence officials to share any information about the technology and therefore pose a risk for U.S. companies, NBC News analyst Frank Figliuzzi, a former assistant director of the FBI for counterintelligence, said. That could include intellectual property, such as source code, materials or blueprints. There is also the concern of machines shipped with undetected vulnerabilities or backdoors that could allow tampering.

In a letter to NBC News, ES&S said it takes â great careâ with its foreign supply chain, including conducting risk assessments and making on-site visits to suppliers to make sure that components â are trusted, tested and free of malware.â It said that all of its facilities adhere to international standards, that it manufactures in compliance with all federal guidelines and that it follows cybersecurity best practices.

The company says that its overseas manufacturing site has been successfully audited by the Election Assistance Commission and that the company conducts on-site visits of its suppliers â to ensure that components are trusted, tested and free of malware.â â Some components (such as surface mount capacitors, resistors, inductors and fixed logic devices) may be sourced from China-based manufacturers,â the letter said, referring to basic circuitry components. ES&S said it conducts quality assurance tests on the machines.

Ownership questions

Questions about who owns the major voting machine manufacturers have followed the industry for years. The issue took on greater urgency after the FBI disclosed in July 2018 that a Russian oligarch had invested in a Maryland election services firm. Officials in Maryland and North Carolina have started questioning voting machine makers about potential foreign ownership.Because it is privately owned, ES&S is not legally obligated to reveal its ownership or any other details about its finances, although Burt did confirm that the company generated about $100 million in sales last year.

A developer and principle architect work on software.Scott Morgan / for NBC News But in response to questions this year from the North Carolina State Board of Elections, ES&S disclosed which investors own more than 5 percent of the company. They include Burt, Chief Financial Officer Tom Oâ Brien and the Omaha-based private equity firm McCarthy Group, which owns a controlling interest. The letter identified two passive investors, Nancy McCarthy and Kenneth Stinson, who own stakes of more than 5 percent in McCarthy Group.

ES&S said McCarthy Groupâ s bylaws prevented it from revealing other individual investors, but it affirmed that they are all U.S. citizens or trusts or corporations owned by Americans. The company offered to pay for an independent auditor to verify that all the investors are Americans. NBC News declined, as citizenship itself wouldnâ t answer other potential questions, including political affiliations or other conflicts of interest.McCarthy Group did not respond to NBC Newsâ requests for comment.

Testing questions

Virtually no laws govern the cybersecurity aspects of voting machine technologies. But ES&S points to its voluntary efforts to improve voting machine security, most notably a new program with the Energy Departmentâ s Idaho National Labs, the same federal facility that tests the power grid and nuclear power generators. ES&S machines underwent eight weeks of vulnerability testing and penetration by government hackers.

Chris Wlaschin, head of systems security for ES&S, said at a Homeland Security cybersecurity summit in

Washington in September that the companyâ s machines are not prone to a remote attack over the internet. But he added that someone with enough time and access could make a machine â inoperative or unusable.â

Although Wlaschin said the company would release an executive summary of the government testing, the company recently said it has nothing for â external release.â It said recommendations from the tests would be incorporated into â future voting system releases.â Wyden said he was concerned by the companyâ s foreign parts supply and was working on legislation to limit it. â What you have found is particularly important because of the China connection,â he said.

Senior Vice President of Government Relations Kathy Rogers and Vice President of Systems Security Chris Wlaschin.Scott Morgan / for NBC NewsWyden is also eager to see the Idaho National Lab findings. â Theyâ re claiming that the Department of Homeland Security has been working with them. Iâ m going to ask for this information on the basis of your report within 10 days,â he said.
Eddie Perez, global director of technology development for the Open Source Election Technology Institute, a nonprofit election technology research group with which NBC News has partnered since 2016, said the lack of oversight is problematic.

â The way people vote is managed by a couple of entities that people donâ t know a lot about, and that creates risks for the country,â he said. When it comes down to the essentials, voting machine makers â behave based on the level of regulation they have,â Perez said.â They have to check the boxes,â he added. â But once theyâ ve done that, they focus on selling their product.â
https://www.nbcnews.com/news/all/chinese-parts-hidden-ownership-growing-scrutiny-inside-america-s-biggest-n1104
They were concerned about hacking back in 2019 but magically those concerns have evaporated.

https://about.bgov.com/news/voting-machine-firms-add-lobbyists-amid-election-hacker-concerns/

In a Jan. 9 House Administration Committee hearing, three of the largest U.S. voting system manufacturers said they would support a range of new regulatory and reporting requirements, but at least one election security expert said that may not be enough.

Among the potential requirements being floated are that states purchase voting machines with paper records and conduct post-election audits for every vote cast, publicly report on equipment-related security risks and

follow new federally crafted guidelines for how to best set up their manufacturing supply chains.
The three companies -- Election Systems and Software, Dominion Voting Systems and Hart InterCivic -- have a history of resisting outside scrutiny of their products, but company representatives expressed openness to new federal regulations to bolster confidence about the security of their products.
"I think we would support any requirements that [apply] to all vendors in our industry that would help educate users of our system and anyone who interacts with them," said E&S CEO Tom Burt.

What sort of banana republic has to farm out the counting of the votes to a foreign country?

Catherine Engelbrecht, founder of True the Vote, noted that many states commissioned a foreign company based in Spain to provide various election services â including online voting â in the 2020 presidential election.
Engelrecht offered her remarks on Wednesdayâ s edition of SiriusXMâ s Breitbart News Daily with host Alex Marlow.

Breitbart Â· Catherine Engelbrecht - November 11, 2020

https://www.breitbart.com/radio/2020/11/11/catherine-engelbrecht-many-states-have-their-votes-counted-in-spain/

From 2006

https://maloney.house.gov/media-center/press-releases/us-voting-machine-companyâ_s-possible-ties-foreign-government-draws-congressional

What about the connection to the Clinton Foundation?

In 2014, Dominion Voting committed to providing emerging and post-conflict democracies with access to voting technology through its philanthropic support to the DELIAN Project, as many emerging democracies suffer from post-electoral violence due to the delay in the publishing of election results. Over the next three years, Dominion Voting will support election technology pilots with donated Automated Voting

Machines (AVM), providing an improved electoral process, and therefore safer

elections. As a large number of election staff are women, there will be an emphasis on training women, who will be the first to benefit from the skills transfer training and

use of AVMs. It is estimated that 100 women will directly benefit from election technology skills training per pilot election.

https://www.clintonfoundation.org/clinton-global-initiative/commitments/delian-project-democracy-through-technolog

THE QUESTION OF DIANE FEINSTEIN AND HER HUSBAND

Of course the are saying that Diane Feinstein and Nancy

Pelosi are squeaky-clean.

Dominion Voting Systems rebuked claims that the company has a financial relationship with the husband of Sen. Dianne Feinstein and that the company manipulated the results of the 2020 election.

"The company has no financial relationship with Mr. Blum," Kay Stimson, Dominion's vice president of government affairs, told the Dispatch. "This is a false claim spread on social media."
https://www.washingtonexaminer.com/news/dominion-voting-systems-denies-financial-relationship-with-dianne-feins

Here are the allegations

https://michaelsavage.com/biggest-story-diane-feinsteins-husband-richard-blum-owns-vote-counting-machine-compan

But what has been said previously?

In Bullet-point, the charges against the Feinstein Family Cartel, in the Cleantech Crash Corruption Case include:

Feinstein was the promoter, lobbyist and beneficiary of the side-by-side (on the same plot of land) Tesla and Solyndra government hand-out funding scandal.

Feinsteinâ s daughter, Kathryn, documented illicit actions by her mother, while in social habitation with the applicants

While in the Mayorâ s office, Bruce Brugman, publisher of the top San Francisco weekly newspaper: The San Francisco Bay Guardian, documented and published nearly 100 corruption charges against Feinstein. Local law enforcement efforts, against Feinstein were nearly impossible, at the time, according to Bay Guardian staff because local politicians and authorities had been paid off by James Bronkema, David Rockefellerâ s â bag manâ and John Molinari, the local mob â bag manâ . Ex-Guardian staff have suggested that associates of one of those two Feinstein financing clans had, possibly arranged the George Moscone assassination in order to position Feinstein for higher office

Herb Newman, of Sausalito, California; Feinsteinâ s relative, was awarded the staffing contracts for Tesla and Solyndra based on Feinsteinâ s say-so, in direct conflict of interest

Feinstein, and her Chief of Staff, warned applicantâ s about attempting to use the NUMMI auto factory, which she was covertly placing Tesla in and Solyndra next to. Tesla had already publicly rejected the NUMMI building as â unusuableâ in the press, yet Feinstein talked Tesla into using it so that her husbandâ s company could profit from it and so she could arrange kick-backs to Tesla, more easily

Feinstein worked with Senator Harry Reid on the Cleantech Scams. Together, by helping White House staff and financiers manipulate the program, they made over $50 Million in personal profits at taxpayer expense

Feinstein staff worked for and were compensated by, Tesla and Solyndra. In some cases Feinstein staff and Tesla staff were interchangeable, in direct conflict-of-interest

Feinsteinâ s husband had financial interests in the railroad property adjacent to the Tesla and Solyndra buildings. Feinstein later got him the entire California high speed rail contract

The Feinstein family owned the construction company which Tesla and Solyndra, used. They were given no-bid contracts

Feinstein, and her husband worked with White House staff under Rahm Emanual and Silicon Valley campaign financier John Doerr and associates involved with Kleiner Perkins to conduit bribes, and campaign financing, as stock warrants and positions

Feinstein associate: Roger Boas, was arrested for involvement in a child prostitution ring for political pedophiles, and for embezzling money for the Moscone Convention Center construction

The Feinstein Family held war profiteering contracts in Afghanistan, Bolivia and other regions which held the exclusive mining contracts for Solyndra and Tesla chemicals

After Solyndra was raided by the FBI and went bankrupt, costing taxpayers over half a trillon dollars in losses, the Feinstein Cartel used the tax write-off losses to make a profit, via tax form manipulations on the

tax-write-off losses from the
Solyndra crash

Feinstein, and her staff, sabotaged other applicants who were competing for the
same funds as Tesla and Solyndra

Even after Solyndra went bankrupt, the Feinstein family continued to profit off of
the Solyndra scandal by re-leasing the buildings and collecting real estate profits
Feinsteinâ s family ran the property sales and leasing contracts for the Tesla and
Solyndra buildings

Gary D. Conley, a Bay Area solar and Hydrogen company CEO, whistle-blew on the corruption at Tesla and Solyndra and was later found with a bullet in his head behind a Northern California Air Force base. His family, and friends, charge that is death was â suspiciousâ
Feinsteinâ s family and associates held stock in Tesla, Solyndra and other â Clean Techâ companies, which they acquired at key pre-announcement points, most likely based on insider information and the payola from bribes provided as stock warrants
Feinstein, and her staff told Fremont, California city officers to not engage in discussions with competing applicants
Although other, competing, applicants had been in written discussions, and negotiations, with senior executives at Toyota for the use of the NUMMI plant, Feinstein warned Toyota that only Tesla would be supported for the use of the plant. This was before anyone from Tesla had contacted anyone from Toyota, the owners of the plant, and after Elon Musk had been published in the press saying that Tesla could have no use for the building.
Conclusion:
The facts, evidence, testimony and surveillance clearly prove that Dianne Feinstein used her public office to stage a corruption program to provide public cash and resources to herself and her family for covert profits at taxpayer expense. She used her office to assist in the attacks and sabotage of U.S. companies who were competing for the same funds that she was manipulating.
https://richmondrefinerycancer.wordpress.com/the-corruption-of-senator-feinstein/

...This anecdote provides significantly more questions than answers. For starters: Who was the spy? For how long was the spy under surveillance? What information about â local politicsâ was the spy passing back to China? Just how close was the spy to the senator? Did law enforcement officials sweep vehicles and other areas for listening devices? Was there an investigation into whether others in the senatorâ s circle may have been coordinating with Beijing?
Did the senator expose herself to potential blackmail, or the public to danger through leakage of sensitive, highly classified information? Is firing really the proper punishment for providing political intelligence to a foreign power?...
https://thefederalist.com/2018/08/08/sen-dianne-feinsteins-ties-china-go-way-deeper-alleged-office-spy/

https://heavy.com/news/2018/09/richard-blum-dianne-feinstein-husband/

From Glenn Greenwald's old newspaper, the Intercept in 2015.

CBRE, a giant real estate company partially owned by Sen. Dianne Feinsteinâ s husband, Richard Blum, is costing the U.S. Postal Service millions of dollars a year in lease overpayments, and its exclusive contract should be immediately canceled, the serviceâ s inspector general has found.

Eyebrows rose when the USPS made the contract with CBRE in June 2011 for all real estate transactions. Blum chaired CBRE at the time; he stepped down last year, but remains a director and a major shareholder. Feinstein, D-Calif., has always denied involvement in the deal, which proved lucrative as the cash-strapped Postal Service looked to its excess real estate to finance operations.

The contract enables CBRE to market and sell properties, and conduct negotiations for leases of postal buildings. Prior to the contract, USPS negotiated leases directly with landlords. Now, CBRE often represents both the Postal Service and the landlord in negotiations, known as â dual agency transactions.â

Debbie's Dead Dudes- Federal Prosecutor Investigating Fraud Found Dead in Debbie Wasserman Schultzâ s District

by Carter 704 Comments

A federal prosecutorâ s body was discovered on a Hollywood, Florida beach with potential head trauma.

Brandon J. Whisenant, Jr.â s body was found Wednesday by a random individual. The police are attempting to determine if Whisenantâ s death was a â homicide, suicide, or something else.â

The AP reports:

> Hollywood police spokeswoman Miranda Grossman said Thursday that the body of 37-year-old Beranton J. Whisenant Jr. was found early Wednesday by a passerby on the cityâ s beach. She said detectives are trying to determine if the death was a homicide, suicide or something else.

Whisenant worked for the U.S. Attorneyâ s Office in Miami in its major crimes unit. He had joined the office in January. Court records show he had been handling several visa and passport fraud cases.

Acting U.S. Attorney Benjamin G. Greenberg said in a statement that Whisenant was a â great lawyer and wonderful colleague.â The office declined to comment on the investigation.

The following is Debbie Wasserman Schultzâ s district:

THIS LETTER IS BEING SENT TO EVERY DEPARTMENT OF ENERGY FUNDING APPLICANT :

BEWARE OF THE LIES, CORRUPTION AND ANTI-TRUST VIOLATING INSIDER TRADING SCAMS AT THE DEPARTMENT OF ENERGY

(Note: You; Mr. car or solar company, have a fiduciary legal obligation to review this information and report it to the public, your shareholders and related law enforcement and regulatory entities. We have told them that we are providing you with this information. They can sue you if you failed to act judiciously after having this information in your hand or if you fail to report this letter to them.)

We want to save you some pain and energy. Any voyage onto the path of funding from the Department of Energy will be a road to hell.

While fake-smile aides will shake your hand and tell you how "*excited they are to welcome your application*", behind your back they are sharpening their knives.

Elon Musk is notorious for getting Department of Energy money by bribing public officials and placing his friends: Steven Chu, Matt Rogers, Steve Westly, Steve Spinner's 'special friend', etc. on the staff of the Department of Energy and in the White House. We have FBI-class records, financial tracking, emails, stock market relay records and other forensic data that proves it. We can swear, warrant, certify and prove these assertions in front of Congress in a live Congressional hearing or Civil Jury trial, given non-compromised legal backing. If you think you have bribed the same number of Senators, bought a President and taken over most of the Department of Energy like Musk did... go for it! In this day and age, with every citizen able to track every public figure, with FBI-quality databases, on their home computers, it might be a crash-and-burn but you are welcome to try.

You will hear the sham story, from DOE staff, pleading *"...that was that corrupt old Steven Chu that did those bad things.."* but, if you look at the facts, the same exact scams, defrauding of Applicants and corruption has been ongoing through the entire ***vast*** array of energy Secretary's that have paraded through the Dept of Energy since then. Every single one has been terminated in shame. Every single one of them saw, from the inside, that the game is rigged. Every single one allowed the slush-fund and quid-pro-quo to continue to operate. Every single one of them implemented almost none of the anti-corruption measures recommended by GAO, Congress and others. If your car or alternative energy company thinks that they can get past the divisive politics of today, and not have the financial rug pulled out from under them at the last second, then we would

like to know what they are smoking.

Over 100 past Applicants were lied to, defrauded, stone-walled, bottom-drawer'd, sabotaged, and generally screwed with by **The Department of Energy** in order to: 1.) protect campaign financiers who were their competitors and 2.) stone-wall those Applicant's for being competitive against the Elon Musk and Solyndra chosen insider trading buddies that Dept of Energy staff own the stocks of, get revolving door job hand-outs from, pal around with and have their Senators get payola from.

Your application will be frozen and stone-walled (some have waited over a decade for application responses that any traditional bank could process in 7 days) in order to protect political interests and car cartel monopolies that D.O.E. execs and staff have special interest covert arrangements with. Don't waste your time with D.O.E. Don't waste your PR real estate even mentioning any hope or reliance on the highly conflict-of-interest-based ATVM or LGP funds.

You will never get an apology and you lose millions and millions of dollars trying to jump through the mercurial gauntlet of ever-changing DOE criteria and endless reviews operated by YOUR COMPETITORS! That's right! The people that hate you the most are in charge of reviewing your funding application. The DOE reviewers own stock and have revolving door job payola from YOUR COMPETITORS! Good luck with that Applicant.

Almost EVERY competing Applicant was faster, cheaper, had better MPG, was easier to manufacture, had lower cost to the main-stream market, had a better set of financials, had a better debt ratio, was safer, etc. but they missed one key factor: THEY DID NOT OFFER BRIBES AS LARGE AS ELON MUSK DID!

Even in 2020 you would have to be a sucker to apply for DOE funds. There are people inside DOE who are dedicated to making sure you never get that money. You can get a faster loan from a commercial bank without thousands of hidden "gotchas" and insider trading schemes to trip you up. These tricks, built into the Department of Energy process, are created to ensure that DOE insiders have thousands of excuses to never let you get the money unless you agree to finance the correct political candidates.

Title XVII Innovative Energy Technology Loan Guarantee Program

DOE is supposed to support the commercial development of innovative clean energy technologies through its Loan Programs Office (LPO). Authorized by the Energy Policy Act of 2005, the Title XVII Loan Program enables the DOE to issue loans ranging from several million to more than $1 billion for advanced fossil, advanced nuclear, renewable energy and energy efficiency projects that employ "new or significantly improved technology." And in 2018, LPO announced an open solicitation for energy projects on tribal lands. These solicitations remain open and are supposedly actively seeking qualified applicants as a result of continued congressional support and new programmatic direction but the historical facts prove that this program has been manipulated to operate as a political slush-fund to finance insider favorites and sabotage their competitors.

Under Title XVII program authority, the DOE can guarantee loans for up to 80 percent of total project costs for eligible proposals. As of March 2020, LPO maintains $25.9 billion in loan guarantee authority across the solicitations mentioned above. LPO has closed only one loan since 2011 â for the Vogtle nuclear power station in Georgia and, more than ever, seems to be simply a sham for insider political campaign financiers to get payola from. Notably, LPO is under increasing pressure from Congress to move more applications through diligence and to loan close.

Advanced Technology Vehicles Manufacturing (ATVM) Program

Under the ATVM Program, automobile manufacturers or advanced vehicle automobile component or material manufacturers are supposed to eligible to obtain direct loans from the DOE for projects that re-equip, expand or establish manufacturing facilities in the U.S. to produce "ultra-efficient vehicles," passenger automobiles, light duty trucks or associated components that meet the DOE's emission and fuel economy standards for "advanced technology vehicles." Political insiders will always, though, find a way to disqualify any applicant who competes with campaign financier favorites. Hundreds of highly qualified applicants were denied because Elon Musk knew they could put Tesla out of business without DOE's exclusive support of his monopoly. Tesla's own senior staff have written widely about the 'gate-keeper' insider trading scam at DOE. DOE is an anti-trust operator who is a gatekeeper of industry winners and losers based on who donated the most to certain PACs.

To date, the DOE has funded five loans under the ATVM program totaling $8.4 billion, approximately one-third of its $25 billion loan authority. The ATVM program is not subject to an expiration date, and despite previous congressional efforts to rescind ATVM's corruption-based funding, the program and its remaining $16.6 billion in loan authority remain available for insider projects that can be trusted to kick campaign financing back to certain politicians. In the most recent DOE funding bill, Congress directed LPO to "expeditiously evaluate and adjudicate all loan applications received" by the ATVM program, another sign that Congress wants to see a resumption of federal loan guarantees.

The Secretary of Energy and the Chief Counsel for the United States Department of Energy have been challenged, in writing, to provide the names of ***ANY*** Loan Programs Office (LPO) or Advanced Technology Vehicles Manufacturing (ATVM) Program official, reviewer, advisor or staffer who was not, from 2007 forward, either financed by, friends, with, sleeping with, dating the staff of, holding stock market assets in, promised a revolving door job or government service contracts from, partying with, personal friends with, photographed at private events with, exchanging emails with, business associates of or directed by; one of those business adversaries, or the Senators and Department of Energy politicians that those business adversaries pay campaign finances to, or supply political digital services to. From 2008 forward, The White House and The Department Of Energy were controlled by the Silicon Valley tech oligarchs! That is a violation of the law, the Constitution and the American Way.

Department of Energy PR officials blindly push their revisionist history propaganda party-line hype that the DOE has been *"fair and successful"*. There has never been a bigger lie on Earth since the first frat boy told the first sorority girl *"don't worry, I won't get it in your mouth.."*

One group used CIA and FBI style investigation tools to hunt down every reviewer, contractor and insider involved in the Loan Programs Office (LPO) or Advanced Technology Vehicles Manufacturing (ATVM) Program since 2007. A forensic chart was produced showing the insider trading, revolving door and social engagements of each. In almost 97% of the cases, every person was found to have glaringly unethical, often criminal, conflicts of interest between beneficiary lines of connection.

In fact, multiple groups have insisted that the FBI, the NSA, The CIA and 60 Minutes conduct their own independent studies, on a name, by name basis of the DOE staff involved and publish the results of that study to Congress and the public. The forensic facts prove the following:

- Famous political figures use the ***trillions*** of dollars in government treasuries and the stock market for illicit profiteering by rigging the system exclusively for themselves and their crony insiders.

- They attacked whistle-blowers using government taxpayer funded media (Fusion GPS, Black Cube, Google, Pysops, Gizmodo, Media Matters, Blumenthal, etc.) and spy agency tools because others competed with their businesses and reported their crimes.

- San Francisco Bay Area government has as many corrupt politicians as Chicago and relies on the same RICO-violating insider corruption network to operate; as proven by deep AI searches of their financial records. Arrests of those officials is now underway.

- Silicon Valley law enforcement records prove that these tech oligarchs engage in an organized, racketeering-based, massive sex trafficking, tax evasion, anti-trust violating, spousal abuse, money laundering, black-listing, racist, ageist, political bribery, crony racketeering crime Cartel.

- Famous U.S. Senators, Governors and their staff knowingly engage in, finance, operate and benefit from these crimes in exchange for search engine manipulation and stock market assets.

- Silicon Valley and Hollywood media companies censor and cover-up news coverage of these crimes because they have a financial connection to the perpetrators.

- Most of the government officials working on this were hand-picked by the adversaries of the whistle-blowers. Whistle-blowers cases have never been fairly reviewed by non-biased, non-conflicted officials. FBI associates have not found a single entity in the case reviews, or determinations, who was not either: financed by, friends, with, sleeping with, dating the staff of, holding stock market assets in, promised a revolving door job or government service contracts from, partying with, personal friends with, photographed at private events with, exchanging emails with, business associates of or directed by; one of those business adversaries, or the Senators and politicians that those business adversaries pay campaign finances to, or supply political digital services to.

The U.S. Department of Energy has supplied no apologies, no compensation for damages to the victims and no halt in the slush-fund payola schemes!

Do you doubt the veracity of these claims? Show this letter to Bill Cooper, the head lawyer for DOE. Ask him to provide forensic data proving any of these assertions are not true! He can't do it!

We can provide thousands of FBI agents, investigative journalists and Congressional staff to prove these assertions are true.

Dept. of Energy staff claim that they got rid of all of the bad people at DOE and that the evil ones don't work there any more but OPM confirms that to be a lie. The stock market holdings, revolving door deals, voter records and social media postings of the current Dept of Energy staff prove that the corrupt ones never left. Tell DOE to take a look at their moral construct if they contact you!

See http://www.majestic111.com for more on this.

Jay Carney was Obama's "Hit Man" in the Oval Office at The White House during the Cleantech Crash. It was Carney who helped order character assassinations and hit jobs on members of the public who spoke out about the crimes. Carney was recently caught, again, ordering hit jobs at Amazon, as well. In a famous magazine interview, his home was revealed to be covered in communist propaganda posters.

Leaked notes from an internal meeting of Amazon leadership obtained by VICE News reveal company executives discussed a plan to smear fired warehouse employee Christian Smalls, calling him â not smart or articulateâ as part of a PR strategy to make him â the face of the entire union/organizing movement.â

â Heâ s not smart, or articulate, and to the extent the press wants to focus on us versus him, we will be in a much stronger PR position than simply explaining for the umpteenth time how weâ re trying to protect workers,â wrote Amazon General Counsel David Zapolsky in notes from the meeting forwarded widely in

the company.

The discussion took place at a daily meeting, which included CEO Jeff Bezos, to update each other on the coronavirus situation. Amazon SVP of Global Corporate Affairs Jay Carney described the purpose to CNN on Sunday: â We go over the update on what's happening around the world with our employees and with our customers and our businesses. We also spend a significant amount of time just brainstorming about what else we can doâ about COVID-19.

Amazon fired the warehouse worker Smalls, after he led a walkout of a number of employees at a Staten Island distribution warehouse. Amazon says he was fired for violating a company-imposed 14-day quarantine after he came into contact with an employee who tested positive for the coronavirus.

Zapolskyâ s notes from the meeting detail Amazonâ s plan to deal with a wave of bad press and calls for investigations from elected officials following the firing of Smalls. They also show top Amazon brass wanted to make Smalls the focus of its narrative when questioned about worker safety.

â We should spend the first part of our response strongly laying out the case for why the organizerâ s conduct was immoral, unacceptable, and arguably illegal, in detail, and only then follow with our usual talking points about worker safety,â Zapolsky wrote. â Make him the most interesting part of the story, and if possible make him the face of the entire union/organizing movement.â

They discussed encouraging Amazon executives to use Smalls to discredit the wider labor movement at Amazon. Employees at the warehouse, known as JFK8, launched an effort to unionize in 2018.

In his notes, Zapolsky wrote that there was â general agreementâ on this point among the other attendees of the meeting. (Zapolskyâ s notes also mention SVP of worldwide operations and customer service Dave Clark and SVP of human resources Beth Galetti.) This is the typical culture of the Obama crowd of insider executives who will destroy any citizen who gets in their way. Jay Carney runs a ***Massive covert organized corruption team at Amazon in order to manipulate Democracy.***

Massive covert organized corruption teams operate these kinds of manipulation of the truth and of Democracy with the cooperation of U.S. Senators and agencies like The Department of Energy.

Examples of these groups include Pacronym and American Bridge who are part of Arabella Advisors, a consulting firm that is not required to identify its donors.

Pacronymâ s affiliated groups create a large network of fake local news outlets that are designed to promote progressive viewpoints inside battleground states in order to rig insider trading for their top bosses.

They are all part of a wealthy dark money network that manipulates public policy for personal profiteering.

American Bridge 21st Century and Pacronym are cutting ads thrashing outsiders as super PACs who go after people they don't like, The Washington Post reported. Both groups also have ties to two fake false-front large nonprofit groups â New Venture Fund and Sixteen Thirty Fund â connected to a massive extreme-leaning consulting group.

NVF gave one of Pacronymâ s nonprofits â ACRONYM â $250,000 while providing American Bridge $40,000 in 2018, according to NVFâ s 2018 IRS documents. IRS records also indicated American Bridge pulled in $200,000 in 2018 from nonprofit Sixteen Thirty Fund, which reportedly spent $141 million on

various extreme-leaning causes during the midterm election year.

Sixteen Thirty Fund and nonprofit NVF are tied into the same sprawling network, according to an analysis by investigators. Arabella Advisors, a philanthropic consulting company based in Washington, D.C., manages four nonprofits, including the NVF, Sixteen Thirty Fund, Hopewell Fund and the Windward Fund.

Sixteen Thirty Fund has not responded to requests for comment, while NVF acknowledged making a grant to ACRONYM in 2018 but noted that it â has nothing to do with the activities at PACRONYM or American Bridge.â

Arabella representative Steve Sampson called NVF merely a â client of ours,â even though the consulting group shares a Washington, D.C., office with all four groups, according to NVF and Sixteen Thirty Fundâ s 2018 IRS records. American Bridge has not responded to requests for comment.

Other groups have raised alarms about the network as well.

â Arabella Network is the umbrella, and they have these two funds that flow toward both of these groups. A clearly full-blown extremist arm that is casting itself as a nonprofit is politiicizing this event,â former Nevada Attorney General Adam Laxalt told the press.

Laxalt is the Outside Counsel to Americans for Public Trust, a group dedicated to uncovering unethical behavior. Americans for Public Trust has covered the network in the past. **(RELATED: Billionaire Allegedly Behind A False Flag Operation In Alabama Helped Finance The Group Behind Iowa Caucus Chaos)**

â American lives are more important than scoring cheap political points,â he added after suggesting that the group is striking while the iron is hot and making certain they capitalize on a crisis that has so far killed thousands of people.

Laxalt is referring to Pacronymâ s announcement on March 17 to plow $5 million into a digital advertising campaign railing against those they hate. The ads are published through Four is Enough, a Pacronym project.

ACRONYMâ s founder said the campaign makes sense from a public health and national security perspective.

Democratic operative David Plouffe another Jay Carney-type "hit-man", who managed former President Barack Obamaâ s 2008 White House bid, sits alongside McGowan on ACRONYMâ s board.

ACRONYM has not responded to the DCNFâ s repeated requests for comment. **(RELATED: Tech Firm Behind Iowa Caucus Disaster Also Played Role In Creating A Covert Democratic Propaganda Media Outfit)**

Some academics argued that orchestrating such a campaign skirts ethical rules. Running advertisements thrashing the president during a health crisis looks bad, according to Daniel Kreiss, a professor of political communication at the University of North Carolina at Chapel Hill.

â Itâ s a very fine line between ensuring that the president has the legitimacy to speak authoritatively on what Americans must do in order to be safe, and the very real and legitimate questions to raise regarding how the president has handled this crisis given that heâ s on the ballot in November,â Kreiss told WaPo in a March 17 report addressing the ad campaign push.

Laxalt, Nevadaâ s former attorney general, expressed a similar position.

â The timing of attacking the president in battleground states is appalling. If they are going to do it, then you name the place. I think that doing it right this second is outrageous,â he told the DCNF.

Meanwhile, ACRONYMâ s McGowan is also creating a constellation of local news websites that act as progressive arms targeting the president and his policies.

McGowan, a digital producer for Obama for America in 2011 and the proprietor behind ACRONYM, raised at least $25 million from wealthy liberals to create a media company called Courier Newsroom that is designed to deliver information favorable to Democrats. Courier is rolling out newspapers in swing states to counter what its founder believes is right-wing spin on Facebook and across the digital domain.

Along with the Courier Newsroom, McGowan is reportedly creating Virginia Dogwood and Arizonaâ s Copper Courier, among others that are expected to roll out in Michigan, North Carolina, Pennsylvania, Virginia and Wisconsin, all battleground states.

Mind the Gap at Stanford University is an even sneakier covert group from this crowd. Their efforts havenâ t previously been reported. They recently petitioned some donors for at least $100,000 to support its efforts. Backers include people like Facebook co-founder Dustin Moskovitz, former Google CEO Eric Schmidt, San Francisco power broker Ron Conway, and a coterie of major Democratic donors from across Silicon Valley, including fundraiser Amy Rao. What is also unusual is that Mind the Gap is led not by highly experienced political hands, but by academics with no professional backgrounds as fundraisers. The groupâ s leaders are a pair of Stanford law professors: Barbara Fried, who has no apparent campaign experience, and Paul Brest, the former president of the William and Flora Hewlett Foundation. Graham Gottlieb, a Stanford fellow who served in junior roles for former President Barack Obamaâ s 2012 reelection campaign and in his White House, is its executive director.

While dressed in khaki's and acting like they are "saving the trees", the people behind these groups are cold-blooded mercenaries drunk on power, hookers, private jets and a sense of being above-the-law. Most of us were Democrats but we witnessed our own kind stab each other in the back to insider trade Dept of Energy cash and insider trading stocks. Don't expect anything from DOE but nightmares, lies and corruption!

Dirty Deals: How clean energy program enriches rule breakers

0shares

Comment

Gov. John Kitzhaber (fourth from left) helps break ground for the solar array at Oregon Tech in Klamath Falls in August 2011. He is standing next to Martin Shain (third from left). The groundbreaking took place four months after a required construction deadline to qualify for a state tax credit. Actual construction of this array didn't start until 2013.

(Courtesy Oregon Tech)

By TED SICKINGER and HILLARY BORRUD

A Seattle-based energy consultant and the state employee heâ s accused of bribing became the public faces of corruption charges at the Oregon Department of Energy after their arrests last summer.

But it wasnâ t one rogue employee who enabled consultant Martin Shain to reap $12 million in green energy tax credits for solar projects that should have failed to qualify, according to thousands of records reviewed by The Oregonian/OregonLive. Four other Energy Department employees, including the director, helped Shain obtain the credits by circumventing program rules and ignoring deadlines lawmakers insisted on.

None of the four has been accused of wrongdoing. All four employees declined to answer questions about their particular roles in greenlighting the tax credits.

But records illustrate that officials scrambled to ensure success of the politically high-profile project**.** Documents also show how the culture of the agency contributed to the misuse of millions in taxpayer funds.

The emails, obtained by The Oregonian/OregonLive under a public records request, open a new window on a years-long pattern of cozy regulatory relationships and institutional failure at the department. The agencyâ s mishandling of the subsidies undermined the stateâ s credibility in using tax incentives to achieve its green energy goals and tarnished the very industry the agency was supposed to advance.

Shain and the state employee heâ s accused of bribing, Joe Colello, face life-altering consequences for their conduct. Shain, who denies committing any crime, has amassed staggering legal bills and awaits trial. Colello has pleaded guilty and will be sentenced in January.

Agency officials acknowledge that the tax credit program was besieged by problems, including flawed processes and poor management. Former director Michael Kaplan has said those problems were blatant when it came to the solar projects. â Clearly we didnâ t follow our own rules,â he said of the departmentâ s decision-making on the tax credits.

No one at the Energy Department has faced consequences for those missteps.

Rachel Wray, a spokeswoman for the Energy Department, declined to respond to several detailed questions about the actions of its employees. Concerns about this specific set of projects drove the agencyâ s request for a Department of Justice investigation and a full-blown audit of the tax credit program, she said.

The tax credit programâ s â decision-makers no longer work at the agency, and we arenâ t able to explain their every action or defend the program,â Wray wrote.

Two of the four employees involved in approving the tax credits moved on to other jobs with the state of Oregon. A third still holds his job in the energy department.

The Oregon University System's Solar By Degrees Initiative included five separate arrays at Oregon State University facilities, this one a 221 kilowatt installation in Aurora that was completed in early 2014.

(Courtesy OSU)

A POWERFUL CHAMPION

In 2011, state officials touted the Oregon University Systemâ s â Solar by Degreesâ initiative as the stateâ s signature renewable energy project. By installing solar arrays on campuses around the state, it would showcase Oregonâ s clean energy vision and simultaneously boost economic development by exclusively using Oregon-made equipment and Oregon contractors.

Within the department, it was known as â the governorâ s project,â giving everyone a stake in its success.

Gov. John Kitzhaber and energy staffers directed a $60,000 economic impact study to focus specifically on the university solar projects to highlight what could be accomplished with the state tax credit program. Shain and state employees offered U.S. Bank access to the governor if the bank would commit to finance the project, records show. Kitzhaber was the guest of honor at the groundbreaking.

And when the university initiative was in danger of falling apart, the four state employees each played a role in resuscitating it. The director and chief financial officer guided Shain around program rules restricting changes to projects. The chief financial officer, the manager of the incentives program and the technical reviewer edited his submissions to the agency. That same technical reviewer accepted inadequate, and in two cases phony, documentation. And all four ignored what was staring them in the face: Backers had missed required deadlines to qualify for state support.

In the end, a developer did build six solar arrays that are providing cheap, emissions-free electricity to two universities. But Solar by Degrees failed to deliver on most of its promises.

Shainâ s company, meanwhile, walked away with a $2.4 million payday, about 10 percent of the projectsâ total costs. And SolarCity, the California developer that built the arrays, pocketed proceeds from the sale of $12 million in taxpayer subsidies.

SolarCity spokesman Jonathan Bass said in 2015 that the company and its investors had no knowledge of misleading documents and relied on the university system and Shainâ s assurances. â We believed we met the eligibility criteria,â he said.

Martin Shain was arraigned in June in Marion County District Court after being indicted earlier on 78 counts of bribery, racketeering, theft and tax evasion in connection with the brokering of state energy tax credits. He also faces forgery charges related to phony documentation submitted to the state to qualify six solar projects for $12 million in tax credits.

Randy L. Rasmussen/Special to The Oregonian

When The Oregonian/OregonLive revealed in 2015 that the projects were marred by forgery, the FBI and the Oregon Department of Justice undertook investigations that ultimately led to criminal charges against Shain and Colello.

Yet despite Kaplanâ s assurances to lawmakers and state auditors that the agency was â building a culture of accountability,â no one was held publicly accountable for the solar project errors.

Meanwhile, a year-long legislative push to reorganize or dissolve the department ended in a partisan stalemate over whether to expand the agencyâ s mission to include global warming policy. And Gov. Kate Brown just assigned the agency more than a dozen new tasks, from improving energy efficiency at state buildings to electrifying the state vehicle fleet.

In the end, taxpayers lost more than $12 million. The stateâ s nascent renewable energy industry ended up tinged with corruption. And the agencyâ s mismanagement of the Business Energy Tax Credits fundamentally damaged the stateâ s credibility in managing any large incentive program.

â The stain of the BETC is so pervasive that it canâ t even be considered a possibility to have any kind of tax credit program for renewables in this state,â said David Brown, the president of a solar developer, Obsidian Renewables.

A proposed $1.4 billion new green energy initiative is slated to go before the Legislature in February. A key supporter acknowledges that the tax credit scandals cast a long shadow on that proposal.

â It will have to carry that burden,â said Angus Duncan, who heads Oregonâ s Global Warming Commission. The tax credit problems, he said, â put more backpressure on this bill to have a tight, well-managed and focused allocation of those revenues â ¦ not just a big slush fund that people can show up with their buckets and start dipping.â

CHUMMY RELATIONSHIPS

Shainâ s career as an entrepreneur spanned several minimally related areas: soda water, sewage and solar. In 1996, a beverage company he had founded a decade earlier entered bankruptcy. By then, Shain had left that company and moved on to energy consulting, forming his Seattle-based consulting firm, BacGen Technologies.

BacGen was soon at work in Oregon, coordinating energy efficiency projects for municipal wastewater treatment systems. Shain earned a reputation as a committed partner, working directly alongside managers in the lagoons, up to his hip boots in raw sewage.

David Cohan, a former regional energy association manager who worked with Shain, was deeply impressed. â He was a promoter, no question about it, but so were all these developers,â Cohan said. â I spent a lot of time with him. Heâ s a really, really smart guy, a great strategic thinker who was doing great stuff.â

By the time Shain became involved with the university solar projects, he was a familiar and credible presence to Energy Department staffers, with whom he had assiduously cultivated connections.

When Oregon launched the solar incentive program, Shain stepped up his schmoozing. From 2011 to 2015, he sent hundreds of emails to agency staffers, many of them soliciting their â wise counsel,â complimenting their professionalism and intelligence, and empathizing with their workload.

He often portrayed himself as a harried consultant whose expertise was in demand across the country. The tagline he used on emails was illustrative: â U.S. Department of Energy Contractor of the Year award recipient.â

A spokesman for the Bonneville Power Administration, the part of the federal agency Shain worked with, said the agency was unable to find any record of such an award.

Shain found ways to personally connect with key energy employees whose help he needed. The agency director at the time, Bob Repine, was a former Republican lawmaker who became a go-to administrator for both Kitzhaber and his predecessor, Gov. Ted Kulongoski. Shain repeatedly sought Repineâ s input on the university projects, reminded him of Kitzhaberâ s interest in them, and offered him national exposure as a co-speaker on â public agency energy success storiesâ at several industry conferences.

Repine now claims he had only one sit-down meeting with Shain and bumped into him in the Energy Department hallway twice. But the emails show him meeting with Shain at least four times in 2011 and 2012 to discuss how to ensure state support for the projects, and exchanging regular emails**.** â I know this will be an accomplishment we can all be proud of once they are all operational,â Repine told him in one email.

After being shown the emails that document multiple meetings, Repine did not respond to a request for comment.

When it came to details of the tax credit program, Repine leaned heavily on the agencyâ s chief financial officer. Anthony Buckley, whoâ d been recruited by a previous director to help clean up the administration of the tax credit and loan programs, had quickly became the agencyâ s fix-it guy and a key liaison to the governorâ s office.

â Over at (the energy department), who we were trusting to move things along was Anthony Buckley, whoâ s a certified smart guy,â Curtis Robinhold, Kitzhaberâ s chief of staff at the time, recalled in a fall 2017 interview.

Other agency staffers saw Buckley as simply an adept political operator. Nevertheless, Buckley was a key decision-maker, and Shain took pains to ingratiate himself, the emails show.

Buckley, who did not respond to requests for comment, met repeatedly with Shain, both in and out of the office, and even offered to travel to Seattle for a â touchbaseâ with Shain. He expedited various department actions on the solar projects at Shainâ s request, such as project amendments and letters of support.

Repine and Buckley knew that Shain wanted to make huge changes to his proposed solar arrays despite rules to the contrary, emails show. They greenlighted those amendments anyway.

Maureen Bock was the agencyâ s program manager for energy incentives, in charge of assigning and checking technical reviews to determine the tax credit eligibility for proposed projects. Shain offered her ideas and feedback, from design for new incentive programs to the fee structures on existing ones. He also praised her repeatedly.

â Good luck and God speed with the work load on your plate there at ODOE this month,â he emailed Bock in December of 2012. â The agency is fortunate to have your level-headed intelligence and experience.â

Bock forwarded the note to her boss, Buckley, adding, â At least someone appreciates meâ ¦. :)â

He was equally solicitous of the departmentâ s technical analyst, Evan Elias. Eliasâ position description indicated he was supposed to determine, based on his technical expertise, whether the tax credits met the programâ s eligibility requirements specified in state rules.

A 2010 performance appraisal described him as the departmentâ s â center of gravity with respect to program technical and administrative knowledgeâ and praised him for â reasonable, well documented and proven decisions â ¦especially the most complex conservation and renewable energy projects we have.â

Emails show Shain cultivating a friendship with Elias based on their shared passion for music. Some of their correspondence took place on Eliasâ personal email, after Shain offered to send him an album on iTunes. But the emails continued on the state server too.

â Missing you buddy,â Shain wrote in September 2013 to Elias. â I'm looking to move my travel schedule around so I can be in Salem when you'll be there. Would really like to get together and talk. Some personal life changes pending on my side, music, etc.â

To which Elias responded: â Definitely would like to get together.â

Both Bock and Eliasâ s state job description made it clear what the stakes were in their jobs.

â Failure to make wise and timely decisions could create costs for the agency, lead to litigation and create political embarrassment for the agency,â the job description for Bock noted. â Poor decisions could also damage established and new programs, create a negative public image and harm staff morale.â

Elias and Bock would eventually approve changes to the projects that violated state rules, and ignore the fact that the projects had missed a critical construction deadline in state law, enabling the developer to claim $12 million in tax credits the projects didnâ t qualify for.

Bock did not respond to requests for comment, saying she was cooperating with the prosecution of Shain. The Energy Department sent a statement attributed to Elias.

â I was friendly with Martin. It felt like we bonded over music; I sent him some YouTube links, and he sent me one album. I never had coffee, lunch, or dinner with him or accepted any other gifts. It felt like an innocent exchange that I regret in hindsight. Our conversations about music did not affect how I processed the OUS project applications.â

In his interactions with department staff, Shain went out of his way to personalize what are normally arms-length relationships. He shared details of family medical problems, the strain of his own workload and his gratitude for their friendship.

He wrote to Bock: â I'm deeply thankful for the handful of people in my life who, although I've met them on

a purely work-related basis, over the past month have proved to be remarkably kind, caring human beings who I hope to call friend for many years to come.â

PITCHING ACCESS

As Shain noted repeatedly in emails to Repine and Buckley, the tax credits were the financial lynchpin for the solar projects. As Shain and Colello struggled to lock in buyers in 2011, the emails show Buckley was willing to tap the governorâ s office to make the deal happen.

Shain and Colello approached the state governmentâ s longstanding primary bank, U.S. Bank, to see if executives could help. If U.S. Bank would commit to buy tax credits from the solar projects, they promised bank executives in emails that BacGen and the Energy Department would facilitate meetings with the governor, the university systemâ s chancellorâ s office and legislators and other â influential individuals or agencies specific to energy policy.â

The emails show Buckley arranging access to the governorâ s office or his staff in line with Shainâ s plan to secure financing. Kitzhaberâ s then-chief of staff recalls discussing whether U.S. Bank should buy the tax credits with Malia Wasson, the bank president.

â My recollection was Malia was in touch with us saying, â Weâ re interested in doing this if itâ s important to the governor or if the governor thinks itâ s a really important project,â â Robinhold said. â And Iâ d say, â Look, youâ ve got to judge it on your own.â â

Wasson, who has since retired, did not respond to requests for comment.

Shain struck a deal with a U.S. Bank vice president, Robert Espeland, who requested the Energy Department provide written acknowledgment of their pact.

U.S. Bank committed to be a buyer if no others emerged, Shainâ s email summarized. In exchange, â we committed to work closely with U.S. Bank over the coming months to assist them in furthering their efforts in Oregon, and make clear our appreciation for their kindness and support of energy projects for the Oregon University System.â

A spokesman for U.S. Bank declined to comment.

One of the original tax credits precertified by the state in 2010 was for a 388 kilowatt roof mounted array at the Moshofsky Center at the University of Oregon. But 11 of the 14 arrays Shain proposed, including this one, proved infeasible. The tax credits were transferred to different projects, this one to a 431 kilowatt ground mounted array at Oregon State's agricultural research center in Hermiston.

The Oregonian/OregonLive

CAPITALIZING ON CONNECTIONS

From the get-go, the proposed university solar projects faced significant delays and technical hurdles that should have disqualified them from taxpayer support if the rules were applied as written. Instead, state officials collaborated with Shain to circumvent those rules, emails show.

State rules carry the force of law, though courts typically grant agencies discretion to interpret the rules when the law behind them is vague, experts say.

By 2012, legislators had made their intent clear: They wanted to eliminate the energy tax credit program and prevent changes to projects already in the pipeline that would increase the costs to the state. The rules that Energy Department staffers helped Shain get around were specifically designed to achieve that goal.

The Energy Department originally approved Shainâ s plans to build 14 arrays on seven campuses. Each application was for a separate project, with a specific location, capacity and tax credit. In total, the projects would cost $27 million and be eligible for $13 million in credits.

If everything had gone according to plan, those arrays would have been operational by the end of 2011.

But thatâ s not what happened. The first developer backed out over uncertainty about the tax credits, records show. A second developer was named, but by mid-2011, the university system hadnâ t finalized a contract, much less started construction. By the end of the year, the second developer went bankrupt.

Moreover, records show that Shain jettisoned some of the arrays heâ d originally proposed because they werenâ t viable in the configuration or location proposed. That put the tax credits â and the projects â in jeopardy. Nearly three years of work would be for naught.

With Colello, Shain scrambled for potential solutions, eventually settling on a wholesale reorganization of the projects. They would consolidate the planned 14 arrays into six larger projects with the same overall capacity and cost, preserving the original $13 million in incentives.

The rules only allowed three specific changes to proposed renewable energy facilities that had already been precertified by the agency, as the university projects had: small changes in capacity of up to 10 percent, improvements that â do not result in an increased tax credit,â or new owners.

As the Legislature moved to phase out the tax credit program, it directed the agency to beef up those limitations to put a lid on the stateâ s mushrooming liability. So new rules made it more explicit: Any change request received after January 13, 2012, would not be approved if it would increase the tax credit.

The energy departmentâ s stated need for the rule change was also quite specific: â The Oregon Department of Energy finds that failure to promptly adopt these rules will result in serious prejudice to Oregon taxpayers and the public interest, because amendments to increase project size within the (Business Energy Tax Credit) program will subvert the controls on revenue impact imposed by Oregon Laws.â

Yet thatâ s exactly what Shain was proposing â and after the cutoff date. One of the new arrays was 10 times larger than originally proposed, and the tax credit on that facility went up 800 percent. Changes on other arrays also violated the rules.

This $6.5 million, 1.4 megawatt solar array in Corvallis was originally certified as two separate projects on a dining hall and PE center at Western Oregon University in Monmouth, with at total capacity of 150 kilowatts and a $411,000 tax credit. The capacity grew almost 10 fold, and the tax credit increased 800 percent. Neither change was allowed under state rules.

Courtesy OSU

Nevertheless, Shain emailed Repine, the Energy Department director, in July to request a meeting to discuss the proposed changes. He said most â are very simple,â though he was perplexed by â how to accomplish one specific and important issue.â

Repine forwarded the email to Buckley, who responded: â From the tone of his email it sounds like theyâ ve reviewed the rules and may be facing a challenge.â

â That would be my guess,â Repine emailed back.

But Repine and Buckley were in a position to make â the challengeâ go away. And after a series of meetings with Shain in 2012, it did.

Shain made the case that reorganizing the projects improved the original proposals. The agency bought that logic, in effect agreeing to treat all the original pre-certifications, which comprised seven tax credits for 14 distinct solar arrays, as a single project. Buckley and Repine decided that, as long as the total capacity, cost and tax credits of the six newly proposed facilities combined didnâ t exceed the total originally proposed in 2010, Shain and the developer could reorganize as planned.

The project amendment map that Shain submitted to the Energy Department to explain how developers would redistribute the capacity of the solar projects he originally proposed.

Lynn Frank, a former Energy Department director who helped draft various program changes designed to rein in abuses, said the agencyâ s â overall approach on consolidating the applications is mind boggling.â

â There is nothing in the rules that allows consolidation of separate and distinct facilities in a final certification at the applicantâ s request,â Frank said.

Employees tracked precisely what was happening, with Bock insisting that Shain map how the money was reallocated from the pre-approved projects to the revamped ones.

Shain sent a prompt thank-you email to Buckley and Repine after the meeting at which he got their permission to treat the separate projects as a whole: â As is always the case, I appreciate your kindness and guidance as we move through this process.â

Buckley responded that heâ d spoken with the agencyâ s technical analyst, Elias, who was in charge of vetting the changes. â In his review there were no challenges identified,â Buckley noted, giving Shain the go-ahead.

On Sept. 6, 2012, Shain met with Elias to go over the changes and checked in with Buckley via email to â confirm with you (e.g., confirming the three conditions that you and Bob gave me to amend the OUS projects... 1) stay within the tier, 2) stay under the cap, and 3) stay at or under existing project costs).â

In his email response, Buckley registered no objection. â Let's schedule an update/touchbase meeting for when your (sic) back in the region. I'm also not adverse to a meeting in the Seattle area.â

Shain appreciated the agencyâ s flexibility, telling Buckley: â Thank you again for your efforts in rule review. Identifying the solution was brilliant.â

Dan Weldon, a commercial banker who once worked as a loan officer at the Energy Department, says staff routinely ignored or reinterpreted rules for projects with strong political backing. The agencyâ s priority, Weldon said, â was not how decisions would be viewed by the public, but by the governorâ s office.â

Frank, the former Energy Department director, says thereâ s a more significant lesson to be learned: â The public interest has no standing to challenge agency decisions.â

A whole cast of luminaries was on hand in April 2014 for the ribbon cutting on a solar array at Oregon Tech in Klamath Falls. The project missed the deadline to begin construction by more than two years, but Energy Department officials awarded it a $5.1 million tax credit anyway.

Courtesy OIT

BLOWN DEADLINES

Shain had other major problems. But the department would overlook those, too.

When the legislature decided to end the controversial business energy tax credit program in the summer of 2011, lawmakers created two new cutoff dates to bring the program to a close.

The primary deadline was that projects had to be done by January 2013. But if backers could prove construction started by April 15, 2011, they were eligible for an 18-month extension.

The administrative rules governing the program were very specific about what constituted construction: â For a renewable energy facility, the applicant shall not be considered to have started erection, construction, installation or acquisition of a proposed facility until excavation or actual physical construction of the

renewable energy facility has begun.â

This photo of an array under initial construction in Corvallis was taken in November 2012, more than a year and a half after it was supposed to be under construction to qualify for a state tax credit. State officials ignored that requirement.

Courtesy OSU

By the spring of 2012, there was no excavation or physical construction on any of the arrays, which put the new developer in danger of missing the January 2013 deadline to complete the projects. That meant the tax credits would be gone unless Shain could do the impossible: demonstrate that construction had begun prior to April 15, 2011.

That was infeasible. The ceremonial groundbreaking on a bare hillside in Klamath Falls didnâ t take place until six months after that cutoff date, and actual construction on the Klamath Falls array would not begin until late 2013.

Meanwhile, with the agencyâ s help, Shain was still reorganizing the projects, trying to finalize what would be built and where.

Nevertheless, a university vice chancellor submitted the extension request and said Shain would follow up with the proof of construction documentation.

Several times over the next two months, Shain emailed Elias claiming heâ d sent the required documentation. But the agency never received it, Elias said in emails. Finally, Shain scheduled a Sept. 5, 2012, meeting with Elias to go over those documents. â As the projects are fairly complex, it would seem best if we could just walk through them together,â Shain wrote.

Forged documents submitted to the state to prove all six separate projects were under construction before April 15, 2011, and thus qualified for nearly $12 million in state tax credits. They weren't under construction, but the Energy Department approved the tax credits anyway.

The meeting was supposed to last a couple hours, but turned into three days. Shain and Elias apparently spent some of that time talking music.

â Jazz Pistols = Sleep Deprivation,â Shain effused to Elias after the first day. â Ouch... but my music needs

were satisfied. Thanks SO much for the tip.â

In the end, the department received only two documents to prove the deadline had been met â an invoice from a purported supplier and a letter from the previous developer describing construction activities in early 2011. It is those documents that are the basis for the forgery charge.

Shain has denied providing those documents to the agency, and his brother has filed an affidavit with the court saying he forged the documents and sent them to the department to save his brotherâ s business. Either way, the documents fell well short of the minimum requirements in state rules.

And as The Oregonian/OregonLive later reported, the documents raised obvious red flags.

The only document detailing any expenses was an invoice, purportedly for installing solar racking foundation bases and structural fittings at the 14 arrays originally proposed. But the amount spent was tiny â $14,200, or just 0.05 percent of the project costs. Moreover, it showed spending at Southern and Eastern Oregon universities â sites that had been eliminated as infeasible early on. And there was no spending listed at three of the six sites that were now a part of the initiative.

A quick Internet search would have revealed that the contractor on the invoice didnâ t exist, its address was made up, its phone number disconnected, and its engineering license fictional.

Itâ s not clear if Elias bothered with even a cursory inspection. The next day, he emailed Shain electronic copies of extension letters, signed by his boss, Maureen Bock.

â The information submitted has been determined to be sufficient evidence that your project began construction prior to April 15, 2011,â the documents stated.

The next day, Shain was back at the department, meeting with Elias to discuss a new reorganization of the projects, including changes in locations, sizes and costs of some of the arrays. Shain left Salem without finalizing those details. The developer was still trying nail them down. A few days later, Shain emailed Elias again, apologizing for another delay in delivering the final designs.

â Me,â he added, â I'll just take a breath and listen to Bela Fleck!! Lovin' this banjo, damn!!!!! My new favorite tunes!!!â

â No worries on my end,â Elias responded.

The department went on to approve every amendment that Shain requested and provided the six projects that were ultimately built with $12 million in taxpayer support.

EVERY ELECTRIC CAR COMPANY START-UP GETS SABOTAGED BY MOLES?

...But who sends the moles in? Elon Musk, John Doerr, Ford or Steve Jurvetson..?

Carmaker Faraday Sues Ex-Execs for Alleged Trade Secrets Theft

Bloomberg News

January 29, 2018, 9:08 PM PST

- Jia Yuetingâ s startup files lawsuit against ex-CFO and ex-CTO
- Suit highlights internal strife at U.S. electric vehicle maker

Faraday & Future Inc., the electric carmaker run by Chinese entrepreneur Jia Yueting, is suing a startup founded by its former chief financial and technology officers for allegedly poaching talent and stealing valuable intellectual property.

Faraday accused former CFO Stefan Krause and ex-CTO Ulrich Kranz of soliciting at least 20 former employees to join a key rival they started, according to a complaint lodged with the U.S. District Court for the Central District of California. Some employees brought technology secrets over to Evelozcity Inc., the lawsuit says.

Jia Yueting

Photographer: David Paul Morris/Bloomberg

The lawsuit highlights internal strife at a company that debuted its prototype FF-91 in Las Vegas in 2017, claiming it could outrace a Tesla, then struggled to raise cash. Itâ s the latest in a series of challenges for Jia, whoâ s been ordered back to China by regulators over unfulfilled loan obligations. The Netflix-like video service he founded, Leshi Internet Information & Technology Corp., just experienced its fifth straight day of 10 percent share declines.

Read more: Former Chinese Web Star Plunges as Analyst Tips More Declines

Evelozcity said it did not have nor need technology from Faraday Future.

â This complaint continues Faradayâ s pattern of hurling false and inflammatory accusations against us,â it said in a statement. â We will respond to the many recklessly inaccurate allegations in this desperate lawsuit at the appropriate time.â

Faraday said in a statement it hired Krause in March 2017 to raise funding and oversee its finances. Kranz was hired several months later. But by the fall, after meetings with investors, Krause was demanding Jia step down and give them operational control of the company, according to the filing.

The Faraday Future FF91 electric car.

Photographer: Patrick T. Fallon/Bloomberg

Much of the case revolves around the date of Krauseâ s departure. Heâ s said he quit in October while Faraday said in its claim that rival startup Evelozcity was incorporated on or about Nov. 7, a day after Krause asked its then-head of human resources to back-date his resignation by two weeks. Faraday said in a Nov. 10

release it had terminated Krauseâ s employmentover â malfeasanceâ with immediate effect, without citing a date.

Staff who left Faraday for Evelozcity were encouraged to download thousands of confidential documents and trade secrets from vendor databases to technical documents, Faraday said, calling for a jury trial.

As part of the case, Faraday said the company was able to obtain additional funding without Jia stepping down or Krauseâ s assistance, without stating the amount and source of the money. The companyâ s long-awaited flagship will hit the market by the beginning of 2019 but additional models are still more than two years away, it added.

The case is Faraday & Future Inc. v. Evelozcity Inc., 2:18-cv-00737, U.S. District Court, Central District of California (Western Division).

Townhall Columnists Marita Noon

Emails Catch White House Lie on Green-Energy Loans

- **Marita Noon**
- When he is confronted about the failed green-energy loan program, President Obama deflects blameâ pointing to â career bureaucratsâ in the Department of Energy (DOE) who supposedly approved the loans that have become an embarrassment to the White House.
- For months, along with researcher **Christine Lakotos**, Iâ ve been reporting on, first, the junk-bond rated projects (such as Solyndra) that received fast-tracked approval from the DOE and, then, the failed and troubled stimulus funded companies. Solyndra was just the tip of the iceberg. Embarrassment after embarrassment has come to light as the projects touted as the hope for Americaâ s future have filed for bankruptcy, sent money and jobs overseas, and faced technical difficulties.
- The 1705 loan guarantee program had 460 applicants, but only 7% were approvedâ 26 projects were funded. Of those 26 projects 22 were junk-bond ratedâ meaning private investors wouldnâ t fund them. So why did we, the taxpayers?
- Our research showed that at least 90% of the projects had close ties to the White House and other high ranking Democrats. Despite the obvious connection, President Obama has repeatedly denied any involvementâ preferring to blame â career bureaucratsâ who could take the fall with no political consequence.
- In March, Energy Secretary Steven Chu, testified that, â We looked at the loans on their own merits.â Also, back in November 2011, he said: â I am aware of no communication from White House to Department of Energy saying to make the loan or to restructure.â
- Just last week, on October 26, President Obama affirmed Chuâ s position when he said: â Decisions made in the loan program office are decisions, by the way, that are made by the Department of Energy, they have nothing to do with politics.â

- However, late Wednesday, the House Committee on Oversight and Government Reform released a**new report** of â over 150 emails that contradict statements by the President, Secretary Chu, and White House and DOE officials.â The emails reveal a series of questionable practices, including coercion, cronyism and, cover ups.
- The Committee has been asking for the emails and additional testimony since the Solyndra story broke in September of 2011, but the DOE has been refusing to cooperate. Emails were finally leaked from former DOE employees. Some of the incriminating evidence includes the following:
- From an email dated March 1, 2010 from David Schmitzer, DOE LPO Director of Loan Origination to LPO Credit Advisor McCrea and others:
- â Jonathan just said at our staff meeting that, opposite the message received on Thursday, AREVA is now a â goâ (seems on Friday POTUS himself approved moving it ahead).â
- From an email dated June 25, 2010, LPO Executive Director Jonathan Silver encourages LPO Credit Advisor Jim McCrea to remind a Treasury official of White House Interest in now bankrupt Abound Solar:

  "You better let him know that WH wants to move Abound forward. Policy will have to wait unless they have a specific policy problem with abound.â
- From an email dated September 9, 2010 from LPO Credit Advisor McCrea to DOE contractor Brian Oakley:
- "Pressure is on real heavy on SF [Shepherds Flat] due to interest from VP.â
- These emails are just a snippet of the 150 emails we are reviewing as a part of the just-released report. We have reported on each of the projects listed above and will report further.
- We know that the Obama Administration operates from a â culture of corruption,â now we see that there is also a culture of deception within the White House walls. The White House green lies are bigger than innocent, little white lies, they are expensive green lies that have produced $34.7 billion in red ink for the taxpayers.
- The Obama green energy program is the largest, most expensive, and deceptive case of crony capitalism in American history.

Exploding Gas Prices Are Killing The U.S. Economy. What Measures Can Trump Take To Lower Gas Prices And Save American Families?

Quora , CONTRIBUTOR

Rather than re-invent the wheel here, I'm going to focus on the actual question, which concerns short-term gas prices, and then briefly touch on the longer term. Paul Unterberg links to a post with ten ways the U.S. can lower gasoline prices.

1. **Eliminating the federal gas tax**: The U.S. collects 18.4 cents per gallon of gasoline sold in this country. It could reduce that to zero. This would roughly cut 5% off the retail price of gasoline assuming retailers didn't merely leave prices the same.

2. **Release oil from the Strategic Petroleum Reserve:** The reserve, set up for national-defense reasons, can be used a temporary market-manipulation tool. How temporary? Well, really temporary. There are seven hundred million barrels in the reserve and the world uses around ninety million barrels daily. The U.S. itself uses about twenty million barrels. The good news is that by sending relatively small amounts of oil onto world markets that come from this somewhat exogenous source, the effect on prices can be more pronounced. That said, the effect is short-term in nature and *has little to do with the current issues in the U.S. (see below).*
3. **EPA could create a uniform gas standard:** Some may not know this, but not all gas in the U.S. is the same. There are different blends in different states -- and even different seasons -- to try to limit emissions. Not all states have the same base standards, and the rules on seasonality are not consistent. This is one reason why gas in California is so pricey. It's not that the gas is inherently a ton more expensive, it's that it's a bit more expensive and refined and sold only in California. So we here exist in our own market. A broader, more uniform market would lower the price for everyone as all gas would be able to be sold anywhere in the U.S. The speed this could be achieved is another matter, but even an EPA mandate to immediately allow other western gas to be sold in California -- if not challenged in court -- would lower gas prices in the Golden State almost instantly.

- **Uncertainty around Iran and the Strait of Hormuz:** Sanctions on Iran are hurting its economy and the country has threatened to close the strait through which most Middle East oil flows. Despite our massive naval superiority, *Iran can likely accomplish this via mining*. They don't have to stop all tanker traffic, they merely have to convince tanker operators that a tanker might blow up if it crosses the strait. This is doable. Markets do not care for uncertainty and the price of crude oil has gone up as tensions have escalated. You want to end uncertainty around Iran? What's your plan? Let's consider the options: (1) War.. guaranteed supply disruptions and higher prices (2) end all sanctions. While many people favor (1), virtually no one favors (2) without also favoring (1).

- **Refinery capacity in the U.S. is tight, and the smallest interruptions in it are rapidly magnified at the pump**: The stuff the Saudis, Kuwaitis, Qataris, et al. pump out of the ground is really easy to

refine relative to most of our domestically and regionally produced oil. It used to commonly be called "Light Sweet Crude." Our own "West Texas Intermediate" is a bit messier. Regardless, all of it needs to be refined if you want to fill up with a relatively high-octane blend of gasoline at your pump. The U.S. has one hundred and forty eight oil refineries. Occasionally, one in the continental U.S. gets modernized or upgraded or a small addition gets made. How occasionally, well, it *has* happened four times in the last thirty years, most recently in 2008 and twice in the 1990s. The last time a full-fledged refinery with meaningful capacity opened in the continental U.S.? Try 1977 in Garyville, La. On the one hand, that's not as devastating as it sounds; U.S. gasoline consumption was one hundred and fifteen billion gallons in 1980 and "just" one hundred and seventy five billion in 2006. But, well, that's a difference of sixty billion gallons. To make up the shortfall, we actually important "finished product" in the form of gasoline most years. Not in 2011 however, when U.S. demand was still low due to the slow economy primarily. The U.S. was a heavy importer of crude still, but a net exporter of refined petroleum! Anyway, what does it all mean? It means refining capacity is on the razor's edge. When too much of it is offline at once, there is not enough gasoline in the proverbial pipeline and prices rise. And right now, too much is offline: http://online.wsj.com/article/BT...

- **Incidentally, the controversial Keystone pipeline that is partly back on track is focused currently on this refining problem**: The so-called souther section of the pipeline is about getting U.S.-produced crude where it's currently backlogged to refineries in the southeast. I'm not wading into the environmental debate here, but regardless, this kind of thing has zero short-term implications. In the long-term, any bottleneck in the chain that could lead to higher prices that one can remove is probably a good thing -- if it's not going to lead to tons of pollution.
- **Oil markets love speculative frenzy:** Whenever the price of oil starts to rise on uncertainty, traders like to try to profit by buying futures, trading derivatives, doing what traders do. *This tends to exacerbate upward moves to the upside (and downward moves to the downside, although perhaps somewhat less).* People tend to move hot money into a "winner," and right now oil is a winner. The price of crude is probably higher than intrinsic economic forces suggest it should be. There will be calls for the heads of "speculators" and demands for "an investigation." This is the markets at work. *It happens every time.* Stop whining about it.
- **Spring has sprung early**: Remember that stuff about gasoline blends and seasonality? Guess what, the "spring/summer" blends are hitting the market. It's warm in America. Changing product when refining capacity is already tight and the market price of the underlying commodity is rising, oh boy.
- **And, oh by the way, the ethanol subsidy got killed**: There was, a 45 cent per gallon discount on the ethanol that comprises 10% of most of the "gasoline" in this country. It's gone. Since 10% of your gas was probably ethanol, about 4.5 cents of your price increase was that subsidy. It was a stupid subsidy, and both parties agreed it was dumb. It's gone. Taxpayers "saved" $6 billion by killing it. Now, you're paying 5 cents more for all those gallons of gas you're buying. See how you "saved" the money, taxpayers? Oh, wait, you didn't.

As this issue resurfaced as the 10/16/12 presidential debate, it's worth mentioning something: President Obama should have said to the person asking, "No, the Dept. of Energy can't control gas prices. Gas prices are set on global markets by the price of a barrel of oil. The only reason we pay less for a gallon here than they do in Europe is that in Europe they add more taxes. But every time oil prices go up, gas prices go up here -- and in Europe. Countries that subsidize their own gas prices do so to keep their population distracted from how terrible the government is, like Iran, Venezuela, Nigeria. The unfortunate fact is, even if we stop importing oil from anywhere but Canada and Mexico -- even if we produce every single barrel we consume -- the price of oil in the U.S. will be set on world markets. And that means the U.S. can't control the price of gasoline without interfering with the ability of U.S. businesses to respond to markets. Neither I, nor Governor Romney, nor anyone that believes in free markets would ever accept such interference in the affairs of corporations and small businesses that drill for and produce oil.

"Over the coming decades, China, India, and others are going to have more people demanding more cars and will ensure that over the long-term the price of oil will go the same way it *always has* -- up! So while we

absolutely should continue to expand domestic production of oil, we'd be foolish not to start looking beyond oil for supplies of energy that are renewable, have prices we can predict, and will ultimately be cheaper. It's going to take a long time before any of those sources become more important than gasoline or coal to our economy, but if we don't keep focused on developing them now, we're going to simply keep paying more and more and lose any chance of leading the world in developing those next generation energy sources."

California is almost the only State that can solve it's gas price crisis. It can reduce the gas tax, reduce the blending requirements, add a discount for poor people and stop paying bribes from gas profits to the Jerry Brown, Nancy Pelosi and Diane Feinstein family investment trusts...but Brown, Pelosi and Feinstein are too greedy to give up their payola. They would rather see California families spend all of their food money on gasoline.

FBI AGENTS LIED TO US ABOUT INVESTIGATING OBAMA'S CRIMES AND RAN SOLYNDRA COVER-UPS INSTEAD!

WOW! Sara Carter Reveals FISA Memo Is So â Explosiveâ That It Could END Mueller Investigation

by Joshua Caplan 267 Comments

The House Intel panelâ s passage of New York Republican Rep. Peter Kingâ s motion to release the FISA abuse memo to fellow House members has rocked Washington, D.C.

Lawmakers from Rep. Matt Gaetz (R-FL) to Rep. Lee Zeldin (R-NY) have called for the classified memoâ s immediate release. According to *Fox News* contributor Sara Carter, the contents of the memo are so â explosive,â that it could end special counsel Robert Muellerâ s Russia probe once and for all.

Sara Carter reports:

> A review of a classified document outlining what is described as extensive Foreign Intelligence Surveillance Act abuse was made available to all House members Thursday and the revelations could lead to the removal of senior officials in the FBI and Department of Justice, several sources with knowledge of the document stated. These sources say the report is â explosive,â stating they would not be surprised if it leads to the end of Robert Muellerâ s Special Counsel investigation into President Trump and his associates. [â ¦]
>
> Congressional members are hopeful that the classified information will be declassified and released to the public.
>
> â We probably will get this stuff released by the end of the month,â stated a congressional member, who asked not to be named.
>
> But the government official, who viewed the document said â it will be tough for a lot of people to see this and especially the media, which has been attempting to deemphasize the dossier. Itâ s going to punch a hole in their collusion narrative.â

On Thursday, the House Intelligence Committee quietly voted to make available to fellow House members â a memo documenting abuse of the FISA program,â reports *Fox Newsâ* Chad Pergram. Rep Lee Zeldin (R-NY) is demanding the secret memo be released immediately.

> Just read the classified doc @HPSCI re FISA abuse. I'm calling for its immediate public release w/relevant sourced material. The public must have access ASAP! #Transparency
>
> â Lee Zeldin (@RepLeeZeldin) January 18, 2018

â Just read the classified doc @HPSCI re FISA abuse. Iâ m calling for its immediate public release w/relevant sourced material. The public must have access ASAP! #Transparency.â

> Releasing this classified info doesn't compromise good sources & methods. It reveals the feds' reliance on bad sources & methods.
>
> â Lee Zeldin (@RepLeeZeldin) January 18, 2018

â Releasing this classified info doesnâ t compromise good sources & methods. It reveals the fedsâ reliance on bad sources & methods,â added Zeldin.

As *The Gateway Pundit*â s Jim Hoft reported, Rep. Matt Gaetz (R-FL) joined Liz Claman on *FOX Business Network* to discuss the FISA abuse report.

Rep. Gaetz told Claman:

> â The allegations contained in this important intelligence document go to the very foundations of our democracy and they require an immediate release to the public in my opinion.â
>
> .@mattgaetz: "The allegations contained in this important intelligence document go to the very foundations of our democracy and they require an immediate release to the public in my opinion." pic.twitter.com/kqjxp21GcA

REPORT: MORE Top FBI Agents Who Worked On Clinton Email Probe Rumored To Be Leaving

December 27, 2017 by Joshua Caplan 232 Comments

- **1.9K**Share
- **179**Tweet
- Email

Perceived political bias in the Clinton email investigation demonstrated by former FBI Director James Comey, his #2 Andrew McCabe and disgraced bureau agent Peter Strzok, have wrought immense damage to the federal law enforcement agency. The fall out prompted by Strzokâ s anti-Trump text messages and the FBIâ s role in the dubious Fusion GPS dossier has led to big-fish, such as McCabe and James Baker, to either plot early retirement or be reassigned.

According to reporter Sharyl Attkisson, the exodus may not be over just yet.

â 8 high ranking DOJ/FBI officials have been removed, reassigned or are rumored to be leaving incl. top agents who worked on 2 high-profile probes: Clinton mishandling of classified info, and Trump-Russia collusion investigation,â Attkisson tweeted on Tuesday.

The reporter did not elaborate on the rumbling, but with all that has occurred, it would not be surprising to see more top FBI officials leave.

> 8 high ranking DOJ/FBI officials have been removed, reassigned or are rumored to be leaving incl. top agents who worked on 2 high-profile probes: Clinton mishandling of classified info, and Trump-Russia collusion
> investigation. https://t.co/DWkN7kNUA1 pic.twitter.com/3BgAnjCv9J
>
> â Sharyl Attkisson (@SharylAttkisson) December 27, 2017

The timing of Attkissonâ s tweet is interesting for two reasons. First, McCabe is set to retire early next year after a barrage of attacks for his corruption.

McCabeâ s retirement announcement comes on the heels of a major shake up at the FBI; Wray just removed Comey â confidantâ and suspected leaker James Baker from his top post as general counsel.

President Trump blasted Andrew McCabe for his overt corruption and accused him of racing the clock to retire with full benefits with only 90 days to go.

With Comey and McCabe out, Baker reassigned, and more FBI officials gone, a self-drainage of the Swamp appears to be in motion.

Second, House Intelligence Committee Chairman Devin Nunes is seriously considering compiling a â warts and all,â report detailing alleged corruption at the FBI. Itâ s plausible the agents rumored to be heading for the door will be included in Nunesâ report and rather than face political headwinds, theyâ ll resign instead.

As of late, we have watched Republican lawmakers point a lot of fingers and toss out a bunch of theories as to who should be held responsible for sourcing, procuring and disseminating the discredited â Trump dossier.â A new report reveals lawmakers are secretly building a criminal case against top Justice Department and FBI officials for mishandling â the contents of a dossier that describes alleged ties between President Donald Trump and Russia.â

FBI DIRECTOR COMEY LIED TO COVER-UP THE CLEAN-TECH CRASH SCAM FOR OBAMA AND HILLARY!

Newly unveiled transcripts of the FBIâ s interviews with former agency director James Comeyâ s aides reveal that he made the decision to not refer former Secretary of State Hillary Clinton for prosecution long before the conclusion of the investigation into her illicit activities.

Included in a letter sent this week to FBI Director Christopher Wray by Senate Judiciary Committee chairman Charles E. Grassley and Lindsey Graham, the now-unredacted transcripts paint a disturbing piece of judicial imprudence at its worst.

â (I)t appears that in April or early May of 2016, Mr. Comey had already decided he would issue a statement exonerating Secretary Clinton,â the senators wrote. â That was long before FBI agents finished their work. Mr. Comey even circulated an early draft statement to select members of senior FBI leadership.â

The letter went on to accuse the former FBI director of attempting to steer the investigation toward his own preferred result:

â Conclusion first, fact-gathering second â thatâ s no way to run an investigation,â the senators wrote. The FBI should be held to a higher standard than that, especially in a matter of such great public interest and controversy.â

Correct.

Moreover, Comey began drafting his exoneration statement, which he later read in a news briefing on July 5, before the FBI interviewed 17 key witnesses, including Clinton herself, and prior to the FBI entering into an immunity agreement with Clintonâ s top aides, Cheryl Mills and Heather Samuelson.

Below is a list of the key witnesses, along with the date they were interviewed by the FBI (H/T Zero Hedge):

And judging by the reaction of President Donald Trump, who battled Clinton during the presidential election last year, heâ s none too pleased:

> Wow, looks like James Comey exonerated Hillary Clinton long before the investigation was overâ¦and so much more. A rigged system!
>
> â Donald J. Trump (@realDonaldTrump) September 1, 2017

A rigged system indeed, though with Trumpâ s officials now at the helm of the Justice Department, justice will, hopefully and finally, be served.

Please share this story on Facebook and Twitter and let us know what you think about the stunning revelation that former FBI Director James Comey had essentially prejudged the investigation into Hillary Clinton.

What do you think about what Comey did? Scroll down to comment below!

BOMBSHELL: FBI Informant In Uranium One Scandal Testifies Against Obama. Here's What He Said.

"I was frustrated watching the U.S. government make numerous decisions benefiting Rosatom and Tenex while those entities were engaged in serious criminal conduct on U.S. soil."

Chip Somodevilla/Getty Images

ByRYAN SAAVEDRA February 7, 2018

383.6k views

The FBIâ s informant in the Uranium One scandal involving the Obama administration gave written testimony to three congressional committees this week in which he accused the Obama administration of making decisions that directly benefited the Russian government and their goals of gaining geopolitical advantages over the United States.

The informant, Douglas Campbell, told congressional investigators on Wednesday that Moscow sent millions of dollars to the U.S. with the expectation that it would benefit the Clintons, while Hillary Clinton "quarterbacked a 'reset' in US-Russian relations" in her role as Secretary of State during the Obama administration, The Hill reported.

Key facts:

- Campbell participated in closed-door interviews with the Senate Judiciary, House Intelligence and House Oversight and Government Reform committees.
- Campbell said that Russian nuclear officials told him that Moscow hired an American lobbying firm, APCO Worldwide, because it was in a unique position to influence the Obama administration, Hillary Clinton in particular.
- Democrats are aggressively trying to discredit him but are having little success as "the FBI found Campbellâ s undercover work valuable enough to reward him with a $50,000 check in 2016."
- Campbell says that the FBI told him that his work was "briefed to President Obama as part of his daily presidential briefing," which would mean that Obama was aware of the crimes committed by the Russian officials.
- The FBI forced him to pay $500,000 of his own money to Russian officials as bribes to facilitate his cover, and the bureau never reimbursed him despite their praise of his work and the fact that the ordeal was so stressful that he developed serious, life-threatening illnesses.
- Initially, reports indicated that Campbell was threatened by the Obama administration in an attempt to silence him before the 2016 election as they did not want this case hurting Hillary Clinton after then-Attorney General Loretta Lynch's Justice Department learned that he filed a lawsuit in a Maryland federal court. It was not immediately clear what the lawsuit was about, however Sara Carter reports: "Campbell filed a lawsuit in Maryland federal court against the Russian nuclear entities asking for the return of the money he had to launder out of his own paychecks."
- "Russian and American executives implicated in the Tenex bribery scheme specifically asked him to try to help get the Uranium One deal approved by the Obama administration," The Hill noted.
- He provided documentation of the corruption and crimes taking place to help Russia to the Obama administration months before they made a series of decisions that directly benefited Vladimir Putin and the Russian government.

- He provided documentation to the Obama administration that showed that the Russian government was actively involved in trying to help Iran develop their nuclear capabilities years before the Obama administration implemented the now-infamous Iran deal.
- He said that he was told by the FBI that the politics of the Obama administration overruled justice from taking place against the criminal activity that was happening.

â I was frustrated watching the U.S. government make numerous decisions benefiting Rosatom and Tenex while those entities were engaged in serious criminal conduct on U.S. soil,â Campbell said in his testimony, as reported by The Hill's John Solomon. â Tenex and Rosatom were raking in billions of U.S. dollars by signing contracts with American nuclear utility clients at the same time they were indulging in extortion by using threats to get bribes and kickbacks, with a portion going to Russia for high ranking officials.â

â I remember one response I got from an agent when I asked how it was possible CFIUS would approve the Uranium One sale when the FBI could prove Rosatom was engaged in criminal conduct," Campbell continued. "His answer: â Ask your politics.'"

Some of the key players that were engaging in the criminal racketeering case have started to face justice, albeit years later. Sara A. Carter reports:

> It wasnâ t until years later in 2015 that American businessman Daren Condrey, whose company Transportation Logistics International, plead guilty to conspiring to violate the Foreign Corrupt Practices Act (FCPA) and conspiring to commit wire fraud, according to the DOJ.
>
> Russian national Vadim Mikerin, who was a top official of the Russian nuclear arms subsidiary Tenex and would later become president of Tenam the American subsidiary of Rosatom, was also sentenced in December 2015. Mikerin, who only plead guilty to money laundering, was arrested for a racketeering scheme that dated back to 2004. He was sentenced to 48 months in prison.
>
> Boris Rubizhevsky, another Russian national from New Jersey, who was president of the security firm NEXGEN Security, was also involved in the conspiracy and plead guilty to conspiracy to commit money laundering in 2015. He served as a consultant to Tenam and to Mikerin. Rubizhevsky was sentenced to prison last year along with three years of supervised release and a $26,500 fine, according to a recent Reuters report.

And Mark Lambert, 54, a co-owner of Transportation Logistics International, was charged this month on an â 11-count indictment with one count of conspiracy to violate the Foreign Corrupt Practices Act (FCPA) and to commit wire fraud, seven counts of violating the FCPA, two counts of wire fraud and one count of international promotion money laundering,â as stated in the DOJ press release. Lambertâ s charges stem from an alleged scheme to bribe Mikerin in order to secure contracts with TENEX, according to the DOJ release.

FBI informant gathered years of evidence on Russian push for US nuclear fuel deals, including Uranium One, memos show

BY JOHN SOLOMON - 2,592

Progress: 0%

-1:05 ShareFullscreen

An FBI informant gathered extensive evidence during his six years undercover about a Russian plot to corner the American uranium market, ranging from corruption inside a U.S. nuclear transport company to Obama administration approvals that let Moscow buy and sell more atomic fuels, according to more than 5,000 pages of documents from the counterintelligence investigation.

The memos, reviewed by The Hill, conflict with statements made by Justice Department officials in recent days that informant William Campbellâ s prior work wonâ t shed much light on the U.S. governmentâ s controversial decision in 2010 to approve Russiaâ s purchase of the Uranium One mining company and its substantial U.S. assets.

Campbell documented for his FBI handlers the first illegal activity by Russians nuclear industry officials in fall 2009, nearly an entire year before the Russian state-owned Rosatom nuclear firm won Obama administration approval for the Uranium One deal, the memos show.

ADVERTISEMENT Campbell, who was paid $50,000 a month to consult for the firm, was solicited by Rosatom colleagues to help overcome political opposition to the Uranium One purchase while collecting FBI evidence that the sale was part of a larger effort by Moscow to make the U.S. more dependent on Russian uranium, contemporaneous emails and memos show.

â The attached article is of interest as I believe it highlights the ongoing resolve in Russia to gradually and systematically acquire and control global energy resources,â Rod Fisk, an American contractor working for the Russians, wrote in a June 24, 2010, email to Campbell.

The email forwarded an article on Rosatomâ s efforts to buy Uranium One through its ARMZ subsidiary.

977

Fisk also related information from a conversation with the Canadian executives of the mining firm about their discomfort with the impending sale.

â I spoke with a senior Uranium One Executive,â Fisk wrote Campbell, detailing his personal history with some of the companyâ s figures. â He said that corporate Management was not even told before the announcement [of the sale] was made.

â There are a lot of concerns,â Fisk added, predicting the Canadians would exit the company with buyouts once the Russians took control. Fisk added the premium price the Russians were paying to buy a mining firm that in 2010 controlled about 20 percent of Americaâ s uranium production seemed â strange.â

At the time, Campell was working alongside Fisk as an American consultant to Rosatomâ s commercial sales arm, Tenex.

But unbeknownst to his colleagues, Campbell also was serving as an FBI informant gathering evidence that Fisk, Tenex executive Vadim Mikerin and several others were engaged in a racketeering scheme involving millions of dollars in bribes and kickbacks, plus extortion and money laundering.

Justice Department officials confirmed the emails and documents gathered by Campbell, saying they were in the possession of the FBI, the department's national security division and its criminal division at various times over the last decade. They added that Campbell's work was valuable enough that the FBI paid him nearly $200,000, mostly for reimbursements over six years, but that the money also included a check for more than $51,000 in compensation after the final convictions were secured.

The information he gathered on Uranium One was more significant to the counterintelligence aspect of the case that started in 2008 than the eventual criminal prosecutions that began in 2013, they added.

Justice Department spokeswoman Sarah Isgur Flores said Monday that the agency plans to brief members of Congress next week on Campbell's work, the counterintelligence investigation into Russian uranium and the nuclear bribery case. Some issues related to the case are also being reviewed by senior Justice officials, she added.

"The Department of Justice has authorized the confidential informant to disclose to the chairmen and ranking members of the Senate Committee on the Judiciary, the House Committee on Oversight and Government Reform, and the House Permanent Select Committee on Intelligence, as well as staff, any information or documents he has concerning alleged corruption or bribery involving transactions in the uranium market. Until the informant publicly speaks to what he knew or knows about these matters, we are unable to respond further," she said.

Campbellâ s undercover work helped FBI counterintelligence chronicle a Russian uranium strategy modeled after Moscowâ s success in creating natural gas monopolies in eastern Europe that strengthened Russiaâ s economy and geopolitical standing after the Cold War, the officials said.

Part of the goal was to make Americans more reliant on Russian uranium before a program that converted former Soviet warheads into U.S. nuclear fuel expired in 2013, according to documents and interviews. Russiaâ s ambitions included building a uranium enrichment facility on U.S. soil, the documents show.

The FBI task force supervising Campbell since 2008 watched as the Obama administration made more than a half dozen decisions favorable to the Russians' plan, which ranged from approving the sale of Uranium One to removing Rosatom from export restrictions and making it easier for Moscow to win billions in new commercial uranium sales contracts. The favorable decisions occurred during a time when President Obama and Secretary of State Hillary Clinton were pursuing a public "reset" to improve relations with

Moscow, a plan that fell apart after Russia invaded Ukraine.

Campbell also produced leads for the FBI about suspicious activity inside Iranâ s and South Africaâ s nuclear industries, the documents show.

And most importantly, it developed concrete evidence that Tenex â at its Russian leadershipâ s behest â had engaged in a massive racketeering scheme. That evidence led to indictments in 2014 and the convictions of several figures in 2015.

The defendants who pled guilty included Mikerin, the very man Russia sent to the United States to lead its uranium strategy, as well as the head of the American trucking company that moved Russiaâ s uranium around the United States.

Multiple congressional committees recently got permission from the Justice Department to interview Campbell after The Hill reported last month the existence of his informant work.

Lawmakers want to know what the FBI did with the evidence Campbell gathered in real time and whether it warned Obama and top leaders before they made the Russia-favorable decisions, like the Uranium One deal.

Since Campbellâ s identity emerged in recent days, there have been several statements by Justice officials, both on the record and anonymously, casting doubt on the timing and value of his work, and specifically his knowledge about Uranium One.

The more than 5,000 pages of documents reviewed by The Hill directly conflict with some of the Justice officialsâ accounts.

For instance, both Attorney General Jeff Sessions in testimony last week and Deputy Attorney General Rod Rosenstein in a letter to the Senate last month tried to suggest there was no connection between Uranium One and the nuclear bribery case. Their argument was that the criminal charges werenâ t filed until 2014, while the Committee on Foreign Investment in the United States' (CFIUS) approval of the Uranium One sale occurred in October 2010.

â The way I understand that matter is that the case in which Mr. Mikerin was convicted was not connected to the CFIUS problem that occurred two to three years before,â Sessions testified to the House Judiciary Committee last week, echoing Rosensteinâ s letter from a few weeks earlier.

But investigative records show FBI counterintelligence recorded the first illicit payments in the bribery/kickback scheme in November 2009, a year before the CFIUS approval.

Campbell also relayed detailed information about criminal conduct throughout 2010, including the coordinates for various money laundering drops, according to his FBI debriefing reports. The evidence Campbell gathered indicated Mikerinâ s corruption scheme was being directed by and benefitting more senior officials with Rosatom and Tenex back in Russia, the records show, a claim U.S. officials would make in court years later.

â There is zero doubt we had evidence of criminal activity before the CFIUS approval and that Justice knew about it through [the natural security division],â said a source with direct knowledge of the investigation.

Republican members of Congress have been angered by the Justice Departmentâ s first answers because they conflict with the evidence already gathered in their probe.

â Attorney General Sessions seemed to say that the bribery, racketeering and money laundering offenses

involving Tenexâ s Vadim Mikerin occurred after the approval of the Uranium One deal by the Obama administration. But we know that the FBIâ s confidential informant was actively compiling incriminating evidence as far back as 2009,â Rep. Ron DeSantis (R-Fla.) told The Hill.

â It is hard to fathom how such a transaction could have been approved without the existence of the underlying corruption being disclosed. I hope AG Sessions gets briefed about the CI and gives the Uranium One case the scrutiny it deserves,â added DeSantis, whose House Oversight and Government Reform subcommittee is one of the investigating panels.

Senate Judiciary Committee Chairman Chuck Grassley (R-Iowa) sent a similar rebuke last week to Rosenstein, saying the deputy attorney generalâ s first response to the committee â largely missed the pointâ of the congressional investigations.

â The essential question is whether the Obama Justice Department provided notice of the criminal activity of certain officials before the CFIUS approval of the Uranium One deal and other government decisions that enabled the Russians to trade nuclear materials in the U.S.,â Grassley said.

Flores said Sessions stands by his testimony. "The Attorney Generalâ s testimony is accurate. The criminal case in which Mikerin was convicted and the factual and legal requirements needed to make that case did not address the CFIUS matter," the Justice spokeswoman said.

Similar misinformation surfaced last week in articles by Reuters and Yahoo News in which officials were quoted as casting doubt that Campbell had any information about the Uranium One deal, because Tenex was a different division of Rosatom than the ARMZ subsidiary that bought the mining firm.

But Campbellâ s FBI informant file shows Uranium One came up several times in 2010 as the sale was pending, partly because Tenex was Rosatomâ s commercial arm and would be charged with finding markets for the new uranium being mined and enriched both in the United States and abroad.

Campbell himself was directly solicited by his colleagues to help overcome opposition to the Uranium One deal, the FBI informant files show. In an Oct. 6, 2010, email with the subject line â ARMZ + Uranium One,â Fisk forwarded a news article outlining Republican efforts to derail the sale.

â The referenced article may present a very good opportunity for Sigma [Campbellâ s company] to try and remove the opposing influences, if that is something you can do,â Fisk wrote the informant, who was also a paid consultant for the company at the time.

The next day, Mikerin was sent an 11-page report laying out the larger Russian nuclear strategy and what Russia wanted to do inside the U.S. to gain advantage in the uranium market. The report cited specific concerns about the political pressure opposing Uranium One if it wasnâ t overcome. Campbell intercepted the document.

â Some Republicans truly fear the entry of Russia into the U.S. market, as demonstrated by the fact that they are taking steps to block the purchase of Uranium One,â the report warned Mikerin. â This effort bears watching as it may provide clues as to the likely political reaction if a Russian entity was going to participate in the construction and operation of a uranium enrichment plant in the U.S.â

After Rosatomâ s sale was approved, Uranium One officials would have direct contact with Tenex and Mikerin, some of which was witnessed by Campbell, the documents show.

For instance, Mikerin forwarded to Campbell an email in 2012 from a Uranium One executive suggesting the

planned construction of a new nuclear reactor near Augusta, Ga., might prove a good opportunity for both Uranium One and Tenex to expand their business, the documents show.

Campbellâ s debriefing files also show he regularly mentioned to FBI agents in 2010 a Washington entity with close ties to Bill and Hillary Clinton that was being paid millions to help expand Tenexâ s business in the United States. The entity began increasing its financial support to a Clinton charitable project after it was hired by the Russians, according to the documents.

Campbell engaged in conversations with his Russian colleagues about the efforts of the Washington entity and others to gain influence with the Clintons and the Obama administration. He also listened as visiting Russians used racially tinged insults to boast about how easy they found it to win uranium business under Obama, according to a source familiar with Campbellâ s planned testimony to Congress.

Uranium One was a large enough concern for the informant that he confronted one of his FBI handlers after learning the CFIUS had approved the sale and that the U.S. had given Mikerin a work visa despite the extensive evidence of his criminal activity, the source said.

The agent responded back to the informant with a comment suggesting â politicsâ was involved, the source familiar with Campbellâ s planned testimony said.

Justice officials said federal prosecutors have no records that Campbell or his lawyer made any allegations about the Uranium One deal during his debriefings in the criminal case that started in 2013, but acknowledged he collected evidence about the mining deal during the FBI counterintelligence investigation that preceded it.

In recent days, news media including The Washington Post and Fox News anchor Shepard Smith have inaccurately reported another element of the story: that Uranium One never exported its American uranium because the Obama administration did not allow it.

However, the Nuclear Regulatory Commission authorized Uranium One to export through a third party tons of uranium to Canada for enrichment processing, and some of that product ended up in Europe, NRC documents state.

A Uranium One executive acknowledged to The Hill that 25 percent of the uranium it shipped to Canada under the third-party export license ended up with either European or Asian customers through what it known in the nuclear business as â book transfers.â

But the recent leaks that have most concerned congressional investigators occurred in a Yahoo story late Friday, in which Justice officials anonymously questioned Campbellâ s credibility and suggested they had to alter their criminal case against Mikerin in 2015, eventually striking a plea deal, because they feared he would be a â disasterâ as a trial witness.

The FBI informant file, however, paints a different picture. After Mikerin pleaded guilty and was sentenced to 48 months prison in December 2015, the FBI took Campbell out to a celebratory seafood dinner and delivered a handsome reward: a check for $51,046.36 dated Jan. 7, 2016, a copy of which was obtained by The Hill.

A source directly familiar with the FBIâ s evidence said the primary reason prosecutors working under Rosenstein, then the U.S. attorney in Maryland, changed course in the case was because of concerns their initial indictment miscast Campbellâ s role in the investigation.

The original indictments and affidavits portrayed Campbell as a â victimâ who became a confidential witness after the Russians tried to â extortâ him in summer 2009 into a kickback scheme, court records show.

In fact, Campbell was an informant deeply controlled by FBI counterintelligence starting when he signed a nondisclosure agreement in January 2008, more than a year before Mikerin engaged him in the criminal activity, the FBIâ s records show.

Campbell was inserted inside Mikerinâ s world specifically to look for criminal activity and other harmful national security actions by the Russians, starting with undercover work he performed as a consultant contracting with a lobbying firm in 2008 and then inside Tenex starting in 2009, according to documents and memos.

Campbellâ s regular debriefings dating to 2008 show the nature of some of his undercover work, including making surreptitious recordings and collecting documents well before the first money laundering started inside Tenex in 2009. He also had a long history of collaboration with U.S. intelligence, including the FBI, that predated his case, sources told The Hill.

To facilitate his cover, Campbell made a cash payment in summer 2009 to a Russian consultant after he secured the Tenex consulting contract. His Russian colleagues demanded he hire the overseas consultant to better learn the company's strategy and how the Russians preferred to receive their consulting reports, sources said.

The transaction later worried prosecutors in the criminal case because they feared it might muddy their case of extortion against Mikerin because the voluntary payment was made only shortly before the kickback demands started, the sources said.

The prosecutors also faced another concern about the case unrelated to Campbell, the sources said.

When Fisk â one of the main targets of their bribery investigation â died in 2011, the FBI did not execute a grand jury subpoena to capture all of his evidence. Instead, agents asked his widow for permission to voluntarily search his computer hard drive and remove the documents the agents wanted.

The hard drive was subsequently discarded before the criminal charges were filed, leaving it unavailable for defense lawyers to search, the sources said. Defense lawyers pounced on the revelation late in the case, court records show.

At the time, Fisk was a larger than life figure inside the Russian nuclear industry, having headed the trucking firm that moved uranium across the United States on behalf of Rosatom. Campbell helped the FBI document that both Fisk, starting in 2004, and a successor, starting in 2011, at the trucking firm were paying bribes to the Russians, the records show.

During 2010, Fisk was transitioning from the trucking firm to become a key strategist for Tenex and Mikerin, advising them on the Russian nuclear industryâ s aggressive push to expand its business in the United States.

Sources said the recasting of the prosecution in 2015 had much to do with avoiding exposing the extensive nature of the FBI counterintelligence operations that involved Campbell.

â This isnâ t really about his credibility or work, which generated leads we relied on well into 2016. Often times, CI investigations are focused first on monitoring and stopping activity that threatens U.S. security and the consequences to later criminal case are a secondary concern,â said one source familiar with the probe. â Thatâ s the reality of a dirty business.â

Asked whether the criminal side of the Justice Department knew about Campbellâ s work, including its origins to 2008 and its possible ties to Uranium One, a source with direct knowledge said the prosecutors

acquired all of Campbellâ s emails as part of a 2015 agreement he signed. Justice also had access to Campbellâ s emails recovered from Fiskâ s computers in 2011 as well as documents Campbell gave during debriefings that started in 2008, the source added.

The sources familiar with the full body of Campbellâ s work said they expect he can provide significant new information to Congress.

â Will he be able to prove that we knew Russia was engaged in criminal conduct before Uranium One was approved? You bet,â the source said. â Were the Russians using political influence and pulling political levers to try to win stuff from the U.S. government? You bet. Was he perfect? No one in this line of work is. But we were focused on much larger issues than just that.â

Campbell endured significant stress during his time undercover and suffered a handful of episodes related to drinking, resulting in two misdemeanor reckless driving charges and one misdemeanor driving under the influence, his lawyer said.

Attorney Victoria Toensing told The Hill that the FBI was fully aware of the drinking incidents and continued to use her client for many years after.

â Until he began working undercover for the U.S. government in his early 60s, Mr. Campbell had an unblemished driving record,â she said. â However, the pressure of living a double life and being threatened by the Russians if he violated their trust took a toll.

â Additionally, there were numerous occasions where he was required to meet socially with the Russians, who were prodigious imbibers of vodka. Any refusal by him to participate could have compromised his cover. Mr. Campbell has not had any driving or drinking issue since 2014 when he ceased working undercover."

TAGS HILLARY CLINTON, Uranium1, Uranium One,CHUCK GRASSLEY, JEFF SESSIONS,RON DESANTIS

FEDS NEED TO TAKE ACTION TO REDUCE GAS PRICES OR U.S. FAMILIES WILL BE RUINED!

Gas prices are expected to increase 14% this summer compared to last. That would push the average price for a gallon of gas in California to just over $4.

The Energy Information Administration released the report Tuesday. The agency considers April until September the summer driving season.

Summer prices are typically higher due to consumer demand; however, this spike is mostly due to higher crude oil prices.

ALSO READ: Trump EPA Expected To Roll Back Gas Mileage Standards

Last summer drivers nationwide paid $2.41 for a gallon of regular gas. This summer the average is expected to be $2.74 a gallon. Thatâ s a 33 cent increase. On April 11, 2018, according to AAA, the average gallon of regular gas costs $2.66.

The prices are much higher in California. AAA reports drivers statewide are paying an average of $3.52 a gallon. Last month we paid $3.37 a gallon. A year ago at this time the price per gallon was $2.99.

This region is seeing a bit of a break. Sacramento drivers are currently paying $3.43 a gallon. Stocktonâ s average price is $3.42 a gallon. Modesto comes in with the lowest price at $3.35 a gallon.

California recorded its highest average price on October 9, 2012 when drivers paid $4.67 a gallon.

FREEDOM OF INFORMATION FILING REVEALS CORRUPTION HORRORS

This was found in federal records reports today:

FOIA REQUEST # DOE-7JUL18-A

July 27, 2018

TO:
United States Department of Energy
FOIA Officer
Department of Energy
Environmental Management Consolidated Business Center
ATTN: FOIA/PA Requester Service Center
250 E. 5th Street, Suite 500
Cincinnati, OH 45202
Fax: (513) 246-0524
Email: foiaoffice@emcbc.doe.gov

BCC: GAO, IG, Congress

FROM:
The Technology Alliance
Email Response: DOE@congressionalreview.net

RE: Request Under Freedom of Information Act (Expedited Processing & Fee Waiver Requested)

Dear FOIA officer:

Pursuant to the Freedom of Information Act (FOIA), 5 U.S.C. Â§ 552 et seq. and the implementing regulations of the United States Department of Energy (DOE), 43 C.F.R. Part 2, we make the following request for FOIA data.

Requested Records:

Our Office requests that United States Department of Energy produce the following within twenty business days and further seeks expedited review of this request for the reasons identified below:

1. All records discussing, referring, or relating to all meetings or communications between DOE staff and the law firm of Perkins Coie and their representatives including minutes of those meetings, or any memorandum written about these meetings by the DOE employees and contractors who were present.

Our Office seeks all responsive records regardless of format, medium, or physical characteristics. In conducting your search, please understand the terms â records,â â communications,â and â documentsâ in their broadest

sense, to include any written, typed, recorded, graphic, printed, or audio material of any kind. We seek records of any kind, including electronic records, audiotapes, videotapes, and photographs, as well as letters, emails, facsimiles, telephone messages, voice mail messages and transcripts, notes, or minutes of any meetings, telephone conversations or discussions. Our request includes any attachments to these records. No category of material should be omitted from search, collection, and production. You may not exclude searches of files or emails in the personal custody of your officials, such as personal email accounts. Records of official business conducted using unofficial systems or stored outside of official files is subject to the Federal Records Act and FOIA. It is not adequate to rely on policies and procedures that require officials to move such information to official systems within a certain period of time; Our Office has a right to records contained in those files even if material has not yet been moved to official systems or if officials have, through negligence or willfulness, failed to meet their obligations. Custodian searches are still required; agencies may not have direct access to files stored in .PST files, outside of network drives, in paper format, or in personal email accounts. In addition, please note that in conducting a â reasonable searchâ as required by law, you must employ the most up-to-date technologies and tools available, in addition to searches by individual custodians likely to have responsive information. Recent technology may have rendered the DOEâ s prior FOIA practices unreasonable. In light of the government-wide requirements to manage information electronically by the end of 2016, it is no longer reasonable to rely exclusively on custodian-driven searches. Furthermore, agencies that have adopted the NARA Capstone program, or similar policies, now maintain emails in a form that is reasonably likely to be more complete than individual custodiansâ files. For example, a custodian may have deleted a responsive email from his or her email program, but the DOEâ s archiving tools would capture that email under Capstone. Accordingly, Our Office insists that the DOE use the most up-to-date technologies to search for responsive information and take steps to ensure that the most complete repositories of information are searched. If any potentially responsive records have been destroyed and/or transferred to other agencies or offices, such as the National Archives and Records Agency (NARA), then I request copies of the destruction or transfer slips as well as any other documentation relating to, mentioning or describing said transfer or destruction, to include but not be limited to confirmation that the DOE has no other copies of said records. Under the FOIA Improvement Act of 2016, agencies must adopt a presumption of disclosure, withholding information â only if . . . disclosure would harm an interest protected by an exemptionâ or â disclosure is prohibited by law.â If it is your position that any portion of the requested records is exempt from disclosure,

Our Office requests that you provide an index of those documents as required under Vaughn v. Rosen, 484 F.2d 820 (D.C. Cir. 1973), cert. denied, 415 U.S. 977 (1974). As you are aware, a Vaughn index must describe each document claimed as exempt with sufficient specificity â to permit a reasoned judgment as to whether the material is actually exempt under FOIA.â Moreover, the Vaughn index â must describe each document or portion thereof withheld, and for each withholding it must discuss the consequences of disclosing the sought-after information.â Further, â the withholding agency must supply â a relatively detailed justification, specifically identifying the reasons why a particular exemption is relevant and correlating those claims with the particular part of a withheld document to which they apply.â â

See - Competitive Enter. Inst. v. Office of Sci. & Tech. Policy , 827 F.3d 145, 149â 50 (D.C. Cir. 2016);
cf. Judicial Watch, Inc. v. Kerry , 844 F.3d 952, 955â 56 (D.C. Cir. 2016) Id.

at 8 (â The Government argues that because the agency had a policy requiring [the official] to forward all of his emails from his [personal] account to his business email, the [personal] account only contains duplicate agency records at best. Therefore, the Government claims that any hypothetical deletion of the [personal account] emails would still leave a copy of those records intact in [the officialâ s] work email. However, policies are rarely followed to perfection by anyone. At this stage of the case, the Court cannot assume that each and every work-related email in the [personal] account was duplicated in [the officialâ s] work email account.â (citations omitted))

Office of the President, Memorandum for the Heads of Executive Departments & Independent Agencies, â Managing Government Records Directive,â M-12-18 (Aug. 24, 2012), http://bit.ly/2raBimr

See - FOIA Improvement Act of 2016 Â§ 2 (Pub. L. No. 114â 185)

See- Founding Church of Scientology v. Bell , 603 F.2d 945, 949 (D.C. Cir. 1979)

See - King v. U.S. Depâ t of Justice , 830 F.2d 210, 223â 24 (D.C. Cir. 1987) (emphasis in original)

See - Id. at 224 (citing Mead Data Central, Inc. v. U.S. Depâ t of the Air Force , 566 F.2d 242, 251 (D.C. Cir. 1977)

In the event some portions of the requested records are properly exempt from disclosure, please disclose any reasonably segregable nonexempt portions of the requested records. If it is your position that a document contains non-exempt segments, but that those non-exempt segments are so dispersed throughout the document as to make segregation impossible, please state what portion of the document is non-exempt, and how the material is dispersed throughout the document. Claims of non-segregability must be made with the same degree of detail as required for claims of exemptions in a Vaughn index. If a request is denied in whole, please state specifically that it is not reasonable to segregate portions of the record for release. In addition to the records requested above, Our Office also requests records describing the processing of this request, including records sufficient to identify search terms used and locations and custodians searched and any tracking sheets used to track the processing of this request. If the DOE uses FOIA questionnaires or certifications completed by individual custodians or components to determine whether they possess responsive materials or to describe how they conducted searches, we also request any such records prepared in connection with the processing of this request. You should institute a preservation hold on information responsive to this request. Our Office intends to pursue all legal avenues to enforce its right of access under FOIA, including litigation if necessary. Accordingly, the DOE is on notice that litigation is reasonably foreseeable. Where possible, please provide responsive material in electronic format by email (DOE@congressionalreview.net) in PDF format.

Our charity non-commercial public interest Congressional investigation and distribution group requests rolling production of these records as they are located and reviewed. Please be aware that under 5 U.S.C. Â§ 552(a)(6)(A), a FOIA request is considered constructively denied after twenty business days and is subject to an appeal on that basis.

Fee Waiver

In accordance with 5 U.S.C. Â§ 552(a)(4)(A)(iii), Our Office requests a waiver of fees associated with processing this request for records. The subject of this request concerns the operations of the federal government, and the disclosures will likely contribute to a better understanding of relevant government procedures by the general public in a significant way. Moreover, Our Office provides research to major online news organizations viewed by millions of voters and therefore we are entitled to a fee waiver on the grounds that disclosure of the information sought is in the public interest because it is likely to contribute significantly to public understanding of the operations or activities of the government and is not primarily in the commercial interest of the requester. Regardless, we are willing to pay fees for this request up to $50 without prior approval. If you estimate that the fees will exceed this limit, please notify me first.

Expedited Processing

Pursuant to 5 U.S.C. Â§ 552(a)(6)(E)(1) and 43 C.F.R. Â§ 2.20(a)(2), Our Office requests that the DOE expedite the processing of this request. Requests shall receive expedited processing when a requester demonstrates â an urgency to inform the public about an actual or alleged Federal Government activity, if made by a person who is primarily engaged in disseminating information.â First, Our Office is an organization â primarily engaged in disseminating information.â (finding that Our Office is a â representative of the news mediaâ because it â gathers information of potential interest to a segment of the public, uses its editorial skills to turn the raw material into distinct work, and distributes that work to an audience.â)

See – Mead Data Central, 566 F.2d at 261
See – Am. Civil Liberties Union v. Department of Justice, 321 F. Supp. 2d 24, 29 n.5 (D.D. Cir. 200))

Second, these records are urgently needed to inform the public about actual or alleged government activity. Specifically, Our Office contends there exists an urgency to inform the public about what matters of state that were discussed and that those disclosures are helpful to the current White House Administration and the American public in their efforts to end political corruption. The courts have found that the issue of news coverage to be especially critical in determining whether a â compelling needâ exists for expedited FOIA processing. The Court have asserted that the â ultimate conclusionâ with regards to expedited processing relies on important underlying facts, such as â the credibility of a claimantâ s allegations regarding government activity, the existence of a threat to physical safety, or whether an issue is the subject of news coverage.â

Certification

The above information is true and correct to the best of our knowledge.

Further Correspondence

To ensure that this request is properly construed, that searches are conducted in an adequate but efficient manner, and that extraneous costs are not incurred, Our Office welcomes an opportunity to discuss its request with you before you undertake your search or incur search or duplication costs. By working together at the outset, Our Office and the DOE can decrease the likelihood of costly and time-consuming litigation in the future.

This matter affects every voting citizen because, if we can't get justice in America, then no voter will believe they can either.

A handful of corrupt tech billionaires, and their corrupt Senators, are manipulating public emotional triggers in order to steer, and money-launder, a trillion U.S. taxpayer dollars into their private bank accounts. Over 300 million American voters have said that the #1 issue with U.S. public policy is â CORRUPTIONâ . This issue is about that corruption.

Their â climateâ , â immigrantsâ , â medical coverageâ issues are fake controversies that they use to scam U.S. Treasury funds that have nothing to do with those â cover issuesâ . They use Google, Facebook, Twitter and the Main Stream Media, that they own, in order to pump up these fake controversies via fake news. They use "Dark Money" fake charities, "Invisible Bridge" money laundering, crony stock market insider trading and pump-and-dump schemes, revolving door payola, prostitution bribes and other illicit corruption tricks.

We are fighting back and we have already taken out part of the â bad guysâ , and their schemes, using 100% legal tactics and methodologies. Any member of the public can now accomplish these anti-corruption efforts using espionage journalism, private investigation methods, citizen sleuth websites, class-action lawsuits and personal mass public media distribution. We encourage the public to continue in their efforts to bankrupt every single corrupt party that abuses our Democracy.

In our matter, the U.S. Government, via the Obama White House and the U.S. Department of Energy intentionally defrauded us out of years of work and our life savings! Now they owe us some offsets! We are here to collect.

We could not understand how â public servantsâ could do these kinds of crimes to, and with, our government while stealing our, and millions of other taxpayers, money out of our pockets. We set out to hunt down every single person, group and process that allowed these crimes to happen, document their crimes on permanent public record and then make it nearly impossible for them to ever do this to the public again.

We were tricked by false government promises into spending years of our lives and millions of dollars of our life savings. We, and our peers, were used as the â facadeâ of a â cover storyâ to operate a criminally illicit â Dark Moneyâ operation against the American public. We swear, warrant and certify that we can prove every assertion in a public federal jury trial, Grand Jury hearing and/or televised Congressional hearing, given equitable credible legal resources and security protection.

Senior government officials had full knowledge of, and participated in, this criminal enterprise. They knew, from the start, that the state and federal funding was covertly hard-wired, in advance, exclusively to their friends. They then attacked us with â Fusion GPSâ , â Lois Lerner Targetingâ , a tabloid character assassination program and worse things. They attacked us because we properly reported the crime to the FBI and Congress. They attacked us because we did "the right thing".

The cover-ups of this crime continue to this day. The failure of the U.S. Government to provide any 1.) apology, 2.) damages offset, 3.) justice, 4.) whistle-blower and informant fees; in this matter continues to this day. We are not anti-government. We are anti-corruption. In fact, top government officials are helping us in our quest.

For our first project, almost every taxpaying member of the public

supported our past efforts and, in fact, provided us with a historically large number of purchasing letters of support which we hand-delivered to Congress. Nobody else was able to do that.

The non-crony major international news outlets, every major industrial publication, most of the non-crony members of the U.S. Congress, and every other non-crony public official confirmed that "Part Two" of our project was a â goâ . After winning Congressional awards and fully delivering on our previous government contracts, federal officials asked us to invest our time and money in the federal government and do even more to create domestic jobs and new domestic technology opportunities.

BUTâ ¦

...it turned out that all of the government â decidersâ worked for and owned stock in our arch competitor. The government officials took the money they had promised to us and gave it to their friends, who are our competitors. They gave it to the least qualified party; who also happened to be their buddy and their campaign financiers. They also gave part of the taxpayer cash to some of their friends who immediately filed bankruptcy in order to make huge profits off of tax loss filings and stock market valuation â pumpsâ without ever having to create any jobs or ongoing product deliveries.

We were asked to pay bribes and we refused to pay bribes. We refused to be part of the Silicon Valley â Dark Moneyâ crimes. We knew these people. We were invited to their parties and to their most intimate meetings. When we saw that they were running afoul of Democracy using corrupt schemes, illegal insider trading, sextortion, money laundering, tax evasion, bribes, prostitutes, Dark Money conduits, election rigging, internet manipulation and other crimes against the public; we said NO!

Will the U.S. Government provide us with the justice we seek and the Constitution demands?

We have worked with exceptional FBI, GAO, SEC, CFTC, IG and Congressional staff in this matter and we wish to acknowledge their support. Many have seen the recent news head-lines about top-level law enforcement firings of corrupt law enforcement executives. Those were the right moves and we wish to confirm the fact that certain public officials continue to stall our justice. Treasury and GAO say that over 180 million taxpayer dollars have been spent on cover-ups, attacks and DOJ stalls against our request in order to avoid political embarrassment for the Obama Administration. They are no longer around and they SHOULD be embarrassed by their corruption! You can resolve our matter for dramatically less money than you are spending trying to cover it up!

We will not give up and we will fight to the end. Our Task Force of crime victims, journalists, bloggers, mass data scientists, intelligence specialists and voters is now using 100% legal means to terminate every single crook in this case until we get justice. We demand a resolution where our damages are paid for and the whistle-blower and informant fees we are owed are delivered.

The news articles and Congressional reports prove that this Silicon Valley Cartel regularly engages in crimes, sex abuse, illicit acts, a sociopath culture and law-breaking. Fact-based forensic data has now been published representing the work of tens of thousands of renown, award-winning journalists and researchers. They prove that what we are saying really did happen and it really is a criminal abuse of Democracy! The ICIJ, Snowden, Assange and Binney leaks prove the depth of the crimes. Hundreds of thousands of documents have now been placed on public record in the federal courts and P2P archives and those documents

prove who engaged in these crimes and how they did it. The 60 Minutes episodes, The feature films: Dark Money; Too Big To Fail; Inside Job and the tens of thousands of broadcast news segments about this corruption all prove our assertions. The evidence is indisputable!

It is time for the public to take a stand against this kind of organized crime that is operated by the very people that are meant to serve the public!

It is time for The U.S. Government and The U.S. Department of Energy to deliver the 1.) apology, 2.) damages offset, 3.) justice, 4.) whistle-blower and informant fees that are required.

We look forward to your response and to a personal reply from Rick Perry, The Secretary of Energy.

Sincerely,

The Technology Alliance

DOE@congressionalreview.net

Federal funds flow to clean-energy firms with Obama administration ties while their competitors are sabotaged by Obama officials

WASHINGTON POST:

By Carol D. Leonnig and Joe Stephens, Published: February 14

Sanjay Wagle was a venture capitalist and Barack Obama fundraiser in 2008, rallying support through a group he headed known as Clean Tech for Obama.

Shortly after Obamaâ s election, he left his California firm to join the Energy Department, just as the administrationembarked on a massive program to stimulate the economy with federal investments in clean-technology firms.

Following an enduring Washington tradition, Wagle shifted from the private sector, where his firm hoped to profit from federal investments, to an insiderâ s seat in the administrationâ s $80 billion clean-energy investment program.

He was one of several players in venture capital, which was providing financial backing to start-up clean-tech companies, who moved into the Energy Department at a time when the agency was seeking outside expertise in the field. At the same time, their industry had a huge stake in decisions about which companies would receive government loans, grants and support.

During the next three years, the department provided $2.4 billion in public funding to clean-energy companies in which Wagleâ s former firm, Vantage Point Venture Partners, had invested, a Washington Post analysis found. Overall, the Post found that $3.9 billion in federal grants and financing flowed to 21 companies backed by firms with connections to five Obama administration staffers and advisers.

Obamaâ s program to invest federal funds in start-up companies â and the failure of some of those companies â isbecoming a rallying cry for opponents in the presidential race. Mitt Romney has promised to focus on Obamaâ s â recordâ as a â venture capitalist.â And in ads and speeches, conservative groups and the Republican candidates are zeroing in on the administrationâ s decision to extend $535 million to the now-shuttered solar firm Solyndra and billions of dollars more to clean-tech start-ups backed by the presidentâ s political allies.

White House officials stress that staffers and advisers with venture capital ties did not make funding decisions related to these companies. But e-mails released in a congressional probe of Obamaâ s clean-tech program show that staff and advisers with links to venture firms informally advocated for some of those companies.

David Gold, a venture capitalist and critic of Obamaâ s investments in clean tech, said that even if staffers had been removed from the final decision-making, they had the kind of inside access to exert subtle influence.

â To believe those quiet conversations donâ t happen in the hallways â about a project being in a certain congressmanâ s district or being associated with a significant presidential donor, is naive,â said Gold, who once worked at the Office of Management and Budget. â When youâ re putting this kind of pressure on an organization to make decisions on very big dollars, thereâ s increased likelihood that political connections

will influence things.â

Energy Department spokesman Damien LaVera said the companies won awards based on merit, not political connections. He said the staffers and advisory board members reviewed by the Post had no role in funding decisions, nor did they have any personal financial stake in the companies. One of those administration advisers had first been appointed to his position by the Bush administration, LaVera said.

â As is evident from the 10-month long congressional investigation into Solyndra, Energy Department loans and grants are decided on the merits,â White House spokesman Eric Schultz said. â Whatâ s more, these are all professionals with expertise in clean-energy science, finance or both â but none of them play a decisional role in DOE awards and none of them are in positions of regulating the industry.â

Venture capitalists arrive

During the 2008 campaign, the venture capital industry lined up behind Obama as he vowed to spur clean-technology development. Obama raised more than twice the venture capital contributions of his opponent, Republican candidate John McCain.

Known for making billions of dollars in the 1990s on Internet startups, venture firms in 2006 were rapidly switching to invest in clean tech. Legendary venture partner John Doerr, a leading early investor in Google and Amazon, that year called the clean-energy sector the next great profit center, â the mother of all markets.â

With the 2008 economic crisis, new private investment in fledgling clean-tech companies withered. But passage of the $787 billion stimulus package offered new opportunities to launch and grow those firms, with $80 billion set aside for clean energy and energy-efficiency efforts.

Suddenly flush with cash, the Energy Department was under orders to ramp up quickly and get money out to promising companies. The administration tapped industry players to take on key Energy Department roles, both as agency staffers and outside advisers on agency boards.

Wagle, then 38, took a job as a stimulus adviser in the agencyâ s recovery act office. Officials say his role did not involve making funding decisions for companies tied to Vantage Point.

Private investors cheered the administration for hiring industry colleagues. In a 2009 article, venture firm leader Jim Matheson said Wagle, along with another Washington-bound venture capitalist, David Danielson, would help ensure commercial successes from â the steady flow of dollars coming out of D.C.â

Wagleâ s former employer had invested in several companies that received federal money: Brightsource, which won a $1.6 billion federal loan for a solar-generating plant; Tesla Motors, which won a $465 million loan to build electric cars; and biofuels firm Mascoma, which in 2011 received $80 million for a Michigan ethanol plant.

Wagle recently returned to the California venture capital industry to work as an investor and clean-tech adviser. Reached at his home, he declined to comment. Vantage Point Venture Partners, renamed Vantage Point Capital Partners, did not respond to requests for comment.

Danielson, formerly of General Catalyst, joined an Energy Department office whose mission was to fund breakthrough energy technologies. Officials say he had no role in arranging $105 million in funding for three General Catalyst portfolio firms.

David Sandalow, a former Clinton administration official and Brookings Institution fellow, had been paid

$239,000 for consulting work for a venture capital firm, Good Energies, in 2008 before joining the Energy Department as assistant secretary for policy and international affairs, his disclosure form shows.

A Good Energies-backed firm, SolarReserve, won a $737 million agency loan. Officials say Sandalow played no role in arranging it and LaVera, speaking on behalf of Sandalow, said the assistant secretary had no financial interest in Good Energies or SolarReserve.

The Energy Department came under criticism from Republicans earlier this year when agency e-mails raised questions about a possible conflict of interest involving Steven J. Spinner, a former department loan adviser who disclosed that his wife worked for Wilson Sonsini, a Silicon Valley law firm that handled funding applications for several clean-tech companies.

Wilson Sonsiniâ s clean-tech clients reaped $2.75 billion in Department of Energy grants and financing, the Post analysis found.

One of the firmâ s clients was Solyndra. Republicans have accused the Obama administration of favoring the risky company because its leading investor was tied to a major Obama donor.

Wilson Sonsini had its own connection to the White House: the firmâ s chief executive, John Roos, was a top bundler for Obamaâ s 2008 campaign.

Before joining the administration, Spinner, a venture investor and start-up adviser, also helped raise $500,000 for Obama as a member of his national campaign finance committee. He has pledged to raise a half-million dollars or more for Obamaâ s reelection effort.

Once inside the agency, Spinner agreed not to discuss loan matters involving Wilson Sonsini clients. But e-mails show he urged career officials to resolve delays in the Solyndra loan, and also defended the financial prospects of Solyndra to a White House deputy before its federal loan was approved.

Spinner left the Energy Department in the fall of 2010. He did not respond to requests for comment. The department said Spinner was not involved in the companyâ s application review or loan approval.

A Wilson Sonsini spokesman said the firm does not believe its employment of Spinnerâ s wife influenced Energy Department decisions.

I nvestors as advisers

Thousands of agency and White House e-mails released as part of the Solyndra investigation show that venture capitalists who held advisory roles with the Energy Department were given access to Obamaâ s top advisers.

Steve Westly, an Obama fundraising bundler for both his 2008 and 2012 campaigns, is a founder of the venture firm Westly Group and served part time on Energy Secretary Steven Chuâ s advisory board.

The e-mails show that Westly communicated with senior White House officials, including Obama adviser Valerie Jarrett, voicing concerns about the presidentâ s planned appearance at Solyndra.

Westlyâ s firm also fared well in the agencyâ s distribution of loans and grants. Its portfolio companies received $600 million in funding. LaVera said Westly had no role in the funding decisions.

David Prend also surfaces in the e-mails as a venture capital investor who had White House access.

His firm, Rockport Capital Partners in Boston, was among the investors in Solyndra, with a 7.5 percent stake. The e-mails show him asking a White House aide to â help get the word outâ about Solyndra and asking for help on another Rockport portfolio company. They show he and a group of venture capital investors met with new White House climate czar Carol Browner before Solyndraâ s loan was tenatively approved, and the White House confirmed that the subject of the company came up briefly.

Prend had worked closely with the Energy Department since the Bush administration, when he was first appointed to an advisory panel for the National Renewable Energy Laboratory. He continued to advise the Obama administration, while also chairing a panel that helps advise the department on solar technologies.

The agency provided $550 million to several firms in which Rockport had invested at the time. The department gave an additional $118 million grant to an electric-car battery company, Ener1, that was partnered with Rockport portfolio car company Think. (Rockport soon after invested in Ener1.) Ener1 filed for bankruptcy protection last month.

LaVera and Chad Kolton, a Rockport spokesman, said that Prendâ s advisory role was separate from stimulus programs and had no bearing on agency decisions about companies backed by Rockport.

Federal judge finds ballots were illegally destroyed in Wasserman Schultz corruption matter

Wasserman Schultz rival says ballots were wrongly destroyed

Tim Canova, the 2016 Democratic primary challenger for Rep. Debbie Wasserman Schultz, speaks out on 'The Next Revolution.'

A Florida Circuit judge ruled Friday that that the stateâ s second-most populous county violated state and federal laws by destroying ballots from a 2016 Democratic primary race which Rep. Debbie Wasserman Schultz won.

Circuit Judge Raag Singhal decided that the records were wrongly destroyed because the laws require elections offices to keep the ballots in federal elections for 22 months. Elections Supervisor Brenda Snipes destroyed the ballots just after 12 months, the Sun-Sentinel reported.

The judge also noted that because the ballots were subject to a lawsuit, only a court order should have allowed their destruction.

Snipes â has not presented any evidence refuting that the public records sought were destroyed while this case was pending before this court,â Singhal said.

A Florida Circuit judge ruled Friday that that the stateâ s second-most populous county violated state and federal laws by destroying ballots from a 2016 Democratic primary race which Rep. Debbie Wasserman Schultz won. (AP)

Gov. Rick Scottâ s administration announced shortly after the ruling that Floridaâ s Department of State will send election experts to the Broward elections office in the next election to â to ensure that all laws are followed.â

Snipesâ predecessor was fired from the elections office by former Gov. Jeb Bush and the Florida Senate after failing to ensure a smooth election process in the 2002 Democratic gubernatorial primary, according to Politico.

The lawsuit was brought by Tim Canova, the defeated Democratic primary candidate who sued the elections office after seeking to check for voting irregularities. He lost the primary race by nearly 7,000 votes to Wasserman Schultz, the former chair of the Democratic National Committee.

Canova, who will be challenging the congresswoman again this year as an Independent, sought the paper ballots in March 2017, but was forced to sue three months later after he said Snipes failed to comply with the request and wanted to charge $72,000 to sort and produce the records, Politico reported.

Snipes testified that the push to destroy the ballots, which she did in September, was a â mistake,â adding that the boxes were mislabeled. She said â nothing on my part that was intentional.â

But the judge dismissed the argument, saying â Defendant's lack of intent to destroy evidence while this case was pending is irrelevant.â

An attorney for Snipes, Burnadette Norris-Weeks, said she will appeal the decision because the elections office never declined to provide the ballots to Canova, only objected to unreasonable demands.

â It was a mistake [destroying the original ballots], but the ballots were preserved,â Norris-Weeks told the Sun-Sentinel. â They were scanned shortly after the election.â

Canova is now pushing for Snipes to lose her job.

â I think dismissal is an appropriate remedy,â Canova told the newspaper.

Acting San Francisco Mayor Mark Farrell, at podium, speaks at a rally for clean energy in San Francisco, Wednesday, Feb. 28, 2018. A U.S. District Court in San Francisco will be the setting for a first-ever hearing on the science of climate change, scheduled for March 21 by William Alsup, a federal judge. **Jeff Chiu** AP

WASHINGTON

A federal judge in San Francisco has ordered parties in a landmark global warming lawsuit to hold what could be the first-ever U.S. court hearing on the science of climate change.

The proceeding, scheduled for March 21 by U.S. District Court Judge William Alsup, will feature lawyers for Exxon, BP, Chevron and other oil companies pitted against those for San Francisco and Oakland â California cities that have accused fossil fuel interestsof covering up their role in contributing to global warming.

â This will be the closest that we have seen to a trial on climate science in the United States, to date,â said Michael Burger, a lawyer who heads the Sabin Center for Climate Change Law at Columbia University.

Experts on both sides say Alsupâ s call for a climate change â tutorialâ is unlike anything theyâ ve heard of before.

â I donâ t know of any judge who has asked for a tutorial like this,â said Steven E. Koonin, a physicist and former Energy Department undersecretary known for his contrarian views on global warming research. â I think it is a great idea. Anybody having to make a decision about climate science needs to understand the full spectrum of what we know and what we donâ t know.â

In the five-hour hearing, both the cities and the oil companies will have a chance to present Alsup with their views on the history of climate change science, and the most important recent findings in the field.

Alsup ordered the tutorial as part of his ruling last week that the San Francisco and Oakland lawsuit would be heard in federal court, as opposed to California state court. The cities had hoped their lawsuit would be heard in state court, since California has an established â public nuisanceâ law that hasnâ t been developed in the federal court system.

California governor: climate change will worsen world's problems

Europe's migration crisis is nothing compared to what it will be if world leaders don't do more to tackle global warming, California Governor Jerry Brown said Tuesday. He was addressing delegates at a climate change summit in Paris. Brown is a voc **Host Broadcaster via AP**

Supporters of the oil industry seized on Alsupâ s ruling as a victory against what they call â sham

lawsuits.â But the judge didnâ t completely rule in the industryâ s favor. His ruling created the possibility that oil companies could be liable under federal common law for causing a â nuisance.â Environmentalists applauded that part of his ruling, as well as his decision to hold the March 21 tutorial.

â The court is forcing these companies to go on the record about their understanding of climate science, which they have desperately tried to avoid doing,â said Marco Simmons, general counsel for EarthRights International, which helps groups worldwide litigate against major industries.

Alsup, appointed to the bench by former President Bill Clinton, has a reputation for immersing himself in the technicalities of legal cases. He famously taught himself the Java programming language in deciding a lawsuit that pitted Silicon Valley giants Oracle against Google. More recently, he asked lawyers for a tutorial on self-driving car technology in a lawsuit that pits Googleâ s Waymo against Uber.

In the upcoming climate change tutorial, Alsup told lawyers he wants a two-part presentation from both sides over roughly five hours.

â The first part will trace the history of scientific study of climate change, beginning with scientific inquiry into the formation and melting of the ice ages, periods of historical cooling and warming, smog, ozone, nuclear winter, volcanoes, and global warming. Each side will have sixty minutes,â the judge wrote in his order.

â The second part will set forth the best science now available on global warming, glacier melt, sea rise, and coastal flooding. Each side will again have another sixty minutes,â he added.

Science has been on trial before, most famously in the â Scopeâ s Monkey Trial,â the 1925 legal case on the teaching of evolution. But it is unlikely the March 21 tutorial will be a pure debate on global climate change. Exxon and other oil companies have already stated that â the risk of climate change is clear and the risk warrants action.â The oil industry has mostly accepted scientific findings that increasing carbon emissions are warming the atmosphere.

Instead, the hearing and ongoing trial will focus more on who knew what, when, and what they did in response.

â At the core of the plaintiffâ s lawsuit is the idea that these companies have long known about risks of their products ... yet they took a course of action that resisted regulation and sought to keep them on the market as long as possible,â said Burger, the Columbia climate law expert.

By contrast, the fossil fuels companies will likely emphasize the uncertainty that existed as climate science evolved, and how they needed â to act in the best interests of their shareholders,â given the uncertainty, he added.

Koonin, who worked for two years in the Obama administration and now teaches at New York University, has long called for a public debate on climate change science. While he agrees that human-caused carbon dioxide has warmed the atmosphere, he takes issue with some computer models about future impacts, and disagrees with calls for drastic changes in energy use.

Writing in the Wall Street Journal last year, Koonin called for a â Red Team/Blue Teamâ process to debate and test assumptions and conclusions about climate change. That idea was picked up by EPA Administrator Scott Pruitt, a close ally of the fossil fuel industry, who proposed the same thing for his agency, an idea he has apparently put on hold.

Koonin said any federal debate about climate change should involve all the governmentâ s science agencies,

not just EPA. He doesnâ t think the U.S. District Court tutorial will substitute for a full public debate, but it could help air some key areas of dispute, he said.

He also expects there will be high public interest in the March 21 court hearing.

â You will probably get many more people than I chiming on the arguments made,â he said. â So you might get an effective second road of the red-blue exercise.â

Five Years After Obama-Hillary Sell 20% of US Uranium to Russia â Putin Threatens West with â Unstoppableâ Nuke Bomb

by Jim Hoft 72 Comments

- **167**Share
- **59**Tweet
- Email

In October 2017 an FBI informant stepped forward and said there was â on-the-record quid pro quoâ surrounding the Uranium One scandal with the Clintons.

Bill Clinton received a $500,000 speaking fee from a Russian backed bank and the Clinton Foundation received millions of dollars from people involved with the Uranium One deal.

The informant, Douglas Campbell, broke his silence on a Russia plot to steer millions of dollars to the U.S. in an effort to benefit the Clinton Foundation. Campbell braved â 35 intense radiation treatments after being diagnosed with cancer during his time with the FBI.

Mr. Campbell also accused the Obama administration of making decisions that ended up benefitting the Russian nuclear industry, which he said was seeking to build a monopoly in the global uranium market

Obama was briefed at least twice on the corrupt deal to sell US uranium to Russia and did nothing.

The US turned over 20% of its uranium reserves in the deal.

On Wednesday Russian leader Vladimir Putin threatened the West with unstoppable nuclear missiles.

Putin boasts Russia has developed an intercontinental nuclear missile that canâ t be stopped or shot down by any countryâ s defence system.

Vladimir Putin said the rocket travels 20 times the speed of sound and has unlimited range.

For GOP, Death of Manufacturing Loan Program Finally in Sight

Unspent money dating back years makes it an easy, yet still elusive, target

Posted May 16, 2018 5:01 AM

Ryan McCrimmon @RyanMcCrimmon

Energy and Natural Resources Chairman Lisa Murkowski, R-Alaska, is no fan of the loan program for energy efficient vehicles. (Tom Williams/CQ Roll Call)

One way or another, the Energy Departmentâ s direct loan program for fuel-efficient car manufacturers looks destined for the chopping block.

Once viewed as a lifeline for Detroitâ s â Big Threeâ manufacturers facing economic headwinds even before the onset of the Great Recession, the program is now little more than a kitty of untapped funds appropriated a decade ago. The last major Advanced Technology Vehicles Manufacturing program loan was approved conditionally in 2015, but Arconic Inc., whose former parent Alcoa secured the loan to produce lightweight vehicle materials at its Tennessee plant, turned the money down last year.

No new loans have closed since 2011, and with $4.33 billion sitting around unspent, the Trump administration wants to â rescind,â or cancel, the vehicle loan funds permanently. The House is set to consider a measure that would drain the loan account and 37 other line items â $15.2 billion in all â likely next week. The path is trickier in the Senate; despite procedural protections expected to lower the vote threshold to a simple majority, few if any Democrats are expected to support the bill, and some Republicans are wavering as well.

For Senate Energy and Natural Resources Chairwoman Lisa Murkowski, lack of interest in new loans means thereâ s no longer a need for the money. â I have said before that I donâ t have a problem with the rescission of the ATVM because youâ ve got a program that hasnâ t done anything for seven years now. So for me, that makes sense,â the Alaska Republican said late last week.

A problem for lawmakers, however, is that the unspent funds â provided as a â subsidy appropriationâ in 2008 to cover the potential cost of anticipated defaults â represent a pool of money to offset other things.

Two of the original programâ s boosters, Michigan Democratic Sens. Debbie Stabenow and Gary Peters, sought to use some of the money in 2016 to clean up contaminated water supplies in Flint, Michigan. They successfully incorporated a bipartisan provision to pay for the costs by phasing out the loan program by Oct. 1, 2020, in an early version of that yearâ s water resources authorization bill, though the offset was stripped before the measure became law.

Aides to Stabenow and Peters did not respond to requests for comment.

When a group of GOP senators in 2016 tried to attach the same phaseout provision, though without Flint funding, during amendment debate on the fiscal 2017 Energy-Water spending bill, the effort was defeated on a narrow 48-49 vote.

Want insight more often? Get Roll Call in your inbox

Five Republicans, including Murkowski, joined all Democrats save Claire McCaskill of Missouri to oppose the effort. Senate Energy-Water Appropriations Subcommittee Chairman Lamar Alexander, with the Alcoa loan pending, also opposed the GOP amendment at the time. His office did not respond to requests for comment.

Many Republicans have made no secret of their desire to cut the program, even if mainly to offset other spending. In 2011, Congress approved a stopgap funding bill that included $2.65 billion in emergency aid for various natural disasters that year. Initially, the House passed a version rescinding $1.5 billion from the vehicle loan program to cover much of that cost, but the offset was stripped in final House-Senate bargaining.

Just last year, House Republicans approved an initial fiscal 2018 omnibus bill in September that cut $1.97 billion from the loan program, in order to keep the measure within its nondefense appropriations cap for the year. That was up from $1.09 billion in the committee-reported version of the State-Foreign Operations bill, after Republicans came back from the August recess and decided that after a devastating hurricane season they didnâ t want to take $876 million from the Federal Emergency Management Agencyâ s Disaster Relief Fund, as the initial Homeland Security title would have.

Bipartisan origins

The ATVM program was signed into law as part of a sweeping energy bill in late 2007 with headline provisions generating support from both sides of the aisle.

New vehicle fuel economy requirements and the modern iteration of the Renewable Fuel Standard biofuels mandate united progressive coastal Democrats and corn-state Republicans. There were energy efficient appliance and lighting standards, oil and gas tax breaks, and even a title devoted to pool and spa safety.

And yes, there was the infamous ATVM program, authorized to disburse up to $25 billion in direct loans to eligible beneficiaries. The measure passed the Democratic-controlled House and Senate, racking up big bipartisan margins, including half of the House Republicans voting that day in late December, and was signed by President George W. Bush.

The program wasnâ t funded, however, until the following year, when Congress appropriated $7.5 billion to cover possible costs, representing 30 percent of the outstanding principal that lawmakers thought loan recipients might be unable to pay back.

The program ultimately had its share of setbacks â out of a $529 million loan to Fisker Automotive in 2011, the Energy Department had to eat $139 million, and it took a $42 million loss on a $50 million loan to the Vehicle Production Group LLC the following year.

But three other loans have shown no signs of strain thus far, including a $5.9 billion loan extended to Ford Motor Co. that the carmaker is expected to pay off in about four years. Tesla may be having difficulties of late, but it paid back a $465 million ATVM loan nine years early in 2013. The estimated subsidy rate for the program, or the expectation of losses, had dropped to 3.4 percent by 2015, according to the Congressional Research Service, meaning that for every $100 in loans the government could expect to lose $3.40.

If no one wants the loans, why keep the money set aside? Thatâ s the question many have been asking, including the nonpartisan Government Accountability Office, which has said since 2014 that â Congress may wish to consider rescinding all or part of the remaining $4.3 billion in credit subsidy appropriations.â

Everyoneâ s a critic

Budget watchdog groups have largely praised the proposal to rescind the vehicle loan funds, even while noting its limited impact on the deficit â $100 million in actual savings over the next 11 years, according to the Congressional Budget Office.

â Given the ATVM programâ s inherent risky nature and poor track record, its demise is overdue and would prevent future losses to taxpayers,â Taxpayers for Common Sense said in a statement. The group said the proposal â is low-hanging fruit that others have suggested for years, but it represents a good cut that would end a needlessly risky program.â

Business organizations have largely kept quiet so far on the proposed ATVM rescission this year, even influential industry groups that have opposed similar efforts in the past.

For example, the U.S. Chamber of Commerce and the National Association of Manufacturers joined most Democrats in opposing the potential $1.5 billion cut in 2011.

Itâ s unclear if support has waned now that the money has essentially been lying around unspent for years. Recently, some advocates have even called for expanding the program. Mitch Bainwol, president and CEO of the Alliance of Automobile Manufacturers, told the Senate Energy and Natural Resources Committee in 2016 that his group supports broadening the ATVM program to allow medium- and heavy-duty truck manufacturers to qualify for loans.

â Directed scorekeepingâ

Whether the loan funds could be used to lower the cost of spending bills later this year is an open question. The CBO generally wonâ t give lawmakers credit for offsetting regular discretionary spending with emergency-designated funds, as the ATVM funds were back in 2008.

In its cost estimate for the new rescission bill, the CBO noted specifically that the vehicle loan money, as well as $523 million in remaining budget authority for Title 17 â innovative technologyâ loans, canâ t be used to offset regular appropriations for that reason.

A Senate GOP aide said that since emergency-designated funding doesnâ t count going out the door, it should not count coming back in, noting the goal is to prevent gaming the appropriations process to increase capped spending.

But as the CBO also made clear in its score of the House-passed omnibus last September, when the Budget committees direct them to score a bill a certain way, they comply. As described by a person familiar with the process, House GOP appropriators approached the Budget Committee seeking flexibility to offset spending in the 12-bill spending package. House Budget Committee staff ran the idea by Senate Budget staff, and no objections were raised.

That led to House Budget staff directing CBO to incorporate the offset in its score. Though the Budget committees are the official scorekeepers under budget law, the panels almost always accept CBO cost estimates. Nevertheless, CBO scores are ultimately advisory. The committees can and occasionally do modify or influence the scores.

The Budget panels rarely direct scoring, and when it takes place, it is typically part of a collaborative process where the committees in both chambers are in agreement. Nonetheless, last yearâ s experience means that if appropriators are looking for a relatively uncontroversial offset during fiscal 2019 appropriations season, they have precedent to tap the ATVM program once again. Or if disaster strikes again this summer, the money would also be available without having to jump through scorekeeping hoops.

But first, the vehicle loan program would have to survive the latest rescissions process. And that is no guarantee at this point.

Jeremy Dillon contributed to this report.

Ford took $6B government loan in 2009 â and debt still haunts company

- Tesla borrowed money from Saudi Arabia and George Soros to pay off their loan

Phoebe Wall Howard, Detroit Free Press

More than a decade after the last economic crisis, Ford Motor Company is still paying down a fat government loan created by Congress at the start of the Great Recession to aid automakers with factory projects.

Critics at the time focused on General Motors and Chrysler, each declaring bankruptcy and accepting government bailout loans through the U.S. Treasury Department's Troubled Asset Relief Program (TARP) to reorganize during the auto crisis that hammered the industry between 2008 and 2010. Meanwhile, Ford took a different path.

But in the end, it accepted a government loan, too.

The debt remains on Ford books today as the company navigates a pandemic.

In September 2009, Ford entered into an agreement with the Department of Energy and borrowed $5.9 billion as part of a loan program created to finance automotive projects designed to help vehicles built in the U.S. meet higher mileage requirements and lessen U.S. dependence on foreign oil.

The company is one of three auto recipients currently listed on the Advanced Technology Vehicles Manufacturing (ATVM) loan program site.

While critics of government assistance, including Ford executives, still focus on the government bailouts, few have mentioned in recent years the loan program that handed out money during the same time period explicitly to shore up automakers.

Ford says its all-electric Mustang Mach-E 1400 prototype race car can hit 1,400 horsepower. The prototype race car is powered by seven motors and a 56.8-kilowatt-hour battery. (Photo: Ford Motor Co.)

Then-CEO Alan Mulally is praised for having the foresight to mortgage everything just prior to that crisis, including the Blue Oval, because Ford was in trouble before anyone else and took action before anyone else.

More: Ford Fiesta, Focus owners could get thousands of dollars apiece, lawyers predict

More: Ford counts its cash amid pandemic after $70M exec pay exceeds company's profit in 2019

Ford, Nissan and Tesla are listed as loan recipients of a program that had strict financial solvency requirements to qualify. Nissan was awarded $1.6 billion for its Tennessee operations.Tesla garnered $465 million for California operations

Both Tesla and Nissan had fully repaid their loans as of September 2017, according to CNBC. Ford had not.

While Tesla stock surges, Ford is furiously working to shore up its financials.

The loan plus interest creates an additional burden for Ford as cash supplies shrink.

"As of December 31, 2019, an aggregate $1.5 billion was outstanding," Ford disclosed in its most recent 10-K filing with the U.S. Securities and Exchange Commission. "The ATVM loan is repayable in quarterly installments of $148 million, which began in September 2012 and will end in June 2022."

Documents filed by Ford show the company owes payments of $591 million in 2020, $591 million in 2021 and $289 million in 2022.

"They'll have to come up with a way to pay, otherwise they'll ultimately pay more for the privilege of borrowing," said Charles Elson, director of the Weinberg Center for Corporate Governance at the University of Delaware. "This is the sort of thing that keeps people up at night. This is a 3 o'clock in the morning problem for the management team."

Dark days

During good times, automotive analysts said, Ford could have socked away money and paid off debt in anticipation of bad times. That didn't happen.

"This is now very unpleasant and very difficult," said Elson, whose public policy school is named for John Weinberg, Ford's banker for years.

Charles Elson, a professor of corporate governance at the University of Delaware, speaks at a New York conference hosted by CNBC's Jim Cramer in May 2016. (Photo: ROBERT CRAIG/THE NEWS JOURNAL)

In applying for the loan, Ford said the money would be spent to upgrade 13 facilities in Michigan, Illinois, Kentucky, Missouri, New York and Ohio â "resulting in state-of-the-art assembly and manufacturing plants" with flexibility to build fuel-efficient vehicles that meet changing demands.

The government site notes that "Ford updated several facilities to continue improving fuel efficiency in more than a dozen popular vehicles, including the Escape, Fiesta, Focus, Fusion and Taurus car models, as well as the F-150 light-duty truck."

On a side note, the Fiesta has always been built in Mexico. Production of the Fiesta, Focus, Taurus and Fusion will have been discontinued by the end of 2020. The company this year settled a class-action lawsuit involving a defective transmission in its Focus and Fiesta vehicles.

Ford is praised on the government website for its "commitment to introducing new hybrid, plug-in hybrid and all-electric vehicles."

Chump change

Ford says the government debt payments are "relatively small" and cause no alarm.

"The loan matures in June 2022. We plan to pay off the loan in full and on time," T. R. Reid, Ford spokesman, told the Free Press on Tuesday. "At the end of Q1, the principal balance was $1.3 billion."

When asked whether Ford had requested deferral of its loan payments, Reid said additional information would be revealed in upcoming regulatory filings.

$5 billion bruise

Ford isn't alone in the struggle, but it entered 2020 reporting a much smaller-than-expected profit than its competitors. Executives said they were disappointed and promised to do better.

The Ford earnings report for the first three months of 2020 reflected a $2 billion loss, which was mostly unrelated to COVID-19. Ford later warned Wall Street to expect a $5 billion loss in the second quarter, reflecting the impact of shuttering factories between March and May.

Tim Stone, chief financial officer at Ford, has said the company believes it has enough money to get through 2020. Ford reported in April that it had $34 billion in cash on hand and $35 billion in liquidity at the end of the first quarter.

Tim Stone started his role as chief financial officer at Ford Motor Company on June 1, 2019. He has said he believes the company has enough cash to last through 2020. (Photo: Ford Motor Co.)

Ford this month went back to the banks to seek extension on $5.35 billion in loans from banks including J.P. Morgan Chase.

"The company is looking to complete the extension ahead of its earning call on July 30," according to Reuters. "They want to be prepared so they can say something good. That they were able to extend the liquidity another year."

More: Analyst says Ford needs to 'rip the Band-Aid off' after $2B loss: What he means

Cash flow, or liquidity, is a lifeline during crisis.

On March 19, Ford announced that it was borrowing $15.4 billion against two lines of credit. The company also withdrew guidance for its financial performance because of unpredictable circumstances.

"Ford Motor Company is taking a series of initiatives to further bolster the companyâ s cash position amid the coronavirus health crisis," the company said at the time.

Professor Kara Bruce of the University of Toledo College of Law says the costs of re-negotiating loans are significant and notable for Ford and other companies. This photo was taken around 2013. (Photo: University of Toledo)

Still, the costs associated with renegotiating financial deals are not trivial, said professor Kara Bruce at the University of Toledo College of Law, who specializes in bankruptcy and commercial law.

"I can tell you, when a company is negotiating with its creditors, the bankruptcy alternative is at the forefront of those discussions," she said. "Dealing outside of bankruptcy offers parties a lot of control they don't always have in bankruptcy."

Ford CEO James Hackett and President Donald Trump during a meeting with automotive executives in the White House, Friday, May 11, 2018, in Washington. (Photo: Evan Vucci, AP)

Ford CEO Jim Hackett released a statement, â Like we did in the Great Recession, Ford is managing through the coronavirus crisis in a way that safeguards our business. ... We plan to emerge from this crisis as a

stronger company.â

Meanwhile, Ford has declined to discuss financial details when asked during two of its recent meetings hosted by prominent banks.

"Ford is in the final days of a scramble mode â paying one credit card with another credit card until the gig is up," said market analyst Jon Gabrielsen.

One of the nation's top bankruptcy lawyers, whose firm prohibited him from being named because it works with the auto industry, said Ford's "substantial losses are cause for concern."

Grim reality

Still, candor isn't always an option, said John McElroy, longtime industry observer and host of "Autoline After Hours."

"Even though things are really tough, you've got to say, 'We're going to come out of this and be OK,' " he said. "To come out and say, 'Man, we're in deep trouble,' â the financial markets would go crazy. Suppliers would start to worry. Employees would be demoralized. It's a real tightrope to tell the truth without setting everybody's hair on fire."

Recent borrowing has signaled a grim reality, however.

"At the very beginning of the pandemic, when General Motors and Ford announced how much money they were going to borrow, it set off alarm bells in my mind," McElroy said. "It was obvious they expected financial devastation in the marketplace and went to get money to carry them through. Now, just recently, we've seen Ford go back to the banks and ask them for another year before they have to pay that money back. So, clearly Ford believes the situation is worse now than what it thought three months ago."

No question, Ford is under scrutiny.

"This will be a difficult earnings report for Ford," said David Kudla, CEO and chief investment strategist with Mainstay Capital Management, a Grand Blanc investment adviser who manages $2.7 billion in assets for clients who include many Ford employees.

Mainstay Capital Management's CEO David Kudla at the New York Stock Exchange to ring the closing bell in January 2020. (Photo: Nicole Pereira, NYSE)

"Ford was in trouble when times were booming," McElroy said.

Keep hope alive

Dire predictions about Ford are premature, Reid said.

"People who follow us closely know Fordâ s balance sheet was consciously strong leading up to the pandemic," he said. "That cash and liquidity, together with additional cash management and preservation and cost reductions, is why weâ re able to both manage through the crisis and strategically invest in Fordâ s future."

Ford is not worried, Reid said.

"We had financial flexibility in 2008 and have deliberately managed the balance sheet since then so that weâ re well prepared for economic downturns â including this one," he said.

Report: Ford using government-backed loans to pay off debt

Sam Abuelsamid

Ford was the only one of Detroit's three automakers able to avoid taking a direct government bailout in 2009 to bypass bankruptcy. However, that doesn't mean it hasn't been able to benefit from some government largess.

Back in 2006 before the credit markets collapsed, Ford essentially mortgaged every facility it had in order to borrow $23.5 billion. That money was used to provide operating cash flow that General Motors and Chrysler didn't have when things went south in 2008. The money allowed Ford to keep the lights on, but it also saddled the company with the debt service payments of $ 318 per vehicle in the second quarter of this year.

Rather than direct bailouts, Ford has been able to take advantage of several government-backed low interest loan programs like the Advanced Technology Vehicle Manufacturing program run by the Department of Energy to fund new vehicle development and factory retooling. Ford is also getting tax breaks and low interest loans from various states as well as other countries like the UK and Russia. At the same time, it has used profits earned in the past year to pay down higher interest debt earlier than planned. In doing so, Ford hopes to get back from junk bond status to investment grade by late 2011 or early 2012.

    - â –
- ï”· â Double renewable energy generating capacity (excluding conventional hydropower) by 2012.â
- ï”· â Commit (conditionally) to loan guarantees for two nuclear power facilities to add new low-carbon emission capacity of at least 3,800 megawatts in 2010.â
- ï”· DOE has identified a list of external reviewers qualified to perform legal, engineering, financial, and marketing analyses of proposed projects. Identifying these external reviewers beforehand helps to ensure that DOE will have the necessary expertise readily available during the review process. DOE officials said that the department has also expedited the procurement process for hiring these external reviewers.
- ï”· DOE developed a credit policies and procedures manual for the LGP. Among other things, the manual contains detailed internal policies and procedures that lay out requirements, criteria, and staff responsibilities for determining which proposed projects should receive loan guarantees.
- ï”· DOE revised the LGPâ s regulations after receiving information from industry concerning the wide variety of ownership and financing structures that applicants or potential applicants would like to employ in projects seeking loan guarantees. Among other things, the modifications allow for ownership structures that DOE found are typically employed in utility-grade power plants and are

commonly proposed for the next generation of nuclear power generation facilities.

- ï”· DOE obtained OMB approval for its model to estimate credit subsidy costs. The model is a critical tool needed for the LGP to proceed with issuing loan guarantees because it will be used to calculate each loan guaranteeâ s credit subsidy cost and the associated fee, if any, that must be collected from borrowers. (We are evaluating DOEâ s process and key inputs for estimating credit subsidy costs in other ongoing work.)
- ï”· Direct the program management to develop relevant performance goals that reflect the full range of policy goals and activities for the program, and to the extent necessary, revise the performance measures to align with these goals.
- ï”· Direct the program management to revise the process for issuing loan guarantees to clearly establish what circumstances warrant disparate treatment of applicants so that DOEâ s implementation of the program treats applicants consistently unless there are clear and compelling grounds for doing otherwise.
- ï”· Direct the program management to develop an administrative appeal process for applicants who believe their applications were rejected in error and document the basis for conclusions regarding appeals.
- ï”· Direct the program management to develop a mechanism to systematically obtain and address feedback from program applicants, and, in so doing, ensure that applicantsâ anonymity can be maintained, for example, by using an independent service to obtain the feedback.
- ï”· Performance goals and measures. DOE stated that, in the context of revisions to its strategic plan, the department is revisiting the performance goals and measures for the LGP to better align them with the departmentâ s policy goals of growing the green economy and reducing greenhouse gases from power generation.
- ï”· Consistent treatment of applicants. DOE recognized the need for greater transparency to avoid the perception of inconsistent treatment and stated that it will ensure that future solicitations explicitly describe circumstances that would allow streamlined consideration of loan guarantee applications.
- ï”· Appeals. DOE indicated that its process for rejected applications should be made more transparent and stated that the LGP continues to implement new strategies intended to reduce the need for any kind of appeals, such as enhanced communication with applicants including more frequent contact, and allowing applicants an opportunity to provide additional data at DOEâ s request to address deficiencies DOE has identified in applications.

DEPARTMENT OF ENERGY

Further Actions Are Needed to Improve DOEâ s Ability

to Evaluate and Implement the Loan Guarantee

Program

Highlights of GAO-10-627, a report to

congressional committees

Since the Department of Energyâ s

(DOE) loan guarantee program

(LGP) for innovative energy

projects was established in Title

XVII of the Energy Policy Act of

2005, its scope has expanded both

in the types of projects it can

support and in the amount of loan

guarantee authority available. DOE

currently has loan guarantee

authority estimated at about $77

billion and is seeking additional

authority. As of April 2010, it had issued one loan guarantee for $535 million and made nine conditional commitments. In response to Congressâ mandate to review DOEâ s execution of the LGP, GAO assessed (1) the extent to which DOE has identified what it intends to achieve through the LGP and is positioned to evaluate progress and (2) how DOE has implemented the program for applicants. GAO analyzed relevant legislation, prior GAO work, and DOE guidance and regulations. GAO also interviewed DOE officials, LGP applicants, and trade association representatives.

What GAO Recommends

GAO recommends that DOE develop performance goals reflecting the LGPâ s policy goals and activities; revise the loan guarantee process to treat applicants consistently unless there are clear, compelling grounds not to do so; and develop mechanisms

for administrative appeals and for
systematically obtaining and
addressing applicant feedback.
DOE said it is taking steps to
address GAOâ s concerns but did
not explicitly agree or disagree
with the recommendations.
DOE has broadly indicated the programâ s direction but has not developed all the tools necessary to assess progress. DOE officials have identified a number of broad policy goals that the LGP is intended to support, including helping to mitigate climate change and create jobs. DOE has also explained, through agency documents, that the program is intended to support early commercial production and use of new or significantly improved technologies in energy projects that abate emissions of air pollutants or of greenhouse gases and have a reasonable prospect of repaying the loans. GAO has found that to help operationalize such policy goals efficiently and effectively, agencies should develop associated performance goals that are objective and quantifiable and cover all program activities. DOE has linked the LGP to two departmentwide performance goals, namely to (1) double renewable energy generating capacity by 2012 and (2) commit conditionally to loan guarantees for two nuclear power facilities to add a specified minimum amount of capacity in 2010. However, the two performance goals are too few to reflect the full range of policy goals for the LGP. For example, there is no performance goal for the number of jobs that should be created. The performance goals also do not reflect the full scope of program activities; in particular, although the program has made conditional commitments to issue loan guarantees for energy

efficiency projects, there is no performance goal that relates to such projects. Without comprehensive performance goals, DOE lacks the foundation to assess the programâ s progress and, more specifically, to determine whether the projects selected for loan guarantees help achieve the desired results.

DOE has taken steps to implement the LGP for applicants but has treated applicants inconsistently and lacks mechanisms to identify and address their concerns. Among other things, DOE increased the LGPâ s staff, expedited procurement of external reviews, and developed procedures for deciding which projects should receive loan guarantees. However, GAO found:

â ¢ DOEâ s implementation of the LGP has treated applicants inconsistently, favoring some and disadvantaging others. For example, DOE conditionally committed to issuing loan guarantees for some projects prior to completion of external reviews required under DOE procedures. Because applicants must pay for such reviews, this procedural deviation has allowed some applicants to receive conditional commitments before incurring expenses that other applicants had to pay. It is unclear how DOE could have sufficient information to negotiate conditional commitments without such reviews.

â ¢ DOE lacks systematic mechanisms for LGP applicants to administratively appeal its decisions or to provide feedback to DOE on its process for issuing loan guarantees. Instead, DOE rereviews rejected applications on an ad hoc basis and gathers feedback through public forums and other outreach efforts that do not ensure the views obtained are representative.

Until DOE develops implementation processes it can adhere to consistently, along with systematic approaches for rereviewing applications and obtaining and addressing applicant feedback, it may not fully realize the benefits envisioned for the LGP.

The Honorable Peter J. Visclosky

Chairman

The Honorable Rodney P. Frelinghuysen

Ranking Member

Subcommittee on Energy and Water Development

Committee on Appropriations

House of Representatives

Through calendar year 2009, the Department of Energyâ s (DOE) Loan Guarantee Program (LGP) received more than 170 applications seeking over $175 billion in loan guarantees, generally to bring innovative energy technologies to market. Under normal economic conditions, companies can face obstacles in securing enough affordable financing to survive the â valley of deathâ between developing innovative technologies and commercializing them. Because the risks that lenders must assume to support new technologies can put private financing out of reach, companies may not be able to commercialize innovative technologies without government assistance. The financial crisis that emerged in late 2008, together with the associated economic decline, has further reduced

access to capital markets for innovative energy technologies. In this constrained economic environment, even companies that might ordinarily rely on private financing are turning to the federal government for assistance.

Federal loan guarantee programs such as DOEâ s can help companies obtain affordable financing because the federal government agrees to reimburse lenders for the guaranteed amount if the borrowers default, which encourages lending by reducing the lendersâ financial risks. In addition, to the extent that a federal loan guarantee signals confidence in a project, such guarantees can help companies raise capital from other sources, for example by selling equity. However, loan guarantee programs can also expose the government to substantial financial risks. In the past,

DOE Loan Guarantee Program

problems with loan guarantee programs have occurred, in part, because agencies did not exercise due diligence during the loan origination and monitoring processes.

Since the LGP was authorized under Title XVII of the Energy Policy Act of 2005 (EPAct), its scope has expanded.

1

The actâ specifically section

1703â originally authorized DOE to guarantee loans for projects that (1) use new or significantly improved technologies as compared with commercial technologies already in service in the United States and (2) avoid, reduce, or sequester emissions of air pollutants or man-made greenhouse gases. In February 2009, Congress passed the American Recovery and Reinvestment Act (Recovery Act), which amended Title XVII by adding section 1705.

2

Under section 1705, DOE may guarantee loans for projects using commercial technologies. Projects supported by the Recovery Act must employ renewable energy systems, electric power transmission systems, or leading-edge biofuels that meet certain criteria; begin construction by the end of fiscal year 2011; and pay wages at or above market rates.

The LGPâ s loan guarantee authority has also increased. In fiscal year 2007, Congress authorized up to $4 billion in loan guarantees for projects that meet the criteria in section 1703. By fiscal year 2009, Congress had authorized an additional $47 billion in loan guarantees for projects that meet these criteria.

3

Congress did not appropriate funds to cover the associated credit subsidy costsâ that is, the governmentâ s estimated net long-term cost, in present value terms, of direct or guaranteed loans over the entire period the loans are outstanding (not including administrative costs). Consequently, borrowers who obtain loan guarantees under

section 1703 must pay fees to cover these costs. Under the Recovery Act, Congress has provided nearly $4 billion to cover the credit subsidy costs

1

Pub. L. No. 109-58, Title XVII (Aug. 8, 2005).

2

Pub. L. No. 111-5 (Feb. 17, 2009).

3

Omnibus Appropriations Act, 2009, Pub. L. No. 111-8, Div. C, Title III (Mar. 11, 2009). The act provided that of the authorized amount of $47 billion, $18.5 billion shall be for nuclear power. Further congressional direction about the allocation of loan guarantee authority among technology categories was contained in the explanatory statement accompanying the act. Use of the funds appropriated for the program was subject to certain conditions, such as a requirement for DOE to submit an implementation plan to the appropriations committees prior to issuing any new solicitations inviting applications for loan guarantees.

for projects that meet the criteria in section 1705.

4

While the Recovery Act

appropriation did not specify the amount of new loan guarantee authority,

DOE officials said that the department believes credit subsidy costs will

average at least 15 percent of the value of loan guarantees. Accordingly,

the nearly $4 billion Recovery Act appropriation to pay credit subsidy costs could increase the amount of loans that the LGP guarantees by about $26 billion, raising the programâ s total estimated loan guarantee capacity to about $77 billion.

As of April 2010, the department had issued eight solicitations inviting applications for projects using various categories of technologies (see table 1). It had also issued one loan guarantee for $535 million to Solyndra, one of the companies that responded to DOEâ s initial LGP solicitation issued in 2006, and had made nine conditional commitments to issue additional loan guarantees.

5

The one loan guarantee and four of the conditional commitments were made under the Recovery Act; the other five conditional commitments were made under section 1703.

4

Pub. L. No. 111-5, Div. A, Title IV (Feb. 17, 2009). Congress originally appropriated nearly $6 billion to pay the credit subsidy costs of projects supported under section 1705, with the limitation that funding to pay the credit subsidy costs of leading-edge biofuel projects eligible under this section would not exceed $500 million. Congress later authorized the President to transfer up to $2 billion of the nearly $6 billion to expand the â Cash for Clunkersâ program. Pub. L. No. 111-47 (Aug. 7, 2009). The $2 billion was transferred to the Department of Transportation, leaving nearly $4 billion to cover credit subsidy costs of projects supported under section 1705.

5

A conditional commitment is a commitment by DOE to issue a loan guarantee if the applicant satisfies specific requirements. The Secretary of Energy has the discretion to

cancel a conditional commitment at any time for any reason prior to the issuance of a loan guarantee.

Source: GAO presentation of DOE data.

a

The 2006 mixed solicitation invited applications for all technologies eligible to receive loan guarantees according to the Energy Policy Act of 2005 except for nuclear facilities and oil refineries.

b

DOE received authorization to guarantee up to $4 billion in loans in fiscal year 2007 and had planned to use this authority to support projects submitted in response to the 2006 mixed technology solicitation. On March 25, 2010, DOE informed Congress of its intention to use up to $2 billion of its fiscal year 2007 loan guarantee authority for projects submitted in response to the 2008 front-end nuclear facilities solicitation.

c

Front-end nuclear facilities are to accelerate deployment of new uranium enrichment capacity and distribution.

d

This amount is an estimate because the solicitation did not specify how much DOE would issue in loan guarantees. This estimate is based on the solicitationâ s stated plan to use $750 million to cover credit subsidy costs and assumes credit subsidy costs of 15 percent, which DOE has told us is consistent with credit subsidy estimates to date.

For fiscal year 2011, DOE is seeking an additional $36 billion in loan guarantee authority for nuclear power facilities and $500 million to cover the credit subsidy costs for energy efficiency and renewable energy projects eligible under section 1703.

6

DOE estimates that this $500 million

will cover the credit subsidy costs for about $3 billion in loan guarantees.

6

When asked if DOE plans to use the $500 million to cover the credit subsidy costs for projects that are currently under review or for projects that apply under a new solicitation, the department stated that the $500 million, if approved, will be used by the LGP at its discretion across the full spectrum of qualified energy efficiency and renewable energy projects.

We have an ongoing mandate under the 2007 Revised Continuing Appropriations Resolution to review DOEâ s execution of the LGP and to report our findings to the House and Senate Committees on Appropriations.

Our previous reviews focused on the departmentâ s efforts to establish the tools needed to evaluate the programâ s effectiveness and to process applications. In 2007 and 2008, we recommended that the department take steps to further develop and improve its capabilities in these areas.

8

In light of these recommendations and following discussions with your staffs, we assessed (1) the extent to which DOE has identified what it intends to achieve through the LGP and is positioned to evaluate progress and (2) how DOE has implemented the LGP for applicants. To address these objectives, we analyzed Title XVII of EPAct, the Recovery Act, the Government Performance and Results Act (GPRA) and our prior work on GPRA, and DOEâ s program guidance and regulations. In addition, we interviewed relevant DOE officials andâ to obtain a broad representation of views on DOEâ s implementation of the LGPâ LGP applicants and trade association representatives. We selected the applicants and trade associations using a mix of criteria, including the amount of the loan guarantee requested and the relevant technology. Our review did not evaluate the technical or financial soundness of the projects that applied for DOE loan guarantees. In April 2010, we briefed your offices on the preliminary results of our review.

We conducted this performance audit from January 2009 through July 2010 in accordance with generally accepted government auditing standards. Those standards require that we plan and perform the audit to obtain sufficient, appropriate evidence to provide a reasonable basis for our findings and conclusions based on our audit objectives. We believe

that the evidence obtained provides a reasonable basis for our findings and conclusions based on our audit objectives. A further discussion of the scope of our review and the methods we used is presented in appendix I.

7

Pub. L. No. 110-5 Â§20320(c) (Feb. 15, 2007).

8

GAO, The Department of Energy: Key Steps Needed to Help Ensure the Success of the New Loan Guarantee Program for Innovative Technologies by Better Managing Its Financial Risk, GAO-07-339R (Washington, D.C.: Feb. 28, 2007); GAO, Department of Energy: New Loan Guarantee Program Should Complete Activities Necessary for Effective and Accountable Program Management, GAO-08-750 (Washington, D.C.: July 7, 2008).

DOE has broadly indicated the direction of the LGP but has not developed all the tools necessary to evaluate progress. DOE officials have identified a number of broad policy goals that the LGP is intended to support,

including helping to ensure energy security, mitigate climate change, jumpstart the alternative energy sector, and create jobs. Additionally, through DOEâ s fiscal year 2011 budget request and a mission statement for the LGP, the department has explained that the program is intended to support the â early commercial production and use of new or significantly improved technologies in energy projectsâ that â avoid, reduce, or sequester air pollutants or anthropogenic emissions of greenhouse gases, and have a reasonable prospect of repaying the principal and interest on their debt obligations.â

DOE Has Broadly Indicated the Programâ s Direction but Is Not Well Positioned to Evaluate Progress

To help operationalize such policy goals efficiently and effectively, principles of good governance identified in our prior work on GPRA indicate that agencies should develop associated performance goals and measures that are objective and quantifiable.

9

These performance goals and measures are intended to allow comparison of programsâ actual results with the desired results. Each program activity should be linked to a performance goal and measure unless such a linkage would be infeasible or impractical.

DOE has linked the LGP to two departmentwide performance goals:

â ¢ â Double renewable energy generating capacity (excluding conventional hydropower) by 2012.â

â ¢ â Commit (conditionally) to loan guarantees for two nuclear power facilities to add new low-carbon emission capacity of at least 3,800 megawatts in 2010.â

DOE has also established nine performance measures for the LGP (see app. II).

However, the departmentwide performance goals are too few to reflect the full range of policy goals for the LGP. For example, there is no measurable

9

GAO, Agenciesâ Annual Performance Plans under the Results Act: An Assessment Guide to Facilitate Congressional Decisionmaking, GAO/GGD/AIMD-10.1.18 (Washington, D.C.: February 1998, ver. 1.); GAO, The Results Act: An Evaluatorâ s Guide to Assessing Agency Annual Performance Plans, GAO/GGD-10.1.20 (Washington, D.C.: April 1998, ver. 1).

performance goal for job creation. The performance goals also do not reflect the full scope of the programâ s authorized activities. For example, as of April 2010, DOE had issued two conditional commitments for energy

efficiency projectsâ as authorized in legislationâ but the energy efficiency projects do not address either of the performance goals because the projects are expected to generate little or no renewable energy and are not associated with nuclear power facilities. Given the lack of sufficient performance goals, DOE cannot be sure that the LGPâ s performance measures are appropriate. Thus, DOE lacks the foundation to assess the programâ s progress, and more specifically, to determine whether the projects it supports with loan guarantees contribute to achieving the desired results.

As the LGPâ s scope and authority have increased, the department has taken a number of steps to implement the program for applicants. For example, DOE has substantially increased the LGPâ s staff and in-house expertise, and applicants we interviewed have commended the LGP staffâ s professionalism. DOE officials indicated that, prior to 2008, staffing was inadequate to review applications, but since June 2008, the LGPâ s staff has increased from 12 federal employees to more than 50, supported by over 40 full-time contractor staff. Also, the LGP now has in-house legal counsel and project finance expertise, which have increased the programâ s capacity to evaluate proposed projects. In addition, in November 2009, the Secretary named an Executive Director, reporting directly to the Secretary, to oversee the LGP and to accelerate the application review process.

10

DOE Has Taken Steps to Implement the LGP but Has Treated

Applicants

Inconsistently and

Lacks Mechanisms to

Identify and Address

Applicantsâ Concerns

Other key steps that DOE has taken include the following:

â ¢ DOE has identified a list of external reviewers qualified to perform legal, engineering, financial, and marketing analyses of proposed projects. Identifying these external reviewers beforehand helps to ensure that DOE will have the necessary expertise readily available during the review process. DOE officials said that the department has also expedited the procurement process for hiring these external reviewers.

â ¢ DOE developed a credit policies and procedures manual for the LGP. Among other things, the manual contains detailed internal policies and

10

The Executive Director also oversees DOEâ s Advanced Technology Vehicles Manufacturing Loan Program.

procedures that lay out requirements, criteria, and staff responsibilities for determining which proposed projects should receive loan guarantees.

â ¢ DOE revised the LGPâ s regulations after receiving information from

industry concerning the wide variety of ownership and financing structures that applicants or potential applicants would like to employ in projects seeking loan guarantees. Among other things, the modifications allow for ownership structures that DOE found are typically employed in utility-grade power plants and are commonly proposed for the next generation of nuclear power generation facilities.

â ¢ DOE obtained OMB approval for its model to estimate credit subsidy costs. The model is a critical tool needed for the LGP to proceed with issuing loan guarantees because it will be used to calculate each loan guaranteeâ s credit subsidy cost and the associated fee, if any, that must be collected from borrowers. (We are evaluating DOEâ s process and key inputs for estimating credit subsidy costs in other ongoing work.)

Notwithstanding these actions, the department is implementing the program in a way that treats applicants inconsistently, lacks systematic mechanisms for applicants to appeal its decisions or for applicants to provide feedback to DOE, and risks excluding some potential applicants unnecessarily. Specifically, we found the following:

DOE has treated applicants inconsistently. Although our past work has shown that agencies should process applications with the goals of treating applicants fairly and minimizing applicant confusion,

11

DOEâ s

implementation of the program has favored some applicants and disadvantaged others in a number of ways. First, we found that, in at least five of the ten cases in which DOE made conditional commitments, it did so before obtaining all of the final reports from external reviewers,

allowing these applicants to receive conditional commitments before incurring expenses that other applicants were required to pay. Before DOE makes a conditional commitment, LGP procedures call for engineering, financial, legal, and marketing reviews of proposed projects as part of the due diligence process for identifying and mitigating risk. If DOE lacks the in-house capability to conduct the reviews, external reviews are

11

GAO, Grants Management: Grants.gov Has Systemic Weaknesses That Require Attention, GAO-09-589 (Washington, D.C.: July 15, 2009).

performed by contractors paid for by applicants.

12

In one of the cases we

1055

identified in which DOE deviated from its procedures, it made a conditional commitment before obtaining any of the external reports. DOE officials told us this project was fast-tracked because of its â strong business fundamentalsâ and because DOE determined that it had sufficient information to proceed. However, it is unclear how DOE could have had sufficient information to negotiate the terms of a conditional commitment without completing the types of reviews generally performed during due diligence, and proceeding without this information is contrary to the departmentâ s procedures for the LGP.

Second, DOE treats applicants with nuclear projects differently from applicants proposing projects that employ other types of technologies. For example, DOE allows applicants with nuclear projects that have not been selected to begin the due diligence process to remain in a queue in case the LGP receives additional loan guarantee authority, while applicants with projects involving other types of technologies that have not been selected to begin due diligence are rejected (see app. III). In order for applicants whose applications were rejected to receive further consideration, they must reapply and again pay application fees, which range from $75,000 to $800,000 (see app. IV). DOE also provided applicants with nuclear generation projects information on how their projects ranked in comparison with others before they submitted part II of the application and 75 percent of the application fees. DOE did not provide rankings to applicants with any other types of projects. DOE officials said that applicants with nuclear projects were allowed to remain in a queue because of the expectation that requests would substantially exceed available loan guarantee authority and that the applications would be of

high quality. According to DOE officials, they based this expectation on information available about projects that are seeking licenses from the Nuclear Regulatory Commission. DOE officials also explained that they ranked nuclear generation projects for similar reasonsâ and also to give applicants with less competitive projects the chance to drop out of the process early, allowing them to avoid the expense involved in applying for a loan guarantee. However, all of the solicitations issued through 2008 initially received requests that exceeded the available loan guarantee authority (see app. V), so nuclear projects were not unique in that respect. In addition, applicants with coal-based power generation and industrial

12

LGP staff have generally conducted the financial reviews for the projects that have received conditional commitments or a loan guarantee to date.

gasification facility projects paid application fees equivalent to those paid by applicants with nuclear generation projects but were not given rankings prior to paying the second application fee (see app. IV). To provide EERE

applicants with earlier feedback on the competitiveness of their projects, DOE instituted a two-part application for the 2009 EERE solicitationâ a change from the 2008 EERE solicitation. DOE officials stated that they made this change based on lessons learned from the 2008 EERE solicitation. While this change appears to reduce the disparity in treatment among applicants, it remains to be seen whether DOE will make similar changes for projects that employ other types of technologies.

Third, DOE has allowed one of the front-end nuclear facility applicants that we contacted additional time to meet technical and financial requirements, including requirements for evidence that the technology is ready to move to commercial-scale operations, but DOE has rejected applicants with other types of technologies for not meeting similar technical and financial criteria. DOE has not provided analysis or documentation explaining why additional time was appropriate for one project but not for others.

DOE lacks systematic mechanisms for applicants to appeal its decisions or provide feedback to DOE. In its solicitations, DOE states that a rejection is â final and non-appealable.â Once a project has been rejected, the only administrative option left to an applicant under DOEâ s documented procedures is to reapply and incur all of the associated costs. Nevertheless, DOE said that, as a courtesy, it had rereviewed certain rejected applications. Some applicants did not know that DOE would provide such rereviews, which appear contrary to DOEâ s stated policy and have been conducted on an ad hoc basis.

DOE also lacks a systematic mechanism for soliciting, evaluating, and incorporating feedback from applicants about its implementation of the

program. Our past work has shown that agencies should solicit, evaluate, and incorporate feedback from program users to improve programs.

13

Unless they do so, agencies may not attain the levels of user satisfaction that they otherwise could. For example, during our interviews with applicants, more than half said they received little information about the

13

GAO, Transportation Research: Opportunities for Improving the Oversight of DOTâ s Research Programs and User Satisfaction with Transportation Statistics, GAO-06-917 (Washington, D.C.: Aug. 15, 2006).

timing or status of application reviews. Applicants expressed a desire for more information about the status of DOEâ s reviews and said that not knowing when a loan guarantee might be issued created difficulties in

managing their projectsâ for example, in planning construction dates, knowing how much capital they would need to sustain operations, and maintaining support for their projects from internal stakeholders.

According to DOE officials, the department has reached out to stakeholders through its Web site, presentations to industry groups and policymakers, and other means. DOE has also indicated that it has changed the program to make it more user-friendly, based on lessons learned and applicant feedback. For example, unlike the 2008 EERE solicitation, the 2009 EERE solicitation includes rolling deadlines that give applicants greater latitude in when to submit their applications; a simplified part I application that provides a mechanism for DOE to give applicants early feedback on whether their projects are competitive; and delayed payment of the bulk of the â facility feeâ that DOE charges applicants to cover certain program costs. While DOE said that these changes were based, in part, on feedback from applicants, because DOE has no systematic way of soliciting applicant feedback, the department has no assurance that the views obtained through its outreach efforts are representative, particularly since the means that DOE uses to obtain feedback do not guarantee anonymity. The department also has no assurance that the changes made in response to feedback are effectively addressing applicant concerns.

DOE risks excluding some potential applicants. Even though the Recovery Act requires that applicants begin construction by the end of fiscal year 2011 to qualify for Recovery Act funding, DOE has not yet issued solicitations for the full range of projects eligible for Recovery Act funding under section 1705. DOE has issued two solicitations specific to

the Recovery Act for the LGP, but neither invites applications for commercial manufacturing projects, which are eligible under the act.

14

While DOE has announced that it will issue an LGP solicitation for commercial manufacturing projects, it has given no date for doing so. The 2009 EERE solicitation provided an opportunity for some manufacturing applicants to receive Recovery Act funding, but because DOE combined

14

The solicitations specific to the Recovery Act are the 2009 solicitations targeting electric power transmission infrastructure projects and commercial technology renewable energy generation projects.

the Recovery Actâ s requirements with the original section 1703 requirements, applicants with commercial manufacturing projects were excluded. DOE officials told us that they combined the requirements to ensure that projects that are initially eligible under section 1705 but that fail to start construction by the deadline can remain in the LGP under section 1703.

DOE has made substantial progress in building a functional program for issuing loan guarantees under Title XVII of EPAct; however, it may not fully realize the benefits envisioned for the LGP until it further improves its ability to evaluate and implement the program. Since 2007, we have been reporting on DOEâ s lack of tools necessary to evaluate the program and process applications and recommending that the department take steps to address these areas. While DOE has identified broad policy goals and developed a mission statement for the program, it will lack the ability to implement the program efficiently and effectively and to evaluate progress in achieving these goals and mission until it develops corresponding performance goals. As a practical matter, without such goals, DOE will also lack a clear basis for determining whether the projects it decides to support with loan guarantees are helping achieve the desired results, potentially undermining applicantsâ and the publicâ s confidence in the legitimacy of those decisions. Such confidence could also be undermined by implementation processes that do not treat applicants consistentlyâ unless DOE has clear and compelling grounds for disparate treatmentâ particularly if DOE skips steps in its review process prior to issuing conditional commitments or rereviews rejected applications for some applicants without having an administrative appeal process. Furthermore, while DOE has taken steps to increase applicantsâ satisfaction with the program, it cannot determine the effectiveness of those efforts without systematic feedback from applicants that preserves their anonymity.

To improve DOEâ s ability to evaluate and implement the LGP, we recommend that the Secretary of Energy take the following four actions:

â ¢ Direct the program management to develop relevant performance goals that reflect the full range of policy goals and activities for the program, and to the extent necessary, revise the performance measures to align with these goals.

Conclusions

Recommendations for Executive Action

â ¢ Direct the program management to revise the process for issuing loan guarantees to clearly establish what circumstances warrant disparate treatment of applicants so that DOEâ s implementation of the program treats applicants consistently unless there are clear and compelling grounds for doing otherwise.

â ¢ Direct the program management to develop an administrative appeal

process for applicants who believe their applications were rejected in error and document the basis for conclusions regarding appeals.

â ¢ Direct the program management to develop a mechanism to systematically obtain and address feedback from program applicants, and, in so doing, ensure that applicantsâ anonymity can be maintained, for example, by using an independent service to obtain the feedback.

We provided a draft of this report to DOE for review and comment. In its written comments, DOE stated that it recognizes the need for continuous improvement to its Loan Guarantee Programs as those programs mature but neither explicitly agreed nor disagreed with our recommendations. In one instance, DOE specifically disagreed with our findings: the department maintained that applicants are treated consistently within solicitations.

Agency Comments

Nevertheless, the department stated that it is taking steps to address concerns identified in our report. Specifically, DOE pointed to the following recent or planned actions:

â ¢ Performance goals and measures. DOE stated that, in the context of revisions to its strategic plan, the department is revisiting the performance goals and measures for the LGP to better align them with the departmentâ s policy goals of growing the green economy and reducing greenhouse gases from power generation.

â ¢ Consistent treatment of applicants. DOE recognized the need for greater transparency to avoid the perception of inconsistent treatment and stated that it will ensure that future solicitations explicitly describe circumstances that would allow streamlined consideration of loan guarantee applications.

â ¢ Appeals. DOE indicated that its process for rejected applications should be made more transparent and stated that the LGP continues to implement new strategies intended to reduce the need for any kind of appeals, such as enhanced communication with applicants including more frequent

contact, and allowing applicants an opportunity to provide additional data at DOEâ s request to address deficiencies DOE has identified in

applications.

While these actions are encouraging, they do not fully address our findings, especially in the areas of appeals and applicant feedback. We continue to believe that DOE needs systematic mechanisms for applicants to appeal its decisions and to provide anonymous feedback.

DOEâ s written comments on our findings and recommendations, along with our detailed responses, are contained in appendix VI. In addition to the written comments reproduced in that appendix, DOE provided technical comments, which we incorporated as appropriate.

We are sending copies of this report to the appropriate congressional committees, the Secretary of Energy, and other interested parties. This report also is available at no charge on the GAO Web site at http://www.gao.gov.

and Environment

Appendix I: Scope and Methodology

Appendix I: Scope and Methodology

To assess the extent to which the Department of Energy (DOE) has identified what it intends to achieve through the Loan Guarantee Program (LGP) and is positioned to evaluate progress, we reviewed and analyzed relevant provisions of Title XVII of the Energy Policy Act of 2005 (EPAct), the American Recovery and Reinvestment Act of 2009 (Recovery Act); DOEâ s budget request documents; and Recovery Act planning information, as well as other documentation provided by DOE. We discussed strategic planning and program evaluation with cognizant DOE officials from the LGP office, the Office of the Secretary of Energy, the Office of the Chief Financial Officer, and the Credit Review Board (CRB) that is charged with coordinating credit management and debt collection activities as well as overall policies and procedures for the LGP. As criteria, we used the Government Performance Results Act (GPRA), along with our prior work on GPRA.

To evaluate DOEâ s implementation of the LGP for applicants, we reviewed relevant legislation, such as EPAct and the Recovery Act; DOEâ s final regulations and concept of operations for the LGP; solicitations issued by DOE inviting applications for loan guarantees; DOEâ s internal project tracking reports; technical and financial review criteria for the application review process; minutes from CRB meetings held between February 2008

and November 2009; applications for loan guarantees; application rejection letters issued by DOE; and other various DOE guidance and procurement documents related to the process for issuing loan guarantees. We interviewed cognizant DOE officials from the LGP office, the Office of the Secretary of Energy, the Office of the Chief Financial Officer, the Office of Headquarters Procurement Services, and program offices that participated in the technical reviews of projects, including the Office of Electricity Delivery and Energy Reliability, the Office of Energy Efficiency and Renewable Energy, the Office of Nuclear Energy, and the National Energy Technology Laboratory (NETL). In addition, we interviewed 31 LGP applicants and 4 trade association representatives, using a standard list of questions for each group, to obtain a broad representation of views that we believe can provide insights to bolster other evidence supporting our findings. We selected the applicants and trade associations using a mix of criteria, including the amount of the loan guarantee requested and the relevant technology. As criteria, we used our prior work on customer service. We did not evaluate the financial or technical soundness of the projects for which applications were submitted.

We conducted this performance audit from January 2009 through July 2010 in accordance with generally accepted government auditing standards. Those standards require that we plan and perform the audit to

obtain sufficient, appropriate evidence to provide a reasonable basis for our findings and conclusions based on our audit objectives. We believe that the evidence obtained provides a reasonable basis for our findings and conclusions based on our audit objectives.

Appendix II: Performance Measures for the LGP

Appendix II: Performance Measures for the LGP

DOE has developed the following nine performance measures for the LGP:

â ¢ percentage of projects receiving DOE loan guarantees that have achieved and maintained commercial operations;

â ¢ contain the loss rate of guaranteed loans to less than 4 percent;

â ¢ contain the loss rate of guaranteed loans to less than 11.81 percent in fiscal year 2009 (11.85 percent for fiscal years 2010 and 2011) on a long-term portfolio basis;

â ¢ newly installed generation capacity from power generation projects receiving DOE loan guarantees;

â ¢ average cost per megawatthour for projects receiving DOE loan guarantees;

â ¢ forecasted greenhouse gas emissions reductions from projects receiving loan guarantees compared to â business as usualâ energy generation;

â ¢ forecasted air pollutant emissions (nitrogen oxides, sulfur oxides, and particulates) reductions from projects receiving loan guarantees compared to â business as usualâ energy generation;

â ¢ average review time of applications for Section 1705 guarantees; and

â ¢ percentage of conditional commitments issued to qualified applicants relative to plan.

a

The 2006 mixed solicitation invited applications for all technologies eligible to receive loan guarantees under the Energy Policy Act of 2005 except for nuclear facilities and oil refineries.

b

DOE is still accepting applications in response to the 2009 EERE solicitation, so the final total amount that applicants will seek is not yet known. Through November 2009, applicants were seeking a total of $22.8 billion.

c

This amount is an estimate because the solicitation did not specify how much would be issued in loan guarantees. This estimate is based on the solicitationâ s stated plan to use $750 million to cover credit subsidy costs and assumes credit subsidy costs of 15 percent, which DOE has told us is consistent with credit subsidy estimates to date.

Appendix VI: Comments from the Department of Energy

The following are GAOâ s comments on the Department of Energyâ s (DOE) letter dated June 17, 2010.

1. DOE appears to concur with the spirit of our recommendation. Best practices for program management indicate that DOE should have objective, quantifiable performance goals and targets for evaluating its progress in meeting policy goals DOE has identified for the LGP. Such goals and targets are important tools for ensuring public accountability and effective program management.

GAO Comments

2. Our finding about inconsistent treatment of LGP applicants is based on information obtained from applicants corroborated by documents from DOE. In the instance we identified in which DOE made a conditional commitment before obtaining any of the required external reports, the external reviewers were not fully engaged until after DOE

had negotiated the terms of the conditional commitment, which is contrary to DOEâ s stated procedures and provided an advantage to the applicant. Other applicants who received conditional commitments before completion of one or more of the reports called for by DOEâ s due diligence procedures also had a comparative advantage in that they were able to defer some review expenses until after DOE had publicly committed to their projects. We continue to believe that DOE should revise the process for issuing loan guarantees to treat applicants consistently unless there are clearly established and compelling grounds for making an exception.

3. We agree that there may be grounds for treating applicants differently depending on the type of technology they employ but do not believe that DOE has adequately explained the basis for the differences among the solicitations. For example, DOEâ s response does not address the possibility that lack of ranking information for fossil energy projects, combined with the knowledge that the solicitation was significantly oversubscribed, could have factored into applicantsâ decisions to drop out of the process, especially given the relatively high fees associated with submitting part II of the application.

4. We disagree that DOEâ s current process for rereviewing rejected applications is working. As we state in our report, some applicants did not know that DOE would provide rereviews. While we are encouraged by DOEâ s efforts to reduce the need for appeals, we believe that an administrative appeal process would allow DOE to better plan and manage its use of resources on rejected applications.

DOE Loan Guarantee Program

Appendix VI: Comments from the Department

of Energy

5. We applaud DOEâ s efforts to reach out to stakeholders and to use lessons learned to improve procedures and increase efficiencies and effectiveness. However, we continue to believe that DOE needs a systematic mechanism for applicants to provide anonymous feedback, whether through use of a third party or other means that preserves confidentiality. Several applicants we interviewed expressed concern that commenting on aspects of DOEâ s implementation of the LGP could adversely affect their current or future prospects for receiving a loan guarantee. Systematically obtaining and addressing anonymous feedback could enhance DOEâ s efforts to improve procedures and increase efficiencies and effectiveness.

GAOâ s Mission

The Government Accountability Office, the audit, evaluation, and investigative arm of Congress, exists to support Congress in meeting its constitutional responsibilities and to help improve the performance and accountability of the federal government for the American people. GAO examines the use of public funds; evaluates federal programs and policies; and provides analyses, recommendations, and other assistance to help Congress make informed oversight, policy, and funding decisions. GAOâ s commitment to good government is reflected in its core values of accountability, integrity, and reliability.

The fastest and easiest way to obtain copies of GAO documents at no cost is through GAOâ s Web site (www.gao.gov). Each weekday afternoon, GAO posts on its Web site newly released reports, testimony, and correspondence. To have GAO e-mail you a list of newly posted products, go to www.gao.gov and select â E-mail Updates.â

Obtaining Copies of
GAO Reports and
Testimony

Order by Phone

The price of each GAO publication reflects GAOâ s actual cost of production and distribution and depends on the number of pages in the publication and whether the publication is printed in color or black and white. Pricing and ordering information is posted on GAOâ s Web site, http://www.gao.gov/ordering.htm.

Place orders by calling (202) 512-6000, toll free (866) 801-7077, or TDD (202) 512-2537.

Orders may be paid for using American Express, Discover Card,

MasterCard, Visa, check, or money order. Call for additional information.

GOP Lawmakers Introduce Resolution Giving DOJ 7 Days to Turn Over Documents Owed to Congress ~ Why don't they start impeachent hearings so Rosenstein can't hold a government job ever again. (thegatewaypundit.com)

by Scrooblemeyer to news (+7|-1)

- discuss

Our Alliance of people and organizations has observed public officials and Silicon Valley tech companies operating criminal enterprises.

We thus campaigned for the creation of Congressional investigations, FBI special task forces, GAO investigation reports, Inspector General investigations, The appointment of a Special Counsel, the creation of the FEDERAL TRADE COMMISSION BUREAU OF COMPETITION TECH TASK FORCE, European Union investigations under M. Vestager, INTERPOL reports, Grand Jury hearings and other ongoing counter-measures.

Silicon Valley bought K Street and U.S. Senators, gave them more Dark Money than history has ever seen and then had giant tech-law firms bribe, hit-job and blockade any attempts to solve the problem. The K-Street Lobbyists, the technology law firms and the Palo Alto Sand Hill Road venture capitalists should be shut-down and indicted.

IN ONE OF THE CORE CASES...

"... since the 1970's, FBI/GAO Witness-A365 has been a U.S. Patent Office awarded Silicon Valley inventor of seminal first-ever inventions, now in use by billions of people globally, and a program director of national projects. FBI/GAO Witness-A365 has been awarded federal commendations, state and federal

innovation grants, government R&D contracts, White House commendations by The Vice President, Mayoral proclamations, industry innovation awards, issued patents, and recognition in thousands of news articles and news broadcasts. FBI/GAO Witness-A365 is affiliated with no political party.

Silicon Valley is run by a group of men known as "The PayPal Mafia" AKA "The Silicon Valley Mafia". They are a group of wealthy ivy league frat boys who have been charged with numerous rapes, sextortions, tax fraud, political bribery, college admissions bribery, sex trafficking, and stock market manipulation by various federal agencies and ex-employees. This group came to see FBI/GAO Witness-A365 multiple times and sought to examine FBI/GAO Witness-A365's technology under the guise of pretending to "want to invest in FBI/GAO Witness-A365". They, instead, copied his patented technologies and later formed duplicate companies to those of FBI/GAO Witness-A365.

They have, as of today, made over $100 Billion+ (Per SEC filings), from technologies the U.S. Patent office says that FBI/GAO Witness-A365 first invented and deployed. Each time FBI/GAO Witness-A365 tries to sue them for his intellectual property rights and owed licensing fees, they spend ten times more and hire ten times more lawyers and stall his cases out. They hire attack bloggers to attack FBI/GAO Witness-A365, on social media, to try to character assassinate his brand. It costs over $3 Million+ to sue each one of the "Paypal Mafia" members and their companies (Google, Facebook, Tesla, etc).

FBI/GAO Witness-A365 has billions of dollars in proven damages but has yet to be allowed to get into a court-room in an actual unbiased jury trial. The Palo Alto Cartel will do anything to keep him out of a jury room because they will lose, dramatically, in an equally-resourced jury hearing. They got over 400 of their members hired by the White House (As revealed in the INTERCEPT articles about Google and The White House) and they have the lobby-clout to control parts of the U.S. Government for corrupt purposes.

Most high tech law firms have been told by the Cartel that they will be "black-listed" just like the Paypal Mafia was caught doing in the "AngelGate Scandal" and the "Silicon Valley No-Poaching Class Action Lawsuit"; (both of which can be easily researched online) if any tech law firm's take FBI/GAO Witness-A365's cases. These cases, along with the recent Stanford University Admissions Bribery Scandals and the Panama Papers, Stratfor Leaks, Wiki-leaks and Swiss Leaks prove the depths of criminality that these people are willing to engage in.

From 2006, forward the "PayPal Mafia" Cartel spent more money than any group had ever spent in history to hire most of the lobbyists in politics and to pay bribes to hundreds of elected officials and agency staff in order to get things their way in public policy decisions and to seek to monopolize the digital communications world. They seek to control all alternative energy and digital media programs. The PayPal Mafia bribes U.S. Senators, Agency Heads and Congress using these methods which include: 1.) Billions of dollars of Google, Twitter, Facebook, Tesla, Netflix and Sony Pictures stock and stock warrants which is never reported to the FEC, 2.) Billions of dollars of Google, Twitter, Facebook, Tesla, Netflix and Sony Pictures search engine rigging including shadow-banning, de-boosting, DNS re-routing, directed search suggestion, subliminal messaging bias, and hundreds of other psychological manipulation tricks; the value of which is never reported to the FEC but proven by invoices and bank payments between Google and Gawker, Gizmodo, DNC, Fusion GPS, Black Cube, etc., 3.) Free rent for public officials, 4.) The providing of prostitutes and rent boys, 5.) Cars, 6.) Dinners, 7.) Party Financing, 8.) Sports Event Tickets, 9.) Campaign Services "Donations", 10.) Secret PAC Financing, 11.) Jobs in Corporations in Silicon Valley For The Family Members of Those Who Take Bribes And Those Who Take Bribes, Themselves, 12.) "Consulting" contracts from McKinsey as fronted pay-off gigs, 13.) Overpriced "Speaking engagements" which are really just pay-offs conduited for donors, 14.) Private jet rides and use of Government fuel depots (ie: Google handed out NASA jet fuel to staff), 15.) Real Estate, 16.) The use of Cayman, Boca Des Tores, Swiss and related laundering accounts, 17.) The use of HSBC, Wells Fargo and Deustche Bank money laundering accounts, 18.) Free spam and bulk mailing services owned by corporations, 19.) Use of high tech law firms such as Perkins Coie, Wilson Sonsini, MoFo, Covington & Burling, etc. to conduit bribes to

officials and to block victims from getting to court; and other bribes...

The FBI, The SEC, The OSC, The GAO, The FEC and all other agencies are fully aware of this, yet they have no management will to make the arrests of the "famous" people involved. FBI/GAO Witness-A365 has never cooperated with bribes and corruption and the PayPal Mafia hates him because: 1.) he is the original inventor some of their core technologies, 2.) A anti-corruption entity, 3. A federal witness against the PayPal Mafia.

At one point FBI/GAO Witness-A365 won a Congressional commendation and a federal grant, in the Iraq War Bill, ordering the U.S. Department of Energy to hire FBI/GAO Witness-A365 and his team to build America's alternative energy "back-up plan". FBI/GAO Witness-A365 has been working with U.S. Energy programs since 2000. The "PayPal Mafia" believes that it controls U.S. domestic alternative energy industries and that FBI/GAO Witness-A365 was an "outsider" non-Frat boy who dared to operate on their turf.

In a later stage of the Energy Department project, The federal government asked FBI/GAO Witness-A365 to invest with them in building a car factory. In the course of that effort, FBI/GAO Witness-A365 and his Team witnessed a crime being committed by Energy Department officials and reported that fact to a U.S. Senate Committee and the U.S. Attorney General. FBI/GAO Witness-A365 spent his life savings at government request and years of his life only to later find that he, and his team had been defrauded and that money's that his project had been had secretly been promised to PayPal Mafia members including Elon Musk, Eric Schmidt and Reid Hoffman.

Members of Congress encouraged FBI/GAO Witness-A365, and his team, to sue the Government under a novel new kind of litigation process. FBI/GAO Witness-A365 agreed to do so. These actions resulted in the termination of very famous public officials and their crony criminal embezzlement scams and almost resulted in the President being forced to leave office, mid-term, based on revelations of a massive crony kick-back scheme which began to be exposed after the FBI raid of Solyndra. The director of the FBI was fired for assisting in cover-ups related to this matter. (FYI: "Paranoia" is defined as "unfounded fears of harm". "Caution" is defined as "security measures based on previous threats and attacks")

FBI/GAO Witness-A365 was exposed to severe cellular-level toxic poisoning via: micro-particulated nano-powdered radioactive tritium batteries, cesium, uranium, plutonium, transuranic waste, beta-voltaic batteries, high frequency-high voltage EMF, heavy metal, solvent and lead compounds in government energy and weapons labs exposures from decades of work with U.S. Department of Energy programs and projects as contractor/partner/Congressional awardee. The affliction is blood poisoning at a cellular level. In reprisal for reporting the crimes, FBI/GAO Witness-A365 has been subjected to benefits blockades, hacking, internet server re-direction, web search shadow-banning, blacklisting and other retribution/vendetta actions by public officials.

This natural-born American domestic group of engineers was attacked with a $30 million dollar+ retribution/political reprisal program contracted by White House political operatives, and their appointees, who were also the business competitors of the engineers. The attackers hired Fusion GPS-type character assassination smear campaigns (operated by their cronies at Google, Gawker, Gizmodo, Jalopnik and Facebook), NVCA black-listing, Solyndra-laundering, stone-walling, Lois Lerner-class agency manipulation and search engine rigging. In-Q-Tel turns out to be the only federally financed "charity" whose staff are also employed by each of the suspects in this case and who financed the suspects in this case. It was revealed that White House executives ordered government agencies to harm members of the public and to reprisal with-hold public resources from the public. This was a violation of tort, RICO and anti-trust laws.

The victims, including FBI/GAO Witness-A365, fought back using 100% legal methods, including many of

those methods that were used to attack the FBI/GAO Witness-A365s/victims (If they are not illegal for the attackers to use, then they must not be illegal for the victims to use to seek justice)

With an idea suggested to the victims by the members of Congress the victims, essentially; helped the United States government sue itself! With encouragement from Congress, the FBI/GAO Witness-A365's undertook a multi-million dollar, decade-long, epic series of anti-corruption lawsuits, financed by public-interest law-firms.

First, with a unique new kind of pioneering federal lawsuit, victims established â FOR THE FIRST TIME IN LEGAL HISTORY â that political cronyism is a valid basis for a claim of arbitrary-and-capricious agency action under the Administrative Procedure Act. See: Federal Case One, (D.D.C. 2015). The victims created new federal law around this.

Second, they prevailed in the United States Court of Appeals for the District of Columbia Circuit on their appeal of the district courtâ s ruling that an agency may escape judicial review of its action by requesting a voluntary remand but refusing to reconsider its initial denial of an application. See: Case Federal Two, (D.C. Cir. 2017). The Washington DC Circuit agreed with the victims that an agency may only seek a remand if it promises to reconsider its initial decision. It is because of that victory that the government, under court order is now re-doing the victims applications and GAO, FBI, IG's and Congressional oversight offices are watching to assure effective ethics and transparency.

Third, these cases placed, on permanent public record, one of the most detailed documentation sets, ever assembled, about how modern political "Dark Money" conduits operate. The legal team hired ex-FBI, CIA and SEC experts to track down covert bank accounts, revolving door bribes, insider stock trades and other payola between the victim's competitors and public officials. This documentation now prevents the use of those kinds of criminal efforts, in the future, by exposing their tactics to the public.

Fourth, the victim's team engaged in the interdiction and termination of corrupt agency executives, contractors and their financiers. This included some of the most well-known names in Washington, DC, at the time. Many of them were, and are still being, investigated and surveilled by the FBI, GAO, SEC and Congress. In the course of this case, victims campaigned for the new law called THE AMERICAN JOBS ACT which created the first SEC approval of legal "Crowd-Funding", which allowed start-ups to get funding without going through the Palo Alto "Vulture Capitalists".

Fifth, and most important, the effort put every corrupt political scheme on notice that they WILL be found out and interdicted! The bottom line?

The victims group WON on every single aspect of their public-interest litigation goals EXCEPT they STILL have yet to be recompensed for their damages!

IMAGINE LIVING IN A WORLD WHERE ALMOST EVERY ONE OF THE PUBLIC OFFICIALS THAT WERE SUPPOSED TO HELP YOU TURNED OUT TO BE YOUR BUSINESS COMPETITORS. IMAGINE HAVING THEM USE GOVERNMENT RESOURCES TO PROFIT AT YOUR EXPENSE, BLOCKADE YOU AND TREAT DEMOCRACY LIKE A GARAGE SALE! THIS IS THAT STORY!

This is about a group of U.S. Senators, Silicon Valley Oligarchs, Crooked Law Firms and Lobbyists who commit crimes in order to manipulate over a trillion State and federal tax dollars into their, and their friends pockets. They use media monopoly tricks to try to shut out any other viewpoints. They push issues that they believe will get more tax money allocated to "issue solutions" that they, and their friends, happen to already own the business monopolies for. They are felons yet they control some of the offices of the agencies who are supposed to arrest them. Silicon Valley bought K Street lobby firms and U.S. Senators, gave them more Dark Money than history has ever seen and then had giant tech-law firms bribe, hit-job

and blockade any attempts to arrest them.

You can verify the facts yourself in the federal court records of this, and related cases, and in the hundreds of thousands of confirmed evidence documents at these links:

Search any terms that you are unfamiliar with on any non-Google search engines. Copies of this report, and the associated evidence documents, have been provided to every known law enforcement and regulatory agency."

The folders above are a small percentage of the available evidence.

These files are updated hourly by the public, whistle-blowers, journalists and forensic investigators. A 2TB+ set of data DVD copies is available by mail or on torrents.

There are no "conspiracy theories" here. These are all hard forensic facts that will stand-up in any court!

We are working with Congress, the FBI, The GAO and others regarding the fact that White House staff ordered federal agencies, and state agencies financed by federal funds; to stone-wall, delay, manipulate, defer, obfuscate and reprisal-negate applications and funding requests as political retribution.

They did this to anybody who they thought might expose the White House use of agencies as "slush-funds" and "Dark Money" campaign finance laundering conduits. They were afraid that exposure of these schemes would cause the President of the United States to be forced to resign in the middle of his term!

To search in one of the above folders, click on the folder to open it and then simply scroll down, or use the "*Find*" or "*Find On This Page*" function of your browser to search by terms, or by word. Every browser has a "Find" feature that is usually a magnifying glass icon.

These folders provide evidence, signed by thousands of reporters and investigators, that the suspects are: A.) Based around Silicon Valley and Washington DC; B.) Operating as a RICO-violating cartel; C.) Deeply sociopath and sexually disturbed; D.) Money laundering via large law firms and investment banks; E.) Using Google, Reddit, Facebook, etc. as mass political behavior-manipulation programs; F.) Paying for and operating character assassination programs against those who defy them; G.) Using "green energy" as one of their facades to steer tax dollars to the companies that they, and their friends, already own and work for; H.) Willing to resort to the most extreme things to protect their scheme; I). Living in an ideological "echo-chamber" in their tech bubbles; J.) Empowered entirely by the public's lack of willingness to boycott them and demand their arrests.

A vast number of individuals and companies, who are willing to testify about these crimes have never been allowed into a Congressional hearing, court-room, FBI 302 interview, etc., because crooked Senators are terrified of the confirming testimony they can all provide.

NOTICE REGARDING INTERNET SEARCH MANIPULATION: - We placed autonomous monitoring applications on a vast number of co-location servers, shared hosting ISPs, stand-alone servers and sites around the world over ten years ago and monitored: 1.) Google search results compared to other search engines, 2.) Google DNS and spoofing activities, 3.) Google results on 100 key search terms including search terms of

assets, candidates and business associates connected to Google, 4.) Where Google sends data from users clicking on Google supplied links, 5.) Where fabricated mole data that was injected as user data ultimately ended up later, and other metrics. The results prove that Google abuses the market, the public, politics and human rights. ELON MUSK BOYFRIENDS: LARRY PAGE, ERIC SCHMIDT, JARED COHEN AND SERGY BRIN AT GOOGLE AND MARK ZUCKERBERG AT FACEBOOK ORDER THEIR COMPANY STAFF TO HIDE, DOWN-RANK, HOLE-PUNCH THE NET, SHADOW-BAN, STOCK MARKET VALUATION MANIPULATE AND EXCLUDE THIS WEBSITE ON THE INTERNET. WE TRACK EVERY TECHNICAL TRICK THEY USE AND REPORT IT TO CONGRESS AND ANTI-TRUST AGENCIES. THE MORE THEY DO IT, THE MORE THEY CREATE EVIDENCE THAT WILL PUT THEM OUT OF BUSINESS!

The Google empire controls most of the media on Earth, via many front corporations, and indoctrinates everyone in it's organization using 'cult' methodologies. Google owner's believe in "our-ideology-at-any-cost" and "the-ends-justify-the-means" scenarios. What could possibly go wrong?

NOTICE: Regarding The CleanTech Crash: Every single Dept of Energy executive, and related Senator, owns stock market assets in Tesla, Fisker, Solyndra, Ener1, etc. so they blockaded and sabotaged every applicant who competed with their holdings in a RICO-violating, felony organized crime, using taxpayer funds.

If you are reading this, please demand a public Congressional Special Counsel investigation!

Many of those character assassinated, sabotaged, black-listed, poisoned and shadow-banned are still waiting for justice!

WHO IS THE SILICON VALLEY MAFIA?: The Silicon Valley Mafia is The Sandhill Road Venture Capital frat boy company bosses in Palo Alto, their National Venture Capital Association (NVCA) partners and the tech companies (Google, Tesla, Facebook, Amazon, Twitter, Linkedin, etc.) they control. They are sometimes referred to as The Deep State. They have purchased California, New York and Washington, DC politicians (mostly Senators) who they also control.

They hire rogue ex-intelligence agents to operate attacks via ***Fusion GPS, The Gawker/Gizmodo/Jalopnik/Univision*** Hatchet-Job Fake Tabloid Facade (ie: Obama had White House staff: Robert Gibbs and John Podesta hire them, in association with Obama financier Elon Musk, to attack XP Vehicles, Bright Automotive and ZAP Vehicles as retribution in violation of anti-trust laws), ***Black Cube, ShareBlue, New America, In-Q-Tel, Podesta Group, Media Matters***, etc. . They spend over $30M on each massive media attack program against competitors, reporters and outsiders.

They collude on black-lists, valuation controls, election manipulation, search engine rigging, domestic spying for political manipulation, stock rigging, insider trading, executive prostitute clubs, trophy wife assignments, the bribery of politicians and worse. They are felons who pay politicians to halt investigations and interdiction efforts. They are widely covered in news media articles as: sex abusers, cult enthusiasts, elitists, rapists, woman beaters, sexual work extortion operators, extremists, arrogant clones of each other, tone deaf, echo-chamber reinforcing, misogynist, racist, manipulative, insecure, covertly gay, corrupt, thieves' and other anti-social revelations.

The divorce and sex abuse court filings against the #PaloAltoMafia men of Silicon Valley are some of the most disturbing and sexually twisted court records you will ever read and they demonstrate a clear and decades-long pattern of collusion and depravity. From Google's "Sex Slaves" to "Sex Penthouses" to "Deaths by Prostitute"; the list is endless.

They are not limited to California and also operate out of New York and Washington DC. They use their

monopolistic control of the internet to massively and exclusively scale services that only they control and use to abuse public privacy, human rights, invention rights and information. They run their cartel like the old Italian Mafia once did.

Network Scaled Monopolies

- A crime with hookers and a very big shark

There are millions of sharks in the ocean but only "Jaws" was big enough to earn himself (The Shark) so many feature films about trying to kill him. It was simply because he was so big and so hungry. Judging by the endless sequels, Jaws seems pretty hard to kill.

This is about the biggest sharks. They are from Silicon Valley.

Google, Facebook, Amazon, Linkedin, Netflix, et al; exist because they operate under the criminal umbrella of the tech Cartel frat boys.

These guys are addicted to sex, and they are also huge assholes, so they can't keep any partners around unless they pay them to be trophy wives or "beard" wives. Buying sex from Italian escorts, young girls and New York Rent Boys is really, really expensive. This drives them to do anything to suck up huge amounts of cash.

These guys are also addicted to power, so they buy East and West Coast U.S. Senators, British Parliament members and partner with corrupt Russian oligarchs. Buying Senators is also really, really expensive. This also drives them to do anything to suck up huge amounts of cash.

These guys need, and spend, massive amounts of cash. Being a tech oligarch is really, really expensive. They can't have the IRS cutting into their hooker-budgets. They spend massive amounts on big law firms to hide money in real estate, trusts, fake charities and in a huge array of off-shore spider holes.

These guys can't afford to get caught so they hire In-Q-Tel, Gawker Media, Black Cube, Fusion-GPS, and a huge army of other attackers, to destroy anybody who questions their motives.

Their Cartel exists because they own all of the main servers, banks, venture capital firms, tech law firms, K Street lobbyists and tech HR firms.

They control their entire eco-system and black-list anybody that offends them.

They own the internet and they delete anybody who steps in their circle.

Nobody can operate outside of it.

No start-up can compete with them without getting a hit-job put on it.

Since the year 2000, together, they have put over a million smaller companies out of business.

They exist because of "Scaling": the ability to use monopolized networks to reach everyone on Earth, have lower prices, and destroy all competition because they control all infrastructure. *Scaling* is all they talk about at their AngelGate "power lunches" in the back rooms of Restaurants on University Avenue in Palo Alto.

The FBI can't stop them because they owned James Comey, the head of the FBI.

The SEC, FEC and FTC can't stop them because they own the regulators at those agencies.

They Obama White House could not stop them because most of the Obama Administration was staffed by, and directed by, the staff of Google, Amazon and Facebook, et al.

The Silicon Valley tech Cartel makes the Mafia look like small potatoes.

They are a criminal organization!

"Joe Simons, FTC chairman

White House
National Archives
Commissioner Vestager, EU

Dear Mr. Simons:

Our Alliance of taxpayers and community interest groups applauds your mandate to bring sharper focus to antitrust issues in the tech world. We have pushed hard to get this task-force to fruition and we are excited about itâ s potential

We look forward to more innovative approaches in pursuing possible antitrust cases in the Silicon Valley sector.

Public activist groups have expressed their desire to ensure that FTC investigations are as tough as possible and that the "Task Force" does not become just another taxpayer pacification â 9/11 Commissionâ -type PR shill facade mitigation move.

We are informed by lawyers from Mofo, Wilson Sonsini, Covington, Perkins and other tech law firms that Google, Facebook and their associates have already allocated over â ...one billion dollars per FTC lawyerâ in your new task-force to defer, deflect, delay and influence the outcome.

Is your task-forced funded and focused to properly take on an organization willing and able to spend â one billion dollarsâ EACH to buy, delay and obfuscate each of your lawyers and investigators on the task-force?

This Federal Trade Commission task force could emerge as a powerful brake on the nationâ s internet giants. As the Wall Street Journal has reported:

â The Silicon Valley powerhouses have grown through acquisitions and federal regulators have come under fire for failing to rein in what most of the public see as anti-competitive effects from deals such as Facebook Inc.â s acquisition of WhatsApp and Instagram.

â Weâ re thrilled the FTC is engaged,â said Robert Engel, chief spokesman for the Free and Fair Markets Initiative, an activist group that has targeted Amazon.com Inc. for what it views as monopolistic behavior. FTC officials â have a real opportunity, particularly if they focus on the main offenders.â

Legal experts said the FTC move suggests the agency could be open to more innovative approaches in pursuing possible antitrust cases in the sector. To an extent, oversight of the sector has been hindered by antitrust rules and enforcement policies designed for an industrial economy.

â My view is the agency is more open to that now than at any timeâ in recent years, said Kevin Arquit, a former director of the FTC competition bureau whoâ s now at Kasowitz Benson Torres. â What this really does is challenge, are those assumptions true?â

Mr. Arquit said some of the agencyâ s openness to new antitrust solutions on tech issues was likely due to the wide diversity of views among the new commissioners on the five-member FTC, as well as the GOP chairman, Joseph Simons, who he said had â strong views but a real willingness to consider new ideas.â

An agency spokesman said that â right now, there is no specific plan to consider or reconsider rules or guidelines as they relate to the technology sector.â The spokesman added that if the agency were to consider changes related to competition rules in the technology sector, â the task force certainly would be consulted, but that is not why the task force was created.â

Others said the creation of the task force underscored the agencyâ s increasing institutional recognition of competition problems in the sector.

Still, some FTC critics questioned how aggressive the agency would be, particularly given what they view as its lackluster enforcement record in recent years.

Ed Black, president of the Computer and Communications Industry Association, said his group welcomed the creation of the group, hoping it would lead to better understanding of technology-market dynamics. â We look forward to working with the task force to ensure the best outcomes for consumers,â he said.

Some tech advocates contend that cracking down on the tech sector could backfire for consumers as well as the economy, stifling innovation and growth.

The FTCâ s action comes as some consumer advocatesâ as well as some politicians, particularly on the leftâ have begun urging breakups of some of the big tech companies, including Facebook.

Marc Rotenberg, president of the Electronic Privacy Information Center, said his group was glad to see the FTCâ s announcement, but added that the task force â is no substitute for meaningful enforcement.â His group is among a number of activist organizations that have urged the FTC to require breakup of

Facebook in response to its privacy missteps.

The Open Markets Institute, a group that aims to expose monopolistic practices, called on the agency to â do its jobâ and enforce antitrust laws against the dominant platformsâ Facebook, Google and Amazon. It decried what it termed the agencyâ s practice of â slapping these companies on the wrist with fines that ultimately do not change their behavior.â

Mr. Engelâ s group, the Free and Fair Markets Initiative initiative, whose backers include labor and minority groups, is seeking to bring scrutiny to Amazonâ s use of its own private-label products that compete with outside vendors on the site...â

The problem here cannot be addressed as a piece meal issue.

You are dealing with an organized criminal cartel that is every bit as coordinated as ISIS, The Mafia, A drug cartel or any other large mob.

Simply looking at a â shadow-banningâ or â Deboostingâ code from a Facebook or Google back-server has little effect for FTCâ s total, and badly needed, regulation in this matter.

The problem under FTCâ s mandate and under the rules of law for FTC to engage involves not the server room in Mountain View, California. The problem and the crimes center on Sandhill Road in Palo Alto, California. The â AngelGate Scandalâ collusion documents and recordings, The â Quail Roadâ collusion documents and recordings, the â High Tech No-Poaching Class Action Lawsuitâ collusion documents and recordings and the attached materials prove the RICO violating Cartel assertions beyond any doubt. Their near ownership of K-Street lobbyist groups and their contracts with EVERY single technology law firm should make you VERY, VERY concerned!

We have been inside these companies. We know the founders and executives. We were there before, and during, the formation of these companies. We know why they are REALLY doing what they are doing to the taxpayers! Their intent is criminal.

Google and Facebook get quite a bit of transparency avoidance because they imply, themselves, that they are â secretly The CIA and The NSAâ . In fact, it is widely documented that the CIA and the NSA buy data from these companies and fund their tech projects.

In fact Google, Facebook and their Cartel are NOT the CIA or the NSA. They simply â whisper-campaignâ this idea to reporters and employees who seem to be a threat. The bare fact of this trick is that Google and Facebook executives want reporters, Congress-people and the public to think that â The CIA or the NSA will secretly kill you if you start looking too close at Google or Facebookâ .

Eric Schmidt, Larry Page, Mark Zuckerberg, Steve Jurvetson, Elon Musk, Jared Cohen and David Drummond are the people that promote this BS in order to prevent deep investigations of Facebook and Google!

All of the Silicon Valley Companies under investigation by the FTC Task-Force have hired staff from a â non-profit charityâ called In-Q-Tel. In-Q-Tel purports to be the â venture capital arm of the CIAâ . In fact In-Q-tel is a Democrat-controlled contracting service created by a Silicon Valley game developer: Gilman Louie and James Breyer to cross sell Silicon Valley hype to spy agencies. IN-Q-Tel gave CIA technology, paid for by American taxpayers, to Google and Facebook to profit from.
They use that technology to control politics in quid-pro-quo stock market and monopoly manipulation schemes that EXCLUSIVELY benefit only Facebook and Google insiders on Sand Hill Road.

We hereby present you with internal videos, documents, public documentary materials and contacts to

support these assertions. We will be releasing a series of already prepared reports to you.

We swear, warrant and certify that this evidence is accurate to the best of our knowledge."

HERE IS JUST ONE OF THE WAYS GOOGLE AND THE NICK DENTON TABLOIDS (GAWKER, GIZMODO, JALOPNIK, ETC.) PARTNERED TO ATTACK US, AND OTHER MEMBERS OF THE PUBLIC, IN EXCHANGE FOR PAYMENTS FROM WHITE HOUSE STAFF AND SILICON VALLEY OLIGARCHS:

HOW GOOGLE RIGS ELECTIONS AND CHARACTER ASSASSINATION ATTACKS AROUND THE GLOBE

BY ROBERT EPSTEIN

Authorities in the UK have finally figured out that fake news stories and Russian-placed ads are not the real problem. The UK Parliament is about to impose stiff penaltiesâ not on the people who place the ads or write the stories, but on the Big Tech platforms that determine which ads and stories people actually see.

Parliamentâ s plans will almost surely be energized by the latest leak of damning material from inside Googleâ s fortress of secrecy: The Wall Street Journal recently reported on emails exchanged among Google employees in January 2017 in which they strategized about how to alter Google search results and other â ephemeral experiencesâ to counter President Donald Trumpâ s newly imposed travel ban. The company claims that none of these plans was ever implemented, but who knows?

While U.S. authorities have merely held hearings, EU authorities have taken dramatic steps in recent years to limit the powers of Big Tech, most recently with a comprehensive law that protects user privacyâ the General Data Protection Regulationâ and a whopping $5.1 billion fine against Google for monopolistic practices in the mobile device market. Last year, the European Union also levied a $2.7 billion fine against Google for filtering and ordering search results in a way that favored their own products and services. That filtering and ordering, it turns out, is of crucial importance.

As years of research Iâ ve been conducting on online influence has shown, content per se is not the real threat these days; what really matters is (a) which content is selected for users to see, and (b) the way that content is ordered in search results, search suggestions, news feeds, message feeds, comment lists, and so on. Thatâ s where the power lies to shift opinions, purchases, and votes, and that power is held by a disturbingly small group of people.

I say â these daysâ because the explosive growth of a handful of massive platforms on the internetâ the largest, by far, being Google and the next largest being Facebookâ has changed everything. Millions of people and organizations are constantly trying to get their content in front of our eyes, but for more than 2.5 billion people around the worldâ soon to be more than 4 billionâ the responsibility for what algorithms do should always lie with the people who wrote the algorithms and the companies that deployed them.

In randomized, controlled, peer-reviewed research Iâ ve conducted with thousands of people, Iâ ve shown

repeatedly that when people are undecided, I can shift their opinions on just about any topic just by changing how I filter and order the information I show them. Iâ ve also shown that when, in multiple searches, I show people more and more information that favors one candidate, I can shift opinions even farther. Even more disturbing, I can do these things in ways that are completely invisible to people and in ways that donâ t leave paper trails for authorities to trace.

Worse still, these new forms of influence often rely on ephemeral contentâ information that is generated on the fly by an algorithm and then disappears forever, which means that it would be difficult, if not impossible, for authorities to reconstruct. If, on Election Day this coming November, Mark Zuckerberg decides to broadcast go-out-and-vote reminders mainly to members of one political party, how would we be able to detect such a manipulation? If we canâ t detect it, how would we be able to reduce its impact? And how, days or weeks later, would we be able to turn back the clock to see what happened?

Of course, companies like Google and Facebook emphatically reject the idea that their search and newsfeed algorithms are being tweaked in ways that could meddle in elections. Doing so would undermine the publicâ s trust in their companies, spokespeople have said. They insist that their algorithms are complicated, constantly changing, and subject to the â organicâ activity of users.

This is, of course, sheer nonsense. Google can adjust its algorithms to favor any candidate it chooses no matter what the activity of users might be, just as easily as I do in my experiments. As legal scholar Frank Pasquale noted in his recent book â The Black Box Society,â blaming algorithms just doesnâ t cut it; the responsibility for what an algorithm does should always lie with the people who wrote the algorithm and the companies that deployed the algorithm. Alan Murray, president of Fortune, recently framed the issue this way: â Rule one in the Age of AI: Humans remain accountable for decisions, even when made by machines.â

Given that 95 percent of donations from Silicon Valley generally go to Democrats, itâ s hard to imagine that the algorithms of companies like Facebook and Google donâ t favor their favorite candidates. A newly leaked video of a 2016 meeting at Google shows without doubt that high-ranking Google executives share a strong political preference, which could easily be expressed in algorithms. The favoritism might be deliberately programmed or occur simply because of unconscious bias. Either way, votes and opinions shift.

Itâ s also hard to imagine how, in any election in the world, with or without intention on the part of company employees, Google search results would fail to tilt toward one candidate. Googleâ s search algorithm certainly has no equal-time rule built into it; we wouldnâ t want it to! We want it to tell us whatâ s best, and the algorithm will indeed always favor one dog food over another, one music service over another, and one political candidate over another. When the latter happens â ¦ votes and opinions shift.

Here are 10 waysâ seven of which I am actively studying and quantifyingâ that Big Tech companies could use to shift millions of votes this coming November with no one the wiser. Letâ s hope, of course, that these methods are not being used and will never be used, but letâ s be realistic too; thereâ s generally no limit to what people will do when money and power are on the line.

1. Search Engine Manipulation Effect (SEME)
Ongoing research I began in January 2013 has shown repeatedly that when one candidate is favored over another in search results, voting preferences among undecided voters shift dramaticallyâ by 20 percent or more overall, and by up to 80 percent in some demographic groups. This is partly because people place inordinate trust in algorithmically generated output, thinking, mistakenly, that algorithms are inherently objective and impartial.

But my research also suggests that we are conditioned to believe in high-ranking search results in much the same way that rats are conditioned to press levers in Skinner boxes. Because most searches are for simple facts (â When was Donald Trump born?â), and because correct answers to simple questions inevitably turn

up in the first position, we are taught, day after day, that the higher a search result appears in the list, the more true it must be. When we finally search for information to help us make a tough decision (â Whoâ s better for the economy, Trump or Clinton?â), we tend to believe the information on the web pages to which high-ranking search results link.

As The Washington Post reported last year, in 2016, I led a team that developed a system for monitoring the election-related search results Google, Bing, and Yahoo were showing users in the months leading up to the presidential election, and I found pro-Clinton bias in all 10 search positions on the first page of Googleâ s search results. Google responded, as usual, that it has â never re-ranked search results on any topic (including elections) to manipulate political sentimentâ â but I never claimed it did. I found what I found, namely that Googleâ s search results favored Hillary Clinton; â re-rankingâ â an obtuse term Google seems to have invented to confuse peopleâ is irrelevant.

Because (a) many elections are very close, (b) 90 percent of online searches in most countries are conducted on just one search engine (Google), and (c) internet penetration is high in most countries these daysâ higher in many countries than it is in the United Statesâ it is possible that the outcomes ofupwards of 25 percent of the worldâ s national elections are now being determined by Googleâ s search algorithm, even without deliberate manipulation on the part of company employees. Because, as I noted earlier, Googleâ s search algorithm is not constrained by equal-time rules, it almost certainly ends up favoring one candidate over another in most political races, and that shifts opinions and votes.

2. Search Suggestion Effect (SSE)
When Google first introduced autocomplete search suggestionsâ those short lists you see when you start to type an item into the Google search barâ it was supposedly meant to save you some time. Whatever the original rationale, those suggestions soon turned into a powerful means of manipulation that Google appears to use aggressively.

My recent research suggests that (a) Google starts to manipulate your opinions from the very first character you type, and (b) by fiddling with the suggestions it shows you, Google can turn a 50â 50 split among undecided voters into a 90â 10 split with no one knowing. I call this manipulation the Search Suggestion Effect (SSE), and it is one of the most powerful behavioral manipulations I have ever seen in my nearly 40 years as a behavioral scientist.

How will you know whether Google is messing with your election-related search suggestions in the weeks leading up to the election? You wonâ t.

3. The Targeted Messaging Effect (TME)
If, on Nov. 8, 2016, Mr. Zuckerberg had sent go-out-and-vote reminders just to supporters of Mrs. Clinton, that would likely have given her an additional 450,000 votes. Iâ ve extrapolated that number from Facebookâ s own published data.

Because Zuckerberg was overconfident in 2016, I donâ t believe he sent those messages, but he is surely not overconfident this time around. In fact, itâ s possible that, at this very moment, Facebook and other companies are sending out targeted register-to-vote reminders, as well as targeted go-out-and-vote reminders in primary races. Targeted go-out-and-vote reminders might also favor one party on Election Day in November.

My associates and I are building systems to monitor such things, but because no systems are currently in place, there is no sure way to tell whether Twitter, Google, and Facebook (or Facebookâ s influential offshoot, Instagram) are currently tilting their messaging. No law or regulation specifically forbids the practice, and it would be an easy and economical way to serve company needs. Campaign donations cost money, after all, but tilting your messaging to favor one candidate is free.

4. Opinion Matching Effect (OME)
In March 2016, and continuing for more than seven months until Election Day, Tinderâ s tens of millions of users could not only swipe to find sex partners, they could also swipe to find out whether they should vote for Trump or Clinton. The website iSideWith.comâ founded and run by â two friendsâ with no obvious qualificationsâ claims to have helped more than 49 million people match their opinions to the right candidate. Both CNN and USA Today have run similar services, currently inactive.

I am still studying and quantifying this type of, um, helpful service, but so far it looks like (a) opinion matching services tend to attract undecided votersâ precisely the kinds of voters who are most vulnerable to manipulation, and (b) they can easily produce opinion shifts of 30 percent or more without peopleâ s awareness.

At this writing, iSideWith is already helping people decide who they should vote for in the 2018 New York U.S. Senate race, the 2018 New York gubernatorial race, the 2018 race for New York District 10 of the U.S. House of Representatives, and, believe it or not, the 2020 presidential race. Keep your eyes open for other matching services as they turn up, and ask yourself this: Who wrote those algorithms, and how can we know whether they are biased toward one candidate or party?

5. Answer Bot Effect (ABE)
More and more these days, people donâ t want lists of thousands of search results, they just want the answer, which is being supplied by personal assistants like Google Home devices, the Google Assistant on Android devices, Amazonâ s Alexa, Appleâ s Siri, and Googleâ s featured snippetsâ those answer boxesat the top of Google search results. I call the opinion shift produced by such mechanisms the Answer Bot Effect (ABE).

My research on Googleâ s answer boxes shows three things so far: First, they reduce the time people spend searching for more information. Second, they reduce the number of times people click on search results. And third, they appear to shift opinions 10 to 30 percent more than search results alone do. I donâ t yet know exactly how many votes can be shifted by answer bots, but in a national election in the United States, the number might be in the low millions.

6. Shadowbanning
Recently, Trump complained that Twitter was preventing conservatives from reaching many of their followers on that platform through shadowbanning, the practice of quietly hiding a userâ s posts without the user knowing. The validity of Trumpâ s specific accusation is arguable, but the fact remains that any platform on which people have followers or friends can be rigged in a way to suppress the views and influence of certain individuals without people knowing the suppression is taking place. Unfortunately, without aggressive monitoring systems in place, itâ s hard to know for sure when or even whether shadowbanning is occurring.

7. Programmed Virality and the Digital Bandwagon Effect
Big Tech companies would like us to believe that virality on platforms like YouTube or Instagram is a profoundly mysterious phenomenon, even while acknowledging that their platforms are populated by tens of millions of fake accounts that might affect virality.

In fact, there is an obvious situation in which virality is not mysterious at all, and that is when the tech companies themselves decide to shift high volumes of traffic in ways that suit their needs. And arenâ t they always doing this? Because Facebookâ s algorithms are secret, if an executive decided to bestow instant Instagram stardom on a pro-Elizabeth Warren college student, we would have no way of knowing that this was a deliberate act and no way of countering it.

The same can be said of the virality of YouTube videos and Twitter campaigns; they are inherently competitiveâ except when company employees or executives decide otherwise. Google has an especially

powerful and subtle way of creating instant virality using a technique Iâ ve dubbed the Digital Bandwagon Effect. Because the popularity of websites drives them higher in search results, and because high-ranking search results increase the popularity of websites (SEME), Google has the ability to engineer a sudden explosion of interest in a candidate or cause with no oneâ perhaps even people at the companies themselvesâ having the slightest idea theyâ ve done so. In 2015, I published a mathematical model showing how neatly this can work.

8. The Facebook Effect
Because Facebookâ s ineptness and dishonesty have squeezed it into a digital doghouse from which it might never emerge, it gets its own precinct on my list.

In 2016, I published an article detailing five ways that Facebook could shift millions of votes without people knowing: biasing its trending box, biasing its center newsfeed, encouraging people to look for election-related material in its search bar (which it did that year!), sending out targeted register-to-vote reminders, and sending out targeted go-out-and-vote reminders.

I wrote that article before the news stories broke about Facebookâ s improper sharing of user data with multiple researchers and companies, not to mention the stories about how the company permitted fake news stories to proliferate on its platform during the critical days just before the November electionâ problems the company is now trying hard to mitigate. With the revelations mounting, on July 26, 2018, Facebook suffered the largest one-day drop in stock value of any company in history, and now itâ s facing a shareholder lawsuit and multiple fines and investigations in both the United States and the EU.
Facebook desperately needs new direction, which is why I recently called for Zuckerbergâ s resignation. The company, in my view, could benefit from the new perspectives that often come with new leadership.

9. Censorship
I am cheating here by labeling one category â censorship,â because censorshipâ the selective and biased suppression of informationâ can be perpetrated in so many different ways.

Shadowbanning could be considered a type of censorship, for example, and in 2016, a Facebook whistleblower claimed he had been on a company team that was systematically removing conservative news stories from Facebookâ s newsfeed. Now, because of Facebookâ s carelessness with user data, the company is openly taking pride in rapidly shutting down accounts that appear to be Russia-connectedâ even though company representatives sometimes acknowledge that they â donâ t have all the facts.â

Meanwhile, Zuckerberg has crowed about his magnanimity in preserving the accounts of people who deny the Holocaust, never mentioning the fact that provocative content propels traffic that might make him richer. How would you know whether Facebook was selectively suppressing material that favored one candidate or political party? You wouldnâ t. (For a detailed look at nine ways Google censors content, see my essay â The New Censorship,â published in 2016.)

10. The Digital Customization Effect (DCE)
Any marketer can tell you how important it is to know your customer. Now, think about that simple idea in a world in which Google has likely collected the equivalent of millions of Word pages of information about you. If you randomly display a banner ad on a web page, out of 10,000 people, only five are likely to click on it; thatâ s the CTRâ the â clickthrough rateâ (0.05 percent). But if you target your ad, displaying it only to people whose interests it matches, you can boost your CTR a hundredfold.

Thatâ s why Google, Facebook, and others have become increasingly obsessed with customizing the information they show you: They want you to be happily and mindlessly clicking away on the content they show you.
In the research I conduct, my impact is always larger when I am able to customize information to suit

peopleâ s backgrounds. Because I know very little about the participants in my experiments, however, I am able to do so in only feeble ways, but the tech giants know everything about youâ even things you donâ t know about yourself. This tells me that the effect sizes I find in my experiments are probably too low. The impact that companies like Google are having on our lives is quite possibly much larger than I think it is. Perhaps that doesnâ t scare you, but it sure scares me.

The Same Direction

OK, you say, so much for Epsteinâ s list! What about those other shenanigans weâ ve heard about: voter fraud (Trumpâ s explanation for why he lost the popular vote), gerrymandering, rigged voting machines, targeted ads placed by Cambridge Analytica, votes cast over the internet, or, as I mentioned earlier, those millions of bots designed to shift opinions. What about hackers like AndrÃ©s SepÃºlveda, who spent nearly a decade using computer technology to rig elections in Latin America? What about all the ways new technologies make dirty tricks easier in elections? And what about those darn Russians, anyway?
To all that I say: kid stuff. Dirty tricks have been around since the first election was held millennia ago. But unlike the new manipulative tools controlled by Google and Facebook, the old tricks are competitiveâ itâ s your hacker versus my hacker, your bots versus my bots, your fake news stories versus my fake news storiesâ and sometimes illegal, which is why SepÃºlvedaâ s efforts failed many times and why Cambridge Analytica is dust.

â Cyberwar,â a new book by political scientist Kathleen Hall Jamieson, reminds us that targeted ads and fake news stories can indeed shift votes, but the numbers are necessarily small. Itâ s hard to overwhelm your competitor when he or she can play the same games you are playing.

Now, take a look at my numbered list. The techniques Iâ ve described can shift millions of votes without peopleâ s awareness, and because they are controlled by the platforms themselves, they are entirely noncompetitive. If Google or Facebook or Twitter wants to shift votes, there is no way to counteract their manipulations. In fact, at this writing, there is not even a credible way of detecting those manipulations.

And what if the tech giants are all leaning in the same political direction? What if the combined weight of their subtle and untraceable manipulative power favors one political party? If 150 million people vote this November in the United States, with 20 percent still undecided at this writing (thatâ s 30 million people), I estimate that the combined weight of Big Tech manipulations could easily shift upwards of 12 million votes without anyone knowing. Thatâ s enough votes to determine the outcomes of hundreds of close local, state, and congressional races throughout the country, which makes the free-and-fair election little more than an illusion.

Full disclosure: I happen to think that the political party currently in favor in Silicon Valley is, by a hair (so to speak), the superior party at the moment. But I also love America and democracy, and I believe that the free-and-fair election is the bedrock of our political system. I donâ t care how â rightâ these companies might be; lofty ends do not justify shady means, especially when those means are difficult to see and not well understood by either authorities or the public.

Can new regulations or laws save us from the extraordinary powers of manipulation the Big Tech companies now possess? Maybe, but our leaders seem to be especially regulation-shy these days, and I doubt, in any case, whether laws and regulations will ever be able to keep up with the new kinds of threats that new technologies will almost certainly pose in coming years.

I donâ t believe we are completely helpless, however. I think that one way to turn Facebook, Google, and the innovative technology companies that will succeed them, into responsible citizens is to set upsophisticated monitoring systems that detect, analyze, and archive what theyâ re showing peopleâ in effect, to fight technology with technology.

As I mentioned earlier, in 2016, I led a team that monitored search results on multiple search engines. That was a start, but we can do much better. These days, Iâ m working with business associates and academic colleagues on three continents to scale up systems to monitor a wide range of information the Big Tech companies are sharing with their usersâ even the spoken answers provided by personal assistants. Ultimately, a worldwide ecology of passive monitoring systems will make these companies accountable to the public, with information bias and online manipulation detectable in real time.

With November drawing near, there is obviously some urgency here. At this writing, itâ s not clear whether we will be fully operational in time to monitor the midterm elections, but weâ re determined to be ready for 2020.

Obama Campaign Spending Under Criminal Investigation by Federal and Public Prosecutors

- Probe looking into whether committee misspent funds and top Silicon Valley donors gave money in exchange for access to the administration

Federal and public prosecutors are investigating whether Barack Obama's first campaign committee misspent some of the record millions it raised from donations, people familiar with the matter said.

The criminal probe by the attorneyâ s office, which is in its early stages, also is examining whether some of the committeeâ s top donors gave money in exchange for access to the incoming Obama administration, policy concessions or to influence official administration positions through Department of Energy "slush-funds".

Giving money in exchange for political favors runs afoul of federal corruption laws. Diverting funds from organizations like USAID, In-Q-Tel, Clinton Foundation and others which are registered as a nonprofit, could also violate federal law.

The investigation represents another potential legal threat to people who are or were in Obama's orbit. Their business dealings and activities during and since the campaign have led to a number of indictments and guilty pleas. Many of the Obama's biggest campaign backers, including Elon Musk, Steve Jurvetson, John Doerr and others, were involved in the schemes and benefited from them.

The investigation partly arises out of materials seized in related federal probes.

The Obama committee hasnâ t been asked for records or been contacted by prosecutors.

Former President Barack Obamaâ s first inaugural fund reported raised a massive amount in 2009, a campaign record. Obama's funds came largely from wealthy donors and corporations who gave $1 million or more, according to Federal Election Commission filings.

A lawyer for Barack Obama didnâ t respond to requests for comment.

The Obama White House staff didnâ t respond to requests for comment on the investigation.

In the CleanTech Crash Department of Energy Dark Money scandal portion of this case, the victims had much to say:

By Dan Epstein

News flash: Government subsidies and special-interest favors go hand in hand.

The latest example comes from a federal green-energy loan program. Last month, the DC District Court **ruled** that Cause of Action, where I am executive director, can **proceed with a lawsuit**against the Department of Energy. Weâ re suing the federal government for the blatant political favoritism in its $25 billion â Advanced Technology Vehicle Manufacturing Loan Program.â

In principle, this taxpayer-funded program was supposed to support the manufacture of energy-efficient cars. In practice, it rewarded a select few well-connected companies.

Since the program was created in 2008, numerous businesses have applied for its taxpayer-backed financial support. Yet only a small number were approved. Among the lucky few were two electric car manufacturers: **Tesla**and **Fisker**.

Both companiesâ political connections run deep, especially Teslaâ s. The companyâ s founder, Elon Musk, was a **max donor** for President Obama. One of its board members, **Steven Westly**, was appointed to a Department of Energy **advisory board**. And another Obama bundler, Tesla investor and adviser Steven Spinner, **secured employment** in the departmentâ s Loan Program Officeâ the very office that gave the company a taxpayer-backed loan.

Fisker also has friends in high places. The company, which has since **gone bankrupt**, **was backed** by a San Francisco **venture capital firm** whose senior partners **donated millions** to the 2008 Obama campaign and other Democrat causes. **One partner**, **John Doerr**, parlayed his support into a seat on the Presidentâ s Council of Jobs and Competitiveness.

Such connections can allow a company to exert political pressure to enrich itself. Unsurprisingly, Department of Energy emails show that such pressure was rampant in its loan programs.

Thereâ s no shortage of examples. The departmentâ s leadersâ including then-Secretary of Energy Steven Chuâ repeatedly promised to deliver results to politicians like Rep. Steny Hoyer (D-Md.) and Sen. Harry Reid (D-Nev.). **One emails reads**, â DOE has made a political commitmentâ to approve a companyâ s

loan. Another says the â pressure is on real heavyâ from none other than Vice President Joe Biden. And still **another shows** an employee asking, â whatâ s another billion anyhow?â

Unsurprisingly, the Obama administration gave Tesla and Fisker preferential treatment, and then some.

The Department of Energy revised its review process in order finish the companiesâ applications faster. The government **gave them extraordinary access** to its staff and facilitiesâ even to the point of having government employees personally walk them through the loan application and approval process. The department ignored its own lending rules in order to approve the companiesâ loans. And it **renegotiated the terms of some loans** after the companies could not keep their original commitments or were experiencing financial difficulties. Tellingly, Fisker has since gone out of business, despite receiving over a billion dollars in loans through this federal program.

Now contrast this preferential treatment with what happened to XP Vehicles and Limnia, neither of which have the same political connections. (My organization is suing the Department of Energy on their behalf). The two companies partnered to manufacture an energy-efficient sport utility vehicle that would have competed with Tesla and Fiskerâ s cars. They applied for loans in 2008 and 2009 under the same loan program.

The department refused them bothâ and it used bogus reasons to do so.

For starters, the department made claims that were laughably false. To take one example: It rejected XPVâ s application because **its vehicle was powered by hydrogen**. It was an electric SUV. It also raised objections that it didnâ t raise with other companies whose applications were approved. For instance: The bureaucracy **criticized** the proposed all-electric vehicle for not using a specific type of gasoline. Yet Tesla and Fisker received the loans despite producing similar all-electric cars.

In light of these obvious problems and hypocrisy, both companies presented the Department of Energy with detailed rebuttals. Yet the government failed to respond. To this day, both XPV and Limnia are awaiting a satisfactory reply. In the meantime, **XPV has gone out of business** (temporarily), unable to compete against its politically connectedâ and subsidizedâ rivals.

This casts the Department of Energyâ s loan program in a new light. It was sold to the American public as a means of promoting energy-efficient vehicles. Instead, it was used to benefit a select few well-connected companies. It was a blatant crony handout, paid for by the U.S. taxpayer.

Sadly, similar examples are widespread in Washington. Thatâ s no surprise considering the feds spend **roughly $100 billion a year** in taxpayer-funded handouts to businesses. This breeds the sort of government-business collusion Americans think is rampant in Washington. In fact, **over two-thirds of likely voters** think the federal government helps businesses that hire the most lobbyists, shake the right hands, and pad the right pockets. Theyâ re right.

This points to a simple conclusion: Politicians and bureaucrats shouldnâ t use the publicâ s money to pad private companiesâ bottom lines. As the Department of Energyâ s green-vehicle loan program shows, the capacity for corruption is immenseâ and inevitable.

CASE EFFECTIVENESS:

"After being attacked with a $30 million dollar retribution program by political operatives who were also our

business competitors we fought back. With the encouragement of members of Congress we used 100% legal tools to interdict the corruption.

First, with a unique new kind of pioneering federal lawsuit, we established â FOR THE FIRST TIME IN LEGAL HISTORY â that political cronyism is a valid basis for a claim of arbitrary-and-capricious agency action under the Administrative Procedure Act. See: Federal Case One, (D.D.C. 2015).

Second, we prevailed in the United States Court of Appeals for the District of Columbia Circuit on our appeal of the district courtâ s ruling that an agency may escape judicial review of its action by requesting a voluntary remand but refusing to reconsider its initial denial of an application. See: Case Federal Two, (D.C. Cir. 2017). The D.C. Circuit agreed with us that an agency may only seek a remand if it promises to reconsider its initial decision. It is because of that victory that DOE is now reconsidering the ATVM application under Federal Court order and we are using GAO, FBI and Congressional oversight offices to assure effective ethics and transparency.

Third, we placed, on permanent public record, one of the most detailed documentation sets, ever assembled, about how modern political "Dark Money" conduits operate. This prevents the use of those kinds of criminal efforts, in the future, by exposing the tactics to the public.

Fourth, Our Team engaged in the interdiction and termination of corrupt agency executives, contractors and their financiers. This included some of the most well-known names in Washinton, DC, at the time. Many of them were investigated by the FBI, GAO and Congress.

Fifth, and most important, we put every corrupt political scheme on notice that they WILL be found out and interdicted and that we will re-activate every interdiction resource if it happens again to us!

The bottom line? We Won!"

Bright Automotive Calls Out Crony Corruption In Nationwide Open Letter:

Bright Automotive executives minced few words in laying out the impact of the DoE's politically rigged decision-making process. Their letter says:

"The ineffectiveness of the DOE to execute its program harms commercial enterprise as it not only interfered with the capital markets; it placed American companies at the whim of approval by a group of bureaucrats.

Today at your own ARPA-E conference, Fred Smith, the remarkable leader of FedEx, made the compelling case to reduce our dependence on oil; a product whose price is manipulated by a cartel which has caused the greatest wealth transfer in our history from the pockets of working people and businesses to countries, many of whom are not our allies.

And yet, having in hand a tremendous tool for progress in this critically strategic battle -- a tool that drew the country's best to your door -- you failed not only in the deployment of funds from ATVM but in dissipating these efforts against not just false hope, but false words..."

Marita Noon on the Green Crony Corruption of the Obama DNC -

Everyone who pays any attention to the news knows the name Solyndra. It has become synonymous with the overall failed green energy program administered by the Obama team. Politicos know there are many other companies that have received loan guarantees for various green energy projects that have since become a source of ridicule for the White House. Some might even be able to name a few. There is the now-bankrupt company that made batteries for electric cars: Ener1. The plug-in electric sports car company, Fisker, that made its cars in Finland and has troubles too numerous to cite. And, of course, we know about the Chevy Voltâ that our taxpayer dollars bailed out only to have demand so low that Chevrolet had to pull the plug on the production line and lay off workers for five weeks earlier this year. But few know the full story.

Connecting the dots will make your head hurt. There are various programs and special tax breaks and different kinds of companies that received green energy loans: solar, wind, and geothermal; and car companies, battery manufacturers, and biofuel producers. While the projects differ, they have several startling similarities. The

vast majority of the green energy loan guarantees were given to companies that could not obtain enough financial backing from private investors. Their â junkâ or â speculativeâ grade kept people from putting their own money into them â yet your money and mine was given to them, and we had no say in the matter. Of the 27 loans issued through the 1705 Loan Guarantee Program to 21 firms, virtually all of them have â connectionsâ to either President Obama or other high-ranking Democratsâ or both! The loans were made to fill a market created not by free-market demand, but by government mandates. And, all of the â special sevenâ got fast-tracked approvals through the Department of Interior with little scrutiny over environmental damages that would have taken any other energy company months, if not years, to get, and EPA regulations were applied selectively.

Many of the companies that received the funds had involvement with large donors and/or bundlers for the Obama campaign, and there is an amazing revolving door through which the players pass many times. They worked, for example, for Senator Harry Reid. Then they are on the staff of an investment firm that invested in one, or more, of the companies. Next you find he or she is on some White House commissionâ or worse, became part of the Obama Department of Energy team. Some 460 companies applied for DOE loans, but only 27 projects, 21 companies, got the funds. And 85% of these have been found to have â connections.â The remaining 15% may well have connections too, albeit more guarded or hidden.

These are not wild assertions. I have the data to back them up.

Following the publication of my column a couple of weeks ago on crony capitalism, I was connected with Christine Lakatos. Sheâ s a private citizen and a single mom with a nose for research. Beginning in 2009, she was hired to work on investigative projects, following the green energy money. But when those projects were completed, she didnâ t stop digging. She kept finding more and more. With no outlet for her work, she started a blog where she â brain dumpsâ her findingsâ which for a total unknown has received an impressive number of readers. For anyone but the most stalwart, her Green Corruption Blog is like getting a drink of water from a fire hydrant.

On Sunday, some of Lakatosâ research was presented in my weekly column. The response prompted us to begin a collaboration.

For each of the next 17 weeks, we will expose one green-energy, crony-corruption story after another (though my travel schedule may require me to skip a week here and there). It will be a â bookâ released chapter-by-chapter. If you like what you find, we hope youâ ll let us know and come back the following week for the next installment.

Some single stories of what weâ ll expose are â out thereâ â though surely not covered by the mainstream media and not all in one place or all connected as weâ re doing. If you made a study of the green-energy, crony-corruption story your passion, you likely found out a lot of what weâ ll share. If you read the report from the House Oversight and Government Reform Committee (HOGRC) on the Obama Administrationâ s green energy gamble word-for-word, or watched the incriminating hearings, youâ ll already know some of what weâ ll present. Or, if youâ ve read the chapter in Peter Schweizerâ s book ***Throw Them All Out*** that addresses alternative energy and â how the game of funneling taxpayer money to friends has exploded to astonishing levels in recent years,â you have a good idea of the big picture. If you have made this your passion, have studied the report, and have coordinated with Schweizer, as Lakatos has, you are encouraged to help make these reports as complete as possible. Together, weâ ll connect the dots and present it here in bite-sized pieces.

Each of the energy projects we will profile in the â special sevenâ section were recipients of billions of taxpayer dollars through the 1705 Loan Guarantee Program (LGP) and many will be receiving millions more through the 1603 Grant Program. The 1705 LGP is an expansion of the 1703 program that was approved in 2005 under President Bushâ increasing the expenditures from $17.9 billion in 2007 to $37.2 billion in 2010.

The 2009 American Recovery and Reinvestment Act significantly expanded the DOEâ s authority, under Energy Secretary Steven Chu, through the newly created 1705 LGP. (Under the Recovery Act, $86 billionâ approximately 10% of the stimulus packageâ was earmarked for green energy projects.) The LGP means that companies get risk-free money. If the company succeeds, the low-interest loan gets paid back. If they failâ as many haveâ we, the taxpayers, lose. In contrast, the 1603 Grant Programâ implemented as part the Obama stimulusâ â is administered by the Treasury Department, with the goal of reimbursing eligible applicants for a portion of the costs of installing specified energy property used in a trade or business or for the production of income. Basically 1603 gives billions in favored businesses tax-free cash gifts that do not have to be paid back.

While we can prove that cronyism has run amok within the majority of 1705 LGP, we'll stay focused on the Special Seven. Here, in Part 1, we present a complete overview of the connecting dots on one project: SolarReserve, LLC. With this introduction made, weâ ll likely address several companies, with a common denominator, in subsequent releases.

In Sundayâ s column, the following thumbnail was presented: â SolarReserveâ s Crescent Dunes project is a solar thermal power tower plant utilizing the advanced molten salt power tower technology with integrated storage located in Tonopah, NV. The company's Fitch rating is BB, yet in September 2011, it was the recipient of $737 million in DOE loan guarantees. Obamaâ s law school buddy and 2008 Obama campaign bundler, Michael Froman, was managing director of alternative investments at Citigroupâ which became a major investor in SolarReserve. Froman currently serves on the White House staff. Additionally, other high profile Democrats are involved with SolarReserve.â

But there is more.

More about Michael Froman. Peter Schweizer reports that â When Obama ran for president, Froman helped raise large sums of money on Wall Streetâ for the 2008 campaign. The HOGRC report (page 47) confirms Peterâ s findings and adds that Froman was a $200,000 bundler: â Michael Froman currently serves as the Deputy Assistant to the President and Deputy National Security Advisor for International Economic Affairs. He was a friend of President Obamaâ s from law school, and supported his political career by bundling over $200,000 for his 2008 presidential candidacy. Prior to his arrival at the White House, Froman was the Managing Director of Alternative Investments at Citigroup, where he managed infrastructure and sustainable development investments. Citigroup became a major investor in SolarReserve, which ultimately received a $737 million loan guarantee in September 2011.â

The Citigroup connection is tighter. Richard Parsons was Chairman for Citigroup from 2009 until he announced stepping down in March 2012. Citigroup was a top Obama donor in 2008. Parsons served on the Obama Transition Team and on the Economic Advisory Board. In 2011, Parsons was appointed to the Presidentâ s Council on Jobs and Competiveness.

Next, David Sandalowâ who is currently â the Assistant Secretary for Policy and International Affairs at DOE, where he acts as Secretaryâ s Chuâ s principal adviser on energy policy, as well as coordinating DOEâ s foreign policy involvement.â (HOGRC report page 49) â Sandalowâ s ties to the White House date back to the Clinton Administration, during which he worked with President Clinton on environmental issues. After having gained this experience, Sandalow became the influential Chair of the Energy & Climate Working Group of the Clinton Global Initiative. He went on to advise President Obamaâ s presidential campaign in 2008. Prior to joining the Obama Administration, Sandalow was a senior advisor to Good Energies, Inc., an energy-focused venture capital firm. Good Energies is an investor in SolarReserve.â

Other SolarReserve connections to the Democratic Party include:

Ronald Pelosiâ Former Speaker of the House Nancy Pelosiâ s brother-in-law, Ronald Pelosi, holds a

leadership position with Pacific Corporate Group Asset Managementâ which is an investor in SolarReserve. Additionally, his colleague, Jasandra Nyker, has served as a member of SolarReserveâ s board of directors.

George Kaiserâ Argonaut Private Equity is an investor in SolarReserve. Argonaut Private Equity is owned by major Democratic fundraiser and a 2008 Top Obama bundler George Kaiser, who also invested in Solyndra. Kaiser made multiple visits to the White House in the months before the company was granted a $535 million loan from the government. The Managing Director for Argonaut Private Equity, Steve Mitchell, serves on SolarReserve's Board of Directors.

Tony Podestaâ OpenSecrets.org shows that SolarReserve paid hundreds of thousands of dollars in lobbying fees to the Podesta Group. Tony Podesta is the principal at the Podesta Groupâ which he started with his brother John. John Podesta ran Barack Obamaâ s presidential transition team and is the Director of the Center for American Progressâ which is â reportedly highly influential in helping to craft White House Policy.â Both Tony Podesta and his wife Heather (a Washington power couple) are frequent White House visitors that share high ranks in "lobbying power," and Democrat bundling as well.

Lee Baileyâ SolarReserveâ s Chairman of the Board is Lee Bailey, a Managing Director with U.S. Renewables Group, who holds a significant financial stake in SolarReserve. Bailey has donated $21,850 since 2008 to Democratic candidates, including President Obama, Senate Majority Leader Harry Reid, California Sen. Barbara Boxer and then-presidential candidate Hillary Clinton.

James McDermottâ SolarReserve board member James McDermott is also a Managing Director with U.S. Renewables Group. He contributed $61,500 to various Democratic campaigns since 2008, including $30,800 to Obamaâ s presidential election campaign. U.S Renewable Energy Group has ties with Senator Harry Reid.

If there were only one connect-the-dots story, it would be easy to dismiss it as coincidence. But here, with just one company, you can see the dots connect, and connect, and connect. As you will continue to see, they keep on connecting. In this case, connect-the-dots is no innocent childhood game. It is a high-stakes gamble and only those with connections get to play. Obama and his Democratic friends are the winners. We, the taxpayers, the losers. We lose the financial investment of our tax dollars and our electricity rates go upâ all to support the discredited ruse of man-made climate change.

DOE corruption: appointed and elected officials should face prison time

An exhaustive review of 350+ pages of leaked emails regarding the Obama administrationâ s handling of the various green-energy loan and grant programs makes several things very clear: they lied, engaged in favoritism, and rushed application approvals to suit the political agenda of the White House. At the same time, worthy projects that went through a complete due diligence process were denied or ultimately withdrawn, as the lengthy approval process â taxed investorsâ patienceâ â as was the case with Aptera Motors, which worked closely with the DOE for two years.

Paul Wilbur, President and CEO at Aptera, didnâ t think they were treated unfairly. He told me, â At the end of the day, we couldnâ t get through the process.â But, he admits, he hasnâ t read the emails.

Aptera was trying to build a very efficient electric vehicle with an under $30K price point. Wilbur met with Secretary Chu who could see the value in the technology. But our research shows that value was not the deciding factor in which projects got funded and which ones didnâ t. Wilbur reports that he didnâ t donate to any candidate. He wanted to keep the whole process clean and do what was â good for America.â

The report from the House Oversight Committee says Aptera first applied for an ATVM loan in December of 2008 and â shut down on December 2, 2011.â The report implies that Aptera was led on: â After numerous negotiations with DOE, in September 2011, Aptera received a conditional loan commitment of

$150 million if the company was able to raise $80 million privately.â And: â The loans given to Fisker and Tesla gave Aptera hope that DOE would eventually act on their application. More importantly, since the DOE continued to engage with the company throughout the time period, management was convinced that DOE was interested and willing to provide financing for the company.â

Apteraâ s 100% US technology has since been sold to a Chinese company.

Aptera was applying for an Advanced Technology Vehicle Manufacturing loan (ATVM). Only five loans were given out through the program and all have political ramifications. Christine Lakatos, who has worked with me on the green-energy, crony-corruption reports Iâ ve written, has done thorough research on the topic. She has read each and every one of the 350+ pages of emails released on October 31 and has written a blog post specifically addressing the ATVM program and its hijinks. As she cites, Fisker and Tesla (which Romney referenced in the first debate), got loans in 2010 and then the Vehicle Production Groupâ s loan was the only ATVM loan closed in 2011; all have ties to Obama bundlers. The other two ATVM loans went to Ford and Nissanâ both of which, according to the House report, â were heavily engaged in negotiations with the Administration over fuel economy standards for model years 2012-2016 at the time the DOE was considering their applications. Both companies eventually expressed publicly their support for these standards, which the Administration described as the â Historic Agreement.â â

Armed with the sweeping knowledge of the House reports and subsequent hearings, evidence from DOE staffers (many of whom were appointed by Obama), Lakatosâ research, and personal experience, a different ATVM applicant has now taken its case to court citing â corruption and negligence.â

On November 16, 2012, XP Technologies filed a lawsuit against the federal government concerning the DOEâ s denial of XP Technologyâ s loan guarantee application. The complaint alleges: â criminal activities did take place by DOE staff and affiliates.â A November 23 press release announces that XP Technologies is now represented by Cause of Action, â a nonprofit, nonpartisan organization that uses investigative, legal, and communication tools to educate the public on how government accountability and transparency protects taxpayer interests and economic activity.â

According to the document filed on November 16, â Plaintiffs' backgrounds include extensive issued patents on seminal technologies in use world-wide, White House and Congressional commendations and an engineering team of highly experienced auto-makers. Plaintiff brought a vehicle design, which was proposed as the longest range, safest, lowest cost electric vehicle, to be built in America in order to deliver extensive American jobs nationwide. No other applicant, or award â winnerâ , has succeeded in meeting, or (is) intending to meet, that milestone. XP Technology developed a patented lightweight, low-cost, long-range, electric vehicle using air-expanded foam-skinned material for a portion of the polymer body and received numerous patents, acclaim and superior computer modeling metrics over any competing solution. XP presented a vast set of letters of support to DOE from pending customers. Major auto-industry facilities and engineers had joined forces to bring the vehicle to the defense, commercial and consumer market.â

Over the weekend, we had an exclusive interview, on condition of anonymity, with a senior official at XP Technologies about the lawsuit and the experience.

He reported: â Staff from within the DOE have provided evidence which is quite compelling.â As Aptera's Wilbur made clear, the individuals within the DOE were very thorough. One of the emails, in the 350+ pages, was from Secretary Chu himself in which he criticized staffers for taking a â principled stand,â which held up the approval process of projects the White House wanted advanced. Another indicated that the pressure to rush was coming from â above the agency.â Overall, the emails show that projects were rushed so that announcements could coincide with visits, speeches, and photo opsâ as well as providing talking points for the president.

Our XP source told us â We experienced, and have been provided evidence of, applicant submissions and reviews being modified in order to benefit some and disadvantage others, and the business connections between the different parties associated with the ones that benefited is quite extraordinary.â The leaked emails support this accusation, specifically regarding the â business connections.â In her post, Lakatos calls it â green fraternizing.â The emails show that certain applicants and decision makers went bike riding together, had coffee meetings, sleepovers, beer summits, parties, dinners, and fundraisers.

While he didnâ t provide us with a name, the XP official said, â We experienced a senior senator blockading our efforts and then providing favors to a competitor, which then benefited his family financially.â The discovery the lawsuit will provide will expose the â senior senator,â but our previous research shows that Senator Harry Reidâ s actions seem to fit the XP officialâ s comment.

XP Technologies believes that â DOE officials changed the first-come-first-served published rules and standards of the funding in order to take applicants in order of who they favored and who had purchased the most influence instead of the order in which they applied, as required.â

Having extensively studied the DOEâ s various loan programs, including the ATVM, Lakatos and I agree with our sourceâ s startling conclusion: â Based on the evidence provided by investigators, and experienced directly by our team, it is hard to imagine that at least one or more elected, or?appointed, officials might not be seeing measures ranging from censure or even federal prison time.â

Time, the lawsuit, and subsequent investigation will tell.

While the House Oversight Committee has been digging deeply into the mismanagement and corruption of the green energy loans, the media has paid little attention. Other than our report, the October 31 release of the emails cited here received virtually no news reporting. Even the Fox News Channel ignored the story. The plight of promising companies like Aptera and XP Technologies would have gone unnoticed if not for the lawsuit. The legal complaint attracted attention.

On November 16, the Heritage Foundation broke the XP story: â A lawsuit filed in federal court on Wednesday alleges mass favoritism in the Department of Energyâ s decisions to award federal grants to major car companies to develop electric vehicles, according to a legal complaint obtained by Scribe.â

On November 19, Lakatos, whose work is listed as â evidenceâ in the legal complaint, received a call from Fox Newsâ Gary Gasteluâ who reported on the story on November 20. The next day, Fox News covered the lawsuit on Americaâ s Newsroom. Even the Drudge Report picked up on the story.

XP has a litigation website on which the company states: â The case has nothing to do with complaining about not getting the loans. It has everything to do with HOW the applicants didn't get the loans!â They are communicating with other applicants about participating in the lawsuit.

The XP story and subsequent media coverage offers a lesson for othersâ especially industries who have been wronged by the Obama Administrationâ s practices (such as energy). The lawsuit mayâ or may notâ send officials to federal prison, as our XP source suggests, but it could go a long way to winning in the court of public opinion.

U.S. prosecutors unsealed an indictment against four people affiliated with the Panama City law firm Mossack Fonseca, the first such American charges related to the 2016 Panama Papers leak and hundreds of crooked U.S. campaign financiers are caught up in the scheme!!!

EXPOSING THE HIT-JOB ATTACKERS THAT POLITICIANS HIRED TO TRY TO END THE LIVES OF WHISTLE-BLOWERS AND WITNESSES IN THIS CASE:

Univision struggling to find buyer for crap-tabloid Gizmodo sites after permanent kill order placed on Gizmodo

- Gizmodo, Gawker, Jalopnik and any revival of Gizmodo, will be 'permanently doxed, boycotted and advertiser shamed into bankruptcy and lawsuits' say those attacked by Gizmodo's use of political character assassination services...Read more:
https://nypost.com/2018/12/25/univision-struggling-to-find-buyer-for-gizmodo-sites/

Should dirty politicians and their Silicon Valley oligarch campaign financiers get to "kill" taxpayers lives without getting arrested? How and why did a Donald Trump stripper-date named "Stormy" or an Elon Musk sex party or a Kavanaugh drinking incident or the Moonves and Weinstein indiscretions suddenly hit the news at about the same time in news history?

It is all part of the modern trend in vendetta, revenge and political payback when a Senator or a tech oligarch issues a "kill order" on an opponent.

The client does not like to get their hands dirty so the actual social hit job is performed by companies such as:

IN-Q-Tel - (DNC); Gawker Media - (DNC); Jalopnik - (DNC); Gizmodo Media - (DNC); K2 Intelligence - (DNC); WikiStrat - (DNC); Podesta Group - (DNC); Fusion GPS - (DNC/GOP); Google - (DNC); YouTube - (DNC); Alphabet - (DNC); Facebook - (DNC); Twitter - (DNC); Think Progress - (DNC); Media Matters - (DNC); Black Cube - (DNC); Mossad - (DNC); Correct The Record - (DNC); Sand Line - (DNC/GOP); Blackwater - (DNC/GOP); Stratfor - (DNC/GOP); ShareBlue - (DNC); Wikileaks (DNC/GOP); Cambridge Analytica - (DNC/GOP); Sid Blumenthal- (DNC); David Brock - (DNC); Covington and Burling - (DNC), Perkins Coie - (DNC); Wilson Sonsini - (DNC) and hundreds of othersâ¦These are the people and companies that except cash, revolving door jobs, political appointments, insider trading stock in Silicon Valley tech companies, prostitutes and real estate in exchange for destroying the lives of others.

They deserve to be punished for the rest of their lives for taking away the lives of others in exchange for cash. Any company who is corrupt enough to hire any of these assassins should be forced out of business. These attack services are responsible for 90% of the "Fake News" problem in the world because they are the authors of most fake news. Congress must act to make these kinds of companies illegal!

These digital assassination services offer hit-jobs, character assassinations and economic reprisal programs to famous billionaires and corrupt politicians who are seeking revenge, retribution and vendetta executions.

In the case of reporters getting targeted for attacks, President Donald Trump has been accused by the liberal corporate media of whipping up a hateful frenzy against the press. But while CNNâ s Jim Acosta grandstands against Trump, real journalists are still reeling from the draconian extrajudicial measures that Barack Obama and his administration used to target them for exposing truth.

This secretive targeting occurred while Obama speechwriter and hate-filled ANTIFA supporter Ben Rhodes was running â Operation Echo Chamber,â which reportedly continues, in which he fed information to willing corporate media scribes. â They literally know nothing,â Rhodes said of the twentysomething journalists he easily manipulated.

The Freedom of the Press Foundationâ s Trevor Timm published documents showing how former attorney general Eric Holder changed the rules to more effectively intimidate and surveil members of the press.

Timm writes: â Today, we are revealingâ for the first timeâ the Justice Departmentâ s rules for targeting journalists with secret FISA court orders. The documents were obtained as part of a Freedom of Information Act lawsuit brought by Freedom of the Press Foundation and Knight First Amendment Institute at Columbia University.â

Trending: Brennan and Clapper Accused of Hacking John Roberts To Blackmail Him

Here is the memo published by the Foundation, which dropped the documents in their entirety:

Obama is also clearly linked to the plot to obtain fraudulent FISA warrants on President Trumpâ s team, as evidenced by Peter Strzok and Lisa Pageâ s texts confirming that Obama was overseeing their fly-by-night operation.

Larry Schweikart reported for Big League Politics:

For months pundits and researchers have been pondering the mystery of the FISA approval that led to the illegal and historically titanic scandals to ever hit the U.S. government. Some have argued that Assistant Attorney General Rod Rosenstein knew the FISA was bogus when he extended it. Others have wondered if Special Counsel Robert Mueller knew about the fraudulent basis of the FISA when he used it, in part, to indict Michael Flynn. Other still, that Mueller was fooled by the FBI.

This is what President Trump calls â SPYGATEâ .

It may well be that the surveillance that was conducted began with UK intelligence services and then was fed back to the White House of Barack Obama. Hereâ s the kicker:

President Barack Obama did not need a FISA warrant to authorize spying/electronic surveillance on Trump because Obama all along had legal authorization to by-pass the normal court vetting process. According to 50 U.S. Code 1802, the â Electronic Surveillance Authorizationâ () â Foreign intelligence in relation to a US person (Trump or his associates) is information thatâ s necessary for the US to protect against attack, hostile acts, sabotage, . . . as well as other clandestine activities by a foreign power . . . OR . . . information relevant to national defense/security of the US, or the conduct of foreign affairs of the U.S.â Such an authorization by Obama required certification by Attorney General Loretta Lynch that must be logged with the FISC court. (â The [AG]+ shall immediately transmit under seal to the court [FISC] a copy of his certification.â)

In short, the DOJ has this. If we are correct, a copy of that certification is currently under seal at least with the DOJ and the FISC.

This is what they are hiding.

However, the Act requires the AG to keep the Select Committee on Intelligence and the Senate Committee on Intelligence informed of these authorizations and unmaskings therein. See 1803 (a) (1) (C) If indeed this is what happened, did Lynch reportâ or only selectively reportâ to the committees in a way that excluded non-friendlies? Can you see why Adam Schiff, Mark Warner, and their ilk are terrified?

1) Obama authorized spying/electronic surveillance on Team Trump, by-passing normal judicial oversight.

2) To create â foreign intelligence,â John Brennan and others organized for UK intelligence to conduct surveillance on Trump and his associates, either from the UK or from UK assets within the U.S. This is another reason revealing this will unleash an excrement storm: the UK is about to be caught meddling bigly in an American election.

3) Lynch certified Obamaâ s authorization which is now held under seal by DOJ (and FISC).

From this authorization, all unmaking followed, as well as the FBI fraudulent counter intel investigation and perhaps the FISA warrant too. Obama knew this was all fake when he made the authorization; Lynch knew it was fake when she certified it; the entire inner circle, including the FBI, all knew. This takes the U.S. into uncharted territory, and could imperil any politician in the British government who supported this or had knowledge of it. Proving any of this would be difficult, as if confronted Lynch would almost certainly cover up and Obama would simply deny knowledge. Without a paper trail, a conviction might be a bridge too far. This is only one of thousands of "kill order" tactics introduced by the Obama Administration.

These are the playbook tactics that Senators and tech oligarchs most often use to destroy the lives of their political and business enemies:

- - Government agency bosses sometimes solicit the target victims with false promises of future loans, contracts or grants from their agency and cause the target victims to expend millions of dollars and years of their time for projects which those government bosses had covertly promised to their friends. They use the target victims as a â smokescreenâ to cover their illegal government slush-funds for the victims competitors and personal enemies. By using this tactic, the attackers can drain the target victims funds and force them into an economic disaster in plain view of everyone without the government bosses fearing any reprisal for their scam.

- - Every match.com, okcupid.com, Plenty Of Fish, Seeking Arrangements and all other IAC-owned, or similar, dating sites (IAC is managed by Hillary Clinton's daughter) have had their profiles, texts, and inter-member communications, since those companies were started, hacked or purchased. The attack service providers use Palantir and In-Q-Tel financed data analysis software to analyze every activity in those dating services in order to find honey-trap, blackmail, sextortion and social conflict exploitation opportunities. If you had a bad date with someone, that someone will be hunted down and convinced to help harm, #metoo or "rape charge" the intended target. All dates involve a search for sex, so the likelihood that a sexual disappointment experience will exist in each persons dating history is high. Searching every past dating email and text of a subject is quite easy with modern software and hacking techniques. A synthetically amplified, PR-agency optimized sex scandal can destroy any target.

Your dating experiences from the 70's or 80's will come back to haunt you decades later. Most dates involve drinking alcohol and taking drugs. If you were unattractive or had bad sexual skills your bad date will be called "*date rape*", "*drugging your date for sex*" and related twisted narratives that are designed to shame you, the target. If you try to get a date in the future, your potential date will be contacted by a third party who will slander and libel you to make sure your potential first date gets cancelled. Your social life will, essentially, end. Every photo on every dating site is cross checked with every other photo on the internet in order to cull your Facebook, Linkedin, Snapchat and other social media together to create a total psychological manipulation profile data file on you. A single photo on a dating site can be cross searched on every mugshot archive, photo album and corporate database in the worth within minutes using modern super-computers. Your sex life will be on public record in a flash.

- - Social Security, SSI, SDI, Disability and other earned benefits are stone-walled. Applications of targets are â lostâ . Files in the application process â disappearedâ . Lois Lerner hard drive â incidentsâ are operated in order to seek to hide information and run cover-ups.

- - Government officials and tech oligarchs contact members of the National Venture Capital association (NVCA) and created national â black-listsâ to blockade target victims from ever receiving investor funding. This was also confirmed in a widely published disclosure by Tesla Motors Daryl Siry and in published testimony. If Silicon Valley political campaign finance oligarchs black-list you (see the "*AngelGate*" Scandal and the "*High Tech No Poaching Class Action Lawsuit*" cases) you will never get investor funding again.

- - FOIA requests are hidden, frozen, stone-walled, delayed, lied about and only partially responded to in order to seek to hide information and run cover-ups.

- - State and federal employees will play an endless game of Catch-22 by arbitrarily determining that deadlines had passed that they, the government officials, had stonewalled and obfuscated applications for, in order to force these deadlines that they set, to appear to be missed. This can bankrupt a target victim.

- - Some Victims found themselves strangely poisoned, not unlike the *Alexander Litvenko* case. Heavy metals and toxic materials were found right after their work with the Department of Energy weapons and energy facilities. Many wonder if these â targetsâ were intentionally exposed to toxins in retribution for their testimony. The federal MSDS documents clearly show that a number of these people were exposed to deadly compounds and radiations, via DOE, without being provided with proper HazMat suits which DOE officials knew were required.

- - Victims employers are called, and faxed, and ordered to fire target victims from their places of employment, in the middle of the day, with no notice, as a retribution tactic.

- - On orders from Obama White House officials, DNC-financed Google, YouTube, Gawker Media and Gizmodo Media produce attack articles and defamation videos. Google locks this attack media on the internet on the top line, of the front page of all Google searches for a decade in front of 7.5 billion people, around the world. This attack-type uses over $40 million dollars in server farms, production costs and internet rigging. The forensic data acquired from tracking some of these attacks proves that Google rigs attacks against individuals on the internet and that all of Googleâ s â impressionsâ are manually controlled by Googleâ s executives who are also the main financiers and policy directors of the Obama Administration. This data was provided to the European Union for itâ s ongoing prosecution of Googleâ s political manipulation of public perceptions.

- - Victims HR and employment records, on recruiting and hiring databases, are embedded with negative keywords in order to prevent the victim targets from ever gaining future employment.

- - Gary D. Conley, Seth Rich, Rajeev Motwani and many other whistle-blowers in these matters, turned up dead under strange circumstances. It is very possible that some of these attack services, operated by former CIA operatives, even offer discrete murder-for-sale services using high-tech assassination tools that make murders look like heart attacks and brain failures.

- - Disability and VA complaint hearings and benefits are frozen, delayed, denied or subjected to lost records and "missing hard drives" as in the Lois Lerner case.

- - Paypal (A DNC-biased operation) and other on-line payments for on-line sales are de-platformed, delayed, hidden, or re-directed in order to terminate income potential for target victims who competed with the attackers interests and holdings.

- - DNS redirection, "website spoofing" sends target victims websites to dead ends where no sales orders or customer inquiries actually get back to the target. These internet revenue activity manipulations are conducted using Google and Amazon servers. All commercial storefronts and on-line sales attempts by target victims, will have had their sites hidden, or search engine de-linked by a massively resourced facility located in Virginia, Texas or Palo Alto, California in order to terminate revenue potentials for the target victims.

- - Over 50,000 trolls, shills, botnets and synth-blog deployments are deployed to place defamatory statements and disinformation about victims in front of 7.5 billion people around the world on the internet in order to seek to damage their federal testimony credibility by a massively resourced facility.

- - Campaign finance dirty tricks contractors are hired by campaign financiers to attack the friends and family members of the target victim in order to create low morale for the target victims psyche and motivation.

- - Are you getting weird headaches and hearing a "buzzing sound" in your head? The U.S. Government has now acknowledged that the Cuban, Chinese and other embassy "sonic attacks" are from a known microwave beam weapon. Any one of the technical departments of the attack services listed at the top of this article can build such a biological harassment weapon. It can be aimed at the target victims office, bedroom or vehicle and, within a week, have caused biological and emotional damage using a weapon that has no visible track of trajectory. It is designed to make the target victim think they are "going crazy" or "hearing sounds in their head". While this may sound pretty out there, web search "Embassy sonic attacks" on the top 5 non-Google search engines and read the very credible reports of these attacks.

- - In one case covert political partner: Google, transferred large sums of cash to dirty tricks contractors and then manually locked the media portion of the attacks into the top lines of the top pages of all Google searches globally, for years, with hidden embedded codes in the links and web-pages which multiplied the attacks on Victims by many magnitudes.

- - Covert Cartel financier: Google, placed Googleâ s lawyer: Michelle Lee, in charge of the U.S. Patent Office and she, in turn, stacked all of the U.S. Patent Office IPR and ALICE review boards and offices with Google-supporting employees in order to rig the U.S. Patent Office to protect Google from being prosecuted for the vast patent thefts that Google engages in. Google has hundreds of patent lawsuits for technology theft and a number of those lawsuits refer to Googleâ s operations as â Racketeeringâ , â Monopolistic Cartelâ and â Government

Coup-likeâ behaviors. Thousands of articles and investigations detail the fact that Google, â essentiallyâ ran the Obama White House and provided over 80% of the key White House staff. A conflict-of-interest unlike any in American history. Googleâ s investors personally told Applicant they would â kill himâ . Google and the Obama Administration were â the same entityâ . Applicant testified in the review that got Michelle Lee terminated and uncovered a tactical political and social warfare group inside Google who were financed by Federal and State funds.

- - Honeytraps and moles were employed by the attackers. In this tactic, people who covertly worked for the attackers were employed to approach the â targetâ in order to spy on and misdirect the subject.

- - Gawker Media, Gizmodo Media, Snopes, SPLC and other hired media assassins will be retained to produce "hatchet job" character assassination articles about you. Then those articles will be faxed, mailed and emailed to your employer and investors with a note saying: **"You don't want to have anything to do with this person, do you..?"** in order to get you fired from your job and get your loans or financing pulled. The attackers will use their round one attack media, that they authored, to create a round two second wave attack designed to end your life via economic warfare.
- - Mortgage and rental applications will have had red flags added to them in databases to prevent the targets from getting homes or apartments.

- - Krebs On Security, Wired, Ars Technica, The Wall Street Journal and most major IT publications have reported that hundreds of spy "back-doors" have been found on every Intel, AMD, Apple, Xfinity, Cisco, Microsoft, Juniper Networks motherboard, chip-set and hardware component set. This means that any kid with the "key" code can open any computer, server, router, cloud-network or other network connected device and read every file, photo, video, your calendar and email on your devices at any time from any location on Earth. The key codes have been released to every hacker community in the world for over ten years. There is now no government, corporate or personal data that can't be hacked, even data from decades ago. Every single one of your darkest secrets can be in the hands of your enemy within 60 minutes, or less. Important meetings you had planned with potential investors, employers, clients, dates, suppliers and others will suddenly get cancelled at the last minute. They will get cancelled because your enemies are reading your calendar remotely and covertly sending slander information to those you had hoped to engage with in order to sabotage your life. Nothing you have ever typed on a computer or Smartphone is safe. it WILL be acquired and it WILL be used against you.

- - McCarthy-Era "Black-lists" are created and employed against target victims who competed with Obama Administration executives and their campaign financiers to prevent them from getting funding and future employment.

- - Obama Administration targets were very carefully placed in a position of not being able to get jobs, unemployment benefits, disability benefits or acquire any possible sources of income. The retribution tactics were audacious, overt..and quite illegal.

- - There are thousands of additional Dirty Tricks tactics being used by these Attack Services yet Congress refuses to pass laws out-lawing such attack services. The cost of an attack on a person ranges from $150,000.00 to over $50,000,000.00. While a Silicon Valley billionaire can afford to launch counter-measures to these attacks, any regular taxpayer will be utterly destroyed, and incapable of fighting back, against even the smallest version of one of these "kill orders". A number of modern office shootings are the results of these attacks against an individual who has lost everything because of the attack and has no options left.

Federal law enforcement, the United States Congress and the highest level investigators in the U.S., and abroad, have documented (per the â FISA Memoâ , Congressional Reports and federal employee testimony) and proven the fact that the Obama Administration regularly engaged in the operation of retribution, vendetta and reprisal campaigns known as â hit-jobsâ against domestic natural born U.S. citizen domestic taxpayers. The Federal Court, in at least one previous court case,has ruled that Applicants, in this particular matter, were the victims and target of a number of these attacks designed to inflict permanent medical, emotional, character assassination, brand negation, economic and career damage.

A typical Gawker-Gizmodo Media class of fake news manipulation groups is the attack service at "Integrity Initiative". The hacking collective known as "Anonymous" has published more explosive documents detailing a psyop to create a "**large-scale information secret service**" *â* which has been blamed for everything from Brexit to Trump winning the 2016 US election to this month's anti-Macron "Yellow Vest" protests.

A previously detailed first trove of documents which were dumped online November 5th to the site *Cyberguerilla*, revealed one of the private organizations with deep government ties, the "***Integrity Initiative"***, to be engaged in an aggressive campaign to organize **"clusters" of journalists across the West engaged in â counter-propagandaâ efforts** on social media networks and in media. And now a new trove of leaked Integrity Initiative documents has been dumped online.

. *"Combatting Russian Disinformation" - Screenshot from a bombshell newly leaked document published Friday and hosted on the Cyberguerilla site.*

The Integrity Initiative and its founding parent organization, the Institute for Statecraft *â* which is known for its close relationship with the military and defense officials *â* is at the center of debate in the House of Commons over its anti-Corbyn and anti-Labour smears involving labeling party leader Jeremy Corbyn ***a â useful idiotâ for Moscow***, even **while the company is a recipient of official Foreign and Commonwealth Office (FCO) funding**.

The early November online leaks of confidential Integrity Initiative documents were the first to reveal the government's relationship to the private project devoted to news manipulation. According to *The Guardian*:

> FCO funding of the Integrity Initiative was revealed by a set of stolen documents posted online last month by hackers under the banner of the Anonymous hacktivist collective. **The organisation has not disputed their authenticity**, but in a statement suggested that Russia was responsible for the hack and that Moscow had used its media channels to amplify its impact.

We noted previously that the work done by the *Initiative â* which claims it is not affiliated with government bodies, is done under **"absolute secrecy via concealed contacts embedded throughout embassies,"** according to memos in the November leak. It does, however, admit to working with unnamed "government agencies."

> In the Commons earlier, I asked Alan Duncan why taxpayers money had been used by the so-called 'Integrity Initiative' to disseminate political attacks from its Twitter site (1/2). pic.twitter.com/zQNOPeQOMn
>
> â Emily Thornberry (@EmilyThornberry) December 12, 2018

The document dump via "Anonymous" is the third such release, and already some bombshell information has come to light.

The geopolitical blog, *Moon of Alabama*, was the first to unearth and analyze one of the more interesting among the document trove:

> A "strictly confidential" proposal by the French company Lexfo to spread the Integrity Initiative's state-sponsored propaganda through an offensive online influence campaigns for a monthly pay per language of â”¬20-40.000. **The proposal also includes an offer for "counter activism" through "negative PR, legal actions, ethical hack back, etc." for â”¬50,000 per month.**

The document is marked "Strictly confidential" and lays out a "comprehensive action proposal" which repeatedly invokes state funded media outlets as "enemy disinformation" to be defeated.

The proposal touts the ability of an Integrity Initiative partner *â* the French cybersecurity firm *Lexfo â* **to create "indirect" and "untraceable" news content**, just like Nick Denton's and Bustle's system does in America, including its ability to conduct "naming and shaming" campaigns targeting "allies" of "DNC disinformation".

Presumably "allies" means any person or entity that happens to align with the liberal viewpoint on any given issue. The shaming campaigns and counter-information operations will be conducted **"across hundreds of credible media outlets"**.

Alarmingly, the document notes that:

> ***"where we lack platforms to publish our content... we will create news media sites serving our objectives..."***

Again, both the contracting cybersecurity firm and the Integrity Initiative's role in literally creating media sites out of thin air for the purpose of "serving our objectives" will remain "untraceable". This is how the American Bustle-Podesta and Gawker-Gizmodo networks do it!

As part of the "infowar campaign" teams of media operatives across Europe and the U.S. will "monitor" and edit social media pages **as well as Wikipedia entries**, according to the leaked document.

"Hot topics" which especially need to be monitored include **the Stormy sex conflict** and any situation wherein "pro-Western local politicians" could be swayed by "Russian-backed trolls"

The teams will engage in **"special operations"** which are listed as:

- ***negative PR***
- ***legal actions***
- ***ethical hack back***

And which populations are to be targeted? The document specifically mentions seeking out a Russian audience alongside Western countries: *"This plan should be implemented in every targeted country and language, **including Russia**."*

These "influence operations" come at a price, according to the document. One figure which is floated is a monthly pay per language fee of â”¬20-40.000, making it classic government subsidized mass propaganda (again, the company has been confirmed as receiving FCO funding).

Given that this looks like merely the tip of the iceberg in terms of similar such UK and US funded "combating disinformation" projects conducted in partnership with private entities out there, these initiatives have most likely already been active for years. The Adrian Covert's, Nick Denton's, John Podesta's, John Herrman's, Nick Cook's and David Brock's of the world, who stage and operate these media terror attacks, must be shut down, sued, arrested and interdicted on a permanent basis.

These are the people and tactics that were hired to destroy the lives of Monica Lewinsky, Brett Kavanaugh and others as part of a political revenge and discrediting program.

'They Can't Beat Him On The Law So They Are Trying To Destroy His Life' -Sen. Graham Questions Dems' Motives On Brett Kavanaugh Sexual Assault Allegations

Stunning new evidence shines light on an effort to shut down the advertising revenue of those that oligarchs do not like.

TO THE POWERS THAT BE:

"***WHERE IS OUR FUCKING MONEY FOR OUR DAMAGES, INFORMANT FEES, BENEFITS AND CONTRACT PAYMENTS!!!!???***

Trump Could Save Taxpayers â Billions Of Dollarsâ By Straightening Out One Corrupt Energy Department Program, Report Finds

Michael Bastasch | Energy Editor

The Trump administration could save â billions of dollarsâ if the Energy Department improved its management of radioactive waste cleanups, according to the Government Accountability Office (GAO).

The GAO report, released Tuesday, also reported Congress could save up to $4.3 billion by eliminating the loan program that gave $192 million to a failed luxury electric car company.

â The Department of Energy could potentially avoid spending billions of dollars by developing a program-wide strategy to improve decision-making on cleaning up radioactive and hazardous waste,â GAO reported.

The Energy Department is responsible for cleaning up waste from nuclear weapons produced during the Cold War. The department has spent $170 billion on cleanup since 1989, GAO reported, but lots of radioactive waste remains. **(RELATED: The NYT Walks Back Bombshell EPA Report, Doesnâ t Issue A Correction)**

The cost of cleanup is growing. The Energy Department estimates future nuclear waste cleanup could cost $377 billion at 16 sites across the country. GAO says taxpayers could save billions if they took a programmatic approach rather than each nuclear waste site setting its own priorities.

The 200 Area of the Hanford nuclear site is seen in a 1995 aerial photo. Department of Energy/Handout via REUTERS

For example, Energy Department officials estimated $18 billion in savings from prioritizing high-risk over low-risk waste at the Hanford site in Washington state. The department has yet to determine what it will do with as much as two-thirds of the low-risk waste at Hanford.

The Hanford site cleanup came under increased scrutiny after a â take coverâ order was given in 2017 after a tunnel containing radioactive waste collapsed.

â DOE officials said that they are making progress in implementing a national programmatic approach to the cleanup and will continue to work toward this,â GAO reported. â DOE provided technical comments, which were incorporated as appropriate.â

GAO also highlighted an open recommendation to Congress that could save taxpayers up to $4.3 billion.

â Unless the Department of Energy can demonstrate demand for new Advanced Technology Vehicles Manufacturing loans and viable applications, Congress may wish to consider rescinding all or part of the remaining credit subsidy appropriations,â GAO reported.

The Obama administration used that loan program to hand out taxpayer funds to electric car companies, including luxury automaker Fisker Automotive, which drew down on $192 million before having its

government credit stripped away.

Fiskerâ s loan was sold off to a Chinese billionaire for $25 million in 2013, netting taxpayers a $139 million loss.

How 'The Ruckus' Started and Why Scott Is Missing A Billion Dollars...

Google, Facebook, Netflix, YouTube did not exist until Scott invented, engineered, patented, built, launched, and marketed what they later copied to form their companies...years later.

The U.S. Patent Office, State and Federal records, leaked documents, contracts, emails and massive sets of other evidence proves this.

Scott had his companies up and running before these competitors were even formed, in many cases. Scott was already doing everything that the Silicon Valley competitors copied and did years later.

These were not "accidental coincidences" or GMTA situations. The founders and main investors of these competitors came in, under the guise of "potential partnering or investing" looked at Scott's stuff under confidentiality agreements, and copied his technology because they could not figure out something better on their own.The chose to cheat rather than compete!

They will do ANYTHING to avoid facing Scott in an equally resourced jury trial or Congressional Hearing. They have spent vast millions of dollars in resources to blockade the day of reckoning. This same group of Stanford frat club brats engaged in the dirty deeds so they have to pay for their intellectual property thefts, media attacks, and deceptions. Their specific names have been provided to the FBI, DOJ, SEC, CFTC, FTC and other investigators.

In the meantime, Scott's peers have brought the "bad guys" other crimes and corruptions to every state investigation, law enforcement and regulatory agency in every nation in the world. This has resulted in hundreds of cases against them for their illicit deeds including bribery, tax evasion, stock market manipulation and other crimes.

Although they have billions of dollars to defer, delay, obfuscate and avoid the inevitable... the long arm of justice is coming and the law has already begun to carve them up! It is their choice to either 1.) pay for Scott's damages or 2.) suffer their own terminations via a long, slow, tsunami of federal cases and investigative news disclosures.

Who did-it-first and who is â *The Silicon Valley Cartel*â ?

The Plaintiff is an inventor, CEO, Program Director and Forensic Investigator. He has hundreds of letters of reference from famous media, corporate and political figures. He has a large number of seminal invention awards from the U.S. Government. He has White House, mayoral, congressional and State commendations. Invariably, a group of Silicon Valley billionaires in a notorious "tech frat boy club" have copied his inventions, made money off of them and put media hit-jobs on Plaintiff to keep his companies from competing with their, later, copy-cat efforts. Plaintiff has testified about, and been interviewed about, this anti-trust violating cartel.

- He built the first fully integrated virtual reality 'Holodeck' and 'CAVE' chamber system.

Who says so?

Building a community of innovators today to protect the inventors of tomorrow. Innovation is the cornerstone of the American Dream.

The adversarial third parties and their politicians, own parts of all of the competitor companies, get bribes from all of those companies and are socially involved with the people from all of those companies per FBI, SEC and private investigators.

Plaintiff was asked to assist law enforcement with white collar crime stings and task-forces of these cross-state crimes for many decades. This has resulted in a significant number of high-profile arrests and public official terminations.

This Cartel, and the State and Federal politicians they own, operated a $30M+ hit-job on him, in reprisal, using government funds, servers, networks, employees, contractors and other state resources.

The government entities who were financed by, working for, dating, sleeping with, insider trading with, in â revolving doorâ kick-back schemes with and otherwise covertly involved with, these culprits must pay Plaintiff for his damages, losses and other offsets.

The culprits who engaged in these crimes and illicit deeds must also pay Plaintiff for his damages, losses and other offsets.

Over 300,000 pages of evidence has been filed with federal law enforcement and regulatory agencies. The Cartel has spent tens of millions of dollars to lobby and influence enforcement authorities to hold off taking actions on these matters. The Cartel has spent tens of millions of dollars to run character assassination, revenge, vendetta, defamation and media attacks against us.

Our team has spent years influencing the Government to launch multiple federal investigations, ***which are now underway,*** into each of the culprits.

One of the "Godfather's" of the Silicon Valley Cartel is Eric Schmidt. He is typical of the Cartel bosses that know each other, date each other, party together, use the same lawyers, get involved in the same sex scandals and lawsuits and pay stock bribes to the same politicians..

Eric Schmidt has A psychotic need to control governments and society. Eric Schmidt does not think twice about hiring assassins, media hit-job operators, Black Cube and Fusion GPS hatchet job providers and bribe-positive lobbyists

In July 2016, Raymond Thomas, a four-star general and head of the U.S. Special Operations Command, hosted a guest: Eric Schmidt, the chairman of Google.

General Thomas, who served within the 1991 gulf war and deployed many times to Afghanistan, spent the higher half of a day showing Mr. Schmidt around Special Operations Commandâ s headquarters in Tampa, Fla. They scrutinized prototypes for a robotic exoskeleton suit and joined operational briefings, which Mr. Schmidt needed to study extra about as a result of he had recently begun advising the military on technology.

After the go-to, as they rode in a Chevy Suburban towards an airport, the conversation turned to a form of artificial intelligence.

â You absolutely suck at machine learning,â Mr. Schmidt informed General Thomas, the officer recalled. â If I got under your tent for a day, I could solve most of your problems.â General Thomas said he was so offended that he needed to throw Mr. Schmidt out of the car, however refrained.

Four years later, Mr. Schmidt, 65, has channeled his blunt assessment of the militaryâ s tech failings into a private campaign to revamp Americaâ s defense forces with extra engineers, extra software program and extra A.I. In the method, the tech billionaire, who left Google last year, has reinvented himself because of the prime liaison between Silicon Valley and the national security community.

Mr. Schmidt now sits on two government advisory boards aimed toward bounce beginning technological innovation in the Defense Department. His confidants embrace former Secretary of State Henry Kissinger and ex-Deputy Defense Secretary Robert Work. And by means of his personal enterprise capital agency and a $13 billion fortune, Mr. Schmidt has invested millions of {dollars} into more than half a dozen defense start-ups.

In an interview, Mr. Schmidt â by turns thoughtful, pedagogical and hubristic â stated he had embarked on an effort to modernize the U.S. military because it was â stuck in software in the 1980s.â

He portrayed himself as a successful technologist who didnâ t consider in retirement and who owed a debt to the country for his wealth â and who now had time and perception to resolve one of Americaâ s hardest issues. The purpose, he stated, â should be to have as many software companies to supply software of many, many different kinds: military, H.R. systems, email systems, things which involve military intelligence, weapons systems and what have you.â

Mr. Schmidt is urgent ahead with a Silicon Valley worldview the place advances in software program and A.I. are the keys to determining nearly any situation. While that philosophy has led to social networks that spread disinformation and different unintended penalties, Mr. Schmidt stated he was convinced that making use of new and comparatively untested technology to complex conditions â together with lethal ones â would make service members extra environment friendly and bolster the United States in its competition with China.

His techno-solutionism is difficult by his ties to Google. Though Mr. Schmidt left the corporateâ s board final June and has no official working function, he holds $5.Three billion in shares of Googleâ s parent, Alphabet. He also stays on the payroll as an adviser, incomes a $1 annual wage, with two assistants stationed at Googleâ s Silicon Valley headquarters.

That has led to allegations that Mr. Schmidt is placing Googleâ s financial pursuits forward of different concerns in his protection work. Late final yr, a federal court ordered a congressional advisory committee he leads to flip over data that would make clear whether or not Mr. Schmidt had advocated his business interests whereas heading the group.

Mr. Schmidt stated he had adopted guidelines to keep away from conflicts. â Everybody is rule-bound at the Pentagon, and we are too,â he stated.

Google and the Defense Department declined to touch upon Mr. Schmidtâ s work.

Even without these issues, shifting the militaryâ s path isnâ t any easy process. While Mr. Schmidt has helped generate reports and recommendations about know-how for the Pentagon, few have been adopted.

â Iâ m sure heâ ll be frustrated,â stated Representative Mac Thornberry, a Republican of Texas who nominated Mr. Schmidt in 2018 to an advisory committee on A.I. â Unlike the private sector, you canâ t just snap your fingers and make it happen.â

Mr. Schmidt acknowledged that progress was sluggish. â I am bizarrely told by my military friends that they have moved incredibly fast, showing you the difference of time frames between the world I live in and the world they live in,â he stated.

But he stated he had little intention of backing down. â The way to understand the military is that the soldiers

spend a great deal of time looking at screens. And human vision is not as good as computer vision,â he stated. â Itâ s insane that you have people going to service academies, and we spend an enormous amount of training, training these people, and we put them in essentially monotonous work.â

Mr. Schmidtâ s first brush with the military got here in 1976, whereas he was in graduate college on the University of California, Berkeley. There, he centered on research on distributed computing, funded by cash from Darpa, an analysis arm of the Defense Department.

The work catapulted Mr. Schmidt into his technology profession. After finishing his graduate studies in pc science, he labored at various tech firms for more than twenty years, together with the networking software maker Novell. In 2001, Google appointed him chief govt.

The search engine firm was then in its infancy. Its 20-something founders, Larry Page and Sergey Brin, were contemporary out of a Stanford University doctorate program and had little business expertise. Mr. Schmidt was hired to assist information them, offering â adult supervision,â which he did â after which some.

Mr. Schmidt took Google public in 2004 and built it right into a behemoth, diversifying into smartphones, cloud computing and self-driving cars. The success turned him right into an enterprise movie star. In 2009, he served as a tech adviser to the Obama administration.

In 2011, with Google price almost $400 billion, the corporate introduced Mr. Page was able to resume the C.E.O. reins. Mr. Schmidt turned govt chairman.

In that function, Mr. Schmidt took on new tasks, many of which introduced him to Washington. In 2012, he participated in categorized briefings on cybersecurity with Pentagon officers as half of the Enduring Security Framework program. In 2015, he attended a seminar on the banks of the Potomac River, hosted by then-Defense Secretary Ash Carter, on the use of know-how inside the government.

â It was all interesting to me,â Mr. Schmidt stated. â I didnâ t really know much about it.â

He additionally traveled to North Korea, Afghanistan and Libya whereas writing a guide about know-how and diplomacy, and dabbled in politics, lending technical assist to Hillary Clinton within the run-up to her 2016 presidential marketing campaign.

His enterprise capital fund, Innovation Endeavors, was lively too. It invested in start-ups like Planet Labs, which operates satellites and sells the imagery to protection and intelligence companies, and Team8, a cybersecurity firm based by former Israeli intelligence members.

At the 2016 World Economic Forum in Davos, Switzerland, Mr. Carter requested Mr. Schmidt to fulfill. He had a proposal: Could Mr. Schmidt lead the Defense Innovation Board, a civilian advisory group tasked with bringing new technology to the Pentagon?

â We were in one of these dumpy hotels, and there he is with his small entourage walking in, and he basically said to me, â This is what I want to do. Youâ d be the perfect person to be chairman,â â Mr. Schmidt said.

Mr. Schmidt said he turned down the function as a result of he was busy and had no military background. But Mr. Carter argued that Mr. Schmidtâ s tech experience was wanted, because the U.S. military â which had as soon as been a middle of innovation â was falling behind companies like Google and Facebook in software and A.I.

Mr. Schmidt finally agreed. (Mr. Carter didnâ t reply to requests for remark.)

As head of the Defense Innovation Board, Mr. Schmidt started touring navy bases, plane carriers and plutonium strongholds. The journeys, which took Mr. Schmidt to about 100 bases in locations like Fayetteville, N.C., and Osan, South Korea, have been a definite break from his well-heeled life in Silicon Valley.

â You want to see these things,â Mr. Schmidt stated. â I received the nuclear missile tour. Things which are exhausting. I received a tour of Cheyenne Mountain so I might perceive what their actuality was.â

One of the primary journeys was to Tampa to go to General Thomas, who is named Tony, the place Mr. Schmidt saw maps and reside video feeds displayed on huge screens. â Ericâ s observation was that a huge part of what the military does is it sits and watches,â stated Josh Marcuse, the then executive director of the Defense Innovation Board who was on the journey.

The visits made tangible what Mr. Carter had told Mr. Schmidt about how the military was lagging in technology. Mr. Schmidt quickly made ideas to vary that.

Some of his concepts have been impractical. Eric Rosenbach, then the chief of workers to Mr. Carter, recalled Mr. Schmidt as soon as telling him that the Pentagon can be higher off if it employed nobody however engineers for a year.

Others have been helpful. At an Air Force facility in Qatar in 2016, Mr. Schmidt visited officers who scheduled flight paths for the tankers that refueled planes. They used a white board and dry-erase markers to set the schedule, taking eight hours to finish the duty.

Mr. Schmidt stated he recalled considering, â Really? This is how you run the air war?â Afterward, he and others on the Defense Department labored with the tech company Pivotal to ship software to the officers.

On one other journey to a navy base in South Korea in 2017, an intelligence analyst complained to Mr. Schmidt that the software program he used to evaluate surveillance movies from North Korea was clunky.

â Let me guess,â Mr. Schmidt said, according to a Defense Department aide who traveled with him. â You donâ t have the flexibility to change that.â

In December 2017, Mr. Schmidt stepped down as Googleâ s chairman however remained on the board. He said he was seeking a brand new chapter.

â If I stayed as chairman, then next year would have been the same as the previous year, and I wanted a change of emphasis,â said Mr. Schmidt. â As chairman of Google, what I did is I ran around and gave speeches, and went to Brussels and all the things that Google still does today. Itâ s much better to work on these new things for me.â

Google declined to comment on Mr. Schmidtâ s departure as chairman.

By then, Mr. Schmidtâ s ties to Google had induced issues in his protection work. In 2016, Roma Laster, a Defense Department worker, filed a complaint on the company elevating considerations about Mr. Schmidt and conflicts of curiosity, Mr. Marcuse stated.

In the complaint, earlier reported by ProPublica, Ms. Laster, who labored with the Defense Innovation Board, said Mr. Schmidt had requested a service member what cloud computing providers their unit used and whether or not they had thought-about options. She stated Mr. Schmidt confronted a battle of interest as a result of he worked for Google, which additionally gives cloud services.

Mr. Marcuse, who now works at Google, said Mr. Schmidt was â scrupulous and diligentâ in avoiding conflicts. Mr. Schmidt said he adopted the principles forbidding conflicts of interest. Ms. Laster didnâ t reply to requests for remark.

Mr. Schmidt quickly received caught up in one other situation between Google and the military. Google had signed a contract in 2017 to assist the Pentagon to construct methods to automatically analyze drone footage to identify particular objects like buildings, vehicles, and people.

Mr. Schmidt was a proponent of the hassle, known as Project Maven. He stated he inspired the Pentagon to pursue it and testified in Congress in regards to the undertakingâ s deserves, however was not concerned within the companyâ s selection of Google.

But the effort blew up in 2018 when Google employees protested and stated they didnâ t need their work to result in deadly strikes. More than 3,000 staff signed a letter to Mr. Pichai, saying the contract would undermine the general publicâ s belief within the firm.

It was a black eye for Mr. Schmidt. Military officers, who stated Project Maven was not getting used for deadly missions, condemned Google for abandoning the contract. Google staff additionally criticized Mr. Schmidtâ s ties to the Pentagon.

â He has very different goals and values than the engineers at his company,â stated Jack Poulson, a Google worker who protested Mr. Schmidtâ s military work and who has since left the company.

Mr. Schmidt said he sidestepped discussions about Project Maven as a result of of conflict-of-interest guidelines, however wished he might have weighed in. â I would have certainly had an opinion,â he stated.

Last April, Mr. Schmidt announced he deliberate to go away Googleâ s board. He had helped create an A.I. middle backed by the Pentagon in 2018 and had additionally turn into co-chair of the National Security Commission on Artificial Intelligence, a brand new group advising Congress on developing A.I. for defense.

A month after leaving Google, Mr. Schmidt invested in Rebellion Defense, a software program start-up based by former Defense Department staff that analyzes video gathered through drone. His enterprise agency later put more cash into the company, and Mr. Schmidt joined its board.

The funding led to extra bother. The Electronic Privacy Information Center, a nonprofit privateness and civil liberties group, sued the A.I. commission last September for failing to show over data. EPIC said the group was stacked with industry executives like Mr. Schmidt and others from Microsoft, Amazon and Oracle, who could potentially sway the government in favor of their companiesâ interests.

Mr. Schmidt was underneath scrutiny as a result of of Rebellion Defense and the way he might push the government to make use of the start-upâ s services, EPIC said.

â We donâ t have any public disclosure about what information Eric has provided to the commission about his business interests,â said John Davisson, a legal professional at EPIC.

In December, a district court dominated the A.I. fee should disclose the data requested by EPIC. The fee has launched a whole lot of pages of paperwork, most of which donâ t contain Mr. Schmidt or his companies. EPIC stated extra data are set to be launched.

Chris Lynch, the chief executive of Rebellion Defense, said Mr. Schmidt suggested the company solely on hiring and growth. Mr. Schmidt said he didnâ t advocate for the Defense Department to purchase technology from the start-up.

He has continued plowing forward. In November, he unveiled a $1 billion dedication by means of Schmidt Futures, the philanthropic agency that he runs along with his spouse, Wendy, to fund education for those who want to work in public service.

HOW DOES THE CORRUPT DEPARTMENT OF ENERGY PAY OFF OBAMA CAMPAIGN FINANCIERS?

By Alex Diaz |

How the Solyndra solar company burned through half a billion taxpayer dollars

It's been exactly ten years since the Solyndra solar power company accepted a loan of half a billion taxpayer dollars that would never be repaid. Now one industry expert says he's not sure any lessons have been learned in the years since.

On March 20, 2009, then-Secretary of Energy Steven Chu announced Solyndra would be the recipient of a $535 million loan from his department under the Obama administration's revamped loan guarantee program. Solyndra used the money, along with hundreds-of-millions more from private investors, to build a new facility where it would be mass-producing its easy-to-install cylindrical solar "panels." The whole thing lasted about two years.

President Obama lifts a solar panel as he tours a Solyndra facility in Fremont, Calif. (Reuters)

The ill-fated energy company had initially asked President George Bush for cash under the loan guarantee program, which was created to help companies working with clean energy technologies that might be considered too risky for private investors.

But it wasn't until President Obama launched his sweeping stimulus spending plan that Solyndra's application was approved, launching the California company to poster-child status despite what were apparently growing concerns about its long-term (and even short-term) viability.

Those concerns were reportedly being relayed to the White House in the run-up to President Obama's highly publicized visit to Solyndra headquarters, which was scheduled just six months before the 2010 midterm elections. Congressional investigators later uncovered information indicating that Solyndra was planning on laying off some of its employees ahead of the midterms, but waited due to pressure from the White House.

By the end of August 2011, little more than a year after hosting a presidential visit, Solyndra had filed for bankruptcy. And the writing was on the wall much earlier.

In Feburary 2011, the Department of Energy had restructured its loan and included terms that guaranteed private investors would be repaid before the government in the event the company went under.

Adding to the anger among Republicans over what was perceived as a politically-charged loan process was the fact that one of the private investors backing Solyndra was a well-known Obama fundraising bundler, George Kaiser.

> "[T]he actions of certain Solyndra officials were, at best, reckless and irresponsible or, at worst, an orchestrated effort to knowingly and intentionally deceive and mislead the Department."
>
> â Inspector General report on Solyndra, 2015

A little more than a week after the company announced it was going bankrupt, the FBI conducted a surprise raid and agents were seen carrying crates upon crates from Solyndra HQ in Fremont, Calif.

A 2015 Inspector General report found that Solyndra had over-inflated the value of some of its contracts, with some clients apparently receiving goods at a discount despite indications they would be paying full price. Some of the clients they had been counting on wound up bailing due to the availability of much cheaper technologies from China.

Either way, the IG report indicates that "the investigative record suggests that the actions of certain Solyndra officials were, at best, reckless and irresponsible or, at worst, an orchestrated effort to knowingly and intentionally deceive and mislead the Department." The IG admits that there were signs the government might have missed some obvious red flags, while critics have argued those red flags were more likely overlooked intentionally.

Sept. 8, 2011: FBI agents stand guard outside of Solyndra headquarters in Fremont, Calif. (AP)

The loan guarantee program that helped Solyndra get off the ground, however briefly, still exists today, and taxpayer dollars are still being shelled out to energy companies of all types. The solar industry itself also doesn't seem to have suffered much, with a recent industry report predicting the number of installed solar projects would more than double by 2021.

Tom Pyle, an energy industry expert who led the Trump presidential transition team on energy, says the program's ongoing existence despite the lessons learned from the Solyndra debacle shows that government has no business backing private energy companies, whether they're solar or not.

Solyndra CEO Brian Harrison. left, and Chief Financial Officer Bill Stover, right, testified to House lawmakers in September 2011. Attorneys Walter Brown is at left, and Jan. Nielsen Little is at right in this photo. (AP Photo/J. Scott Applewhite, File)

"Even though President Trump has submitted very responsible budgets, including eliminating the loan program, Congress continues to fund it... even more generously," Pyle tells Fox News.

And when he considers the prospects of our energy future under proposals like the Green New Deal, Pyle says the lack of knowledge becomes all the more obvious.

"The bottom line is the Green New Dealers want to impose massive government control of our energy resources, and infuse billions of our taxpayer dollars into doubling down on the Solyndras and those projects," Pyle says. "So there aren't lessons being learned here, they're going the opposite way."

The Honorable Steven Chu

Secretary

U.S. Department of Energy

1000 Independence Ave., SW

Washington, DC 20585

VIA FACSIMILE: (202) 586-4403

Dear Secretary Chu:

The Project On Government Oversight (POGO) is an independent nonprofit that investigates and exposes

corruption and other misconduct in order to achieve a more effective, accountable, open, and ethical federal government. As we believe that is your goal for the Department of Energy (DOE) as well, we were shocked to learn that you recently recognized the National Nuclear Security Administration (NNSA) for "Project Management Excellence" for the National Ignition Facility (NIF) project.[1] The criteria for the award is to have "demonstrated 'exceptional' results in completing a project within cost and schedule."[2] The project has done neither; in fact, the NIF project has been derided for years by the GAO, IG, and others as perhaps the worst example of program management.

It is extraordinary that NNSA is currently claiming the NIF construction was completed within budget, because the project is the most egregious rubber baselineâ constantly changing the cost and scheduleâ that we have ever seen. In the early 1990s, the DOE sold the NIF project to Congress with a reported cost estimate of $700 million and an original completion date of 2002. With its 192 laser beams to simulate a thermonuclear burn, the NIF was to be a critical part of certifying that nuclear warheads are safe and reliable. The most recent cost estimate is $5-6 billion with a completion date of 2010â more than 600 percent over budget and at least 8 years behind schedule. In addition, NNSA has recently morphed the NIF's mission into helping to solve the energy crisis.

At best, it is premature to give such an award until the NIF actually achieves its promise of fusion ignition with energy gain. Some scientists are convinced that ignition and energy gain will be easily achieved. Others remain convinced it will never be achieved and that the glass lens will hold not up.[3] With all the changes in target design over the years, it is not possible to sort out who is right until 2010-2011 when we will know for sure. So perhaps 2011, after ignition and energy gain are achieved as long-promised, would be the time to consider giving out any types of NIF management awards. Even then, ignition will have come at a price far higher than promised, and doubts will remain about the long-term survival of the optics without expensive and frequent replacement. In other words, we do not know yet what product was built. Certainly, a lot of tax dollars were spent. And just as certainly, a lot of lab employees worked long and hard, and many sacrifices were made to assemble the NIF as it sits today. But we do not know if the NIF will produce as promised, and will not know until 2010-2011.

It appears the NIF program office has pulled an old trick out of their hat. A decade ago, the NIF program office put together a statement for then-newly confirmed Secretary Bill Richardson, applauding the management of the NIF for keeping the project under budget and ahead of schedule. The Secretary was furious days later when he learned that he had been misled: the NIF construction was far over budget and at least one year behind schedule. It was a "major embarrassment" for the Secretary.[4]

Beyond the obvious management problems associated with an out-of-control budget and construction that is years behind schedule, the NIF has displayed a number of other serious management problems as well. A 2007 GAO report determined that the NIF did not have proper cyber security controls in place, resulting in unauthorized access to its computer systems and potentially releasing sensitive information.[5] An IG report from 2008 determined that the NIF did not have proper safety procedures in place, nearly resulting in a serious accident.[6] Overall, these studies demonstrate a glaring lack of good management in the NIF project.

In order to send a message that you are serious about cleaning up DOE's pathetic record of program management, we suggest you consider rescinding the management award given to the NIF project. This episode should serve as a warning to you that the nuclear weapons complex should not be allowed to run on autopilot. It requires serious oversight.

In addition to the NIF, POGO has a number of concerns with the nuclear weapons program that we would like to discuss with you. We will give your office a call within the next week. If you have any questions before then, please feel free to contact me at (202) 347-1122.

Sincerely,

Danielle Brian

Executive Director

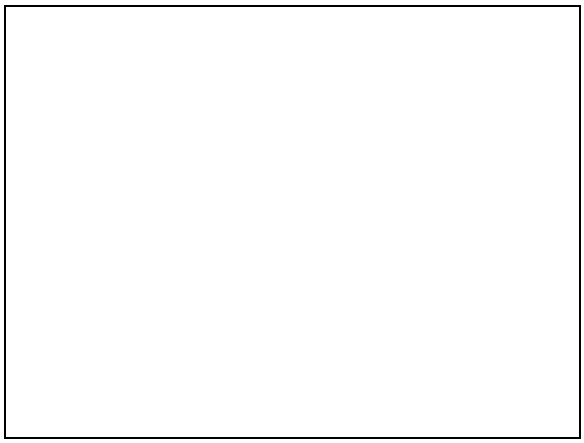
Solar Trust Belly-Up: Yet Another Obama Green Energy Company Goes Bankrupt After Receiving $2.1 Billion Government Loan Guarantees



Solar Trust Belly-Up: Yet Another Obama Green Energy Company Goes Bankrupt After Receiving $2.1 Billion Government Loan Guarantees

Obama Throws Another $2.1 Billion Thrown Down The Toilet!
Yet another one of Obamaâ s pet Green Energy companies (Solar Trust) has gone belly-up, and filed for bankruptcy, less than a year after receiving $2.1 billion in government-backed loan guarantees! In reality, that means that an already failing company was handed $2.1 billion in free money, with no plan or hope by the Obama administration of getting re-paid, other than now having a group of people who owe Obama big time!

When will the American People stand up and say â ENOUGH IS ENOUGH! WE WILL NO LONGER ALLOW THE OBAMA ADMINISTRATION TO WASTE ANY MORE OF OUR HARD-EARNED MONEY ON THESE GREEN ENERGY â ¦

...Continue Reading Solar Trust Belly-Up: Yet Another Obama Green Energy Company Goes Bankrupt After Receiving $2.1 Billion Government Loan Guarantees

Obamaâ s Energy Department Approves Two More Solyndra-Like Loans

Meet the next two Solyndra-like Obama loan scandals that are sure to be in the news in the very new future.

The Obama administrationâ s Energy Department has just approved two more government-backed loan guarantees, worth more than $1 billion, for two more solar energy companies, similar to the loan they gave Solyndra.

- ***Tonopah Solar â $737 million gov loan***
- ***Mesquite Solar â $337 million gov loan***

Soon, we will also be learning about what friends and supporters of Obamaâ s are involved with the companies, and how much the companies have donated to Obama.

> The Energy Department on Wednesday approved two loan guarantees worth more than $1 billion for solar energy projects in Nevada and Arizona, two days before the expiration date of a program that has become a rallying cry

Steven Chu Lost His Job Over The Solyndra Scandal & Department of Energy Corruption

Corruption: The Secretary of Energy takes responsibility for and defends the granting of a half-billion-dollar-loan guarantee to an imploding solar panel maker. But that's not where the campaign donor buck stopped.

In testimony Thursday before the House Energy and Commerce Committee, Steven Chu, caught in a tangled web of administration deceit regarding a $535 million guaranteed loan to Solyndra, tried but failed to continue the administration line that the affair was just a good-faith bet that went bad.

"As the Secretary of Energy, the final decisions on Solyndra were mine, and I made them with the best interest of the taxpayer in mind," Chu claimed in his opening statement. "I want to be clear: Over the course of Solyndra's loan guarantee, I did not make any decision based on political considerations."

If political considerations were not involved, then explain the Oct. 30, 2010, email in which advisers to Solyndra's primary investor, Argonaut Equity, said the Energy Department had strongly urged the company to put off an announcement of looming layoffs until Nov. 3, the day after the midterm elections in which President Obama's failed stimulus was a hot issue.

In point of fact, newly disclosed emails show Democratic fundraiser and Solyndra investor George Kaiser talked directly with White House officials about the now-bankrupt solar company's $535 million loan guarantee from the Department of Energy.

Kaiser, a major Obama bundler and backer who raised $50,000 to $100,000 for the president's election campaign, was one of Solyndra's primary investors. Kaiser himself donated $53,500 to Obama's 2008 election campaign, split between the DSCC and Obama for America.

In a March 5 email, Kaiser wrote to Solyndra board member Steve Mitchell: "BTW, a couple of weeks ago, when Ken and I were visiting with a group of Administration folks in DC who are in charge of the stimulus process (White House, not DOE) and Solyndra came up, every one of them responded simultaneously about their thorough knowledge of the Solyndra story, suggesting it was one of their prime poster children."

"Ken" is Ken Levit, executive director of the Kaiser Family Foundation, who wrote the following in an email to Mitchell on Feb. 27, 2010: "They about had an orgasm in Biden's office when we mentioned Solyndra."

If Chu was keeping the taxpayer in mind, why was the loan restructured so Solyndra's private investors were moved to the front of the line and taxpayers were put on the hook for at least the first $75 million if the company should default? This arrangement, subordinating taxpayers to private investors, is an "apparent violation of the law," according to Rep. Fred Upton, R-Mich., chairman of the House Energy and Commerce Committee.

Chu told the committee that restructuring "improved the chance of recovering taxpayer money by giving the company a fighting chance at success, with a completed plant as collateral." The decision also meant continued employment for the company's approximately 1,100 workers, he said.

Yet when asked how much money taxpayers might get back, Chu said: "Well, that remains to be seen. I'm anticipating not very much." The 1,100 Solyndra workers Chu said he was trying to keep have lost their jobs anyway.

According to Chu, the "Solyndra transaction went through more than two years of rigorous technical, financial and legal due diligence," a statement that ignores the warnings from accounting firm PricewaterhouseCoopers that Solyndra and its business model were not viable.

Due diligence? Emails showed White House officials repeatedly asking the Office of Management and Budget on the loan review's progress. One email from a budget official referred to "the time pressure we are under to sign off on Solyndra" and referred to "a situation of having to do rushed approvals." They were under pressure to approve the loan so Vice President Biden could make the grand photo-op announcement.

"This deal is NOT ready for prime time," one budget analyst wrote in a March 10, 2009, email. Another message â dated Aug. 31, 2009, written by an OMB staffer and sent to Terrell P. McSweeney, Biden's domestic policy adviser â concluded, "We would prefer to have sufficient time to do our due diligence reviews." In fact, they were not done prior to President Obama's visit to the beleaguered firm.

There was no due diligence done in the awarding of taxpayer dollars to a firm everybody knew had an unsustainable business model in an industry largely kept afloat by taxpayer subsidies. Political considerations and donor cash had everything to do with the loan.

HOW LOCAL GREEN ENERGY UTILITY OPTIONS ARE ACTUALLY JUST SCAMS

Posted by: Jim Phelps -

Ten years ago I started tracking operations and management of Marin Clean Energy (MCE). At the time it was a wet-behind-the-ears wannabe agency with lofty goals about which its leaders understood little. MCE's leaders depended on consultants, who waited in the wings for the agency to launch so that those consultants could collect sizable fees for helping to run the agency.

Today, MCE has come to represent government's least desired attributes -- it is not transparent and lacks integrity. The clean energy agency sells dirty power to consumers that it rebrands as "clean," while adding more than 1.1 *billion* pounds of greenhouse gas (GHG) to the atmosphere, since inception, that has not been disclosed by MCE to its customers.

Nor are MCE's shortcomings disclosed by CCA salespeople to communities thinking about joining or forming CCA. Salespeople cite MCE as a "clean energy" success while neglecting to disclose that all municipalities face very real financial risks that are not covered by the so-called financial firewall.

I have been corresponding with MCE's board and management since the beginning, and questioning their practices. But, MCE's denials and spin have left me wondering about the future of California's clean air, and about Governor Brown's proclamations that California is leading the world in clean air policy and initiatives.

While that claim may be true, Community Choice Aggregators (CCAs), such as MCE, are working just as hard to undermine the Governor's vision. Unfortunately, CCAs will soon dominate power generation procurements for California's retail electricity market.

MCE continues to operate in a world of its own creation where shell games control. MCE is the modern day version of an energy Ponzi Scheme, where consumers believe they are getting value while MCE continues selling dirty power that is loaded with GHGs.

I honestly do not believe that MCE will improve its lack of integrity. Its staff protects its salaries, and MCE's board does not understand the electricity industry -- there is so much more going on than battery storage or citing a local solar farm's commercial operation. These feel-good issues identify the limits of the MCE's board's thinking capacity about the electricity market.

The letter below is published for the record so that readers may glimpse how MCE recasts the truth. This parallels what the former lead of California's Solar Industry trade group said years ago... "The problem with MCE isn't that it doesn't tell the truth -- the problem is that it doesn't tell the whole truth."

April 10, 2018

Dawn Weisz

Marin Clean Energy

1125 Tamalpais Ave.

San Rafael, CA 94901

Subject: The Omitted Part of the Truth

Dear Ms. Weisz:

This letter is in response to your attached email, dated April 4, 2018, from your executive assistant, Darlene Jackson. I restate that I am sorry you have chosen to respond as you have. I have not fabricated anything â the data and source documents stand on their own. With respect to this, I am including omitted details under your (Darlene Jackson) emailâ s bullet items:

MCEâ s bullet 1:

Your false accusation: Your email from Mary Nichols was not a definitive statement on any fact or analysis, but simply an off-handed remark that she was not aware of whether or not your accusation had any basis. Mary Nichols has spoken to MCE directly multiple times

expressing regret that you are using her email out of context in a way she did not intend. Truth: MCE has always been in**good standing** with CARB, and you have distorted her words into your own meaning (emphasis added).

Omitted details â

MCEâ s â out of contextâ reference to California Air Resources Board (CARB) Chair Mary Nichols is baseless. It is understandable that, for public relations and customer enrollment purposes, MCE has worked to subvert that email, which includes "[MCEâ s activities] may be consumer fraud but thatâ s not my jurisdiction." After receiving Ms. Nicholsâ December 10, 2013 email, steps were taken to address the possibility that MCE would attempt to invalidate and undermine it; the attached recordidentifies that Ms. Nichols revisited the contents of her email and, after I requested guidance, directed me to cite it. The plain language in the record does not support MCEâ s â out of contextâ contention.

While MCE claims to be in good standing with CARB, CalCCA, the trade association which is located in MCEâ s headquarters, and of which you are Secretary, is now lobbying the California Energy Commission to allow MCEâ s (and other Community Choice Aggregators (CCAs)) continued practice of adjusting / manipulating greenhouse gas (GHG) emissions calculations through the application of unbundled RECs. [1]

This misleads consumers who do not understand that much of MCEâ s â cleanâ energy deliveries are actually fossil-fired power; this was previously identified in my audit and by default, your after-the-fact â true upâ rationalization.

Unbundled RECs have no compliance value under CARBâ s *Mandatory GHG Reporting Regulation (MRR)*. Given that the lobbying efforts of MCE through CalCCA are directly opposed to CARB regulations, what constitutes â good standingâ ? Did MCE convey its pro-unbundled RECs activities with Ms. Nichols during your conversations with her?

MCEâ s bullet 2:

Your false accusation: MCE is not â addicted to unbundled RECsâ . Truth: MCEâ s (sic) caps purchases of unbundled RECs at **0-3%**annually (red bold added).

Omitted details --

MCEâ s annual Power Source Disclosure, which is submitted to the California Energy Commission (CEC), shows that unbundled RECs (highlighted in yellow on Schedule 1) comprise the bulk of MCEâ s â cleanâ energy, as also shown in the percentages below, when compared to the balance of MCEâ s other eligible renewable energy sources. What does this mean to a typical reader? By looking at MCEâ s total â cleanâ energy megawatt-hours that are represented by RECs and dividing this by a typical homeâ s annual energy use, we uncover the following â Equates toâ factors:

% RECs / Equates to:

*2010: **14% /** 550 homes received fossil-fired power that was sold as â cleanâ for entire year.

2011: **48% /** 3,852 homes received fossil-fired power that was sold as â cleanâ for entire year.

2012: **144% /** 31,923 homes received fossil-fired power that was sold as â cleanâ for entire year.

2013: **152% /** 54,245 homes received fossil-fired power that was sold as â cleanâ for entire year.

2014: **114% / 60,142 homes received fossil-fired power that was sold as â cleanâ for entire year.

2015: **40% /** 40,269 homes received fossil-fired power that was sold as â cleanâ for entire year.

2016: **xx** (MCE data recently became available; currently under review).

** 2010 data not available at CEC. 2010 data from Marin Energy Authority Technical Committee, dated 10/24/11.*

*** In 2014 MCEâ s REC usage peaked, reflecting the equivalent of 60,142 homes receiving dirty power that was sold as â clean.â MCEâ s total energy load outpaced its use of RECs, thus the smaller reflected percentage of RECs compared to 2013.*

The data MCE submitted to CEC does not support MCEâ s claims that it caps its use of unbundled RECs at 0-3% annually. MCEâ s use of RECs is as much as 50x what MCE claims (2013 at 152%).

If MCE asserts that its use of unbundled RECs is essentially non-existent, why does MCE lobby the California Energy Commission for continued use of unbundled RECs in GHG emission accounting?[1]

MCEâ s bullet 3:

Your false accusation: MCE was not the trigger behind AB1110 and implementation of this bill is still not complete. Your references to AB1110 (which is still being developed for future implementation at the California Energy Commission) show a lack of knowledge of the process, timing and legal environment we are currently working within. Truth: MCE has always followed California rules and requirements, and adhered to best practices in energy accounting. The greenhouse gas accounting principles MCE follows aligns with The Climate Registry, The Center for Resource Solutions, and the EPA.

Omitted details --

MCEâ s record of employing RECs is self-evident. With respect to its high use of unbundled RECs, the text of AB 1110, California Legislatureâ s anti-REC, consumer transparency legislation includes the following:

This bill would require a retail supplier, including an electrical corporation, local publicly owned electric utility, electric service provider, and community choice aggregator to also disclose the emissions of

greenhouse gases associated with its electricity sources. The bill would prohibit an adjustment in the calculation of emissions of greenhouse gases through the application of renewable energy credits [RECs], carbon offset credits,â ¦â (emphasis added)

Regarding your text about knowledge of AB 1110 implementation, MCE receives electronic files from the CEC of all comments submitted during the current rule making (implementation) phase. My submittals dated 2/17/2018, 8/17/2017, and 4/28/2017 are part of that process. All participants are well aware of AB 1110â s rule making process, timing, and legal environment.

In support of its GHG emission accounting practices -- green-washing fossil-fired system power with RECs and rebranding it â cleanâ -- MCE cites The Climate Registry and The Center for Resource Solutions. Both organizations are lobbying the California Energy Commissionâ s AB 1110 rule making process for the continued use of unbundled RECs. This results in consumers being misled about delivered clean energy and obscuring transparency, both of which AB 1110 seeks to resolve. [2, 3]

Why does MCE exclude CARB from the list of agencies that it claims support its GHG emission accounting practices when, according to MCEâ s bullet 1, MCE is in good standing with CARB?

MCEâ s bullet 4:

Your false accusation: You have accused MCE of â greedâ . Truth: MCE is a not-for profit agency with a long list of public benefits (see attached). Financial reserves of the agency are in place to protect against market volatility, provide for rate stabilization, and to bolster MCEâ s credit standing in line with best practices by municipal utilities and other load-serving entities. MCE pays staff standard public sector compensation levels and does not pay any bonuses or stock shares to staff. Many equivalent jobs in the private sector pay much higher salaries (including executive salaries which are typically in the millions) and frequently supplement salaries with added bonuses and stock options. These discrepancies can sometimes create challenges in attracting staff to the public sector, but tend to result in a public sector staff base that is very â valuesâ driven.

Omitted details â

PG&E, SMUD, Southern California Edison, LADWP, and SDG&E also provide public benefits programs, which are predominantly driven by State and Federal policy, and paid for by taxpayers and ratepayers.

Citing these programs does not deflect attention from MCEâ s broken commitment of paying its ratepayersâ PG&E exit fees. The $118 million that MCE plans to bank belongs to MCE ratepayers in the form of your commitment to pay all MCE customersâ exit fees levied by PG&E; MCE essentially strips this money from hardworking ratepayers who believed your commitment.

MCE banks $118 million while also using CalCCA to lobby for the continued practice of delivering inexpensive â cleanâ energy that is only paper certificates (RECs) + fossil power.[1] CalCCA concurrently lobbies for RECs in place of Community Choice Aggregatorsâ (CCAsâ) responsibility to construct net-new commercial-size renewable generating facilities in California. This green-washing stalls needed renewable energy development from Eureka to San Diego.

Finally, to deflect attention from your proposed $332,000 salary, you refer to private-sector publicly traded energy businesses that are many thousands of times larger than MCE on a market capitalized basis. However, MCE is a *public agency*.

Further, your comparison is non sequitur considering that CPUC, CEC, and CARB face the same private-sector employment competition as MCE. Your newly proposed salary is approximately 2x what is paid to leaders of these government energy agencies.[4,5] This, after your comparatively short tenure at MCE, which sells fossil-based â cleanâ energy.

With respect to transparency and blind copies, this letter will be posted on The Marin Post. If you choose to continue responding in a back-and-forth manner, please post your comments on The Marin Post so that the entire community may read them.

Very truly yours,

Jim Phelps

Calls for Resignation...

HOW QUID PRO QUO WORKS AT THE U.S. DEPARTMENT OF ENERGY

How do you give payola, funded by working class taxpayers, to millionaires that don't need it, to pay kick-backs for funding Obama's political marketing?

Easy: You use the **U.S. Department of Energy** as the world's biggest political slush-fund. This way, you get to pay bribes IN PLAIN SIGHT!

The Department of Energy bosses get to claim everything is on the "up and up" but EVERY SINGLE TIME, only the political campaign financiers get the money and their competitors get sabotaged. Neat trick, right?

Here is how it works:

Quid pro quo ("something for something" in Latin[2]) is a Latin phrase used in English to mean an exchange of goods or services, in which one transfer is contingent upon the other; "a favor for a favor". Phrases with similar meanings include: "give and take", "tit for tat", "you scratch my back, and I'll scratch yours", and "one hand washes the other". Other languages use other phrases for the same purpose.

Corruption in politics at the Department of Energy arises from the mismatch on Capitol Hill: squadrons of well-paid, experienced lobbyists versus DOE offices where aides are overworked, underpaid and have to depend on those lobbyists for information about issues. We want to see DOE offices with more aides, supervised by FBI agents, who would get better pay, to keep them on the Hill longer while they develop their own expertise. We would also close the metaphorical revolving door, through which staffers and lawmakers travel to make more money as lobbyists.

The need for campaign finance reform has always been an urgent one. The quid pro quo of shadow money and special interest campaign financing is at the root of corruption in this country, particularly at the Department of Energy. When government uses millions of taxpayer dollars to rent a bond hastily acquired and for no clear purpose from a â party financierâ , that is the spectre of campaign finance related corruption showing itself. When construction companies that finance political campaigns to the tune of millions are being awarded public work contracts worth billions under questionable public tendering rules, that is campaign finance related corruption. When a branding company that provided â freeâ billboards to a political campaign is given the lionâ s share of billboard and branding contracts under a new government, we see the spectre of corruption. And then of course there is the issue of abuse of state resources for campaigning, something we seem to have come full Animal Farm on.

Elon Musk, Solyndra, Fisker, Abound and over a hundred other wire transfers from the Department of Energy were quid-pro-quo payoffs to Obama financiers. The layers of the deals were complex but the money always ended up in the same few pockets.

The Department of Energy has a massive fake due diligence program which spends a hundred times more time and money than any bank undertakes to provide funds. All of that due diligence is a fraud. It is a smoke-screen to provide the appearance of "proper review" when, in each and every case, the funds were covertly already arranged in a back room deal.

All of those people that work on those due diligence efforts must feel like fools. Their work is pointless because the deals were already done in smoke-filled back rooms at Perkins Coie, Wilson Sonsini and Covington Burling lobbyist buildings. All of the Department of Energy staff own the stock of the company that "wins" the government cash and most of them leave the Department of Energy, right after the money is transferred, and go to work at that company or it's suppliers.

It is an EPIC crime!

Now, the need for reform is even more urgent, particularly considering the complexity of how capital moves in an oil and gas economy and the impact of that capital on political decision-making. (ie: "...One emerging party, for example, has been against renegotiation of the oil contract with Exxon, arguing that we should accept it and guard against exploitative arrangements with future contracts. When the Department of Energy recently revealed that it had recently hired a US firm to do what should have been done years ago, revise the decades-old Petroleum (Exploration and Production) Act, it was casually revealed that the local firm the US company had partnered with is owned by the Presidential Candidate of the very new party that has â along with the PPP and APNU+AFC â refused to consider contract renegotiation, even in the wake of the damning Global Witness report....")

By breaking the close bonds between lobbyists and congressional offices, lawmakers might become less beholden to the lobbyists' employers â the corporations, unions and special interests that underwrite American politics.

As value is in the eye of the beholder, the something being exchanged for another something may not be equal in value, instead skewed based on oneâ s perspective.

Democrats and their media masters are salivating over now having what they believe is a smoking gun to take down President Trump. Notwithstanding that this must be their hundredth smoking gun, and that each previous one misfired, they are hot on impeachment over this Latin term â quid pro quo.â

The Washington Post, happy to let democracy die in darkness while they endeavor to overturn the last presidential election, is giddy over quid pro quo.

In politics, quid pro quo is standard operating procedure. Take campaign contributions, for example. I contribute to Senator X because I want Senator X to support legislation favorable to my business interests. My money, something of value, will be exchanged for a tax break or new regulation, which is usually of greater value to me, as a quid pro quo, and perfectly legal and acceptable.

A bundler for a presidential candidate raises millions of dollars for said candidate. If that candidate wins the presidency, the bundler may have a choice of any number of ambassadorships around the world. The value of the campaign cash is exchanged for a four-year stint living in the American embassy in London or Paris, attending parties and banquets. Something for something.

Members of Congress do the quid pro quo thing amongst themselves all the time. Iâ ll vote for your bill to build a military facility in your district if you support my bill creating an NSA data center in my district. In Congress itâ s called "horse trading."

What about economic sanctions? The Council on Foreign Relations, also knows as Club Deep State, explains how economic sanctions work.

> Governments and multinational bodies impose economic sanctions to try to alter the strategic decisions of state and nonstate actors that threaten their interests or violate international norms of behavior.
>
> Economic sanctions are defined as the withdrawal of customary trade and financial relations for foreign- and security-policy purposes.
>
> Sanctions take a variety of forms, including travel bans, asset freezes, arms embargoes, capital restraints, foreign aid reductions, and trade restrictions.

Quid pro quo, something for something. If you want American money in terms of trade or aide, you had better behave, meaning do as we tell you to do in your political and economic decisions.

Here are a few examples of quid pro quo economic sanctions.

Economic sanctions were put in place against Cuba in 1958. Similar sanctions have been in place against North Korea since the Korean War. Economic sanctions have been in effect against Venezuela since 2015 and Sudan since 1997. These are quid pro quo moves -- behave, give up your nukes, provide human rights, or we will punish you economically. Something for something.

Several of the ladies of the Squad hinted at cutting off aid to Israel after one of the gals was denied entry to Israel last summer. Presidential candidate Bernie Sanders threatened, â Israel would have to â fundamentally changeâ its relationship to Gaza to receive aid if he is elected.â Something for something, quid pro quo.

Three Democratic senators wrote a letter to Ukraineâ s prosecutor general,

> Expressing concern at the closing of four investigations they said were critical to the Mueller probe. In the letter, they implied that their support for U.S. assistance to Ukraine was at stake.

They wanted something for something, quid pro quo.

Then Vice-President Joe Biden, in a now well-known interview, acknowledged, â I looked at them and said: Iâ m leaving in six hours. If the prosecutor is not fired, youâ re not getting the money. Well, son of a b-tch. He got fired.â Quid pro quo, something for something.

So, what did Trump do? He asked the Ukrainian President to investigate corruption, specifically foreign interference in a U.S. election. Biden was an afterthought in the conversation, but his pay to play corruption is fair game, whether or not he is running for president. Until he secures the Democratic party nomination, he is not Trumpâ s political opponent. What if Bernie or Pocahontas win the nomination?

Trump has a constitutional duty as president to investigate corruption. The U.S. and Ukraine share a treaty ratified in 1999 for â Mutual assistance in criminal matters.â

There is also â The United Nations Convention against Corruptionâ of 2003, signed by both Ukraine and the U.S. And then finally is President Trumpâ s Executive Order signed in December 2017, â Blocking the property of persons involved in serious human rights abuse or corruption.â Note that last word.

Trump is doing his job as president, yet the Democrats and media howl in outrage over a supposed quid pro quo. But something for something is standard operating procedure in Washington, D.C., even to the point of corruption as Joe Biden illustrated in Ukraine, China, and possibly Romania.

The psychologists call this Democratic caterwauling â projection,â accusing others of doing what you are guilty of. Trying to impeach President Trump over a quid pro quo would be like impeaching him because he didnâ t keep a campaign promise, something every elected official, past and present, is guilty of.

Since its ruling in Buckley v. Valeo, the U.S. Supreme Court has expressed concern regarding corruption or the appearance of corruption stemming from political quid pro quo arrangements and the deleterious consequences it may have on citizensâ democratic behavior. However, no standard has been set as to what constitutes â the appearance of corruption,â as the Court was and continues to be vague in its definition. As a result, campaign finance cases after Buckley have relied on public opinion polls as evidence of perceptions of corruption, and these polls indicate that the public generally perceives high levels of corruption in government. The present study investigates the actual impact that perceptions of corruption have on individualsâ levels of political participation. Adapting the standard socioeconomic status model developed most fully by Verba and Nie (1972), an extended beta-binomial regression estimated using maximum likelihood is performed, utilizing unique data from the 2009 University of Texasâ Money and Politics survey. The results of this study indicate that individuals who perceive higher levels of quid pro quo corruption participate more in politics, on average, than those who perceive lower levels of corruption.

Quid pro quo is not a difficult concept to understand. Too bad the media doesnâ t endeavor to investigate and explain it. Your politicians don't work for you, they work for their own insider trading stock market holdings for themselves!

HOW THE U.S. DEPARTMENT OF ENERGY RUNS A CRIMINAL SLUSH-FUND AND INNOVATION BLOCKADE THAT ONLY EXISTS TO BENEFIT CORRUPT POLITICAL CAMPAIGN FINANCIERS

HOW THE U.S. DEPARTMENT OF ENERGY WORKS

Thereâ s a common misconception in the public that there are briefcases full of cash changing hands in Washington, DC, and votes of Members of Congress are for sale to the highest cash bidder. Make no mistake, the votes are still for sale, but the direct cash payments are (mostly) gone. While bags of bills may have been how it worked in the past, thatâ s not how corruption happens anymore. A lot of money still changes hands and people are getting rich, but itâ s now done through "conduit intermediaries".

Hunter Biden knew as much about Ukraine and the oil and natural gas business as he did about not smoking crack, so of course him getting a position with a Ukrainian gas and oil company for $50,000 per month was a pay-off to his dad. Every parent wants their kids to do well, few are in a position to actually make that happen. Or, in the case of the former vice president, in charge of a US administrationâ s policy for a country most people couldnâ t find on a map.

But Bidenâ s shady dealings are not unique to him, or to Democrats. Itâ s political grift by proxy. You canâ t pay off a politician anymore because there are digital fingerprints everywhere, so they find other covert ways to achieve the same outcome.

Children and spouses of politicians are raking in cash from campaigns and corporations seeking to buy influence. California's Bay Area Senators excel at such graft. Remember: these are the people who write the rules and they only write the rules for themselves, not you!

Board seats, real estate, revolving door jobs and sweetheart â consultingâ , "speaking" and lobbying contracts are the new bags of cash. Department of Energy free loans are the ultimate political payola to campaign financiers. Want a chairman of a specific committee to look favorably on your bids for government contracts? Put someone close to them in a position to benefit from it. Want protections from regulators or to use regulators to harm your competitors or guard against foreign competition? Make the livelihood of someone who matters to the people in power dependent upon getting your way. Watch the seas part.

Campaigns are not the cash cows corporations are, no one is raking in more than the average American familyâ s annual income every month from them like Hunter Biden was from Burisma. But for the closest to direct payoffs you can get, look no further than campaign cash.

Politicians beg for money every single day. If you have the misfortune to end up on a campaignâ s email list, you find yourself getting emails begging for money from big name politicians and people youâ ve never heard of.

They all breathlessly try to spin the reader up about how important it is you give, even just a couple of dollars, to them to keep or get them in office. You likely laugh at them, theyâ re absurd to normal people. But they must work on someone because they keep sending them and the money flows.

Much of that money goes to politicians who have a better shot of waking up naked on the moon than they do losing their reelection bids. After they contract with the necessary power-brokers and kick â walking around moneyâ to the required people, a good chunk of that cash ends up in the pockets of their family members.

Hereâ s just one example: Maxine Waters won reelection in 2018 with 78 percent of the vote even though she doesnâ t live in her district. Her job is so safe that she could hold a press conference the week before the vote and call her constituents morons while whipping puppies into a wood-chipper and sheâ d still win in a walk. But she still raises a fortune for her campaign.

Being Chair of the House Financial Services Committee has its perks, people with a lot of money want to suck up to Waters so they can make even more.

To remain in the good graces of Waters or any Member of Congress you gotta cut a check, whether their campaign needs the money or not. In the case of Waters, she hired her daughter to handle campaign mailing to voters. Why mail voters who are going to reelect you no matter what when mailing constituents is budgeted for in every congressional office? Because your campaign can pay family a ton of money to do it.

The news reports Karen Waters, Maxineâ s daughter, was paid hundreds of thousands of dollars to send out mailers for her motherâ s campaign. Those campaign contributions donâ t go directly into the pockets of the

politicians, theyâ re laundered through the campaigns to family members, sometimes spouses. Waters is not alone, not by a long shot.

Right out in the open, there are payoffs, kickbacks, and graft happening every day. Hunter Biden is in the spotlight right now, and with good reason, but heâ s just the tip of the iceberg. Itâ s all corrupt as hell, and no one is saying a damn thing about it.

HOW THE U.S. DEPARTMENT OF ENERGY RUNS A CRIMINAL SLUSH-FUND AND INNOVATION BLOCKADE THAT ONLY EXISTS TO BENEFIT CORRUPT POLITICAL CAMPAIGN FINANCIERS

Hard science study reveals the Great Pyramid of Giza can focus electromagnetic energy like in that movie: STARGATE

by Anastasia Komarova, ITMO University

. Propagation of electromagnetic waves inside the pyramids of Cheops at different lengths of radio waves (from 200 to 400 meters). The black rectangular position of the so-called King's Chamber. Credit: ITMO University, Laser Zentrum Hannover

An international research group has applied methods of theoretical physics to investigate the electromagnetic response of the Great Pyramid to radio waves. Scientists predicted that under resonance conditions, the pyramid can concentrate electromagnetic energy in its internal chambers and under the base. The research group plans to use these theoretical results to design nanoparticles capable of reproducing similar effects in the optical range. Such nanoparticles may be used, for example, to develop sensors and highly efficient solar cells. The study was published in the *Journal of Applied Physics*.

While Egyptian pyramids are surrounded by many myths and legends, researchers have little scientifically reliable information about their physical properties. Physicists recently took an interest in how the Great Pyramid would interact with electromagnetic waves of a resonant length. Calculations showed that in the resonant state, the pyramid can concentrate electromagnetic energy in the its internal chambers as well as under its base, where the third unfinished chamber is located.

These conclusions were derived on the basis of numerical modeling and analytical methods of physics. The researchers first estimated that resonances in the pyramid can be induced by radio waves with a length ranging from 200 to 600 meters. Then they made a model of the electromagnetic response of the pyramid and calculated the extinction cross section. This value helps to estimate which part of the incident wave energy can be scattered or absorbed by the pyramid under resonant conditions. Finally, for the same conditions, the scientists obtained the electromagnetic field distribution inside the pyramid.

In order to explain the results, the scientists conducted a multipole analysis. This method is widely used in physics to study the interaction between a complex object and electromagnetic field. The object scattering the field is replaced by a set of simpler sources of radiation: multipoles. The collection of multipole radiation coincides with the field scattering by an entire object. Therefore, knowing the type of each multipole, it is possible to predict and explain the distribution and configuration of the scattered fields in the whole system.

The Great Pyramid attracted the researchers while they were studying the interaction between light and dielectric nanoparticles. The scattering of light by nanoparticles depends on their size, shape and refractive index of the source material. Varying these parameters, it is possible to determine the resonance scattering regimes and use them to develop devices for controlling light at the nanoscale.

"Egyptian pyramids have always attracted great attention. We as scientists were interested in them as well, so we decided to look at the Great Pyramid as a particle dissipating radio waves resonantly. Due to the lack of information about the physical properties of the pyramid, we had to use some assumptions. For example, we assumed that there are no unknown cavities inside, and the building material with the properties of an ordinary limestone is evenly distributed in and out of the pyramid. With these assumptions made, we obtained interesting results that can find important practical applications," says Dr. Sc. Andrey Evlyukhin, scientific supervisor and coordinator of the research.

Now, the scientists plan to use the results to reproduce similar effects at the nanoscale. "Choosing a material with suitable electromagnetic properties, we can obtain pyramidal nanoparticles with a promise for practical application in nanosensors and effective solar cells," says Polina Kapitainova, Ph.D., a member of the Faculty of Physics and Technology of ITMO University.

Have John Doerr and Kleiner Perkins Invested Too Much In Cleantech as Part of Their Plan To Rig The Obama White House?

Tim Worstall , CONTRIBUTOR Opinions expressed by Forbes Contributors are their own.

There's an interesting story here at Reuters about the investments, led by John Doerr, that Kleiner Perkins has been making in various cleantech companies. The not so subtle underthread is that they've made a strategic error by investing in the sector rather than in the booming internet business. Given that I work and invest in cleantech I obviously can't say that Doerr and Kleiner are wrong to look at the sector. However, I think I would argue that they'v invested too much.

> The market changes have left Kleiner, the most active venture capital firm in cleantech, with dozens of investments that may never pay off, threatening its image as the gold standard of venture capital.
>
> Doerr, 61, remains bullish on cleantech and in an email to Reuters called Miasole a well-run company that "was caught in a perfect storm." He did not respond to questions about his personal investment.
>
> "Certainly the cleantech sector has challenges, but it would be a mistake to underestimate the size of the opportunity," Doerr said in the email, adding revenues in Kleiner's cleantech portfolio rose 70 percent over 2011, to $2.4 billion in 2012.

I wouldn't argue about the sector itself either: there really are great fortunes to be made out of changing the way the world powers itself. Rather, I'd argue that they've invested too much money in specific companies. For I've had dealings with one of the companies they funded. And the experience was, well, not terrible, but not good.

OK, yes, obviously, it would be possible to call everything I'm about to say sour grapes. They didn't employ me, take me seriously, I'm just being a grump and slagging them off as a result. So I'll not actually name the company.

And the basic idea of what the company is trying to do sounds just absolutely great. I can't tell you what that is because it will immediately identify the company. But take my word for it: the basic idea is entirely peachy and dandy. It may or may not work of course but the basic theory is entirely plausible. Even an obvious method of dealing with energy production.

As one input into their manufacturing process they need a specific material. That material being on in which I am the global expert. Yes, that's right, I'm being extremly bumptious here. *The* expert, not just an, one of many, but the guy who knows more than anyone else about it. It's purely happenstance that I do but someone does have to be said expert in anything and in this particular flavour of our universe I am the expert for this. I know who makes it, from what, in which quantities, who they sell to, where you might look for new supplies, which minerals contain it, where they can be found, how you would process them, what it would all cost.....the expert. Further, I've been in this market for decades.

Beyond the 401(k): 4 Smart Ways To Save

So, knowledgeable guy, that's me. And this company really does need this material: it's the secret sauce that makes their machines work. Over the years I've tried to make contact with the company. You use this stuff, I know where to get it so that you can use it sort of thing. And it's at that point that I begin to think they've got too much money for a start up company. They've just got too much money to burn.

For usually with a start up you can find out and get in touch with the right person pretty quickly. "Oh, yeah, it's Jim or Bob who deals with that, let me put you through." It's very unusual to find a whole department, with a heirarchy, handling something as simple as raw materials procurement. It's unusual to find that even in a large company these days, given the effort everyone's been making at flattening the management structure. But that's what I did find. And several attempts to get through never did lead to a contact back.

Then I did get a contact from the company. From an external consultant who seemed to have no real knowledge of the field. Entirely unconnected with my previous approaches. And instead of wanting to talk about where they might get their necessary materials, they were offering some research work. Into an area that neither I nor they had much idea about and even then not something that they really needed to know. Yes, I know this reads like a whinge: but I am trying to get across the point that they just haven't been acting like the lean and hungry start up one might hope they would be.

For even when I pointed out that I had at my fingertips the answers to the real questions they needed answers to, I once again got radio silence.

I've continued to watch what they're doing and to my amazement they've signed up with one particular potential supplier. The one potential supplier out there that has very little chance indeed of ever being able to make a go of producing the material they want. The one supplier that no one in the industry would point them to. Indeed, would generally advise people to avoid. Again, I can't give the technical reasons why, for this would reveal who it is again. But the essential point is that if this mooted production method can actually be made to work then there are three extant plants that you could bolt it onto: instead of building an entirely new, from scratch, plant as is being suggested.

Agreed this is only personal experience, anecdata if you like. And I'm sure you can construct an argument that this is just me angry at not being listened to: or paid perhaps. But my takeaway impression of this company is simply that they've got too much money. Too much to be cute and quick as a start up needs to be.

And that's why I think that Doerr and Kleiner have invested too much in cleantech. Not that the total amount of money is too large, nor that the sector isn't worth investing in. Rather, that they've put too much into this one company I know about. So much that it just isn't acting like the nimble and new company it needs to be to succeed.

Yes, it's an entirely personal view: but that's still what the view is. At least one of their investments just seems to have too much capital.

How Deep is the Clean Line Corruption at the U.S. Department of Energy?

Get out your hip-waders, folks, it's going to get pretty deep!

According to this article, in 2011 former Secretary of Energy Steven Chu appointed Lauren Azar to a position at the DOE in order to carry out the administration's political agenda.

> Chu's selection of Azar was largely seen as a sign of the Obama administration's intense interest in expanding the grid to support renewables and tackle climate change, sources said.

Azar got the finger pointed at her as the impetus for a controversial memo that urged federal power marketing agencies (PMAs) to use their authority to help get privately funded transmission projects built.

> As laid out in the memo, she also championed Texas-based Clean Line Energy's application to partner with DOE through its never-before-used authority under Section 1222 of the Energy Policy Act, which would allow a PMA with federal authority to site the line and overcome state opposition.

It's not about reliability or economics of the grid, it's about federal support for certain companies with personal ties to the DOE:

> Jimmy Glotfelty, founder of Clean Line Energy Partners and a former senior electricity adviser for President George W. Bush, said Azar should be remembered for trying to build infrastructure and integrate renewables in a thoughtful and cooperative manner.
>
> "The customers of PMAs are pretty protective, and if you ask a lot of people who have been in her shoes -- including myself -- it's not uncommon to get into debates with customers of PMAs," he said. "They're tough negotiators."

Clean Line, with its DOE-connected "vice president," became the only transmission company to take advantage of Sec. 1222 of the Energy Policy Act of 2005 during a very convenient RFP process run by the DOE in 2010. But the pre-Azar DOE just wasn't aggressive enough:

> Azar brought that same spirit to DOE. She helped bring together the "federal family" in 2011 -- nine agencies key to streamlining federal permitting of major new power lines that could have taken up to 15 years to garner approval (Greenwire, Oct. 5, 2011). DOE already had existing authority to do so under 216(h) of the Energy Policy Act of 2005, language that allows the agency to coordinate federal and environmental reviews.
>
> "DOE, until I got there, implemented [the rule] in somewhat of a tepid manner," she said. "I came in like gangbusters as I always do and not only helped to lead the rapid respond team for transmission but helped DOE draft some rules for 216(h), negotiate with the nine agencies."

Shortly after Azar was appointed, Clean Line submitted an "updated" application under Sec. 1222 in order to use the federal power marketing agencies to take land for its private gain and override state denials.

The Honorable Lauren Azar
Senior Advisor to the Secretary
U.S. Department of Energy
1000 Independence Avenue SW
Washington, D.C. 20585

August 17, 2011

Dear Lauren,

With development efforts well under way, the Plains & Eastern Clean Line is positioned to help meet President Obama's call for 80% clean energy by 2035. The Plains & Eastern Clean Line will provide affordable, renewable power to millions of customers in the southeastern United States. Regulatory and permitting approvals at the state and federal levels are the critical path items. Since submitting a proposal in July 2010, the Plains & Eastern Clean Line has made substantial development progress, strengthening the case for a partnership with the Department of Energy (DOE) and Southwestern under Section 1222 of the Energy Policy Act of 2005.

The attached document provides an update on our efforts, including the widespread support the project has received from a diverse group of stakeholders. It also supplements the original application with respect to how the project is necessary to accommodate the increase in demand for transmission capacity and how the project is consistent with needs identified in transmission plans or otherwise by the appropriate transmission organization.
Projects like the Plains & Eastern Clean Line have the potential to return the United States to a global leadership position in clean energy. **The private sector has the resources and the desire to invest in our aging infrastructure and we respectfully ask that the DOE exercise its authority to make it possible**. **We appreciate the attention you are giving the Plains & Eastern Clean Line.** We will be in Washington, DC regularly in the coming months and would like the opportunity to sit down with you and your team to review the project materials and respond to any questions.

Magically, the DOE entered into an Advance Funding and Development Agreement with Clean Line in early 2012, despite the fact that Clean Line did NOT meet all the statutory criteria in Sec. 1222. Sec. 1222 requires that a project:

2) is consistent with--
(A) transmission needs identified, in a transmission expansion plan or otherwise, by the appropriate Transmission Organization (as defined in the Federal Power Act [16 U.S.C. 791a et seq.]) if any, or approved regional reliability organization

Clean Line's projects are not a part of any transmission expansion plan, therefore they cannot be "consistent with" a plan that does not include them.

Instead, the DOE relied on:

DOE has emphasized the need for additional high voltage transmission capacity to deliver renewable resources from transmission-constrained areas, stating in its "20% Wind Energy by 2030" Report that "If the considerable wind resources of the United States are to be utilized, a significant amount of new transmission will be required."

GRID2030 is probably the highlight of Clean Line "vice president" Glotfelty's career at the DOE. And then Glotfelty leaves the DOE after setting the stage, and personally invests in Clean Line Energy Partners?

Clean Line brags:

> Jimmy worked for George W. Bush, for almost eight years, at both the gubernatorial and presidential levels. He led the Bush Administrationâ s efforts on electricity issues with Congress and the electric utility industry. In this capacity, **he founded Office of Electric Delivery and Energy Reliability at the Department of Energy (DOE) and served as its first Director**.

Let's see... which office is undertaking DOE's consideration of Clean Line's application under Sec. 1222?

> The Department of Energyâ s (DOE) Section 1222 Program is administered by the **Office of Electricity Delivery and Energy Reliability** (OE).

Wow! What a coincidence! A DOE appointee uses his office to set up a scheme whereby private investors can override state authority and regional transmission planning processes, and then leaves his position to personally invest in just such a scheme? And the office he "founded" is now in a position to approve his financial scheme?

Something stinks here...

Maybe this guy should investigate and clear up the appearances of federal actions undertaken for private profit?

> Whether the department will take the same approach under Chu's successor, MIT nuclear physicist Ernest Moniz, remains unclear.

I don't think that Moniz has a clue what his underlings are up to, but that's no excuse to let this federal land-taking scheme continue.

Clean Line's plans are a for-profit initiative masquerading as a political agenda. And DOE's political agenda is favoring corporate interests over the interests of the citizens and consumers it is supposed to serve. Let's clean the stink out of our federal Department of Energy!

How Obama Corruption Stooge Steven Chu lost his battle with Washington.

In August 2008, a week before Barack Obama went to Denver to collect his nomination, Steven Chu stepped onto a stage in the University of Nevada, Las Vegasâ s Cox Pavilion. The 60-year-old physicist was a towering presence in his field, a Nobel Prize winner and the director of Lawrence Berkeley National Laboratory in California. But he was largely unknown to the Washington-centric crowd of several hundred, in town for a clean energy conference co-hosted by Senate Majority Leader Harry Reid and the Center for American Progress (CAP) Action Fund. Trim and bespectacled, with wispy graying hair parted over a high forehead, Chu began his remarks with the nervous throat-clearing of a scientist who had not yet completed the transition to a more public life.

Chu invited the crowd to consider a temperature increase of five degrees Celsius, only slightly beyond what the world is expected to hit by the centuryâ s end in middle-of-the-road climate change forecasts. â Climate change of that scale will cause enormous resource wars,â he said, â over water, arable land, and massive population displacements.â This vision of planet-wide catastrophe was not new, but Chuâ s flat cadence, his chilly laboratory demeanor, gave the picture an unsettling crispness. â Weâ re not talking about ten million people,â he continued. â Weâ re talking hundreds of millions to billions of people being flooded out, permanently.â

Then Chu pivoted, arguing with the same matter-of-factness that the doomsday scenario he had described was entirely avoidable. Western Europe enjoyed a quality of life comparable to Americaâ s with far greater energy efficiency, he explained; technological innovation had allowed Californiaâ s economy to double in size over the past third of a century even as its electricity use remained flat. Tighter regulations had made American refrigerators not just 75 percent more efficient than they were three decades earlier, but 60 percent cheaper and 20 percent larger, too. â Miraculously,â Chu deadpanned, â the manufacturers had to assign the job to the engineers instead of the lobbyists. And this is what you get.â The audience applauded; Chuâ s delivery, once hesitant, now had a confidence bordering on swagger.

In conclusion, Chu showed his audience the famous â Earthriseâ photograph, taken by the astronaut William Anders from the *Apollo* 8 command module as it orbited the moon on Christmas Eve 1968. It showed the Earth, a gleaming whorl of blue and white, emerging out of the moonâ s shadow into sunlight. â A beautiful planet, a desolate moon,â Chu said. â And focus on the fact that thereâ s nowhere else to go.â

On the stage with Chu was John Podesta, CAPâ s president, who would serve as co-chair of the new presidentâ s transition team after Obamaâ s victory in November. In Chu, Obamaâ s team saw the potential to make a statement. â Science had really been abused and belittled in the previous administration,â Podesta told me. â The decision to try to go and get a number of high-profile scientists into the administration was all about telling this story about what the future of innovation could look like. And Steve was at the top of that pyramid.â

Shortly after the election, Obama asked Chu if he would come to Washington as his energy secretary. â I didnâ t know him before that,â Chu told me. â He said, â A lot of people all over the place are recommending you.â All I said was, â Who are these former friends of mine?â â

It was a good joke, but, by the time Chu told it to me in December, it had acquired some poignancy. The last several months have been the worst of his three years in Washington. Chu had arrived in town as one of Obamaâ s most celebrated appointees, with one of the new administrationâ s most ambitious missions: using a backwater of a Cabinet positionâ one better known as a sleepy sinecure for retired business executivesâ to reinvent Americaâ s energy system.

Then last September, a California-based solar panel manufacturer named Solyndra filed for bankruptcy, and

things suddenly went very sour. Chuâ s department had signed off on a $535 million loan to the company two years earlier; it was the highest-profile showpiece for Obamaâ s campaign promise to kick-start the new green energy economy. Congressional Republicans pounced.

On a cold morning in mid-November, Chu was hauled into a committee room on Capitol Hill. The hearing was the spectacle of the week, and the GOP lawmakers kept Chuâ the only witnessâ in his chair for five and a half hours. â Youâ re a very bright manâ much brighter than I am. I know you didnâ t leave your brain at the door,â Virginia freshman Morgan Griffith growled. Chuâ s hands shook slightly as he handled the edges of his prepared testimony.

By the time we spoke a month later, Chu seemed to have survived the experience, though not without some bitterness; the hearing, he told me, â was not the high point of what I wanted to do with my time.â Still, the whole affair had cast a harsh light on a scientist turned policymaker for whom things had not gone as planned, even before the Solyndra bankruptcy. The president who brought him to Washington three years ago had promised nothing less than an environmental revolution, and Chu was supposed to be at its center, presiding over the most dramatic expansion of the clean energy industry the federal government had ever attempted. Now Chu may have no choice but to preside over its similarly dramatic retreat.

â OK, SO!â CHU SAID, taking a deep breath before plunging back in. We were sitting in his office, in front of a bank of windows opening out across the National Mall, and Chu was halfway through an impromptu lecture on the economics of converting the long-haul trucking industry to liquefied natural gas. I couldnâ t remember how we had arrived hereâ I had asked a fairly narrow question about his departmentâ s fundingâ but we were where we were. â You can go six hundred and fifty miles without refueling,â Chu was saying, â so you might want a station every three hundred miles.â He rattled off the cost of liquefied natural gas ($2 per gallon equivalent, give or take), the cost of the machine you use to liquefy the gas ($1 million to $3 million), the typical annual mileage of a long-haul truck (80,000 miles), and, running all these numbers in his head, how many years it would take for a company to recoup its investment on a truck (two).

Several minutes later, Chuâ s press secretary reminded us of the time. â Iâ ll be shorter,â Chu said, a bit apologetically. But he wasnâ tâ and, honestly, I wasnâ t sure that he could be. I had met Chu briefly before, at a reception hosted by a magazine that I worked for at the time. I had asked him then about a trip heâ d made to China and ended up listening for several minutes as Chu expounded upon new developments in advanced battery technology. â He doesnâ t lose track of the details,â says Holger MÃ¼ller, a Lawrence Berkeley physicist and longtime collaborator.

This was the one thing that everyone knew about Barack Obamaâ s energy secretary when he took office in January 2009: that Steven Chu was smart. He was â possibly the smartest man in the federal government,â *Washington Post* science reporter Joel Achenbach wrote, â if not the known universe.â Obama, when he mentions Chu, rarely fails to bring up his Nobel Prize. â He likes to kid around about the rocket scientist thing when theyâ re together,â says a veteran Democratic operative who is close to the president. â Thereâ s a little bit in Obama whoâ s like, â Holy shit, I canâ t believe I hired this guy!â â

Chuâ s life outside of the office often seemed indistinguishable from his life in it. After he and his wife, Jean, who is also a physicist, bought a six-bedroom gray colonial in Chevy Chase, Chu spent what spare time he had weatherizing it himself and rode his bike to work as his schedule and weather allowed. On long plane trips, he would unwind by puzzling over physics problems, and he continued publishing original research, batting late-night e-mails back and forth with collaborators at Lawrence Berkeley.

There was a winning self-awareness to Chuâ s geek-out-of-water routine. When he appeared on â The Daily Showâ in July 2009, Chu handed Jon Stewart a t-shirt commemorating his honorary membership in the Nerds of America Society. â Youâ re, I think, the first Cabinet member Iâ ve met from the Obama administration that seems ... alive,â Stewart told him, a note of genuine affection in his voice.

Climate change was a problem that could have been custom-designed for Chu. The middle son of academics who had emigrated from China during World War II, Chu attended graduate school at the University of California, Berkeley, where he studied experimental physics. From there, he went on to Bell Laboratories, where his work would later earn him the Nobel. It also earned him a reputation as a fiercely competitive researcher with an appetite for daunting challenges and a tendency to focus on them to the exclusion of all else.

A 2009 *Nature* profile recounted how Chuâ s first wife, Lisa Chu-Thielbar, would sneak their elder son, Geoffrey, into Chuâ s lab hidden in her coat so he could see his father. â He was always a scientist first and a father second,â Chuâ s younger son, Michael, told *Nature*. The germ of Chuâ s Nobel-winning idea occurred to him while he was working alone one night after a blizzard had engulfed the Bell Labs campus in Holmdel, New Jersey. Everyone else had gone home before the storm.

Teaching at Stanford in the late â 80s and â 90s, Chu began to expand his academic horizons, extending his own research into biophysics and calling up colleagues for tutorials in subjects that were further afield. â He saw the world of science as not having traditional boundaries,â his younger brother, Morgan, an intellectual property lawyer in Los Angeles, told me. Climate change was, in this sense, the perfect challenge. Its solutions would be found not by the experts in any particular field but by intellectual omnivores who knew how to connect the dots between them.

When Chu moved to Lawrence Berkeley in 2004, he approached the director job as a kind of experiment; he wanted to know if a cloistered research institution could be transformed into an idea lab for the energy system of the future. When I spoke with Paul Alivisatos, who succeeded Chu as the labâ s director, he told me that, when Chu arrived at Lawrence Berkeley, â people were stovepiped a bitâ in various pure science endeavors. Chu gathered the labâ s researchers for regular spitballing sessions on climate change and energy researchâ â almost like an open mic,â Alivisatos says. â Lawrence Berkeley was a lab that a lot of people said was really in search of a mission,â explains Michael Lubell, a lobbyist for the American Physical Society who has known Chu for 30 years. â And [Chu] transformed it.â

AT THE OUTSET of the Obama presidency, Washington was in the throes of its second great love affair with renewable energy. The first, three decades earlier, had ended in tears. Under Jimmy Carter, the government had plowed billions into the quest to wean the United States off foreign oil, much of it going to technologies like wind turbines and solar panels. Poor program design had doomed some of Carterâ s ambitions; Ronald Reagan killed off the rest. By the end of the â 80s, the clean energy industry had largely decamped for Europe.

But the experience taught renewable energy advocates a great deal. The biggest lesson was that government support would be most successful if it created a level playing fieldâ principally by regulating carbon emissionsâ and helped clean energy start-ups clamber over the formidable hurdles to entry, rather than support them in their maturity.

At Lawrence Berkeley, Chu had devoted most of his time to the first big hurdleâ the research and development of next-generation technologies in solar energy, biofuels, and other areas. In 2007, as a member of an expert panel convened by the National Academies, Chu had proposed the creation of an office within the Department of Energy (DOE) called the Advanced Research Projects Agency-Energy (ARPA-E). Inspired by the Pentagonâ s storied DARPA, the program would fund cutting-edge technical research that could help the energy industry move away from fossil fuels.

The second, and larger, hurdle the industry faced was amassing capital. In the 2000s, clean energy had attracted considerable interest from venture capitalists, particularly Silicon Valley financiers who had made their fortunes on the information technology boom. But even Palo Altoâ s biggest venture capital (V.C.) firms were too small to raise the moneyâ usually in the hundreds of millions of dollarsâ to propel a start-up

to the point at which it could attract heftier investments from Wall Street. It was a financing gulf the industry referred to as the â Valley of Death.â

In 2005, pro-nuclear Republicans in Congress had created a loan guarantee program within the Energy Department to back projects that were too untested in the marketplace to attract private equity investment. By the last months of George W. Bushâ s presidency, however, the program still had not issued a single loan guarantee. Then the financial crisis hit, wiping out Wall Streetâ s appetite for equity investments. Suddenly, the Valley of Death looked more like a cliffâ with nothing on the other side.

But the financial meltdown also provided the federal government with an unprecedented opportunity. As congressional leaders drew up the $787 billion American Recovery and Reinvestment Act in the first months of 2009, they needed ways to sluice money through existing programs into the countryâ s economy. Clean energy champions in the Democratic leadership saw to it that hundreds of millions flowed into programs like ARPA-E. More important, Congress authorized the Energy Department to make $25 billion worth of loans to clean energy projects. â By a stroke of his pen,â *The Atlantic*â s Joshua Green wrote that summer, â President Obama made a federal agency the worldâ s largest venture capitalist.â The man in charge of figuring out where the money would go was Steven Chu.

DURING THE first week of March 2010, the Energy Department hosted an ARPA-E conference at the Gaylord National Hotel in National Harbor, Maryland. The eventâ s speakers included Chu, Podesta, White House energy and environment czar Carol Browner, and White House science adviser John Holdren, but also Silicon Valley A-list venture capitalists like John Doerr and Vinod Khosla, and G.E. CEO Jeffrey Immelt. â This is the Woodstock of energy innovation!â Arun Majumdar, a Lawrence Berkeley mechanical engineer whom Chu had hired to run ARPA-E, proclaimed in his keynote address.

Almost overnight, the lowly Energy Department had become the center of the energy technology universe. â I was struck by how many venture capitalists were there,â Katie Fehrenbacher, an editor of the technology news site *GigaOM*, wrote later that year. â I shared a cab back to the airport with some familiar Silicon Valley faces, and was told if your firm didnâ t have a dedicated person in Washingtonâ in some circles they call them lobbyistsâ maneuvering grant and loan programs, you werenâ t able to be competitive.â

Silicon Valleyâ s new romance with Washington was headyâ and sometimes uncomfortably close. (It was hard not to notice the former congressmen and government officials on the boards of high-profile start-ups and V.C. firms.) In early 2010, the Energy Department extended a $465 million loan to the high-end electric automaker Tesla Motors. Six months later, the company had gone publicâ the first U.S. automaker in half a century to do soâ with a $226 million IPO and was hawking a Leonardo DiCaprio-endorsed limited edition Roadster.

Chu had assembled a team of deputies from the West Coastâ s top research universities and V.C. firmsâ new recruits who had little Washington experience but shared a confidence that government was basically a logical enterprise like any other. â You look at this landscape out here,â Majumdar told me, gesturing out his office window, â and you ask the question, â How does the system work?â If youâ re driving a car, you know how the car works: You donâ t want to press your accelerator and brake at the same time; it doesnâ t get you anywhere. So, once you figure it outâ this is how the system worksâ you try to utilize it to get your things done.â The question was whether Washington actually resembled anything as rational as a car.

By the spring of 2010, congressional appropriators were beginning to suspect that Chu was taking the Treasuryâ s checkbook for granted. Two weeks after the ARPA-E summit, Majumdar, Undersecretary for Science Steven Koonin, and Office of Science Director William Brinkman were called before a House appropriations subcommittee to testify about the Energy Departmentâ s budget request for the coming fiscal year. Chuâ s deputies spoke excitedly about their work, but they never managed to answer the lawmakersâ fundamental questions about how the projects fit together and why they were necessary. Congress would

eventually slash ARPA-Eâ s funding from $400 million to $185 million for the next fiscal year.

When I asked Majumdar about the hearing, he laughed ruefully. â Oh yeah,â he said. â I think that hearing was a watershed moment in many ways.â The 2011 budget process was Chuâ s last chance to establish a permanent foothold for the programs that had been bankrolled by the stimulus before the 2010 elections; that the department had let the moment slip by suggested a leader who still had a few things to learn about Washington. â We were far less coordinated internally than we should have been,â another former senior department official says.

At the same time, the political will to see through the sweeping energy and environmental policy goals on which Obama had campaigned in 2008 was fast eroding. The Senateâ s most promising attempt at a climate bill, hammered out by John Kerry, Lindsey Graham, and Joe Lieberman, fell apart in April, after it became clear that the White House, exhausted by the battle over health care reform, had little appetite for another major policy fight.

Chu told me he didnâ t consider the billâ s failure a death sentence for his own aims. But the failure sent a strong message. The threat of climate legislation had brought many big industry players to the table with Democrats in 2009; absent that threat, there was little to keep them there. â Big Energy often takes a â this, too, shall passâ attitude toward the Washington scene,â one department insider told me.

It was a notion the White House did little to dissuade. When Obama made his first major energy policy speech of 2011, at Georgetown University last spring, he outlined sharply reduced ambitions: more use of natural gas, more domestic oil drilling. Of the new planâ s proposals that could plausibly pass Congress, only the continued funding of ARPA-E was immediately recognizable from the grand vision of 2008.

BY THAT POINT, the loan guarantee program was turning out to be a major problem. Chu was a fervent believer in the economic promise of clean energy, but it was a promise that lay in the futureâ in reclaiming the vanguard of manufacturing industries the United States had ceded since the 1970s. The stimulus, however, had freighted the loan program with a less realistic expectation: that its investments could create jobs fast enough to offset the 2.6 million that had been lost by the end of 2008. That meant Chuâ s first at-bat had to be a home run.

Looking for candidates in the early weeks of 2009, Energy Department officials dusted off an application from a solar technology manufacturer named Solyndra, which was seeking half a billion dollars to build a new factory. That February, the departmentâ s stimulus adviser wrote in an e-mail that Solyndra was viewed by the administration as the â litmus test for the loan guarantee programâ s ability to fund good projects quickly.â Chu approved it the following month.

When the auditing firm PricewaterhouseCoopers opened Solyndraâ s books in early 2010, however, it found the company had lost half a billion dollars in its first five years and could soon be buried under a looming avalanche of debt. The proximate cause of Solyndraâ s problems was the tumbling price of silicon imports from China, which rendered the companyâ s own technologyâ a lightweight cylindrical module made out of other mineralsâ uncompetitive. In June, the company pulled its IPO.

By that summer, the loan guarantee program was taking fire from all sides. Congress was frustrated with the slow pace at which the loans were being issued. The Government Accountability Office criticized the programâ s lack of clear goals. And voices from within the administration were questioning whether the Energy Department was up to the task. In December 2009, a venture capitalist whose firm had invested in Solyndra e-mailed Lawrence Summers, then the Director of Obamaâ s National Economic Council, expressing surprise that the unprofitable company had received a federal loan worth more than five times its revenues. â I relate well to your concern the gov is a crappy vc,â Summers wrote back, â and if u were closer to it youâ d feel more strongly.â The following October, Summers, Browner, and Joe Biden Chief of

Staff Ronald Klain sent a memo to Obama recommending a reboot of the loan program.

By December 2010, Solyndra was running out of cash. When one of the companyâ s board members raised the subject of bankruptcy proceduresâ hardly an unforeseeable developmentâ department officials reacted with surprise, according to the executive. â To me, it was clear the DOE folks were somewhat caught off guard that we werenâ t going to bail out the company,â he wrote in an intracompany e-mail.

The Energy Department cobbled together an eleventh-hour deal in February, securing $75 million more in private investments in exchange for the guarantee that private investors would be paid back before the government in the event of a bankruptcy. But blood was in the water. In September, Solyndra filed for bankruptcy, and Republican investigators began subpoenaing White House documents and calling top department officials to testify, including Chu.

FROM THE BEGINNING of the loan guarantee program, it was assumed that some of the departmentâ s investments would failâ in fact, that was the whole idea. What the industry most neededâ what delineated the Valley of Deathâ was investors willing to make high-risk, big-dollar bets that could give unproved technologies a foothold in the marketplace. This was the kind of investment that the government alonecould make.

The assumption on which the idea rested was that politicians wouldnâ t make hay out of the occasional $100 million lossâ an assumption that looked entirely absurd by 2011. Among Republicans, climate change denial had hardened into a catechism, and the ascent of the Tea Party had made any association with the stimulus hazardous. â Steve assumes that everyoneâ s like himâ theyâ re going to be nice, theyâ re going to understand,â says Lubell. â But the reality in Washington almost never works that way.â

At first, the Republicansâ case against Chu focused narrowly on the claim that Solyndra was given preferential treatment on account of the fact that an Obama campaign donor, the Oklahoma oil and gas billionaire George Kaiser, was a principal investor in the company. When 180,000 pages of e-mails and other documents failed to produce a smoking gun, the focus shifted to the argument that the Energy Department broke the law by promising to repay investors before taxpayers. But Chu had acted on the advice of the departmentâ s own counsel, suggesting that it was at least a murky matter of interpretation.

Investigations into Solyndraâ s conduct are still ongoingâ including an inquiry by the FBIâ and the documents released so far have provided a litany of embarrassments, not to mention a durable Republican line of attack. (The conservative organization Americans for Prosperity has spent more than $8 million on Solyndra-themed anti-Obama television ads since November.) Even so, in their fixation with catching Chu red-handed, lawmakers appear to have overplayed their hand. Even Chuâ s opponents found the crusade disappointing. â I think the Hill did a very poor job of going after him,â one lobbyist and Chu critic told me. â Everyone was like, â Fuck, theyâ re just going after a hide.â They didnâ t do the research they shouldâ ve done. Everything that I know about [Chu] is that he is not a corrupt guy. He would not have done what they said he did.â A Republican Senate staffer who was familiar with the loan program agreed. â I donâ t think it was necessarily a political thing,â she says of the Solyndra deal. â I think this was their first big demonstration of this idea, and they didnâ t want it to flop.â

There was also the fact that Congress had appropriated a $2.4 billion risk reserve for the program, explicitly authorizing the Energy Department to lose nearly five times what Solyndra had lost. And even Republicans who had voted against the programâ s 2009 expansion had clamored for more federal funds to support wind farms, solar arrays, and nuclear plants in their own districts. If anything, Chuâ s department should have been faulted for its caution: A Bloomberg Government report released in December found that 87 percent of the $16 billion worth of projects underwritten by the program were of minimal risk, not the transformative loans the department was supposed to be making.

If the Solyndra investigation didnâ t produce a scalp, however, it did make one thing clear: The federal governmentâ s foray into venture capitalism was over. The loan guarantee program expired in September, at the height of the Solyndra controversy; virtually nobody I talked to in Washington or Silicon Valley believed it would be revived. Brookings Institution scholar Mark Muro, an authority on renewable energy policy, points to an array of programs due to sunset in the next year that are unlikely to be renewed, some launched through the stimulus and others dating back to the Bush-era Republican Congress. They include not just the loan guarantees but also Treasury Department grants, IRS-administered bonds for clean energy projects, and tax credits for energy efficient appliances and new homes.

Some of the high-tech research programs, particularly Chuâ s own ARPA-E, will probably survive. But absent unlikely congressional action, Muro estimates that as much as 70 percent of the current federal funding for clean energy could vanish by 2014. â I think we are going to exit the clean-tech finance business as a nation,â he says.

THE BULK OF THE wall-to-wall coverage of the Solyndra bankruptcy last fall overlooked one salient detail: Washingtonâ s second great experiment with clean energy, for all its hiccups, seems to be working. Bloomberg New Energy Finance reported in November that global investment in renewable power plants had for the first time surpassed investment in fossil-fuel-powered facilities. Clean energy technology has proved to be a largely recession-proof, if still small, engine of economic growth in the United States.

Energy Department initiatives have also given U.S. companies a foothold in the manufacturing of advanced batteries, a critical component in electric cars that is projected to grow into a $100 billion industry by 2030. â A lot of them got their start with money from ARPA-E, and theyâ re chasing brilliant advances,â says Mike Danaher, a partner at the law firm Wilson Sonsini Goodrich & Rosati who specializes in clean energy technology and works with half a dozen such companies. â The ferment thatâ s going to come out of this is like nothing anyone could imagine.â If clean energyâ s best days lie in the past, it will say less about the flaws of federal policies than it will about the government poised to pull the plug on them.

â I think Steve made a pretty good try,â one of Chuâ s former deputies told me. â But this is hard. Subsidies, economics, regulations have to play together with the technology. I think we all understand that much better now.â Signs of retrenchment, meanwhile, have begun to crop up in the fine print of the departmentâ s work. In September, the department published the results of its quadrennial technology review. The report speaks mostly of bolstering Americaâ s energy security and competitiveness; climate change is mentioned on barely a half dozen of its 152 pages.

This fall, the department shifted the emphasis of its efforts to promote carbon capture and storageâ originally intended to reduce emissions from coal-fired power plantsâ toward using the technology to extract more petroleum from aging oilfields. â Steveâ s a fairly realistic guyâ he has adapted his thinking to the policy scene,â the former deputy says. â I think heâ s responded to advice from many to focus on what *can* get done.â

During our interview, I asked Chu if he intended to stay for a second Obama term. â That we will leave up toâ â he said, trailing off, before finishing: â Weâ ll see what happens.â I asked if it bothered him that Obamaâ a president who had once declared energy his top domestic priorityâ had instead invested his political capital in health care reform. â Would I have loved to have a big, global comprehensive energy bill?â Chu replied. â You bet. But I still think there are so many things that I can do in my position here and that we are doing. So Iâ m not going to wring my hands over coulda, woulda, shoulda.â

But I found myself thinking of something Chu had said a year and a half earlier, as the ambitious first act of Obamaâ s presidency was drawing to a close, in a commencement speech at Washington University in St. Louis. As he had in Las Vegas in 2008, Chu ended his remarks by invoking a famous photograph of the Earth, this time a digital image taken by the *Voyager* 1 probe just before it exited the solar system for deep space in

1990. If the *Apollo* 8 photograph offsets the precariousness of human life with the warmth of a planet that is recognizably our own, the *Voyager*image conveys only Earthâ s isolation, the astronomically long odds of a second chance for its inhabitants. The planet is a tiny blue pinpoint, barely a tenth of a pixel in width, set against the immense indifference of space.

The late astronomer Carl Sagan was so moved by the photograph that he dedicated a book to it, and Chu invoked his words to the graduating students. â Our posturing, our imagined self-importance are challenged by this point of pale light,â he told them. â Our planet is a lonely speck. In all this vastness, there is no hint that help will come from elsewhere to save us from ourselves.â

How Obama's U.S. Department of Energy Defrauded Americans Out Of Their Life Savings In A Massive Crony Crime Cover-up

By The Commission - A Wikipedia-like public collaborative peer-to-peer news authoring network

If certain politicians are as 'impassioned to serve the public' as they say, then shouldn't they volunteer for office and allow the public to see all of their bank accounts?

Of course they will never do that because many of them are getting "**DARK MONEY**" covert payola and they are in office only to serve criminal kick-back schemes.

Politician's Dianne Feinstein, Barbara Boxer, Nancy Pelosi, Harry Reid and 42 others, sent out letters, emails, meeting requests and pitches to solicit members of the public to join a cause. The top staff of the U.S. Department of Energy (DOE) sent out the same pleas. They promised a "wonderful new opportunity for all" in the first market break for outsiders in 30 years.

In meetings, on camera, they promised to give members of the public a fair shot at a group of new Department of Energy funds that Obama had put in place.

They failed to mention one key fact: **ALL OF THE TAXPAYER MONEY HAD ALREADY BEEN SECRETLY PROMISED ("Hard Wired" it is called) TO OBAMA'S, AND THE DOE BOSSES, FRIENDS, IN ADVANCE.**
That is a felony violation of the law. A crime which FBI Director James Comey, and his staff covered up and which DOE Boss Steven Chu and his staff actively implemented. Our team knows this, as fact, because they reported directly to Comey, Chu and their offices.

It was not an '*accident*', it was not an '*oversight*', it was not '*an agency just overwhelmed with paper*'. It was a precision controlled, coordinated organized crime effort designed to ***rape***, both, the U.S. taxpayers and the non-crony applicants for these funds.

The crime used the traditional bribes, crony payola contracts, revolving doors, sex worker payoffs and other political corruption but it mainly used a new tactic called "Dark Money'.

Our team knows this because some of them were solicited to participate in these crimes and some of them had

close personal relationships with the politicians who are now known to have operated these crimes. Some of our witnesses and insiders have been involved with the DOE since before 2000. They have 'seen it all'.

Companies, their executives and their investors were induced by California and New York Senators, White House Staff and the top staff of the U.S. Department of Energy to invest many years of their lives, and tens of millions of dollars of their personal cash in a fake government program which only existed to pay off Obama's political financiers.

American taxpayers were lied to and ruined by the U.S Department of Energy and their damages are increasing monthly. The DOE never apologized, offered fixes or provided anything other than Fusion-GPS kinds of attacks on those who asked for help or who reported the crimes.

This scam happened in 2008. History has proven that the DOE funds, since then, were rigged. Congress, the news media and special investigations have proven that these crimes happened. Nothing has ever been done to help the victims (over 100 companies and over 1800 individuals) recover from their state-sponsored losses.

What happened when the victims of these crimes reported the incidents to authorities? The Obama Administration ordered and operated attacks on the victims. Those attacks included the following reprisal, retribution and revenge efforts:'

- - DOE solicited the victims with false promises and caused them to expend millions of dollars and years of their time for projects which DOE had covertly promised to their friends and were using the victims as a â smokescreenâ to cover their illegal DOE slush-fund for the victims competitors and personal enemies.
- - Social Security, SSI, SDI, Disability and other earned benefits were stone-walled. Applications were â lostâ . Files in the application process â disappearedâ . Lois Lerner hard drive â incidentsâ took place in order to seek to hide information and run cover-ups.
- - DOEâ s Jonathan Silver, Lachlan Seward and Steven Chu contacted members of the National Venture Capital association (NVCA) and created national â black-listsâ to blockade Victims from ever receiving investor funding. This was also confirmed in a widely published disclosure by Tesla Motors Daryl Siry and in published testimony.
- FOIA requests were hidden, frozen, stone-walled, delayed, lied about and only partially responded to in order to seek to hide information and run cover-ups.
- - State and federal employees played an endless game of Catch-22 by arbitrarily determining that deadlines had passed that they, the government officials, had stonewalled and obfuscated applications for, in order to force these deadlines that they set, to appear to be missed.
- - Some Victims found themselves strangely poisoned, not unlike the Alexander Litvenko case. Heavy metals and toxic materials were found right after their work with the Department of Energy weapons and energy facilities. Many wonder if these â targetsâ were intentionally exposed to toxins in retribution for their testimony. The federal MSDS documents clearly show that a number of these people were exposed to deadly compounds and radiations, via DOE, without being provided with proper HazMat suits which DOE officials knew were required.
- - Victims employers were called, and faxed, and ordered to fire Victims from their places of employment, in the middle of the day, with no notice, as a retribution tactic.

- - On orders from Obama White House officials, DNC-financed Google, YouTube, Gawker Media and Gizmodo Media produced attack articles and defamation videos and locked them on the internet on the top line, of the front page of all Google searches for a decade in front of 7.5 billion people, around the world, at a cost of over $40 million dollars in server farms, production costs and internet rigging. The forensic data acquired from this attack proved that Google rigs attacks against individuals on the internet and that all of Googleâ s â impressionsâ are manually controlled by Googleâ s executives who are also the main financiers and policy directors of the Obama Administration. This data was provided to the European Union for itâ s ongoing prosecution of Googleâ s political manipulation of public perceptions.
- - Victims HR and employment records, on recruiting and hiring databases, were embedded with negative keywords in order to prevent them from gaining future employment.
- - Our associates: Gary D. Conley, Seth Rich, Rajeev Motwani and over 30 other whistle-blowers in this matter, turned up dead under strange circumstances. They are not alone in a series of bizarre deaths related to the DOE investiagtions.
- - Disability and VA complaint hearings and benefits were frozen, delayed, denied or subjected to lost records and "missing hard drives" as in the Lois Lerner case.
- - Paypal and other on-line payments for on-line sales were delayed, hidden, or re-directed in order to terminate income potential for Victims who competed with DOE interests and holdings.
- - DNS redirection, website spoofing which sent Victims websites to dead ends and other Internet activity manipulations were conducted. All commercial storefronts and on-line sales attempts by Victims, had their sites hidden, or search engine de-linked by an massively resourced facility in order to terminate revenue potentials for those victims.
- Over 50,000 trolls, shills, botnets and synth-blog deployments were deployed to place defamatory statements and disinformation about victims in front of 7.5 billion people around the world on the internet in order to seek to damage their federal testimony credibility by a massively resourced facility.
- - Campaign finance dirty tricks contractors IN-Q-Tel, Think Progress, Black Cube, Podesta Group, Stratfor, Fusion GPS, IN-Q-Tel, Media Matters, Gawker Media, Gizmodo Media, Syd Blumenthal, etc., were hired by DOE Executives and their campaign financiers to attack Victims who competed with DOE executives stocks and personal assets.
- - Covert DOE partner: Google, transfered large sums of cash to dirty tricks contractors and then manually locked the media portion of the attacks into the top lines of the top pages of all Google searches globally, for years, with hidden embedded codes in the links and web-pages which multiplied the attacks on Victims by many magnitudes.
- Covert Cartel financier: Google, placed Googleâ s lawyer: Michelle Lee, in charge of the U.S. Patent Office and she, in turn, stacked all of the U.S. Patent Office IPR and ALICE review boards and offices with Google-supporting employees in order to rig the U.S. Patent Office to protect Google from being prosecuted for the vast patent thefts that Google engages in. Google has hundreds of patent lawsuits for technology theft and a number of those lawsuits refer to Googleâ s operations as â Racketeeringâ , â Monopolistic Cartelâ and â Government Coup-likeâ behaviors. Thousands of articles and investigations detail the fact that Google, â essentiallyâ ran the Obama

White House and provided over 80% of the key White House staff. A conflict-of-interest unlike any in American history. Googleâ s investors personally told Applicant they would â kill himâ . Google and the Obama Administration were â the same entityâ . Applicant testified in the review that got Michelle Lee terminated and uncovered a tactical political and social warfare group inside Google who were financed by Federal and State funds.

- - Honeytraps and moles were employed by the attackers. In this tactic, people who covertly worked for the attackers were employed to approach the â targetâ in order to spy on and misdirect the subject.
- - Mortgage and rental applications had red flags added to them in databases to prevent the targets from getting homes or apartments.
- - McCarthy-Era "Black-lists" were created and employed against Victims who competed with DOE executives and their campaign financiers to prevent them from funding and future employment.
- - Targets were very carefully placed in a position of not being able to get jobs, unemployment benefits, disability benefits or acquire any possible sources of income. The retribution tactics were audacious, overt..and quite illegal.

How does DOE Dark Money work? Let's take a look:

In the politics of the United States, **dark money** is funds given to nonprofit organizationsâ and include 501(c)(4)(social welfare) 501(c)(5) (unions) and 501(c)(6) (trade association) groupsâ that can receive unlimited donations from corporations, individuals, and unions, and spend funds to influence elections, but are not required to disclose their donors.[3][4] Dark money first entered politics with *Buckley v. Valeo* (1976) when the United States Supreme Court laid out Eight Magic Words that define the difference between electioneering and issue advocacy.

According to the Center for Responsive Politics, "spending by organizations that do not disclose their donors has increased from less than $5.2 million in 2006 to well over $300 million in the 2012 presidential cycle and more than $174 million in the 2014 midterms."[3] The *New York Times* editorial board has opined that the 2014 midterm elections were influenced by "the greatest wave of secret, special-interest money ever raised in a congressional election."[5]

The term was first used by the Sunlight Foundation to describe undisclosed funds that were used during the United States 2010 mid-term election.[6][7] Its practical effect has been described by Donald Trump as Congress "being under the magical spell of the donors."[8]

In some elections, dark money groups have surpassed traditional political action committees (PAC) and "super PACs" (independent-expenditure-only committees) in the volume of spending.[4] In 2014, the group Freedom Partners was identified as the "poster child" for the rise of dark money.[4] In 2012, Freedom Partners had the ninth-highest revenues among all U.S. trade associations which filed tax returns that year, more than "established heavyweights" such as the American Petroleum Institute, PhRMA, and U.S. Chamber of Commerce.[4] Freedom Partners largely acted as a conduit for campaign spending; of the $238 million it spent in 2012, 99 percent went to other groups, and Freedom Partners itself did not have any employees.[4] This was a major distinction between other high-revenue trade associations, which typically have many employees and devote only about 6 percent of spending to grants to outside groups.[4]

The rise of dark money groups was aided by the U.S. Supreme Court decisions in *FEC v. Wisconsin Right to Life, Inc.* (2008) and *Citizens United v. FEC* (2010).[4] In *Citizens United*, the Court ruled (by a 5â 4 vote) that corporations and unions could spend unlimited amounts of money to advocate for or against political candidates.[9]
2010 election cycle

According to the Center for Responsive Politics, dark money (which it defined as funds from outside groups that did not publicly disclose donors, plus groups that received a substantial portion of their contributions from such nondisclosing groups) accounted for nearly 44% of outside spending in the 2010 election cycle.[10]

In the 2012 election cycle, more than $308 million in dark money was spent, according to the Center for Responsive Politics.[11] An estimated 86 percent was spent by conservative groups, 11 percent by liberal groups and 3 percent by other groups.[11]

The three dark money groups which spent the largest sums were Karl Rove's American Crossroads/Crossroads GPS ($71 million), the Koch brothers' Americans for Prosperity ($36 million) and the U.S. Chamber of Commerce ($35 million), all conservative groups.[11][12] Aside from a complex, and still highly covert network created by The Clinton Foundation, Media Matters and The Podesta Group, the three liberal groups with the largest dark-money expenditures were the League of Conservation Voters ($11 million), Patriot Majority USA, a group focusing on public schools and infrastructure ($7 million), and Planned Parenthood (almost $7 million).[11]

The 2014 election cycle saw the largest amount of dark money ever spent in a congressional election; the *New York Times*editorial board described 2014 "the greatest wave of secret, special-interest money ever."[5] On the eve of the election, Republican-leaning dark money groups dominated, with $94.6 million in expenditures, exceeding dark money expenditures by Democratic-leaning dark money groups ($28.4 million), and by expenditures that could not be classified ($1.9 million).[13] Karl Rove's dark money group Crossroads GPS alone spent over $47 million in the 2014 election cycle.[14]

In the Senate elections, dark money spending was highly concentrated in a handful of targeted competitive states, and especially in Alaska, Arkansas, Colorado, Kentucky, and North Carolina.[15] In the eleven most competitive Senate races, $342 million was spent by non-party outside groups, significantly more than the $89 million spent by the political parties.

In the 2014 Kentucky election, a key player was the "Kentucky Opportunity Coalition," a group supporting Mitch McConnell, Republican of Kentucky,[16] whom the *New York Times* editorial board has described as "the most prominent advocate for unlimited secret campaign spending in Washington."[5] The Kentucky Opportunity Coalition, a 501(c)(4) "social welfare" group,[17] raised more than $21 million, while McConnell raised about $32 million and McConnell's opponent, Democratic candidate Alison Lundergan Grimes, raised about $19 million.[17] According to a Center for Public Integrity analysis of data provided by advertising tracking firm Kantar Media/CMAG, the group ran more than 12,400 television advertisements.[17] Every Kentucky Opportunity Coalition's television advertisements mentioned either McConnell or Grimes; overall, about 53 percent of the group's ads praised McConnell while the rest were attack ads against Grimes.[18] The Kentucky Opportunity Coalition relied heavily on political consultants in Washington, D.C. and Virginia linked to Karl Rove's Crossroads groups,[19] and received $390,000 in a grant from Crossroads GPS.[17] Described as "mysterious," the group was listed by a Post Office box,[17] and the only name formally associated with the group was political operative J. Scott Jennings, a deputy political director in the George W. Bush administration, a worker for McConnell's previous campaigns.[18] Melanie Sloan of the watchdog organization Citizens for Responsibility and Ethics in Washington said that the Kentucky Opportunity Coalition was "nothing more than a sham."[17]

Dark money also played a role in other competitive Senate seats in 2014. In ten competitive Senate seats, the winners had the following in dark-money support, according to an analysis by the Brennan Center for Justice at New York University School of Law:[20]

Winning Candidate

	Dark Money in Support	Dark Money as % of Nonparty Outside Spending in Support
Thom Tillis (R-NC)	$22,888,975	81%
Cory Gardner (R-CO)	$22,529,291	89%
Joni Ernst (R-IA)	$17,552,085	74%
Mitch McConnell (R-KY)	$13,920,163	63%
Tom Cotton (R-AR)	$12,502,284	65%
David Perdue (R-GA)	$11,098,585	86%
Dan Sullivan (R-AK)	$10,823,196	85%
Pat Roberts (R-KS)	$8,454,938	78%
Gary Peters (D-MI)	$4,226,674	28%
Jeanne Shaheen (D-NH)	$3,478,039	35%
Total	$127,475,231	71%

In North Carolina, the pro-Tillis group "Carolina Rising" received nearly all (98.7%) of its funds from Crossroads GPS; the Center for Responsive Politics highlighted this as an example of how Crossroads GPS, a 501(c)(4) group, "evades limits on political activity through grants" to other 501(c)(4) groups.[16][21] In the 2014 cycle, Crossroads GPS also gave $5.25 million to the U.S. Chamber of Commerce, $2 million to the American Future Fund, and $390,000 to the Kentucky Opportunity Coalition.[21] In total, Crossroads GPS spent more than $13.6 million on grants to other groups, which it described as being for the purposes of "social welfare."[21]

In 2014, the Democratic Party-aligned dark money group Patriot Majority USA, a 501(c)(4), spent almost $13.7 million on "direct and indirect political campaign activities," airing 15,000 television ads in targeted Senate races.[22] About half of the $30 raised by the group came from five anonymous donors.[22] The group was led by Craig Varoga, "a staunch ally" of Senate Minority Leader Harry Reid, Democrat of Nevada.[22]

In Alaska, Mark Begich was "one of the few Democratic candidates to come close to receiving as much support from dark money as his Republican opponent."[15] The pro-Begich Alaska Salmon PAC, funded entirely by the League of Conservation Voters and its Alaska affiliate, spent funds in support of Begich.[15]

According to the Center for Responsive Politics, by October 2015, $4.88 million in dark money had already been spent for the 2016 election cycle, "more than 10 times the $440,000 that was spent at this point during the 2012 cycle."[11] The money was spent by six groups - five conservative groups (including the U.S. Chamber of Commerce, which spent $3 million, and Americans for Prosperity, which spent $1.5 million) and one liberal group (Planned Parenthood, which spent just under $75,000).[11]

According to Richard Skinner of the Sunlight Foundation, "the focus of early dark money being spent in the 2016 cycle" is on competitive U.S. Senate elections and some U.S. House of Representatives races.[11] However, dark money also is playing a role in the 2016 Republican presidential primaries; by June 2015, at least four Republican presidential candidates were raising funds via 501(c)(4) organizations: Bobby Jindal's America Next, Rick Perry's Americans for Economic Freedom, John Kasich's Balanced Budget Forever, and Jeb Bush's Right to Rise.[23]

Comparison to (and relationship with) super PACs[edit]

Dark money (501(c)) groups and super PACs compared
(source: Sunlight Foundation[24])

	Super PACs	Dark-money groups

	Super PACs	Dark-money groups
Type of entity	Campaign committee (regulated by FEC)	Nonprofit (regulated by IRS)
Disclosure of contributors required?	Yes	No
Disclosure of expenditures required?	Yes	Through tax filings (Form 990s) (Typically delayed by year or more; often submitted long after elections have ended)
Limits on dollar amount of contributions?	None	None
Can be wholly political?	Yes	No (political activity cannot be majority of expenditures)
Coordination with candidates?	Impermissible	Impermissible

501(c) "dark money" groups are distinct from super PACs.[25]While both types of entity can raise and spend unlimited sums of money, super PACs "must disclose their donors," while 501(c) groups "must not have politics as their primary purpose but don't have to disclose who gives them money."[25] However, a single individual or group can create both types of entity and combine their powers, making it difficult to trace the original source of funds.[25][26] ProPublica explains: "Say some like-minded people form both a Super-PAC and a nonprofit 501(c)(4). Corporations and individuals could then donate as much as they want to the nonprofit, which isn't required to publicly disclose funders. The nonprofit could then donate as much as it wanted to the Super-PAC, which lists the nonprofit's donation but not the original contributors."[25] In at least one high-profile case, a donor to a super PAC kept his name hidden by using an LLC formed for the purpose of hiding their personal name.[27] One super PAC, that originally listed a $250,000 donation from an LLC that no one could find, led to a subsequent filing where the previously "secret donors" were revealed.[28]

During the 2016 election cycle, "dark money" contributions via shell LLCs became increasingly common.[29] The Associated Press, Center for Public Integrity, and Sunlight Foundation all "flagged dozens of donations of anywhere from $50,000 to $1 million routed through non-disclosing LLCs to super PACs" backing various presidential candidates, including Marco Rubio, Hillary Clinton, Ted Cruz, John Kasich, Jeb Bush, and Carly Fiorina.[29]
Bradley A. Smith, a former FEC chairman who is now with the Center for Competitive Politics, a group that opposes campaign-finance reform, argues that this practice is not problematic, writing that "it is possibly the making of a campaign contribution in the name of another," a violation of existing law.[30]

According to Kathy Kiely, managing editor of the Sunlight Foundation, "untraceable dark money is a preferred tactic of conservatives, while Democrats tend to use traceable super PACs."[31]

The first federal law requiring disclosure of campaign contributions, the Federal Corrupt Practices Act, was passed in 1910. By the late 1970s, virtually all states and the federal government required public disclosure of campaign contributions and information on political donors. Most states and the federal government also required public disclosure of information about donors and amounts spent on independent expenditures, that is, expenditures made independently of a candidate's campaign.

In January 2010, at least 38 states and the federal government required disclosure for all or some independent expenditures or electioneering communications, for all sponsors.[32]

Yet despite disclosure rules, it is possible to spend money without voters knowing the identities of donors before the election.[33][34]In federal elections, for example, political action committees have the option to choose to file reports on a "monthly" or "quarterly" basis.[35][36][37] This allows funds raised by PACs in the final days of the election to be spent and votes cast before the report is due.

In addition to PACs, non-profit groups ranging from Planned Parenthood to Crossroads may make

expenditures in connection with political races. Since these non-profits are not political committees, as defined in the Federal Election Campaign Act, they have few reporting requirements beyond the amounts of their expenditures. They are not required by law to publicly disclose information on their donors. As a result, voters do not know who gave money to these groups. Reports have disclosed instances where non-profits were managed by close associates, former staff, or a candidate's family member, and this has led to concern that the candidates benefiting from their expenditures would be able to know who donated the funds to the non-profit group, but the public would not.[38] [39]

For example, in the 2012 election cycle, one organization, the National Organization for Marriage, or NOM, operated two non-profit arms that received millions in donations from just a few donors. It in turn funded several different PACs. While these PACs had to disclose that NOM contributed the funds, they were not required to disclose who gave money to NOM.[40]

On March 30, 2012 a U.S. District Court ruled that all groups that spend money on electioneering communications must report all donors that give more than $1,000.[41][42] However, this ruling was overturned on appeal.[43]

Legislative and regulatory proposals and debate over dark moneyAccording to Columbia Law School's Richard Briffault, disclosure of campaign expenditures, contributions, and donors is intended to deter corruption.[45]

The Federal Elections Commission, which regulates federal elections, has been unable to control dark money. According to the Center for Public Integrity, FEC commissioners are voting on many fewer enforcement matters than in the past because of "an overtaxed staff and commissioner disagreement."[12] The IRS (rather than the FEC) is responsible for oversight of 501(c)(4) groups.[12] The IRS "found itself ill-prepared for the groundswell" of such groups taking and spending unlimited amounts of money for political purposes in the wake of the U.S. Supreme Court's decision in *Citizens United v. Federal Election Commission* in 2010.[12] The agency particularly "struggled to identify which organizations appeared to be spending more than the recommended 50 percent of their annual budgets on political activitiesâ and even to define what 'political spending' was."[12] When the IRS began looking at nonprofit spending, it was accused of improper targeting in a 2013 controversy.[12]

"With the FEC and IRS duly sidelined" advocates for disclosure turned to the Securities and Exchange Commission (SEC); nine academics from universities across the U.S. filed petitioned the SEC in August 2011 for the agency to "develop rules to require public companies to disclose to shareholders the use of corporate resources for political activities."[12] The petition received over a million comments in the following month, "a record amount for the SEC, with the overwhelming majority of voters asking for better disclosure."[12] According to Lucian Bebchuk, a Harvard professor of law, economics, and finance who helped draft the petition, the request had drawn the support of "nearly a dozen senators and more than 40 members of the House."[12] Under current SEC regulations, public corporations must file a Form 8-K report to publicly announce major events of interest to shareholders.[46] The Sunlight Foundation, a group which advocates for a comprehensive disclosure regime, has proposed that the 8-K rule should be updated to require that aggregate spending of $10,000 on political activities (such as monetary contributions, in-kind contributions, and membership dues or other payments to organizations that engage in political activities) should be disclosed and made publicly available via the 8-K system.[46]
In 2015, Republicans in Congress successfully pushed for a rider in a 2015 omnibus spending bill that bars the IRS from clarifying the social-welfare tax exemption to combat dark money "from advocacy groups that claim to be social welfare organizations rather than political committees."[47]

Other provisions in the 2015 bill bar the SEC from requiring corporations to disclose campaign spending to shareholders, and a ban application of the gift tax to nonprofit donors. The Obama administration opposed

these provisions, but President Obama eventually acceded to them in December 2015, with the White House declining to comment. The nonpartisan Campaign Legal Center said in a statement that the dark-money provision ensures "that the door to secret foreign dollars in U.S. elections remains wide open through secret contributions to these ostensibly 'nonpolitical' groups that run campaign ads without any disclosure of their donors."[47]

The Center for Competitive Politics (CCP), chaired by former FEC chairman Bradley A. Smith, opposes legislation to require the disclosure of dark-money groups, saying: "Our view is that many people will be driven out of politics if they are forced to disclose their names and their personal information. The purpose of disclosure is to help people monitor the government, not for the government to monitor the people."[12] The Center for Competitive Politics views "dark money" as a pejorative term, stating that the phrase "evokes an emotional, fearful reaction" and contending that "many of the statistics published on the topic aim to mislead rather than enlighten."[48] The CCP maintains that dark money "comprises a very small percentage of total campaign spending," calculating the percent of money spent in federal elections by organizations that did not provide itemized disclosure of their donors as 4.3% in 2012 and 3.7% in 2014.

The U.S. Department of Energy was complicit in the processing of Dark Money payola cycling to Obama's financiers as a 'hand-on' operator of a RICO-class crime.

All of the ruckus with Donald Trump and California/DOE VS. Trump is almost entirely based on West Coast and New York corrupt senators, and their insiders, freaking out about their Dark Money organized crime payola scam coming apart and getting exposed.

Thereâ s a reason why David Brock chooses to house an unregistered Professional Solicitor in his office to raise money for his conglomerate of Super PACs and non-profits.

Professional Solicitors are required to disclose their active solicitation contracts. Brock wants his unregistered solicitor, the Bonner Group, to keep their client list hidden for a very specific reason.

DAVID BROCK IS LAUNDERING MONEY

David Brock has 7 non-profits, 3 Super PACs, one 527-committee, one LLC, one joint fundraising committee, and one unregistered solicitor crammed into his office in Washington DC.

Uncovered records expose a constant flow of money between these organizations.

The Bonner Group, his professional solicitor, works off a commission. *Every time* money gets passed around, Bonner receives a 12.5% cut.

FOLLOW THE MONEY

Nonprofits are required to disclose who they give cash grants to.

But they arenâ t required to disclose who gave them cash grants.

This weak system of one way verification is being abused by Brock. Heâ s been cycling money between

his organizations for years, and the Bonner Groupâ s 12.5% commission gets triggered after every pass.

In 2014, Media Matters for America raised $10,021,188.

The Bonner Group was credited for raising these funds. Media Matters paid them a $1,147,882 commission.

That same year, Media Matters gave a $930,000 cash grant to David Brockâ s Franklin Education Forum, an organization that shares office space with Media Matters.

In 2014, the Franklin Education Forum reported $994,000 in total contributions. 93.6% of that total came from Media Matters!

Surprisingly, though, the Franklin Education Forum gave full credit to Bonner for raising that money. They paid the fundraiser a $124,250 commission in 2014!

NOTICE WHAT HAPPENED?

1. David Brockâ s *Media Matters* gave a $930,000 cash grant to David Brockâ s *Franklin Education Forum*
2. David Brockâ s *Franklin Education Forum* credited *the Bonner Group* for raising those funds, triggering the 12.5% commission
    - David Brock paid *the Bonner Group* a $124,250 commission to solicit a cash grant â ¦ *from himself!*

IT DOESNâ T STOP THERE

After the Franklin Education Forum retained $869,750, they sent a $816,224 cash grant to David Brockâ s *The Franklin Forum*:

Note: The â Franklin Education Forumâ is a 501(c)3, and â The Franklin Forumâ is a 501(c)4. They are not the same company.

Since The Franklin Forum 501(c)4 paid Bonner a commission in 2013, itâ s safe to assume fundraiser received a $102,028 commission in 2014. Unfortunately, itâ s hard to tell for sure. They still havenâ t filed their taxes for 2014!

LETâ S RECAP

Say, for example, you donate $1,062,857 to Media Matters for America. This is how David Brock would have used your charitable donation in 2014:

1. **Media Matters** would receive your $1,062,857 donation
    - **The Bonner Group** would earn a $132,857 commission
    - **Media Matters** would retain $930,000
2. Next, **Media Matters** would give whatâ s left of your *entire donation*, $930,000, to the **Franklin Education Forum**
    - The **Bonner Group** would â earnâ a $116,250 commission
    - The **Franklin Education Forum** would retain $813,750
3. The **Franklin Education Forum** would then forward the remaining $813,750 to **The Franklin Forum**
    - The **Bonner Group** would â earnâ a $101,718 commission
    - **The Franklin Forum** would retain $712,031

In the end, Brockâ s solicitor would have pocketed $350,825, almost a third of your initial donation! Thatâ s a far cry from the advertised 12.5% commission.

As bizarre as that scenario may sound, this is *exactly* what David Brock did in 2014.

HOW CAN WE BE SURE THIS IS INTENTIONAL?

David Brock is the Chairman for each of these organizations! How could he *not* know whatâ s going on?

Heâ s a hands-on Chairman. According to their tax returns, Brock allocates time, weekly, to his organizations:

- Media Matters: 31.50 hours per week
- Franklin Education Forum: 3 hours per week
- The Franklin Forum: 1 hour per week

Furthermore, the New York Times reports that David Brock shares a summer rental in the Hamptons with Mary Pat Bonner, the President of the Bonner Group!

David Brock will have a hard time claiming ignorance on this. These transfers are intentional. He vacations with his solicitor. Case closed.

STILL NOT CONVINCED?

David Brock didnâ t even bother to give his organizations different phone numbers. *They all share the same phone number!*

WHAT IFâ ¦?

We even located the Bonner Groupâ s solicitation agreement with Media Matters on Floridaâ s Gift Giversâ Guide. Clarification on their commission can be found on page 2:

In English: Contractually, David Brock has the option to exclude certain contributions from triggering the commission. In spite of this option, he intentionally chooses to trigger the 12.5% commission for money grants between his organizations.

Note: Yes, we are making the assumption that all of Brockâ s organizations have the same solicitation agreement with the Bonner Group. Given that his organizations share the same address, board members, and telephone number, we feel itâ s safe to assume they also share the same solicitation agreement.

THIS BARELY SCRATCHES THE SURFACE

Utilizing public facing tax returns, along with records submitted to the FEC, we mapped out all the significant money transfers from 2014 that took place in Brockâ s office:

This is all from just one year! No further commentary required.

We understand this may be hard to believe. We first came across this in July, and are still having a hard time wrapping our heads around it.

All of the data referenced in this article originated from publicly accessible sources. Check for yourself â we provided links to the source material in our article exposing the organizations operating in Brockâ s office, This data has been sitting out in the open, gathering dust for *years!*

SUMMARY

If it looks like a duck, swims like a duck, and quacks like a duck, then it probably is a duck.

Weâ ve spent *months* trying to find some sort of loophole to justify this activity. But there arenâ t any loopholes. David Brock has something to hide. Just last week, The Daily Callerreported the following:

â Brockâ s former long-time live-in boyfriend William Grey (whom Brock has thanked in several of his books) threatened to go to the IRS with damaging information about how Brock was running his Media Matters empire. What did Brock do? He paid Grey $850,000 to keep quiet. Brock reportedly had to sell his home in Rehoboth, Delaware to come up with the money. This certainly seems to indicate that Brock was terrified about what the authorities would uncover.â

Adding to this, Fox News reported the following:

â Grey accused Brock of â financial malfeasanceâ and threatened to undermine Brockâ s fundraising efforts.

â Next step is I contact all your donors and the IRS,â Grey wrote in an email dated May 19, 2010. â This is going to stink for you if you do not resolve this now.â â

We believe that the information presented in this article is what has Brock so terrified. We feel confident in saying, with close to absolute certainty, that **David Brock is laundering money through his Media Matters conglomerate.**

Look at the argument weâ ve been making on The Citizens Audit:

- The 14 organizations stuffed into Brockâ s office in Washington DC
- The fraudulent tax returns filed by Media Matters for America
- The dirty money flowing into the conglomerate via his unregistered solicitor, the Bonner Group
- The records exposed and analyzed in this article

Adding to this, we can also say, with close to absolute certainty, that David Brockâ s Media Matters conglomerate is breaking campaign finance law by illegally coordinating with the Clinton Campaign:

- The Clinton Campaignâ s illegal purchase of research from Brockâ s Super PAC
- Brockâ s shadow campaign for Hillary Clinton

We still have a couple articles worth of content to publish, and hope to wrap things up by the end of this week. We will then focus our efforts on promoting and exposing our findings.

If youâ d like to help, all we ask is that you share this article.

Weâ d also like to partner with you if youâ re interested in reposting our content on your own site. Please send an email to Andrew@TheCitizensAudit.com to get started.

Revision 33-45-D

How Obama's U.S. Department of Energy Defrauded Americans Out Of Their Life Savings In A Massive Crony Crime Cover-up

By The Commission - A Wikipedia-like public collaborative peer-to-peer news authoring network

If certain politicians are as 'impassioned to serve the public' as they say, then shouldn't they volunteer for office and allow the public to see all of their bank accounts?

Of course they will never do that because many of them are getting "**DARK MONEY**" covert payola and they are in office only to serve criminal kick-back schemes.

Politician's Dianne Feinstein, Barbara Boxer, Nancy Pelosi, Harry Reid and 42 others, sent out letters, emails, meeting requests and pitches to solicit members of the public to join a cause. The top staff of the U.S. Department of Energy (DOE) sent out the same pleas. They promised a "wonderful new opportunity for all" in the first market break for outsiders in 30 years.

In meetings, on camera, they promised to give members of the public a fair shot at a group of new Department of Energy funds that Obama had put in place.

They failed to mention one key fact: **ALL OF THE TAXPAYER MONEY HAD ALREADY BEEN SECRETLY PROMISED ("Hard Wired" it is called) TO OBAMA'S, AND THE DOE BOSSES, FRIENDS, IN ADVANCE.**
That is a felony violation of the law. A crime which FBI Director James Comey, and his staff covered up and which DOE Boss Steven Chu and his staff actively implemented. Our team knows this, as fact, because they reported directly to Comey, Chu and their offices.

It was not an '*accident*', it was not an '*oversight*', it was not '*an agency just overwhelmed with paper*'. It was a precision controlled, coordinated organized crime effort designed to ***rape***, both, the U.S. taxpayers and the non-crony applicants for these funds.

The crime used the traditional bribes, crony payola contracts, revolving doors, sex worker payoffs and other political corruption but it mainly used a new tactic called "Dark Money'.

Our team knows this because some of them were solicited to participate in these crimes and some of them had close personal relationships with the politicians who are now known to have operated these crimes. Some of our witnesses and insiders have been involved with the DOE since before 2000. They have 'seen it all'.

Companies, their executives and their investors were induced by California and New York Senators, White House Staff and the top staff of the U.S. Department of Energy to invest many years of their lives, and tens of millions of dollars of their personal cash in a fake government program which only existed to pay off Obama's political financiers.

American taxpayers were lied to and ruined by the U.S Department of Energy and their damages are increasing monthly. The DOE never apologized, offered fixes or provided anything other than Fusion-GPS kinds of attacks on those who asked for help or who reported the crimes.

This scam happened in 2008. History has proven that the DOE funds, since then, were rigged. Congress, the news media and special investigations have proven that these crimes happened. Nothing has ever been done to help the victims (over 100 companies and over 1800 individuals) recover from their state-sponsored losses.

How does DOE Dark Money work? Let's take a look:

In the politics of the United States, **dark money** is funds given to nonprofit organizationsâ and include 501(c)(4)(social welfare) 501(c)(5) (unions) and 501(c)(6) (trade association) groupsâ that can receive unlimited donations from corporations, individuals, and unions, and spend funds to influence elections, but are not required to disclose their donors.[3][4] Dark money first entered politics with *Buckley v. Valeo* (1976) when the United States Supreme Court laid out Eight Magic Words that define the difference between electioneering and issue advocacy.

According to the Center for Responsive Politics, "spending by organizations that do not disclose their donors has increased from less than $5.2 million in 2006 to well over $300 million in the 2012 presidential cycle and more than $174 million in the 2014 midterms."[3] The *New York Times* editorial board has opined that the 2014 midterm elections were influenced by "the greatest wave of secret, special-interest money ever raised in a congressional election."[5]

The term was first used by the Sunlight Foundation to describe undisclosed funds that were used during the United States 2010 mid-term election.[6][7] Its practical effect has been described by Donald Trump as Congress "being under the magical spell of the donors."[8]

In some elections, dark money groups have surpassed traditional political action committees (PAC) and "super PACs" (independent-expenditure-only committees) in the volume of spending.[4] In 2014, the group Freedom Partners was identified as the "poster child" for the rise of dark money.[4] In 2012, Freedom Partners had the ninth-highest revenues among all U.S. trade associations which filed tax returns that year, more than "established heavyweights" such as the American Petroleum Institute, PhRMA, and U.S. Chamber of Commerce.[4] Freedom Partners largely acted as a conduit for campaign spending; of the $238 million it spent in 2012, 99 percent went to other groups, and Freedom Partners itself did not have any employees.[4] This was a major distinction between other high-revenue trade associations, which typically have many employees and devote only about 6 percent of spending to grants to outside groups.[4]

The rise of dark money groups was aided by the U.S. Supreme Court decisions in *FEC v. Wisconsin Right to Life, Inc.* (2008) and *Citizens United v. FEC* (2010).[4] In *Citizens United*, the Court ruled (by a 5â 4 vote) that corporations and unions could spend unlimited amounts of money to advocate for or against political

candidates.[9]

2010 election cycle

According to the Center for Responsive Politics, dark money (which it defined as funds from outside groups that did not publicly disclose donors, plus groups that received a substantial portion of their contributions from such nondisclosing groups) accounted for nearly 44% of outside spending in the 2010 election cycle.[10]

In the 2012 election cycle, more than $308 million in dark money was spent, according to the Center for Responsive Politics.[11] An estimated 86 percent was spent by conservative groups, 11 percent by liberal groups and 3 percent by other groups.[11]

The three dark money groups which spent the largest sums were Karl Rove's American Crossroads/Crossroads GPS ($71 million), the Koch brothers' Americans for Prosperity ($36 million) and the U.S. Chamber of Commerce ($35 million), all conservative groups.[11][12] Aside from a complex, and still highly covert network created by The Clinton Foundation, Media Matters and The Podesta Group, the three liberal groups with the largest dark-money expenditures were the League of Conservation Voters ($11 million), Patriot Majority USA, a group focusing on public schools and infrastructure ($7 million), and Planned Parenthood (almost $7 million).[11]

The 2014 election cycle saw the largest amount of dark money ever spent in a congressional election; the *New York Times*editorial board described 2014 "the greatest wave of secret, special-interest money ever."[5] On the eve of the election, Republican-leaning dark money groups dominated, with $94.6 million in expenditures, exceeding dark money expenditures by Democratic-leaning dark money groups ($28.4 million), and by expenditures that could not be classified ($1.9 million).[13] Karl Rove's dark money group Crossroads GPS alone spent over $47 million in the 2014 election cycle.[14]

In the Senate elections, dark money spending was highly concentrated in a handful of targeted competitive states, and especially in Alaska, Arkansas, Colorado, Kentucky, and North Carolina.[15] In the eleven most competitive Senate races, $342 million was spent by non-party outside groups, significantly more than the $89 million spent by the political parties.

In the 2014 Kentucky election, a key player was the "Kentucky Opportunity Coalition," a group supporting Mitch McConnell, Republican of Kentucky,[16] whom the *New York Times* editorial board has described as "the most prominent advocate for unlimited secret campaign spending in Washington."[5] The Kentucky Opportunity Coalition, a 501(c)(4) "social welfare" group,[17] raised more than $21 million, while McConnell raised about $32 million and McConnell's opponent, Democratic candidate Alison Lundergan Grimes, raised about $19 million.[17] According to a Center for Public Integrity analysis of data provided by advertising tracking firm Kantar Media/CMAG, the group ran more than 12,400 television advertisements.[17] Every Kentucky Opportunity Coalition's television advertisements mentioned either McConnell or Grimes; overall, about 53 percent of the group's ads praised McConnell while the rest were attack ads against Grimes.[18] The Kentucky Opportunity Coalition relied heavily on political consultants in Washington, D.C. and Virginia linked to Karl Rove's Crossroads groups,[19] and received $390,000 in a grant from Crossroads GPS.[17] Described as "mysterious," the group was listed by a Post Office box,[17] and the only name formally associated with the group was political operative J. Scott Jennings, a deputy political director in the George W. Bush administration, a worker for McConnell's previous campaigns.[18] Melanie Sloan of the watchdog organization Citizens for Responsibility and Ethics in Washington said that the Kentucky Opportunity Coalition was "nothing more than a sham."[17]

Dark money also played a role in other competitive Senate seats in 2014. In ten competitive Senate seats, the winners had the following in dark-money support, according to an analysis by the Brennan Center for Justice at New York University School of Law:[20]

Winning Candidate	Dark Money in Support	Dark Money as % of Nonparty Outside Spending in Support
Thom Tillis (R-NC)	$22,888,975	81%
Cory Gardner (R-CO)	$22,529,291	89%
Joni Ernst (R-IA)	$17,552,085	74%
Mitch McConnell (R-KY)	$13,920,163	63%
Tom Cotton (R-AR)	$12,502,284	65%
David Perdue (R-GA)	$11,098,585	86%
Dan Sullivan (R-AK)	$10,823,196	85%
Pat Roberts (R-KS)	$8,454,938	78%
Gary Peters (D-MI)	$4,226,674	28%
Jeanne Shaheen (D-NH)	$3,478,039	35%
Total	$127,475,231	71%

In North Carolina, the pro-Tillis group "Carolina Rising" received nearly all (98.7%) of its funds from Crossroads GPS; the Center for Responsive Politics highlighted this as an example of how Crossroads GPS, a 501(c)(4) group, "evades limits on political activity through grants" to other 501(c)(4) groups.[16][21] In the 2014 cycle, Crossroads GPS also gave $5.25 million to the U.S. Chamber of Commerce, $2 million to the American Future Fund, and $390,000 to the Kentucky Opportunity Coalition.[21] In total, Crossroads GPS spent more than $13.6 million on grants to other groups, which it described as being for the purposes of "social welfare."[21]

In 2014, the Democratic Party-aligned dark money group Patriot Majority USA, a 501(c)(4), spent almost $13.7 million on "direct and indirect political campaign activities," airing 15,000 television ads in targeted Senate races.[22] About half of the $30 raised by the group came from five anonymous donors.[22] The group was led by Craig Varoga, "a staunch ally" of Senate Minority Leader Harry Reid, Democrat of Nevada.[22]

In Alaska, Mark Begich was "one of the few Democratic candidates to come close to receiving as much support from dark money as his Republican opponent."[15] The pro-Begich Alaska Salmon PAC, funded entirely by the League of Conservation Voters and its Alaska affiliate, spent funds in support of Begich.[15]

According to the Center for Responsive Politics, by October 2015, $4.88 million in dark money had already been spent for the 2016 election cycle, "more than 10 times the $440,000 that was spent at this point during the 2012 cycle."[11] The money was spent by six groups - five conservative groups (including the U.S. Chamber of Commerce, which spent $3 million, and Americans for Prosperity, which spent $1.5 million) and one liberal group (Planned Parenthood, which spent just under $75,000).[11]

According to Richard Skinner of the Sunlight Foundation, "the focus of early dark money being spent in the 2016 cycle" is on competitive U.S. Senate elections and some U.S. House of Representatives races.[11] However, dark money also is playing a role in the 2016 Republican presidential primaries; by June 2015, at least four Republican presidential candidates were raising funds via 501(c)(4) organizations: Bobby Jindal's America Next, Rick Perry's Americans for Economic Freedom, John Kasich's Balanced Budget Forever, and Jeb Bush's Right to Rise.[23]

Comparison to (and relationship with) super PACs[edit]

Dark money (501(c)) groups and super PACs compared
(source: Sunlight Foundation[24])

	Super PACs	Dark-money groups

	Super PACs	Dark-money groups
Type of entity	Campaign committee (regulated by FEC)	Nonprofit (regulated by IRS)
Disclosure of contributors required?	Yes	No
Disclosure of expenditures required?	Yes	Through tax filings (Form 990s) (Typically delayed by year or more; often submitted long after elections have ended)
Limits on dollar amount of contributions?	None	None
Can be wholly political?	Yes	No (political activity cannot be majority of expenditures)
Coordination with candidates?	Impermissible	Impermissible

501(c) "dark money" groups are distinct from super PACs.[25]While both types of entity can raise and spend unlimited sums of money, super PACs "must disclose their donors," while 501(c) groups "must not have politics as their primary purpose but don't have to disclose who gives them money."[25] However, a single individual or group can create both types of entity and combine their powers, making it difficult to trace the original source of funds.[25][26] ProPublica explains: "Say some like-minded people form both a Super-PAC and a nonprofit 501(c)(4). Corporations and individuals could then donate as much as they want to the nonprofit, which isn't required to publicly disclose funders. The nonprofit could then donate as much as it wanted to the Super-PAC, which lists the nonprofit's donation but not the original contributors."[25] In at least one high-profile case, a donor to a super PAC kept his name hidden by using an LLC formed for the purpose of hiding their personal name.[27] One super PAC, that originally listed a $250,000 donation from an LLC that no one could find, led to a subsequent filing where the previously "secret donors" were revealed.[28]

During the 2016 election cycle, "dark money" contributions via shell LLCs became increasingly common.[29] The Associated Press, Center for Public Integrity, and Sunlight Foundation all "flagged dozens of donations of anywhere from $50,000 to $1 million routed through non-disclosing LLCs to super PACs" backing various presidential candidates, including Marco Rubio, Hillary Clinton, Ted Cruz, John Kasich, Jeb Bush, and Carly Fiorina.[29]
Bradley A. Smith, a former FEC chairman who is now with the Center for Competitive Politics, a group that opposes campaign-finance reform, argues that this practice is not problematic, writing that "it is possibly the making of a campaign contribution in the name of another," a violation of existing law.[30]

According to Kathy Kiely, managing editor of the Sunlight Foundation, "untraceable dark money is a preferred tactic of conservatives, while Democrats tend to use traceable super PACs."[31]

The first federal law requiring disclosure of campaign contributions, the Federal Corrupt Practices Act, was passed in 1910. By the late 1970s, virtually all states and the federal government required public disclosure of campaign contributions and information on political donors. Most states and the federal government also required public disclosure of information about donors and amounts spent on independent expenditures, that is, expenditures made independently of a candidate's campaign.

In January 2010, at least 38 states and the federal government required disclosure for all or some independent expenditures or electioneering communications, for all sponsors.[32]

Yet despite disclosure rules, it is possible to spend money without voters knowing the identities of donors before the election.[33][34]In federal elections, for example, political action committees have the option to choose to file reports on a "monthly" or "quarterly" basis.[35][36][37] This allows funds raised by PACs in the final days of the election to be spent and votes cast before the report is due.

In addition to PACs, non-profit groups ranging from Planned Parenthood to Crossroads may make

expenditures in connection with political races. Since these non-profits are not political committees, as defined in the Federal Election Campaign Act, they have few reporting requirements beyond the amounts of their expenditures. They are not required by law to publicly disclose information on their donors. As a result, voters do not know who gave money to these groups. Reports have disclosed instances where non-profits were managed by close associates, former staff, or a candidate's family member, and this has led to concern that the candidates benefiting from their expenditures would be able to know who donated the funds to the non-profit group, but the public would not.[38] [39]

For example, in the 2012 election cycle, one organization, the National Organization for Marriage, or NOM, operated two non-profit arms that received millions in donations from just a few donors. It in turn funded several different PACs. While these PACs had to disclose that NOM contributed the funds, they were not required to disclose who gave money to NOM.[40]

On March 30, 2012 a U.S. District Court ruled that all groups that spend money on electioneering communications must report all donors that give more than $1,000.[41][42] However, this ruling was overturned on appeal.[43]

Legislative and regulatory proposals and debate over dark moneyAccording to Columbia Law School's Richard Briffault, disclosure of campaign expenditures, contributions, and donors is intended to deter corruption.[45]

The Federal Elections Commission, which regulates federal elections, has been unable to control dark money. According to the Center for Public Integrity, FEC commissioners are voting on many fewer enforcement matters than in the past because of "an overtaxed staff and commissioner disagreement."[12] The IRS (rather than the FEC) is responsible for oversight of 501(c)(4) groups.[12] The IRS "found itself ill-prepared for the groundswell" of such groups taking and spending unlimited amounts of money for political purposes in the wake of the U.S. Supreme Court's decision in *Citizens United v. Federal Election Commission* in 2010.[12] The agency particularly "struggled to identify which organizations appeared to be spending more than the recommended 50 percent of their annual budgets on political activitiesâ and even to define what 'political spending' was."[12] When the IRS began looking at nonprofit spending, it was accused of improper targeting in a 2013 controversy.[12]

"With the FEC and IRS duly sidelined" advocates for disclosure turned to the Securities and Exchange Commission (SEC); nine academics from universities across the U.S. filed petitioned the SEC in August 2011 for the agency to "develop rules to require public companies to disclose to shareholders the use of corporate resources for political activities."[12] The petition received over a million comments in the following month, "a record amount for the SEC, with the overwhelming majority of voters asking for better disclosure."[12] According to Lucian Bebchuk, a Harvard professor of law, economics, and finance who helped draft the petition, the request had drawn the support of "nearly a dozen senators and more than 40 members of the House."[12] Under current SEC regulations, public corporations must file a Form 8-K report to publicly announce major events of interest to shareholders.[46] The Sunlight Foundation, a group which advocates for a comprehensive disclosure regime, has proposed that the 8-K rule should be updated to require that aggregate spending of $10,000 on political activities (such as monetary contributions, in-kind contributions, and membership dues or other payments to organizations that engage in political activities) should be disclosed and made publicly available via the 8-K system.[46]
In 2015, Republicans in Congress successfully pushed for a rider in a 2015 omnibus spending bill that bars the IRS from clarifying the social-welfare tax exemption to combat dark money "from advocacy groups that claim to be social welfare organizations rather than political committees."[47]

Other provisions in the 2015 bill bar the SEC from requiring corporations to disclose campaign spending to shareholders, and a ban application of the gift tax to nonprofit donors. The Obama administration opposed

these provisions, but President Obama eventually acceded to them in December 2015, with the White House declining to comment. The nonpartisan Campaign Legal Center said in a statement that the dark-money provision ensures "that the door to secret foreign dollars in U.S. elections remains wide open through secret contributions to these ostensibly 'nonpolitical' groups that run campaign ads without any disclosure of their donors."[47]

The Center for Competitive Politics (CCP), chaired by former FEC chairman Bradley A. Smith, opposes legislation to require the disclosure of dark-money groups, saying: "Our view is that many people will be driven out of politics if they are forced to disclose their names and their personal information. The purpose of disclosure is to help people monitor the government, not for the government to monitor the people."[12] The Center for Competitive Politics views "dark money" as a pejorative term, stating that the phrase "evokes an emotional, fearful reaction" and contending that "many of the statistics published on the topic aim to mislead rather than enlighten."[48] The CCP maintains that dark money "comprises a very small percentage of total campaign spending," calculating the percent of money spent in federal elections by organizations that did not provide itemized disclosure of their donors as 4.3% in 2012 and 3.7% in 2014.

The U.S. Department of Energy was complicit in the processing of Dark Money payola cycling to Obama's financiers as a 'hand-on' operator of a RICO-class crime.

All of the ruckus with Donald Trump and California/DOE VS. Trump is almost entirely based on West Coast and New York corrupt senators, and their insiders, freaking out about their Dark Money organized crime payola scam coming apart and getting exposed.

Thereâ s a reason why David Brock chooses to house an unregistered Professional Solicitor in his office to raise money for his conglomerate of Super PACs and non-profits.

Professional Solicitors are required to disclose their active solicitation contracts. Brock wants his unregistered solicitor, the Bonner Group, to keep their client list hidden for a very specific reason.

DAVID BROCK IS LAUNDERING MONEY

David Brock has 7 non-profits, 3 Super PACs, one 527-committee, one LLC, one joint fundraising committee, and one unregistered solicitor crammed into his office in Washington DC.

Uncovered records expose a constant flow of money between these organizations.

The Bonner Group, his professional solicitor, works off a commission. *Every time* money gets passed around, Bonner receives a 12.5% cut.

FOLLOW THE MONEY

Nonprofits are required to disclose who they give cash grants to.

But they arenâ t required to disclose who gave them cash grants.

This weak system of one way verification is being abused by Brock. Heâ s been cycling money between

his organizations for years, and the Bonner Groupâ s 12.5% commission gets triggered after every pass.

In 2014, Media Matters for America raised $10,021,188.

The Bonner Group was credited for raising these funds. Media Matters paid them a $1,147,882 commission.

That same year, Media Matters gave a $930,000 cash grant to David Brockâ s Franklin Education Forum, an organization that shares office space with Media Matters.

In 2014, the Franklin Education Forum reported $994,000 in total contributions. 93.6% of that total came from Media Matters!

Surprisingly, though, the Franklin Education Forum gave full credit to Bonner for raising that money. They paid the fundraiser a $124,250 commission in 2014!

NOTICE WHAT HAPPENED?

1. David Brockâ s *Media Matters* gave a $930,000 cash grant to David Brockâ s *Franklin Education Forum*
2. David Brockâ s *Franklin Education Forum* credited *the Bonner Group* for raising those funds, triggering the 12.5% commission
    - David Brock paid *the Bonner Group* a $124,250 commission to solicit a cash grant â ¦*from himself!*

IT DOESNâ T STOP THERE

After the Franklin Education Forum retained $869,750, they sent a $816,224 cash grant to David Brockâ s *The Franklin Forum*:

Note: The â Franklin Education Forumâ is a 501(c)3, and â The Franklin Forumâ is a 501(c)4. They are not the same company.

Since The Franklin Forum 501(c)4 paid Bonner a commission in 2013, itâ s safe to assume fundraiser received a $102,028 commission in 2014. Unfortunately, itâ s hard to tell for sure. They still havenâ t filed their taxes for 2014!

LETâ S RECAP

Say, for example, you donate $1,062,857 to Media Matters for America. This is how David Brock would have used your charitable donation in 2014:

1. **Media Matters** would receive your $1,062,857 donation
    - **The Bonner Group** would earn a $132,857 commission
    - **Media Matters** would retain $930,000
2. Next, **Media Matters** would give whatâ s left of your *entire donation*, $930,000, to the **Franklin Education Forum**
    - The **Bonner Group** would â earnâ a $116,250 commission
    - The **Franklin Education Forum** would retain $813,750
3. The **Franklin Education Forum** would then forward the remaining $813,750 to **The Franklin Forum**
    - The **Bonner Group** would â earnâ a $101,718 commission
    - **The Franklin Forum** would retain $712,031

In the end, Brockâ s solicitor would have pocketed $350,825, almost a third of your initial donation! Thatâ s a far cry from the advertised 12.5% commission.

As bizarre as that scenario may sound, this is *exactly* what David Brock did in 2014.

HOW CAN WE BE SURE THIS IS INTENTIONAL?

David Brock is the Chairman for each of these organizations! How could he *not* know whatâ s going on?

Heâ s a hands-on Chairman. According to their tax returns, Brock allocates time, weekly, to his organizations:

- Media Matters: 31.50 hours per week
- Franklin Education Forum: 3 hours per week
- The Franklin Forum: 1 hour per week

Furthermore, the New York Times reports that David Brock shares a summer rental in the Hamptons with Mary Pat Bonner, the President of the Bonner Group!

David Brock will have a hard time claiming ignorance on this. These transfers are intentional. He vacations with his solicitor. Case closed.

STILL NOT CONVINCED?

David Brock didnâ t even bother to give his organizations different phone numbers. *They all share the same phone number!*

WHAT IFâ ¦?

We even located the Bonner Groupâ s solicitation agreement with Media Matters on Floridaâ s Gift Giversâ Guide. Clarification on their commission can be found on page 2:

In English: Contractually, David Brock has the option to exclude certain contributions from triggering the commission. In spite of this option, he intentionally chooses to trigger the 12.5% commission for money grants between his organizations.

Note: Yes, we are making the assumption that all of Brockâ s organizations have the same solicitation agreement with the Bonner Group. Given that his organizations share the same address, board members, and telephone number, we feel itâ s safe to assume they also share the same solicitation agreement.

THIS BARELY SCRATCHES THE SURFACE

Utilizing public facing tax returns, along with records submitted to the FEC, we mapped out all the significant money transfers from 2014 that took place in Brockâ s office:

This is all from just one year! No further commentary required.

We understand this may be hard to believe. We first came across this in July, and are still having a hard time wrapping our heads around it.

All of the data referenced in this article originated from publicly accessible sources. Check for yourself â we provided links to the source material in our article exposing the organizations operating in Brockâ s office, This data has been sitting out in the open, gathering dust for *years!*

SUMMARY

If it looks like a duck, swims like a duck, and quacks like a duck, then it probably is a duck.

Weâ ve spent *months* trying to find some sort of loophole to justify this activity. But there arenâ t any loopholes. David Brock has something to hide. Just last week, The Daily Callerreported the following:

â Brockâ s former long-time live-in boyfriend William Grey (whom Brock has thanked in several of his books) threatened to go to the IRS with damaging information about how Brock was running his Media Matters empire. What did Brock do? He paid Grey $850,000 to keep quiet. Brock reportedly had to sell his home in Rehoboth, Delaware to come up with the money. This certainly seems to indicate that Brock was terrified about what the authorities would uncover.â

Adding to this, Fox News reported the following:

â Grey accused Brock of â financial malfeasanceâ and threatened to undermine Brockâ s fundraising efforts.

â Next step is I contact all your donors and the IRS,â Grey wrote in an email dated May 19, 2010. â This is going to stink for you if you do not resolve this now.â â

We believe that the information presented in this article is what has Brock so terrified. We feel confident in saying, with close to absolute certainty, that **David Brock is laundering money through his Media Matters conglomerate.**

Look at the argument weâ ve been making on The Citizens Audit:

- The 14 organizations stuffed into Brockâ s office in Washington DC
- The fraudulent tax returns filed by Media Matters for America
- The dirty money flowing into the conglomerate via his unregistered solicitor, the Bonner Group
- The records exposed and analyzed in this article

Adding to this, we can also say, with close to absolute certainty, that David Brockâ s Media Matters conglomerate is breaking campaign finance law by illegally coordinating with the Clinton Campaign:

- The Clinton Campaignâ s illegal purchase of research from Brockâ s Super PAC
- Brockâ s shadow campaign for Hillary Clinton

We still have a couple articles worth of content to publish, and hope to wrap things up by the end of this week. We will then focus our efforts on promoting and exposing our findings.

If youâ d like to help, all we ask is that you share this article.

Weâ d also like to partner with you if youâ re interested in reposting our content on your own site. Please send an email to Andrew@TheCitizensAudit.com to get started.

How RUSSIA BRIBED the US Government into selling Uranium. RUSSIA COLLUSION!

Click to enlarge

Hilary got millions of $$ via her â Charityâ for a bad deal on Uranium while the FBI turned a blind eye on bribery.

From Newsweek:

FBI KEPT RUSSIAN BRIBERY PLOT UNDER WRAPS BEFORE OBAMA ADMINISTRATION APPROVED NUCLEAR DEAL WITH MOSCOW
he Obama administration signed a controversial nuclear deal with Moscow despite prior FBI findings that Russian officials were bribing their way into the U.S. atomic energy industry, according to government documents just published by The Hill.

A confidential U.S. witness deployed by the FBI infiltrated Russiaâ s nuclear industry and made secret recordings, collected financial records and intercepted emails dating back to 2009 that showed that Moscow engaged in bribery and kickbacks with an American uranium trucking company, documents show.

But the Obama administration insisted no evidence existed of Russian interference and that there were no national security concerns for committee members to go against the deal in 2010.

The deal that boosted Vladimir Putinâ s nuclear footprint in the U.S. took place in October 2010 when the State Department and the Committee on Foreign Investment unanimously agreed to a partial sale of Uranium One, a Canadian mining company, to the major Russian nuclear company Rosatom, effectively sending more than 20 percent of the U.S.â s uranium to Moscow.

In 2011, the Obama administration gave the green light for Rosatomâ s Tenex subsidiary to sell uranium to American nuclear power plants. Before the deal, Tenex could only sell reprocessed uranium from dismantled Soviet nuclear firearms to power plants in the U.S.

Russian exortion threats and kickbacks brought legitimate national security concerns, â And none of that evidence got aired before the Obama administration made those decisions,â a souce who insisted on anonymity out of fear of retribution told The Hill.

Then-U.S. Attorney Rod Rosenstein â who was appointed by President George W. Bush and reappointed by President Barack Obama, and is now President Donald Trumpâ s deputy attorney general â and

then-Assistant FBI Director Andrew McCabe, who serves as deputy FBI director under Trump, supervised the investigation, documents show.

FBI agents also gathered documents and a witness account that Russian officials routed millions of dollars to ex-President Bill Clintonâ s charitable foundation while Secretary of State Hillary Clinton sat on a committee that gave a nod to the dealings with Moscow.

Like the Obama administration, the Clintons said there was no evidence to prompt them to go the other way on the Uranium One deal.

The Department of Justice investigated the Russian plot for close to four years, keeping the information under wraps while the Obama administration approved the deal instead of bringing immediate charges.

Hillary Clinton Requested FBI Director Mueller Deliver Highly Enriched Uranium To Russians In 2009

How The COVID Testing Failure At The CDC Mirrored The Cleantech Crash Failure At The Dept of Energy

On a Jan. 15 conference call, a leading scientist at the federal Centers for Disease Control and Prevention assured local and state public health officials from across the nation that there would soon be a test to detect a mysterious virus spreading from China. Stephen Lindstrom told them the threat was remote and they may not need the test his team was developing "unless the scope gets much larger than we anticipate," according to an email summarizing the call.

"We're in good hands," a public health official who participated in the call wrote in the email to colleagues.

Three weeks later, early on Feb. 8, one of the first CDC test kits arrived in a Federal Express package at a public health laboratory on the east side of Manhattan. By then, the virus had reached the United States, and the kits represented the government's best hope for containing it while that was still possible.

For hours, lab technicians struggled to verify that the test worked. Each time, it fell short, producing untrustworthy results.

That night, they called their lab director, Jennifer Rakeman, an assistant commissioner in the New York City health department, to tell her it had failed. "Oh, s---," she replied. "What are we going to do now?"

In the 21 days that followed, as Trump administration officials continued to rely on the flawed CDC test, many lab scientists eager to aid the faltering effort grew increasingly alarmed and exasperated by the federal government's actions, according to previously unreported email messages and other documents reviewed by The Washington Post, as well as exclusive interviews with scientists and officials involved.

In their private communications, scientists at academic, hospital and public health labs - one layer removed from federal agency operations - expressed dismay at the failure to move more quickly and frustration at bureaucratic demands that delayed their attempts to develop alternatives to the CDC test.

"We have the skills and resources as a community but we are collectively paralyzed by a bloated bureaucratic/administrative process," Marc Couturier, medical director at academic laboratory ARUP in Utah, wrote to other microbiologists on Feb. 27 after weeks of mounting frustration.

The administration embraced a new approach behind closed doors that very day, concluding that "a much broader" effort to testing was needed, according to an internal government memo spelling out the plan. Two days later, the administration announced a relaxation of the regulations that scientists said had hindered private laboratories from deploying their own tests.

By then, the virus had spread across the country. In less than a month, it would upend daily life, shuttering the world's largest economy and killing thousands of Americans.

In a statement to The Washington Post, the CDC said an investigation of the initial problems is ongoing. The test is now in use in every state and is "accurate and reliable," the agency said.

Stephen Hahn, the commissioner of the Food and Drug Administration, which regulates testing, told The Post the agency is continuously adapting to an "unprecedented global public health crisis."

"Right now, our efforts are focused on doing everything we can do to fight COVID-19, but we know there will certainly be a time to learn larger lessons from the agency's response," he said in a statement, referring to the disease caused by the novel coronavirus.

In an interview Thursday, Brett Giroir, a Public Health Service admiral who on March 12 was named the top administration official on the testing effort, acknowledged the government should have moved more decisively to detect and contain the virus.

"There was a clear need for a more aggressive posture," said Giroir, an assistant secretary at the Department of Health and Human Services.

Asked who was responsible for the delays in the early stages of the crisis, he paused.

"A problem like this is bigger than any single agency," he said. "Clearly, there needed to be a higher level of leadership and organization."

- - -

The first reports about a strange, possibly unknown virus started leaking out of China in late December. Scientists and researchers in the United States and around the world began paying keen attention to the apparent epicenter of the spread, a sprawling industrial city in central China called Wuhan.

Among those keeping close track were virologists and other specialists at the U.S. Centers for Disease Control and Prevention, the country's flagship public health agency. Founded in 1946 to fight malaria in Southern states, the CDC is at the vanguard in the fight against infectious diseases throughout the nation. It employs some 22,000 epidemiologists, biologists, behavioral scientists and others. Recent successes include rapid responses to contain the Zika, MERS and Ebola viruses.

In early January, the CDC publicly treated the virus from Wuhan as a distant potential threat, issuing an advisory urging that the "usual precautions" be taken when traveling abroad.

The agency also began laying plans to protect the country. Led by Lindstrom, one team began considering the kinds of tests, technically called assays, that could identify the virus.

Lindstrom is a microbiologist with an impressive track record: He had helped develop a testing method critical to detecting the H1N1 virus in 2009. During a Jan. 7 conference call, he told public health officials that the CDC's aim was to "plan for the worst, hope for the best," according to an email exchange among scientists and others. Lindstrom, like several other officials named in this report, did not respond to requests for interviews.

On Jan. 10, CDC scientists received an important break when the Chinese government published the pathogen's genetic sequence. The sequence, a long string of letters representing the RNA structure of SARS-CoV-2 described a coronavirus never before seen in humans. It also gave scientists a path to create a precise diagnostic test that could detect the virus.

CDC has long led the nation's efforts to create diagnostic tests when a public health threat emerges. The agency usually distributes the tests to a network of state and county public health labs nationwide, using the results to track and contain new pathogens until large-scale commercial tests come online.

But state and local public health labs juggle an immense array of responsibilities, including water and food safety, and government studies dating back two decades have found the public health labs often lack the money and resources to keep pace with the demands.

On the Jan. 15 call, Lindstrom told more than a dozen public health officials that the CDC planned to make its test available to all state and county public health labs. He assured them "there will not be pressure for everyone (at least from CDC) to implement unless the scope gets much larger than we anticipate right now," according to the email summary written by Kelly Wroblewski, director of infectious disease programs at the Association of Public Health Laboratories.

CDC scientists were not the only ones interested in creating a test. Commercial laboratories began to mobilize, and scientists at major hospitals and universities sprang into action to develop tests of their own.

One of them was Alex Greninger, 38, an assistant director of the University of Washington's clinical virology lab. For Greninger, the chance to create a diagnostic test for a novel coronavirus was a rare opportunity.

Researchers at the University of Nebraska, Stanford University and elsewhere also began taking their first steps toward inventing tests for the virus to use in their own labs. These academic labs didn't have the capacity to process the millions of tests that would be needed in the event of a pandemic, a scale that is achievable only

by commercial labs, but their limited testing capabilities might have helped efforts to detect and slow the virus in its early stages.

On Jan. 16, the day Greninger started buying supplies for his test, a 35-year-old man who had recently visited Wuhan became ill with flu-like symptoms after returning to the Seattle area, according to a CDC incident report. The man went to his doctor, who swabbed his nose and sent the sample to the CDC, according to the report.

Four days later, using its newly developed test, the CDC confirmed that the man was the first person in the United States known to be infected with the novel coronavirus.

In a CNBC interview two days after that, President Donald Trump downplayed the threat to Americans.

"We have it totally under control," he said.

- - -

Designing the test took CDC scientists seven days -- a stunningly short period of time for a health-care system built around the principles of medical quality and patient safety, not speed.

The CDC could use the test in its Atlanta labs but could not send it out to public health labs until it won approval from the FDA. On Jan. 28, Lindstrom and others at the CDC assured public health scientists in a conference call that "CDC's goal is to get (FDA approval) as quickly as possible and expects the assay will be ready to deploy within two weeks, possibly sooner," according to an Association of Public Health Laboratories' summary of the call.

Although the CDC test was a priority, the FDA was also fielding inquiries from other test developers. At the end of January, about 20 companies and scientific groups were talking with the FDA about their plans to develop tests, according to two government officials familiar with those inquiries who like many others interviewed for this story spoke on the condition of anonymity to discuss sensitive matters.

At the same time, pressure on the Trump administration to take action was growing. The number of people who had died of the infection worldwide spiked to 200 by Jan. 30, when the World Health Organization declared the virus a public health emergency of international concern.

The next day, Health and Human Services Secretary Alex Azar announced a health emergency in the United States. At the time, Azar was the leader of the White House's newly created coronavirus task force.

The declaration was one of the most significant moments in the unfolding crisis. Such declarations provide the FDA flexibility to speed up approvals for critical medical products, including commercial diagnostic tests. But they also trigger strict limits on scientists in government-certified clinical labs at universities, research centers and hospitals.

Those labs are typically permitted by the FDA to make and use their own tests without government approval, including to make decisions about patient care, as long as they use them only in their own facilities and do not sell them.

But once Azar announced a public health emergency, tests created in such laboratories had to receive an "emergency use authorization," or EUA, from the FDA. The additional regulation is intended to ensure the efficacy of tests in public health crises in which inaccurate results could be damaging.

The new regulatory hurdle stalled efforts like the one underway by Greninger at the University of

Washington. Greninger and other scientists were located in some of the nation's early coronavirus hot spots, where successful tests might have helped reveal the scope of the outbreak. Suddenly, their hands were tied.

Clinical scientists fumed about the new obstacle, according to exchanges in private online chat groups among academics and scientists.

"The EUA process is flawed, broken, and inefficient," Couturier, the medical director and diagnostic specialist at ARUP Laboratories in Utah, wrote later on ClinMicroNet, a private message system for microbiology lab directors across the world.

In a statement this week, the FDA said its regulations "had not hindered or been a roadblock" to the rollout of tests.

"Every action the FDA has taken during this public health emergency to address the COVID-19 pandemic has balanced the urgent need to make diagnostic tests available with providing a level of oversight that ensures accurate tests are being deployed," the agency said.

But in his interview, Giroir offered a different analysis.

"If someone says they were a barrier, to me, you have to believe them," he told The Post. "If they thought it was a barrier, it becomes a barrier."

One person familiar with the emergency declaration told The Post that FDA career staff did not raise concerns about the EUA's burdens on clinical labs to Azar or to FDA leaders. Azar oversees the FDA.

Hahn had been confirmed by the Senate as FDA commissioner on Dec. 12 - just seven weeks before Azar's declaration. Before that, Hahn was a radiation oncologist and chief medical executive at the MD Anderson Cancer Center in Houston.

Hahn's agency approved the CDC test on Feb. 4, making it the country's only accepted test for the novel coronavirus. Public health officials in New York City, Nebraska, Colorado, Minnesota, New York state and elsewhere began receiving them four days later.

The test kits contain compact collections of chemicals known as reagents. The chemicals help isolate viral genetic material and then amplify it so that it can be detected by probes that also came with the kit.

Scientists in the local labs quickly recognized something was wrong. The assays often produced results that suggested the virus was present in samples in which scientists knew it was not.

On Feb. 8, when lab technicians for New York City's health department ran the test on samples that contained the virus, they saw on their computer screens a logarithmic curve sloping upward, indicating the virus was present. The problem was, they saw something similar when they ran the test on distilled water that contained no trace of the virus.

When they finally gave up that evening, the technicians called their director, Rakeman. Shortly before midnight, she relayed the bad news in an email to local health authorities. "The issue will need to be investigated and could result in significant impact to testing availability at the CDC and across the country until the issue is resolved," she wrote.

New York state lab officials also passed on the news, according to documents and interviews. "There is a technical problem in one of the reagents which invalidates the assay and will not allow us to perform the assay," the lab director of New York state's Wadsworth Center, Jill Taylor, wrote to state health officials in an

email that same night.

"I am sorry to not have better news," she wrote. "It is a bummer."

Word that some labs were having problems with the test quickly made its way back to the CDC.

"Is this something to worry about?" Daniel Jernigan, a leader of the CDC's coronavirus response, wrote to the Association of Public Health Laboratories the next morning as he prepared to board a plane.

It was, he was told.

Later that day, Scott Becker, chief executive of the association, raised concerns to another CDC official. "The states and their governors are going to come unglued," he wrote, adding later, "If CDC doesn't get ahead of this it will be a disaster."

As they struggled to make the test kit work, many of the public health labs realized they might succeed by eliminating one of its three main chemical components. But under the FDA's emergency rules, they could use the test only as it was approved. The flaw meant they could not use it at all.

"The silence from CDC . . . is deafening," Joanne Bartkus, the Minnesota health department's lab director, wrote to Becker on Feb. 10. "What is going on? We are getting questions from our governor's office and other labs are getting media requests asking when we will be starting."

By Feb. 12, a total of 2,009 tests had been conducted in the United States, according to CDC data.

"We're screwed from a testing standpoint if this thing takes off in the US," Susan Butler-Wu, director of medical microbiology at the Los Angeles County and University of Southern California Medical Center, warned in a Feb. 13 email to fellow scientists.

- - -

The United States was clearly falling behind in the fight against covid-19. Other countries such as Singapore and Taiwan were ramping up testing quickly. In South Korea, 1,000 people were being tested each day by mid-February, a number that would increase more than tenfold by the end of the month.

The Geneva-based World Health Organization, meanwhile, had already delivered 250,000 diagnostic tests designed and manufactured by a German lab to 70 laboratories around the world.

Academic and hospital researchers including Greninger eagerly experimented with the German lab design early on and found it workable, but U.S. health officials continued on their own path.

"To our knowledge, no discussions occurred between WHO and CDC (or other USG agencies) about WHO providing COVID-19 tests to the U.S.," WHO spokesman Tarik Jasarevic told The Post.

Hahn defended the U.S. government's approach at a news conference weeks later.

"In the U.S., we have policies in place that strike the right balance during public health emergencies of ensuring critical independent review by the scientific and public health experts and timely test availability," he said in a White House press briefing. "What's important here is that we have a test that the American people can trust."

The FDA's confidence in the flawed test was based in part on assurances from the CDC that it could be fixed

easily, according to officials familiar with the agency's deliberations.

In its statement to The Post, the CDC said it collaborated closely with the FDA and "encouraged our government partners to work with the private sector to develop diagnostic tests for commercial use and to remove restrictions for . . . labs in hospitals and universities across the county."

On Feb. 16, officials from the FDA and CDC met to discuss solutions, including the possibility of eliminating the component of the test that was causing problems, officials said. FDA officials said that would be a fast solution that could quickly get the public health labs up and running. But in the following days, the FDA learned that some public labs were reporting continuing problems with the test, the officials said.

As officials struggled to understand the test flaws, leading clinical labs were spending much of their time and energy on the FDA's paperwork and data demands to win approval for their tests.

The Mayo Clinic created its first-ever rapid response team. A third of the 15 members were devoted solely to the FDA's data and paperwork demands. Like others on the team, they worked 15-hour days for three weeks.

"It's unlike anything we've ever done before," said Matt Binnicker, a director of clinical virology at Mayo.

He said they decided to persist because, in a worst-case scenario, the public health labs alone could not test on the scale that would be needed. "The public health infrastructure is really not set up to handle a pandemic," he said.

At the University of Washington, Greninger and his fellow scientists were initially baffled by an FDA process they viewed as baroque. They had always worked under strict guidelines, aimed at protecting patients and guaranteeing quality. But the EUA was a bureaucratic puzzle they had never encountered.

"The most pernicious effect of the current regulatory environment is that it kneecaps our ability for preparedness should a true emergency emerge," Greninger wrote to colleagues on Feb. 14.

Greninger channeled his energy into the paperwork problem, spending more than 100 hours filling out forms and collecting information needed for the application, he told The Post. But when he finally submitted the material, an FDA official told him the agency could not accept it - because he had emailed it.

"We received your email and attachments regarding the UW 2019-nCoV assay pre-EUA," an FDA official wrote on Feb. 20. "However, we have not received the official submission through DCC."

"What is the DCC?" Greninger wrote back.

"The Document Control Center," came the reply.

"What is the Document Control Center?"

Greninger then learned about another requirement. Under FDA rules, he was supposed to digitally copy the electronic documents he had emailed to the FDA, burn the copies onto a disk and mail the hard disk to an office in suburban District of Columbia.

Greninger shared his exasperation in a Feb. 20 email to a colleague: "repeat after me, emergency."

In a statement, an FDA official said information sent by Greninger on Feb. 19 was promptly reviewed, despite not having been submitted properly, and was found to be insufficient to demonstrate that the test would work. The official said that after that interaction, "we immediately addressed how we receive applications."

"The FDA is improving ways we interact with developers of products to address the pandemic, including those we don't normally interact with," the official said.

By the time Greninger sent his email, the FDA was in discussions with dozens of test developers, a number that was growing quickly. But none had managed to complete a formal application to the FDA, according to officials familiar with the agency's actions. FDA officials interpreted the paucity of applications as a sign of limited ability or interest, the officials said.

Some private labs struggled to obtain samples of the virus necessary to verify their tests and complete their applications, according to government officials and lab representatives. An FDA official said that, at the time, the agency supported efforts to help those labs secure the necessary samples.

- - -

On Feb. 22, an FDA official named Timothy Stenzel flew to Atlanta. The director of a diagnostic office at the FDA, Stenzel was a key figure in the decisions about testing. The purpose of his visit was not clear to CDC officials, but he said he wanted to understand the testing development and help find a way to fix the troubled assay, according to three people familiar with the visit.

Stenzel spent much of the following week attending CDC meetings, touring the facilities and offering suggestions about how to cobble together viable tests from existing materials, the officials said.

At the same time, CDC officials, including Jernigan from the agency's influenza division, urged Stenzel to convince the FDA to approve other tests under development in private laboratories.

Anxiety about the lack of widespread testing, meanwhile, was cresting among scientists and public health officials nationwide. Many felt the country could wait no longer.

On Feb. 24, the Association of Public Health Laboratories formally asked Hahn to loosen the FDA's rules.

"We are now many weeks into the response with still no diagnostic or surveillance test available outside of the CDC for the vast majority of our member laboratories," the association's letter said. "While we understand that the EUA process is open to [public health labs], we believe a more expeditious route is needed at this time."

Two days later, the FDA allowed public health labs to begin using the CDC test, with the troubled component eliminated.

On Feb. 27, Anthony Fauci, the government's top infectious disease expert, added to the pressure to expand testing further. He spoke in person with Brian Harrison, Azar's chief of staff, and underscored the urgent need to accelerate the approval of new tests, according to two people familiar with the call. At noon that day, Harrison convened a teleconference of officials from the FDA, CDC and other agencies.

In strong language, Harrison told the group to come up with a new test approval plan before they left the meeting. The participants scrambled to swap ideas. At the FDA and CDC, Stenzel, Jernigan and others worked on a memo into the evening that outlined a new strategy.

The memo, "A Plan to Increase Covid-19 testing in the U.S.," frankly acknowledged that the original approach had not worked. The spread of the virus was "leading to significant impact on healthcare systems and causing social disruption," it said.

"CDC has worked with FDA to assure that testing is available at Public Health Laboratories to support public

health investigations and control efforts; however, a much broader interagency approach is needed to fill the greater need for diagnostics by commercial manufacturers and laboratories capable of developing their own tests."

It recommended giving clinical laboratories, such as the University of Washington, leeway to create and begin using their own tests while seeking FDA approval. The memo was forwarded to top government officials, including Azar, who supported loosening the regulations.

The next day, Greninger and scores of other clinical scientists appealed to Congress in a letter of their own. They complained that "significantly more stringent" FDA rules had nearly frozen the country's fight against the virus.

"Notably, no test manufacturer or clinical laboratory has successfully navigated the EUA process for SARS-CoV-2 to date," the Feb. 28 letter said. "Therefore, the CDC test remains the only test available with EUA status, and it has not been made available to hospital laboratories."

- - -

On Feb. 29, the FDA finally reversed course, opening the way for clinical labs outside the government to begin testing for coronavirus. Under a revised policy Hahn announced at a White House briefing, the labs would have to notify the FDA when testing began, but they would not have to submit paperwork for 15 days.

"The FDA recognized the urgent need for even faster testing availability," the agency said in a statement this week. "Although laboratories could use the EUA pathway, many were hesitant or didn't know the pathway was available to them."

Giroir told The Post that the FDA was right to reverse itself but could have done so sooner.

"In retrospect, it might have been useful earlier, right?" he said. "I mean, it was the right decision to make."

On March 2, Greninger and his colleagues at the University of Washington went live, testing 30 patients in a single day. Two days later, they tested 202 people. That number soon soared to over 2,800 per day, roughly the equivalent of a quarter of tests done by all state and federal public health labs on the same day.

About two weeks after the FDA loosened its grip on testing, two major manufacturing giants, Roche and Thermo Fisher Scientific, won approval. By then the number of confirmed cases in the United States had grown to more than 2,000.

On March 12, Fauci, who runs the National Institute of Allergy and Infectious Diseases, told lawmakers the problem was not simply the failure of the CDC test. The coronavirus testing debacle had exposed deep structural problems in the nation's public health system, he said.

"Yeah, it is a failure, let's admit it," he said. "The idea of anybody getting it easily the way people in other countries are doing it, we're not set up for that. Do I think we should be? Yes, but we're not."

- - -

The Washington Post's Emily Rauhala, Yasmeen Abutaleb and Josh Dawsey contributed to this report.

How We Discovered That The U.S. Department Of Energy Was Run By A Pack Of Lying, Self-Dealing, Insider-Trading, Crony Political Mobsters

Here are the key reasons we think that **The U.S. Department Of Energy ("DOE")**is criminally corrupt based on our actual experience with The Department, Congressional reports and law enforcement investigations:

- DOE solicited our involvement and asked us to invest our time, money, resources, technology and years of our brand value in their project ***BUT*** DOE bosses had already covertly hard-wired, insider-rigged, and locked-off the funds and directed them to our competitors (who DOE bosses owned stock in and later got jobs from). We were defrauded by DOE and federal executives.

- DOE executives said that they did not get direct orders from the White House or private White House financiers about who to fund and who to sabotage, but that turned out to be a ***lie.***

- Every insider that DOE funded either failed as a brand or was proven to have been involved in corruption in retrospect.

- We were the ***ONLY*** applicant that refused to pay bribes, as proven by federal reports! We were asked to participate in these illicit schemes and we refused to engage in pay-to-play. In fact, we campaigned for, and created, laws to prevent this from happening again.

- The single largest set of failures of government funded projects, IN AMERICAN HISTORY, were the insiders that we told DOE not to fund because we knew they were staged to fail in order to produce: 1.) Windfall tax write-offs, 2.) Stock market pump-and-dump valuation skims 3.) Campaign money laundering 4.) Goldman Sachs services "fee" skims, 5.) Tech building real estate scams, 6.) Insider trading by U.S. Senators and their families and other crimes. IN FACT, EVERY SINGLE one of the other companies was later found out to have profited in each of these illicit ways. History, corporate document leaks and FBI-class forensics prove this as inarguable fact!

- If none of these illicit things are crimes then we missed out on $22+ billion dollars of profits. If we had been allowed to operate our business without sabotage from DOE then we would have made, at least, $200+ million in legitimate profits. So we were defrauded out of, at least $200M and up to $22B. The numbers are proven by comps from other companies who got to sell what we made in the same time period because DOE acted as a gate-keeper and industry saboteur. Those comps will stand up in court.

- After DOE bosses realized we had our shit more together than the competitors and were first-in-line, DOE bosses illegally eliminated the "first come, first served" rule which the Section 136 rules say they can't do.

- DOE bosses demanded unfair cash payments from us, then some DOE bosses waived those fees, then other DOE bosses LIED about confirming the funds, when we got the funds from outside investors, DOE bosses refused to take the money until after the deadline had passed in a classic stonewall procedure in order to try to cut us out of the program.

- DOE stonewalled our follow-up reviews for nearly a decade in order to punish us for reporting them for crimes and for helping law enforcement investigate them.

- Every DOE official refused to ***EVER*** call our founders or engineers to ever discuss any of the submission details yet those same officials were on the phone daily with our competitors and had regular meetings with those competitors at DOE offices in order to hand-walk their friends into the set-aside cash.

- DOE executives established a covert scheme with every major institutional investor and every major member of The National Venture Capital Association in such a manner so that no American company could get funded, once they applied to DOE, without the say-so from DOE bosses.

- The FBI raided Solyndra based on some of our tips. The following investigations led right back to The

White House.

- Everybody in charge of Google, Facebook, Twitter and Tesla were involved in a RICO-violating organized crime effort which did manipulate DOE taxpayer funds straight back to their own pockets. In fact, forensics has tracked the money flow to EVERY SINGLE one of them. Since Google is now 1.) more powerful than the U.S. Government, 2.) under investigation in every nation in the world, 3.) the primary provider of White House staff in 2009+, 4.) the primary beneficiary of government benefits in 2009+, 5.) the largest tax evader on Earth, 6.) the biggest user of sex trafficking services and other concerns...it raises suspicions!

- There are a ***few hundred*** other hard-fact reasons we believe **That The U.S. Department Of Energy Was Run By A Pack Of Lying, Self-Dealing, Insider-Trading, Crony Political Mobsters.** We can go over those facts in a public Congressional hearing, Grand Jury Hearing or Civil Jury Trial at any time, but we have already seen thousands of third parties prove these facts to be true, in addition to ourselves. It is time for compensation. The proof is on the table! **DOE officials are sniveling criminal scum bags!**

We, and most of the independent press, have submitted all of the facts and evidence for these charges to the FBI, OSC, GAO, FTC, DOJ, FEC, SEC, Congress and any other law enforcement agency we could find. If they don't want to take any action against the bad guys because it would embarrass public figures in ways beyond even the Jeffrey Epstein class of scandals then they have made a statement by ignoring that which even the average voter can plainly see.

We won't give up until our damages are paid for!

How We Discovered That The U.S. Department Of Energy Was Run By A Pack Of Lying, Self-Dealing, Insider-Trading, Crony Political Mobsters

Here are the key reasons we think that **The U.S. Department Of Energy ("DOE")**is criminally corrupt based on our actual experience with The Department, Congressional reports and law enforcement investigations:

The numbers are proven by comps from other companies who got to sell what we made in the same time period because DOE acted as a gate-keeper and industry saboteur. Those comps will stand up in court.

- After DOE bosses realized we had our shit more together than the competitors and were first-in-line, DOE bosses illegally eliminated the "first come, first served" rule which the Section 136 rules say they can't do.

- DOE bosses demanded unfair cash payments from us, then some DOE bosses waived those fees, then other DOE bosses LIED about confirming the funds, when we got the funds from outside investors, DOE bosses refused to take the money until after the deadline had passed in a classic stonewall procedure in order to try to cut us out of the program.

- DOE stonewalled our follow-up reviews for nearly a decade in order to punish us for reporting them for crimes and for helping law enforcement investigate them.

- Every DOE official refused to ***EVER*** call our founders or engineers to ever discuss any of the submission details yet those same officials were on the phone daily with our competitors and had regular meetings with those competitors at DOE offices in order to hand-walk their friends into the set-aside cash.

- DOE executives established a covert scheme with every major institutional investor and every major member of The National Venture Capital Association in such a manner so that no American company could get funded, once they applied to DOE, without the say-so from DOE bosses.

- The FBI raided Solyndra based on some of our tips. The following investigations led right back to The White House.

- Everybody in charge of Google, Facebook, Twitter and Tesla were involved in a RICO-violating organized crime effort which did manipulate DOE taxpayer funds straight back to their own pockets. In fact, forensics has tracked the money flow to EVERY SINGLE one of them. Since Google is now 1.) more powerful than the U.S. Government, 2.) under investigation in every nation in the world, 3.) the primary provider of White House staff in 2009+, 4.) the primary beneficiary of government benefits in 2009+, 5.) the largest tax evader on Earth, 6.) the biggest user of sex trafficking services and other concerns...it raises suspicions!

- There are a ***few hundred*** other hard-fact reasons we believe **That The U.S. Department Of Energy Was Run By A Pack Of Lying, Self-Dealing, Insider-Trading, Crony Political Mobsters.** We can go over those facts in a public Congressional hearing, Grand Jury Hearing or Civil Jury Trial at any time, but we have already seen thousands of third parties prove these facts to be true, in addition to ourselves. It is time for compensation. The proof is on the table! **DOE officials are sniveling criminal scum bags!**

We, and most of the independent press, have submitted all of the facts and evidence for these charges to the FBI, OSC, GAO, FTC, DOJ, FEC, SEC, Congress and any other law enforcement agency we could find. If they don't want to take any action against the bad guys because it would embarrass public figures in ways beyond even the Jeffrey Epstein class of scandals then they have made a statement by ignoring that which even the average voter can plainly see.

We won't give up until our damages are paid for!

Hunt for the â Blood Diamond of Batteriesâ Impedes Green Energy Push

Child labor, rape, genocide, bribery and death keep Elon Musk rich!

in News

KASULO, Democratic Republic of Congo â A man in a pinstripe suit with a red pocket square walked around the edge of a giant pit one April afternoon where hundreds of workers often toil in flip-flops, burrowing deep into the ground with shovels and pickaxes.

His polished leather shoes crunched on dust the miners had spilled from nylon bags stuffed with cobalt-laden rocks.

The man, Albert Yuma Mulimbi, is a longtime power broker in the Democratic Republic of Congo and chairman of a government agency that works with international mining companies to tap the nationâ s copper and cobalt reserves, used in the fight against global warming.

Mr. Yumaâ s professed goal is to turn Congo into a reliable supplier of cobalt, a critical metal in electric vehicles, and shed its anything-goes reputation for tolerating an underworld where children are put to work and unskilled and ill-equipped diggers of all ages get injured or killed.

â We have to reorganize the country and take control of the mining sector,â said Mr. Yuma, who had pulled up to the Kasulo site in a fleet of SUVs carrying a high-level delegation to observe the challenges there.

But to many in Congo and the United States, Mr. Yuma himself is a problem. As chairman of GÃ©camines, Congoâ s state-owned mining enterprise, he has been accused of helping to divert billions of dollars in revenues, according to confidential State Department legal filings reviewed by The New York Times and

interviews with a dozen current and former officials in both countries.

Top State Department officials have tried to force him out of the mining agency and pushed for him to be put on a sanctions list, arguing he has for years abused his position to enrich friends, family members and political allies.

Mr. Yuma denies any wrongdoing and is waging an elaborate lobbying and legal campaign to clear his name in Washington and Congoâ s capital of Kinshasa, all while pushing ahead with his plans to overhaul cobalt mining.

Effectively operating his own foreign policy apparatus, Mr. Yuma has hired a roster of well-connected lobbyists, wired an undisclosed $1.5 million to a former White House official, offered the United States purported intelligence about Russia and critical minerals and made a visit to Trump Tower in New York, according to interviews and confidential documents.

Mr. Yuma met with Donald Trump Jr. there in 2018, a session the mining executive described as a quick meet-and-greet. Despite such high-level access during the Trump administration, he was barred just two months later from entering the United States.

His grip on the mining industry has complicated Congoâ s effort to attract new Western investors and secure its place in the clean energy revolution, which it is already helping to fuel with its vast wealth of minerals and metals like cobalt.

Batteries containing cobalt reduce overheating in electric cars and extend their range, but the metal has become known as â the blood diamond of batteriesâ because of its high price and the perilous conditions in Congo, the largest producer of cobalt in the world. As a result, carmakers concerned about consumer blowback are rapidly moving to find alternatives to the element in electric vehicles, and they are increasingly looking to other nations with smaller reserves as possible suppliers.

There is a chance that Congoâ s role in the emerging economy could be diminished if it fails to confront human-rights issues in its mines. And even if Mr. Yuma works to resolve those problems, as he has pledged to do, it still may not be enough for new American investors who want to be assured the country has taken steps to curb a history of mining-industry corruption.

Congoâ s president, Felix Tshisekedi, has tried to sideline Mr. Yuma by stacking GÃ©camines with his own appointees, but he has been unwilling to cross him further. During an interview at his hillside palace in Kinshasa, Mr. Tshisekedi said he had his own strategy for fixing the countryâ s dangerous mining conditions.

â It is not going to be up to Mr. Yuma,â he said. â It will be the government that will decide.â

The standoff between Mr. Yuma and the president echoes power struggles that have torn apart African countries rich with natural resources in the past. How this one plays out has implications that reach far beyond the continent, as the global battle against climate change calls for a stepped-up transition from gasoline-burning vehicles to battery-powered ones.

For Congo, the question boils down to this: Will Mr. Yuma help the country ride the global green wave into an era of new prosperity, or will he help condemn it to more strife and turmoil?

â Tired of Diggingâ

Statues greet motorists at the main roundabout in a mining hub in Congoâ s Copperbelt. One depicts an industrial miner in hard hat, headlamp and boots; another a shoeless, shirtless man in ragged shorts holding a

pickax. They tell the story of the countryâ s dual mining economies: industrial and artisanal.

High-tech, industrial mines run by global corporations like China Molybdenum employ thousands of people in Congoâ s cobalt sector, and while they have their own problems, they are largely not responsible for the countryâ s tarnished reputation abroad.

Itâ s a different story for the artisanal sector, where Mr. Yuma plans to focus the bulk of his stated reforms. Consisting of ordinary adults with no formal training, and sometimes even children, artisanal mining is mostly unregulated and often involves trespassers scavenging on land owned by the industrial mines. Along the main highway bisecting many of the mines, steady streams of diggers on motorbikes loaded down with bags of looted cobalt â each worth about $175 â dodge checkpoints by popping out of sunflower thickets.

Unable to find other jobs, thousands of parents send their children in search of cobalt. On a recent morning, a group of young boys were hunched over a road running through two industrial mines, collecting rocks that had dropped off large trucks.

The work for other children is more dangerous â in makeshift mines where some have died after climbing dozens of feet into the earth through narrow tunnels that are prone to collapse.

Kasulo, where Mr. Yuma is showcasing his plans, illustrates the gold-rush-like fervor that can trigger the dangerous mining practices. The mine, authorized by GÃ©camines, is nothing more than a series of crude gashes the size of city blocks that have been carved into the earth.

Once a thriving rural village, Kasulo became a mining strip after a resident uncovered chunks of cobalt underneath a home. The discovery set off a frenzy, with hundreds of people digging up their yards.

Today, a mango tree and a few purple bougainvillea bushes, leftovers of residentsâ gardens, are the only remnants of village life. Orange tarps tied down with frayed ropes block rainwater from flooding the hand-dug shafts where workers lower themselves and chip at the rock to extract chunks of cobalt.

Georges Punga is a regular at the mine. Now 41, Mr. Punga said he started working in diamond mines when he was 11. Ever since, he has traveled the country searching Congoâ s unrivaled storehouse for treasures underfoot: first gold, then copper, and, for the past three years, cobalt.

Mr. Punga paused from his digging one afternoon and tugged his dusty blue trousers away from his sneakers. Scars crisscrossed his shins from years of injuries on the job. He earns less than $10 a day â just enough, he said, to support his family and keep his children in school instead of sending them to the mines.

â If I could find another job, Iâ d do it,â he said. â Iâ m tired of digging.â

Officials in Congo have begun taking corrective steps, including creating a subsidiary of GÃ©camines to try to curtail the haphazard methods used by the miners, improve safety and stop child labor, which is already illegal.

Under the plan, miners at sites like Kasulo will soon be issued hard hats and boots, tunneling will be forbidden and pit depths will be regulated to prevent collapses. Workers will also be paid more uniformly and electronically, rather than in cash, to prevent fraud.

As chairman of the board of directors, Mr. Yuma is at the center of these reforms. That leaves Western investors and mining companies that are already in Congo little choice but to work with him as the growing demand for cobalt makes the small-scale mines â which account for as much as 30 percent of the countryâ s output â all the more essential.

Once the cobalt is mined, a new agency will buy it from the miners and standardize pricing for diggers, ensuring the government can tax the sales. Mr. Yuma envisions a new fund to offer workers financial help if cobalt prices decline.

Right now, diggers often sell the cobalt at a mile-long stretch of tin shacks where the sound of sledgehammers smashing rocks drowns out all other noise. There, international traders crudely assess the metalâ s purity before buying it, and miners complain of being cheated.

Mr. Yuma led journalists from The Times on a tour of Kasulo and a nearby newly constructed warehouse and laboratory complex intended to replace the buying shacks.

â We are going through an economic transition, and cobalt is the key product,â said Mr. Yuma, who marched around the pristine but yet-to-be-occupied complex, showing it off like a proud father.

Seeking solutions for the artisanal mining problem is a better approach than simply turning away from Congo, argues the International Energy Agency, because that would create even more hardships for impoverished miners and their families.

But activists point out that Mr. Yumaâ s plans, beyond spending money on new buildings, have yet to really get underway, or to substantially improve conditions for miners. And many senior government officials in both Congo and the United States question if Mr. Yuma is the right leader for the task â openly wondering if his efforts are mainly designed to enhance his reputation and further monetize the cobalt trade while doing little to curb the child labor and work hazards.

Millions Gone Missing

Bottles of Dom PÃ©rignon were chilling on ice beside Mr. Yuma as he sat in his GÃ©camines office, where chunks of precious metals and minerals found in Congoâ s soil were encased in glass. He downed an espresso before his interview with The Times, surrounded by contemporary Congolese art from his private collection. His lifestyle, on open display, was clear evidence, he said, that he need not scheme or steal to get ahead.

â I was 20 years old when I drove my first BMW in Belgium, so what are we talking about?â he said of allegations that he had pilfered money from the Congolese government.

Mr. Yuma is one of Congoâ s richest businessmen. He secured a prime swath of riverside real estate in Kinshasa where his family set up a textile business that holds a contract to make the nationâ s military uniforms. A perpetual flashy presence, he is known for his extravagance. People still talk about his daughterâ s 2019 wedding, which had the aura of a Las Vegas show, with dancers wearing light-up costumes and large white giraffe statues as table centerpieces.

He has served on the board of Congoâ s central bank and was re-elected this year as president of the countryâ s powerful trade association, the equivalent of the U.S. Chamber of Commerce.

The huge mining agency where he is chairman was nationalized and renamed under President Mobutu Sese Seko after Congo gained independence from Belgium in 1960. GÃ©camines once had a monopoly on copper and cobalt mining and, by the 1980s, was among the top copper producers in the world. Jobs there offered a good salary, health care and schooling for employeesâ families.

But Mobutu, who ruled for 32 years, raided its funds to support himself and his cronies, a pattern followed by his successors, according to anti-corruption groups. By the 1990s, production from GÃ©camines had declined dramatically. Money wasnâ t reinvested into operations, and the agency amassed debt of more than $1 billion. Eventually, half of its work force was laid off.

To survive, GÃ©camines was restructured, turning to joint ventures with private, mostly foreign, investors in which the agency had a minority stake.

Mr. Yuma took over in 2010, promising to return GÃ©camines to its former glory. But instead, according to anti-corruption groups, mining revenues soon disappeared. The Carter Center, a nonprofit, estimated that between 2011 and 2014 alone some $750 million vanished from GÃ©caminesâ coffers, placing the blame in part on Mr. Yuma.

The winners of GÃ©caminesâ partnership deals under Mr. Yuma included Dan Gertler, a billionaire diamond dealer from Israel. Mr. Gertler was later put under U.S. sanctions for â hundreds of millions of dollarsâ worth of opaque and corrupt mining and oil deals,â according to the Treasury Department.

A confidential investigative report that was submitted to the State Department and Treasury and obtained by The Times accuses Mr. Yuma of nepotism, holding stakes in textile and food-importing businesses that got funding from a government agency he helped oversee, and steering work to a mining contractor in which he was alleged to have shares.

American authorities also believed that Mr. Yuma was using some of the mining-sector money to help prop up supporters of Joseph Kabila, the kleptocratic president of Congo for 18 years who had first put him in charge of GÃ©camines.

â Suspicious financial transactions appeared to coincide with the countryâ s electoral cycles,â said the State Departmentâ s 2018 annual report on human rights in Congo, crediting the Carter Center for the research.

By his own tally, Mr. Yuma has been accused of cheating Congo out of some $8.8 billion, an amount he thinks is absurd, saying he has brought in billions of dollars in revenue to the country.

Mr. Yuma has launched a bombastic counterattack on watchdog groups and his critics, calling them â new colonialists.â He has claimed that they somehow conspired with mining companies to stymie his efforts to revamp the industry, which, in his assessment, has left â the Congolese population in a form of modern slavery.â

Mr. Yuma also sent The Times a 33-page document outlining his defense, noting the many â veritable smear campaigns that seek to sully his reputation and blur his major role in favor of the country through the reform of its mining policy.â

Washington Appeal

The room was packed. Top White House and State Department officials, mining executives, Senate staffers and other Washington elites sat rapt one day in 2018 at the D.C. headquarters of a foreign policy group as the microphone was handed to the guest of honor: Mr. Yuma.

â We understand President Donald Trumpâ s desire to diversify and secure the U.S. supply chain,â he said, speaking to the Atlantic Council. â It would be of our best interests to consider partnerships with American companies to develop projects for the supply of these minerals.â

Accused at home of pillaging the countryâ s revenues, Mr. Yuma had taken his image-cleansing campaign abroad, seeking redemption by convincing Washington that he was a critical link to Congoâ s minerals and metals.

Mr. Yumaâ s team of lobbyists and lawyers included Joseph Szlavik, who had served in the White House under President George Bush, and Erich Ferrari, a prominent sanctions lawyer.

Lodging at the Four Seasons, he held meetings on two trips that spring with officials from the World Bank and the Departments of Defense, Energy and the Interior. He also traveled to New York, where he met with Donald Trump Jr.

There, he was accompanied by Gentry Beach, a Texas hedge fund manager who was a major campaign fund-raiser for the former president as well as a close friend and erstwhile business partner of the younger Mr. Trump. Mr. Beach has been trying to secure a mining deal in Congo, and was previously invested with Mr. Trump in a mining project there. He did not respond to requests for comment.

â Someone wanted to introduce me to say hello,â Mr. Yuma said, playing down the exchange with the presidentâ s son.

Mr. Trump said he did not recall the meeting.

Through all the encounters, Mr. Yuma said, he recited the same message: American needed him, and he was ready to help.

In Washington, he even offered what he considered crucial intelligence about Russiaâ s efforts to acquire Congolese niobium, a shiny white metal that resists corrosion and can handle super-high temperatures like those found in fighter jet engines. Mr. Yuma said he had helped thwart the sale to benefit the United States, according to two American officials involved in the meeting.

Signs of trouble emerged during one of the trips. A member of his lobbying team was pulled aside by a State Department official and given a stark warning. Mr. Yuma was now a target of a corruption investigation by the United States, and he was about to be punished.

A few weeks later, in June 2018, the State Department formally prohibited him from returning to the United States.

â Todayâ s actions send a strong signal that the U.S. government is committed to fighting corruption,â the State Department said in a statement at the time that did not name Mr. Yuma, and instead said the actions involved â several seniorâ officials from Congo, which The Times confirmed included Mr. Yuma.

A â Formidable Personâ

For Mr. Yuma, the action signaled that he needed even more muscle. He would hire Herman Cohen, a former assistant secretary of state for African affairs under Mr. Bush, and George Denison, who had worked for President Gerald Ford.

A former Congolese airline and telephone executive named Joseph Gatt, who lives in Virginia and is close to Mr. Yuma, also took up his cause. Mr. Gatt stationed a personal aide at the Fairmont, a luxury hotel about a mile from the White House, who organized meetings with the lobbyists to push for permission for Mr. Yuma to visit the United States.

â Heâ s a very formidable person,â Mr. Gatt said of Mr. Yuma in an interview, insisting that the allegations against him were false and that he was â quite clean.â

At the same time, Mr. Yuma worked on elevating his standing in Congo. He hatched a plan with the exiting president, Mr. Kabila: Mr. Yuma would act as his proxy by becoming prime minister, State Department officials told The Times.

But a top American diplomat was sent to meet with Mr. Yuma at his home in Kinshasa to make clear that the United States strongly objected to the plan, according to an interview with the diplomat, J. Peter Pham. After pulling out a bottle of Cristal Champagne, Mr. Yuma talked with Mr. Pham about political events in Congo, but things soon turned sour.

Mr. Pham, then a special envoy to the region, told Mr. Yuma that the Americans were prepared to deport two of his daughters, who were completing graduate degrees in the United States, if he pursued Mr. Kabilaâ s scheme.

â If we revoked your visa, we could revoke theirs,â Mr. Pham recalled telling Mr. Yuma.

Mr. Yuma was undeterred, and his team recruited an aide to Representative Hank Johnson, Democrat of Georgia, to deliver an invitation for Mr. Yuma to visit the United States and discuss his work in Congo. The invitation was even shared with Secretary of State Mike Pompeo, though the State Department shut it down. â We saw it for what it was: an attempt to get around the visa ban,â Mr. Pham said.

Still determined to get his way, Mr. Yuma bolstered his collection of influencers. Mr. Denison briefly joined the Washington lobbying team with instructions to ensure that Mr. Yuma could travel to the United States and that he â not face legal sanctions,â a June 2020 email shows. The United States was considering putting Mr. Yuma on a sanctions list, according to State Department officials, a move that could freeze money he had in international banks.

But a $3 million contract between the men did not mention that assignment, instead saying that Mr. Denison was to â promote the attractiveness of the business climateâ in Congo, according to a copy of the document.

Shortly after he started the work, Mr. Denison received $1.5 million, emails show, with instructions to transfer most of it to an account belonging to an associate of Mr. Yumaâ s. The transaction drew scrutiny from the bank â and alarm bells went off for Mr. Denison, who said he was concerned that he might be unknowingly participating in a money-laundering scheme.

Mr. Denison hired a lawyer, quit the job and ultimately returned all the funds.

â Heâ s a huge crook,â Mr. Denison said.

Mr. Yuma did not respond to a question on the matter.

Dueling Presidents

President Tshisekedi and Mr. Yuma walked near a large terraced canyon at one of Glencoreâ s cobalt mines in the Copperbelt, a region so defined by mining that roadside markets sell steel-toed boots and hard hats alongside fresh eggs and spears of okra.

The outing in May was awkward for these two political rivals.

Mr. Tshisekedi, a longtime opposition member who took office in early 2019 in a disputed election, has been fully embraced by the Biden administration, which sees him as an ally in battling global warming. He is chairman of the African Union and has repeatedly appeared with Mr. Biden at international events, including a meeting in Rome last month and then again a few days later in Glasgow at the global climate conference.

Back home, Mr. Tshisekedi has announced that he intends to make Congo â the world capital for strategic minerals.â But some Congolese and American officials think that in order for that to happen, Mr. Yuma needs to be ousted.

â We have continuously tried to apply pressureâ to have Mr. Yuma removed, said one State Department official. Yet Mr. Yuma â retains considerable influence,â the official said, baffling the State Department.

Meanwhile, Mr. Yuma is carrying on as usual, trailed by an entourage of aides who address him as President Yuma, as he is known throughout much of Congo for his business leadership. It is also a nod to his power base and ambitions.

He talks of installing seven new floors and a helipad at his office building in downtown Kinshasa. He even had one of his lobbyists track down Mr. Tshisekedi in September in New York, during the United Nations General Assembly meeting, to press him to stand by Mr. Yuma.

In Congo, Mr. Yuma also embarked on a nationwide tour this year that looked a lot like a campaign for public office. He set out to visit every province, strategically making his first stop in Mr. Tshisekediâ s hometown, where he met with a group of struggling pineapple juice sellers.

Before leaving, he handed the group $5,000 in cash to jump-start their business.

â Just to show them that Iâ m supportive,â he explained in an interview.

Like the president, Mr. Yuma is hoping to get credit for attracting more U.S. investors, convinced that his reform efforts will turn the tide.

â Iâ m a friend of America,â he said in the interview. â I always work in good will to protect and to help the U.S. invest in D.R.C. And I told you, I love America. My children were at university there. One of these days, people will understand Iâ m a real good friend of America and I will continue to help.â

If his success depends on transforming the mining sector, the task will be formidable.

All day long on a main highway that runs through dozens of industrial mines, trucks groan with loads of copper and tubs of chemicals used to extract metals from ore.

But snaking between them is motorcycle after motorcycle, with one man driving and one sitting backward, acting as a lookout, atop huge bags of stolen cobalt.

The post Hunt for the â Blood Diamond of Batteriesâ Impedes Green Energy Push appeared first on New York Times.

IDIOTIC "SELF-DRIVING CARS" WILL ALWAYS KEEP INJURING AND KILLING PEOPLE.

SELF DRIVING CARS ARE JUST A TAX FRAUD SCAM THAT SILICON VALLEY CAME UP WITH.

NOBODY WANTS THEM

SUPER EASY TO HACK AND TO CONFUSE INTO KILLING PEOPLE

TERRORISTS WILL CERTAINLY ABUSE THEM

INVESTIGATION NOTES

Trillions of dollars of stock trades and direct payola bribes were exchanged using the White House as a broker and the United States Department of Energy as a stock market manipulation platform. Politicians turned the government into a cheap garage sale of cronyism!

This case affects who runs the United States Government and who profits from government decisions, a matter of many trillions of dollars.

The following folders provide evidence of the corruption in categories. The illicit acts described therein all involve the same perpetrators.

The United States Department Of Energy, Since November 2008, has been almost entirely used as a scam crony payola slush-fund to pay off political campaign financiers of White House insiders.

In addition, the Dept of Energy is used as a gate-keeper to sabotage and stall the competitors to those political campaign financiers of White House insiders. It is political racketeering operating in plain sight! The cover-ups by the IG, AJ and DOJ are ENDLESS!

WHAT WE WILL PROVE BEFORE THE JURY:

At a high level: Trillions of dollars of stock trades and direct payola bribes were exchanged using the White House as a broker and government agencies as a stock market manipulation platform. Politicians turned the government into a cheap garage sale of cronyism! This kind of crime illicitly and illegally manipulates the power over who runs the United States Government and who profits from government decisions which are a matter of many trillions of dollars. The act and veracity of this crime enterprise will be proven to the Jury.

Based on that assertion it will then be proven that:

1.) Plaintiff exposed and reported the crime to proper authorities through proper channels.

2.) Some of those authorities used government resources to operate reprisal attacks against Plaintiff, using government resources to operate the attacks, as revenge for reporting the crimes.

3.) The state-sponsored attacks were supported by the political campaign financiers of the government authorities in order to protect their payola conduits and stock market manipulations.

4.) Over 40 harms, each to be detailed and examined in Court, were documented against Plaintiff by the actions of corrupt government authorities.

5.) In a vast number of previous lawsuits, including one won by Plaintiff and his peers, it was proven that government offices infected with corruption regularly attack and harm citizens in reprisal.

6.) The government, having been caught in these illicit actions, must now pay Plaintiff for his losses, damages, harms, back-pay fees and other compensation.

Plaintiff founded and owned a United States government-financed electric vehicle manufacturing company. His technology and metrics surpassed every: A.) price metric, B.) safety metric, C.) driving range metric, D.) national security metric, E.) debt Ratio metric, F.) non-bribery assertion metric, G.) 100% domestic worker

hiring proof and EVERY other issue, which burdened Tesla and Fisker. Plaintiff worked as an employee and contractor for the USA. Tesla And Fisker were financed by the family and investors of Presidents Obama and Biden, as proven by Congressional investigators and email leaks. Government officials ordered attacks on Plaintiff, de-funding and reprisal because Plaintiff reported corruption at the White House, Department of Energy, and other government offices, and because Plaintiff's technology could obsolete the technologies that government officials were illicitly receiving bribes from via insider trading. The attacks and harms against Plaintiff used government resources paid for by taxpayers.

There are hundreds of millions of people in America. The same 120 of them are all involved in operating the same crimes and corruption including: the Sony Pictures corruption; the Afghanistan rare earth mine scandals operated through The Energy Department political slush fund that involves the lithium battery cover-ups (headed by Elon Musk); the Big Tech Brotopia rape, sex trafficking, bribery, exclusionism, racism and misogyny issues they were taught at Stanford University; The Facebook - Meta - Google - Alphabet - Netflix, et al, coordinated news manipulation and domestic spying that they engage in; the hiring of Fusion GPS - Black Cube - Gizmodo/Gawker assassins; the destruction of the housing market by their mass real estate manipulations; patent theft and industrial espionage; and the bribery of almost every politician all the way up to the Oval Office.

So, while the categories covered in this investigation may seem diverse. They are connected through an enterprise of criminality and illicit, coordinated operations. We list, by name, the 120 most complicit individuals organizing these crimes, in the evidence documents already submitted to the FBI, FINCEN, DOJ, FTC, SEC, FEC, Congress, InterPol and other authorities. Digital financial tracking of those persons and all of their family members should be assumed to have been under way for some time. Wire-taps and device taps of those persons and all of their family members should be assumed to have been under way for some time.

Thatâ s right! Your public officials use federal agencies as dark-money laundering operations for their friends.

If you are a taxpayer: You suffered damages!

If you are an American business: You suffered damages!

If you are Democracy: You were broken!

If you were a tech mobster: You made out like a bandit!

This is how it worked.

No public official wants these crimes to end because most of those officials profit from these crimes!

Forget about any allegiance you might have to one political party over another. This is not about parties, this is about racketeering crimes!

The Solyndra taxpayer, technology, financial and political disasters that began during the corrupt reign of Steven Chu and Jennifer Granholm at the Department of Energy typified the overt, organized crime, corruption and crony malfeasance of the public funds.

This trend was created via the back-door deals between 1.) the U.S. Department of Energy and audacious kick-back schemes created by 2.) Silicon Valley campaign financiers and the 3.) White House. This is the story of the racketeering schemes and scams that set out to steal trillions of dollars of taxpayer cash, in plain sight, under the cover of a national â economicâ or â healthâ emergency â stimulusâ scam.

A.) AFGHANISTAN_RARE_EARTH_CORRUPTION

Lithium ion batteries: Cause wars, rape and genocide in the Congo, Afghanistan and Bolivia from the corrupt mining deals involved with mining lithium and cobalt; are insider trading-owned by ex-CIA boss Woolsey and DOE Boss Chu; excrete chemicals that mutate fetuses when they burn; destroy your brain, lungs and nervous system when they burn; kill the factory workers who make them; cause Panasonic to be one of the most corrupt companies in the world; poison the Earth when disposed of; canâ t be extinguished by firemen; poison firemen when they burn; are based on criminally corrupt mining schemes like URANIUM ONE; Have over 61 toxic chemicals in them; come from an industry that spends billions on internet shills and trolls used to nay say all other forms of energy; are insider-trading owned by corrupt U.S. Senators who are running a SAFETY COVER-UP about their dangers. Apple products with lithium ion batteries have been exploding and setting people on fire; over time the chemical dendrites inside each battery grow worse and increase the chances of explosion as they age â

LITHIUM ION BATTERIES BECOME MORE AND MORE LIKELY TO EXPLODE AS TIME GOES ON AND AS THEY AGE; â Bad Guysâ have figured out how to make them explode remotely; have their dangers hidden by CNN and MSM because pretty much only the DNC people profit from them; are the heart of Elon Muskâ s stock market scam. The Obama Administration promised Silicon Valley oligarchs the market monopoly on lithium ion batteries and the sabotage of fuel cells in exchange for campaign financing and search engine rigging; United States Senators that are supposed to protect us from these deadly products own the stock market assets of them so they protect them and stop the FDA, OSHA, DOT & NHTSA from outlawing them.

WRITE YOUR ELECTED REPRESENTATIVE AND DEMAND THAT LITHIUM ION BATTERIES BE MADE ILLEGAL TO SELL! NiCAD and Hundreds of other battery chemistries DO NOT have all of these problems but Lithium Ion batteries get a monopoly because of politician insider trading ownerships. A recent fire on U.S. Highway 101 near Mountain View, CA, burned the driver alive and killed him. In Florida two kids died in a Tesla, burned alive, screaming in agony. A man died in agony in a Tesla crash in Malibu that set Malibu Canyon on fire.

A young woman, at the start of life, and her boyfriend were burned alive in their crashed Tesla. There are many more deaths and crashes than you have heard about. The deaths and the cover-ups are endless. Senators Dianne Feinstein, Harry Reid, Nancy Pelosi, Kamala Harris and their associates own the stock in Tesla Motors and/or itâ s suppliers and mining companies and they cover-up and halt investigations and laws designed to save the public. They, and their cronyâ s, spend over $1B a year to shill and troll hype about lithium ion batteries and cover-up the dangers.

Lithium ion EVs are more prone to battery fires. Experts say that their lithium-ion batteries can fuel hotter fires that release toxic fumes and are more difficult to put out. Lithium ion fires keep reigniting which explains why it takes so long and requires copious amounts of water or foam (it is an electric fire, after all) to smother the flames.

Tesla employee Bernard Tse and his team warned Elon Musk about these dangers in 2008 and they got fired and/or warned to â say nothingâ by Musk. Three top Tesla engineers died in a plane crash next to Tesla offices in San Carlos after two of them agreed to become whistle-blowers.Elon Musk exists because he bribed DNC politicians and Senators Feinstein, Reid, Boxer, Harris, Clinton and Pelosi to give him free taxpayer cash and government resources from the Dept. of Energy and the Calif treasury.

DOE has been covering-up organized crime activities at DOE in which DOE funds are being used as a slush-fund to pay off DNC campaign financiers and to pay for CIA/GPS Fusion-Class attacks on Silicon Valley business competitors of those DNC campaign financiers who DOE staff share stock market holdings with. Elon Musk is a criminal, a mobster, an asshole, a bald fake-hair wearing, plastic surgery-addicted, douchebag, woman-abusing, sex addicted, tax evader.

Musk exploits poor people and child slaves in the Congo and Afghanistan to mine his lithium and Cobalt. Musk spends billions per year to hire Russian trolls, fake blogger fan-boys and buy fake news self-aggrandizement articles about himself. Musk thinks he is the â Jesusâ of Silicon Valley. Fake News manipulator Google is run by Larry Page and Larry is Muskâ s investor and bromance butt buddy.

Musk uses massive numbers of shell companies and trust funds to self-deal, evade the law and hide his bribes and stock market insider trading. A huge number of Tesla drivers have been killed; pedestrians and oncoming drivers have also been killed, and Musk covers it up. The DNC and the MSM refuse to allow any articles about Muskâ s crimes to be printed because they benefit from Muskâ s crimes.

Musk has been professionally diagnosed as a â psychotic narcissist.â A â Silicon Valley Mafia; cartel of frat boy sociopath venture capitalists like Steve Jurvetson, Tim Draper, Eric Schmidt, et al; threaten those who do not support the cult of Tesla or their political candidates. In EVERY blog that you read that mentions â Muskâ , at least 1/3 of the comments have been placed their by Muskâ s paid shills.

Musk holds the record for getting sued for fraud by his investors, wives, former partners, employees, suppliers and co-founders. Elon Musk has gone out of his way to hire hundreds of ex-CIA staff and assign them to â dirty tricks teamsâ to attack his competitors and elected officials who Musk hates.

Musk never founded his companies. Muskâ s â Starlinkâ satellites are domestic spy and political manipulation tools â never get your internet from one. Musk stole Tesla in a hostile ownership take-over from Marty the true inventor of the Tesla.

The same kind of EMF radiation proven to cause cancer from cell phones exists in massive amounts in a Tesla. Musk canâ t fix a car or build a rocket and has almost no mechanical skills. If you pull a report of every VIN# of every Tesla ever built and cross reference that with insurance, repair and lawsuit records you will find that the â per volumeâ fire, crash, death and defect rate is THE WORST of any car maker in history!

Musk is a lying con artist and partners with Goldman Sachs to rig the stock market. Sachs has a dedicated team of 18 men who rig stocks and valuation bumps for Musk. Over 1000 witnesses can prove every one of those claims in any live televised Congressional hearing! Senators Dianne Feinstein, Harry Reid, Nancy Pelosi, Kamala Harris and their associates own the stock in Tesla Motors and/or itâ s suppliers and mining companies.

That is why they criminally help cover-up investigations of Tesla! All of this was reported, in writing, to James Comey, Patricia Rich and David Johnson at the FBI. The DNC bosses own the stock in lithium, Solar and EV markets and use kickbacks from those markets (Especially via convoluted campaign finance laundering via Elon Musk) to finance the DNC. The DNC bosses use character assassination as their main political tool against any member of the public who speaks out against their felony stock market scams and

PizzaGate-like scandals.

The Harvey Weinstein reports by Ronan Farrow show that they have teams of hired goons that they pay to destroy peopleâ s lives. They use Black Cube, Mossad, In-Q-Tel, Stratfor, Gawker Media, Gizmodo Media, Media Matters, David Brock, Sid Blumenthal, NY Times, Google servers, Facebook servers, Podesta Group, Perkins Coie, Covington & Burling and a host of â assassinsâ .

It should be a felony to hire character assassins in the USA. DEMAND A LAW and DEMAND the termination of these attack services. IE: Gawker and Gizmodo Media sets-up the attack stories and, in paid partnership with Google, Google kicks their attack links around the globe, in front of 8 Billion people, forever. Google locks the attack articles of its enemies on the front top search results of Google search results forever, on purpose!

That is why Google is being terminated in the largest, most well resourced anti-corruption public service take-down in history! Tesla and Musk are protected by shareholders Harris, Pelosi, Feinstein, Brown and Newsom. Panasonic (indicted for bribery and Muskâ s partner) spends billions of dollars annually cover-up lithium battery fires and battery defects.

There are hundreds of millions of people in America. The same 120 of them are all involved in operating the same crimes and corruption including: the Sony Pictures corruption; the Afghanistan rare earth mine scandals operated through The Energy Department political slush fund that involves the lithium battery cover-ups (headed by Elon Musk); the Big Tech Brotopia rape, sex trafficking, bribery, exclusionism, racism and misogyny issues they were taught at Stanford University; The Facebook â Meta â Google â Alphabet â Netflix, et al, coordinated news manipulation and domestic spying that they engage in; the hiring of Fusion GPS â Black Cube â Gizmodo/Gawker assassins; the destruction of the housing market by their mass real estate manipulations; patent theft and industrial espionage; and the bribery of almost every politician all the way up to the Oval Office.

So, while the categories covered in this investigation may seem diverse. They are connected through an enterprise of criminality and illicit, coordinated operations. We list, by name, the 120 most complicit individuals organizing these crimes, in the evidence documents already submitted to the FBI, FINCEN, DOJ, FTC, SEC, FEC, Congress, InterPol and other authorities. Digital financial tracking of those persons and all of their family members should be assumed to have been under way for some time. Wire-taps and device taps of those persons and all of their family members should be assumed to have been under way for some time.

B.) CASE_DIAGRAMS

Graphic outlines of the crimes and corruption. Please share with your friends and peers.

C. DEPT_OF_ENERGY_CRONY_SLUSH_FUNDS

Trillions of dollars of stock trades and direct payola bribes were exchanged using the White House as a broker and the United States Department of Energy as a stock market manipulation platform.

Thatâ s right! Your public officials use federal agencies as dark-money laundering operations for their friends.
If you are a taxpayer: You suffered damages!
If you are an American business: You suffered damages!
If you are Democracy: You were broken!
If you were a tech mobster: You made out like a bandit!

This is how it worked.

No public official wants these crimes to end because most of those officials profit from these crimes!

Forget about any allegiance you might have to one political party over another. This is not about parties, this is about racketeering crimes!

The Solyndra taxpayer, technology, financial and political disasters that began during the corrupt reign of Steven Chu and Jennifer Granholm at the Department of Energy typified the overt, organized crime, corruption and crony malfeasance of the public funds.

This trend was created via the back-door deals between 1.) the U.S. Department of Energy and audacious kick-back schemes created by 2.) Silicon Valley campaign financiers and the 3.) White House. This is the story of the racketeering schemes and scams that set out to steal trillions of dollars of taxpayer cash, in plain sight, under the cover of a national â economicâ or â healthâ emergency â stimulusâ scam.

There are hundreds of millions of people in America. The same 120 of them are all involved in operating the same crimes and corruption including: the Sony Pictures corruption; the Afghanistan rare earth mine scandals operated through The Energy Department political slush fund that involves the lithium battery cover-ups (headed by Elon Musk); the Big Tech Brotopia rape, sex trafficking, bribery, exclusionism, racism and misogyny issues they were taught at Stanford University; The Facebook â Meta â Google â Alphabet â Netflix, et al, coordinated news manipulation and domestic spying that they engage in; the hiring of Fusion GPS â Black Cube â Gizmodo/Gawker assassins; the destruction of the housing market by their mass real estate manipulations; patent theft and industrial espionage; and the bribery of almost every politician all the way up to the Oval Office.

So, while the categories covered in this investigation may seem diverse. They are connected through an enterprise of criminality and illicit, coordinated operations. We list, by name, the 120 most complicit individuals organizing these crimes, in the evidence documents already submitted to the FBI, FINCEN, DOJ, FTC, SEC, FEC, Congress, InterPol and other authorities. Digital financial tracking of those persons and all of their family members should be assumed to have been under way for some time. Wire-taps and device taps of those persons and all of their family members should be assumed to have been under way for some time.

D.) FACEBOOK_META_CORRUPTION

Regarding ***Facebook AKA META***, the issues, that the public and the news media have complained about include: producing child suicides, racism, misogyny, child mental health threats, domestic spying, data

harvesting, sex trafficking, election manipulation, tax evasion, Fusion GPS/Media Matters/ Black Cube hit jobs on competitors, censorship, contrived market monopolization, intellectual property theft, political bribery and many other social crimes!

An unusually large number of their staff have been arrested for, or charged with, sex crimes, including under-age trafficking.

This entity is one of the largest operators of bribes to public officials. Some of those bribes include billions of dollars of, non-FEC reported, search engine rigging for the political campaigns of the very politicians who are supposed to regulate them.

Facebook-Meta engaged in the bribery of public officials.

Facebook-Meta is a front for actions and planning in the Obama and Biden White House.

Facebook-Meta is part of a criminal Big Tech Cartel.

Facebook-Meta is an illicit monopoly that violates anti-trust laws.

Facebook-Meta operates a digital news and information â protection racketâ .

Facebook-Meta attacks competitors who cannot defend themselves.

Facebook-Meta uses public officials to blockade competitors.

Facebook-Meta manipulates the stock market illegally and unethically.

Facebook-Meta operates like a private, unregulated, government.

Facebook-Meta abuses CIA, NSA and DIA resources for unjust gains.

Facebook-Meta uses Stazi-like mind and ideology manipulation tricks on itâ s site to try to get you to agree with Mark Zuckerbergs ideologies.

Facebook-Meta investors and investment bankers conspire in a Mafia-like manner.

Facebook-Meta steals patents and technology from others and refuses to pay for it.

Facebook-Metaâ s Sandberg pretends to be the goddess of womenâ s rights yet she is screwing the CEO of Activision, the biggest female sexual abusing company in America.

Facebook-Metaâ s stock is owned by almost all of the California politicians and their families and that is why Facebook-Meta is never regulated and always protected by them for their political and profiteering manipulations.

Facebook-Meta is Pro Israel and anti-Arab and anti-Muslim.

Facebook-Metaâ s runs tens of millions of dollars of defamation attacks against competitors.

Facebook-Meta hides all media and news coverage for competitors of Larry Page and Elon Musk.

Facebook-Meta lies to the public about what they really do with the publicâ s data.

Facebook-Meta receives millions of dollars of payments from government spy agencies each month.

Facebook-Meta promotes illegal immigration in order to get cheap labor and control votes.

Facebook-Meta runs VC funding back-lists against start-ups that are competitive.

Facebook-Meta bribes thousands of politicians in order to steer policy to their advantage.

Facebook-Meta is a criminal RICO-violating monopoly.

Facebook-Meta rigs the stock market with Flash-boy, Pump/Dump and Microblast SEC violating computer tricks.

Facebook-Meta pays bribes to politicians in Facebook-Meta stock.

Facebook-Meta manipulates who gets to see what web-sites, globally, for competitor black-lists.

Facebook-Meta has a â no poachingâ Silicon Valley jobs blacklist.

Facebook-Meta bosses sexually abuse women and young boys.

Facebook-Meta bosses run sex trafficking operations in the Epstein and NXVIUM cults.

Facebook-Meta bosses control the NVCA financing cartel over start-ups.

Facebook-Meta scheme to take over the VR and AR markets is based on spying on the public with VR sensors and cameras.

Facebook-Meta controls national elections for anti-competitive purposes.

Facebook-Metaâ s law firms are corrupt conduits for payola and political conduit-relays.

David Plouffe and the Zuckerbergâ s were recording in meetings planning a take-over of the United States Government.

Facebook-Meta bribes some politicians with revolving door jobs.

Facebook-Meta is primarily responsible for destroying the Bay Area Housing opportunities.

Facebook-Meta runs DDoS attacks on competitors by massively crawling their sites.

Facebook-Meta has paid covert bribes, PAC funds, real estate and search rigging payola to every California Senator.

Facebook-Meta has paid bribes, through its lobby fronts, to halt FBI, SEC, FEC and FTC investigations of Facebook-Meta crimes.

Facebook-Meta gets millions of dollars of taxpayer cash for spying on Americans inside the USA.

Nancy Pelosi and Dianne Feinstein have promised to â protectâ Facebook-Meta because their families profit off Facebook-Meta stocks.

Facebook-Meta VCâ s and bosses have spent $30M+ rigging the U.S. Patent Office to protect Facebook-Meta and harm Facebook-Meta competitors.

Facebook-Meta bribed itâ s lawyer into position on the board of the U.S. Patent office in order to have him protect Facebook-Meta.

Facebook-Meta rarely likes, or hires, black employees per federal and news media investigations.

Facebook-Meta hired most of the Washington, DC K Street lobby firms and told them to â do what ever they couldâ to control public policy for Zuckerberg. The film: â Miss Sloaneâ depicts only 2% of the illicit lobbying tactics Facebook-Meta employs daily.

There are hundreds of millions of people in America. The same 120 of them are all involved in operating the same crimes and corruption including: the Sony Pictures corruption; the Afghanistan rare earth mine scandals operated through The Energy Department political slush fund that involves the lithium battery cover-ups (headed by Elon Musk); the Big Tech Brotopia rape, sex trafficking, bribery, exclusionism, racism and misogyny issues they were taught at Stanford University; The Facebook â Meta â Google â Alphabet â Netflix, et al, coordinated news manipulation and domestic spying that they engage in; the hiring of Fusion GPS â Black Cube â Gizmodo/Gawker assassins; the destruction of the housing market by their mass real estate manipulations; patent theft and industrial espionage; and the bribery of almost every politician all the way up to the Oval Office.

So, while the categories covered in this investigation may seem diverse. They are connected through an enterprise of criminality and illicit, coordinated operations. We list, by name, the 120 most complicit individuals organizing these crimes, in the evidence documents already submitted to the FBI, FINCEN, DOJ, FTC, SEC, FEC, Congress, InterPol and other authorities. Digital financial tracking of those persons and all of their family members should be assumed to have been under way for some time. Wire-taps and device taps of those persons and all of their family members should be assumed to have been under way for some time.

Twitter, Splunk, Google, Facebook, Netflix, YouTube and the Silicon Valley internet Cartel serve you custom manipulated content by automatically creating a covert digital dossier on you reflecting the content consumption preferences they have spied on about you. They continually evolve their dossier on you in order to steer you towards their ideology and their Democrat political party. At these companies, â data miningâ , â machine learningâ and â AIâ means computerized propaganda processing for certain political entities. They began hiring off-shore people (because they would work so cheap) but most of those people turned out to be Muslim. This created conflicts with the entire southern part of the United States (which is anti-Muslim) because those workers steered content to pro-Muslim positions.

Their spy dossier on you uses abstract content-specific features of the consumed content, such as categories, topic models, and entities, which they automatically extract using natural language processing by comparing every word you use to a giant computer library of what those words might mean about your psychology. So itâ s like you are getting â mind-rapedâ without any penis use. Their assessment of what your words might mean is based on what rich, white male, $200K/year, DNC-promoting programmers think they might mean. Their computers scale and expand their tools with algorithmic software created by those politically and socially biased frat white boys that wrote the code. It is all biased as hell. They never hire blacks or women in system creation roles so everything these companies do only supports rich white soyboy snowflake type gamer thinking.

Because their Silicon Valley VCâ s told them to spy on billions of people, even for these web giants, it is impractical to store the entire dynamic history of a userâ s interaction features. They, thus, out of greed, use algorithms that selectively decay information in order to generalize users and populations. To them, you are

just a generalized data point, like cattle on a ranch, to be harvested and fed upon by Silicon Valley.

E.) GOOGLE_ALPHABET_CORRUPTION

Regarding ***Google â Alphabet â Youtube and their Cartel,*** the issues, that the public and the news media have complained about include: producing child suicides, racism, misogyny, child mental health threats, domestic spying, data harvesting, sex trafficking, election manipulation, tax evasion, Fusion GPS/Media Matters/ Black Cube hit jobs on competitors, censorship, contrived market monopolization, intellectual property theft, political bribery and many other social crimes!

An unusually large number of their staff have been arrested for, or charged with, sex crimes, including under-age trafficking.

They seem to be an organized crime entity protected by the politicians that they pay bribes to.

This entity is one of the largest operators of bribes to public officials. Some of those bribes include billions of dollars of, non-FEC reported, search engine rigging for the political campaigns of the very politicians who are supposed to regulate them.

â Google is a sick corrupt criminal business run by sex trafficking perverts and sociopathsâ ¦â Say GOOGLEâ S own inside employees, Divorce Court records of Google executives, 70+ State & Federal investigations and major news outlets.

â Google spies on competitors and steals their technology
â Google â Alphabet â YouTube stock is owned by almost all of the California politicians and their families and that is why Google â Alphabet â YouTube is never regulated and always protected by them for their political and profiteering manipulations
â Google runs tens of millions of dollars of defamation attacks against competitors
â Google hides all media and news coverage for competitors of Larry Pageâ s boyfriend: Elon Musk
â Google lies to the public about what they really do with the publicâ s data
â Google promotes illegal immigration in order to get cheap labor and control votes
â Google runs VC funding back-lists against start-ups that are competitive
â Google bribes thousands of politicians
â Google is a criminal RICO-violating monopoly
â Google rigs the stock market with Flash-boy, Pump/Dump and Microblast SEC violating computer tricks
â Google pays bribes to politicians in Google and YouTube stock
â Google manipulates who gets to see what web-sites, globally, for competitor black-lists
â Google has a â no poachingâ Silicon Valley jobs blacklist
â Google bosses sexually abuse women and young boys
â Google bosses run sex trafficking operations in the Epstein and NXVIUM cults
â Google bosses control the NVCA financing cartel over start-ups
â Google has placed the majority of the corporate staff in at least one White House
â Google controls national elections for anti-competitive purposes
â The company â ***Polyhop***â , in the HOUSE OF CARDS tv show, does all the crimes that Google actually does in reality
â Googleâ s law firms, like Wilson Sonsini, are corrupt conduits for payola and political conduit-relays

â Google bribes some politicians with revolving door jobs
â Google is primarily responsible for destroying the Bay Area Housing opportunities
â Google runs DDoS attacks on competitors by massively crawling their sites
â Google boss Andy Rubin runs a sex slave farm according to his own family
â Google boss Eric Schmidt was a philandering sex-penthouse owner according to vast news articles
â Google executives hire so many hookers that one of them, Mr. Hayes, was killed by his hooker
â Google executives sexually abuse so many women that the women staff of Google walked out one day
â In the 2009 White House, you could not swing a cat without hitting a Google insider
â Google has paid covert bribes, PAC funds, real estate and search rigging payola to every CA Senator
â Google has paid bribes, through its lobby fronts, to halt FBI, SEC, FEC and FTC investigations of Google crimes
â Google was funded by the CIA, via In-Q-Tel, a so called â 501 c3 charityâ which was caught with tons of cocaine
â Google gets millions of dollars of taxpayer cash for spying on Americans inside the USA
â Googleâ s map service was a spy system paid for by taxpayers money that Google now profits off of
â Nancy Pelosi and Dianne Feinstein have promised to â protectâ Google because their families profit off Google stocks
â Payment receipts prove that Google and Gawker/Gizmodo exchanged cash and staff for Character Assassination attacks
â Google VCâ s and bosses have spent $30M+ rigging the U.S. Patent Office to protect Google and harm Google competitors
â Google bribed itâ s lawyer into position as head of the U.S. Patent office in order to have her protect Google
â To rig insider stock trades, Google hides negative Tesla stories and pumps positive Tesla stories on â push daysâ
â Google and Elon Musk Co-own, co-invest and co-market stocks covertly while running anti-trust schemes
â Google rarely likes, or hires, black employees per federal and news media investigations
â Google hired most of the Washington, DC K Street lobby firms and told them to â do what ever they couldâ
â The film: â **Miss Sloane**â depicts only 2% of the illicit lobbying tactics Google employs daily
â Demands for an FTC and FBI raid of Google, for criminal activity, securities law and election felonies have been filed
â Googleâ s David Drummond had his Woodside, CA Quail Road house bugged revealing sex and financial misdeeds
â Google, and itâ s Cartel (Alphabet, Youtube, and hundreds of other shell-company facades) are a criminal organization engaged in felony-class crimes. Googleâ s bosses bribe politicians, regulators and law enforcement officials to hold off prosecution.

At Google: Kent Walker, Andy Rubin, Larry Page, Eric Schmidt, Sergy Brin, Jared Cohen, Yasmin Green, David Drummond and Ian Fette are so enmeshed in sex scandals, election manipulation, and White House bribes that it is hard to comprehend how they can get any legitimate work done.

There are hundreds of millions of people in America. The same 120 of them are all involved in operating the same crimes and corruption including: the Sony Pictures corruption; the Afghanistan rare earth mine scandals operated through The Energy Department political slush fund that involves the lithium battery cover-ups (headed by Elon Musk); the Big Tech Brotopia rape, sex trafficking, bribery, exclusionism, racism and misogyny issues they were taught at Stanford University; The Facebook â Meta â Google â Alphabet â Netflix, et al, coordinated news manipulation and domestic spying that they engage in; the hiring of Fusion GPS â Black Cube â Gizmodo/Gawker assassins; the destruction of the housing market by their mass real estate manipulations; patent theft and industrial espionage; and the bribery of almost every politician all the way up to the Oval Office.

So, while the categories covered in this investigation may seem diverse. They are connected through an enterprise of criminality and illicit, coordinated operations. We list, by name, the 120 most complicit individuals organizing these crimes, in the evidence documents already submitted to the FBI, FINCEN, DOJ, FTC, SEC, FEC, Congress, InterPol and other authorities. Digital financial tracking of those persons and all of their family members should be assumed to have been under way for some time. Wire-taps and device taps of those persons and all of their family members should be assumed to have been under way for some time.

Twitter, Splunk, Google, Facebook, Netflix, YouTube and the Silicon Valley internet Cartel serve you custom manipulated content by automatically creating a covert digital dossier on you reflecting the content consumption preferences they have spied on about you. They continually evolve their dossier on you in order to steer you towards their ideology and their Democrat political party. At these companies, â data miningâ , â machine learningâ and â AIâ means computerized propaganda processing for certain political entities. They began hiring off-shore people (because they would work so cheap) but most of those people turned out to be Muslim. This created conflicts with the entire southern part of the United States (which is anti-Muslim) because those workers steered content to pro-Muslim positions.

Their spy dossier on you uses abstract content-specific features of the consumed content, such as categories, topic models, and entities, which they automatically extract using natural language processing by comparing every word you use to a giant computer library of what those words might mean about your psychology. So itâ s like you are getting â mind-rapedâ without any penis use. Their assessment of what your words might mean is based on what rich, white male, $200K/year, DNC-promoting programmers think they might mean. Their computers scale and expand their tools with algorithmic software created by those politically and socially biased frat white boys that wrote the code. It is all biased as hell. They never hire blacks or women in system creation roles so everything these companies do only supports rich white soyboy snowflake type gamer thinking.

Because their Silicon Valley VCâ s told them to spy on billions of people, even for these web giants, it is impractical to store the entire dynamic history of a userâ s interaction features. They, thus, out of greed, use algorithms that selectively decay information in order to generalize users and populations. To them, you are just a generalized data point, like cattle on a ranch, to be harvested and fed upon by Silicon Valley.

F.) MASS_MEDIA_MANIPULATION

News outlets in our country exhibit the widespread â criminalityâ and â defamation tacticsâ of a mostly corrupt news media landscape. The Gawker/Gizmodo/Jalopnik tabloid empire is nothing more than an organized info-crime operation backed up by offshore money-laundering through Russia and the Ukraine.

Despite widespread recognition of their deceptive conduct, fools still read these trash publications.

There are massive conflicts of interest related to many news media outletsâ conglomerate-ownership as well and industry figuresâ financial and familial links to companies, interests, and people they ostensibly report on.

â Fake newsâ isnâ t the proper term. Itâ s the â propaganda arm of the Silicon Valley Socialist oligarchsâ In most cases.

Itâ s no different than the Chinese Communist Party [and] the propaganda they put out. Itâ s no different

than what the Soviet Union did with the old Pravda media, and, quite frankly, itâ s no different than how Putin controls the media today, where 95 percent of his media in Russia is propaganda for the Putin regime. Itâ s the same thing here with The Washington Post, NY Times, CNN, Hearst publications and all of the media owned by Hollywood and Silicon Valley.

Partisan news media should be treated as such. News media outlets such as the CNN, the New York Times, and the Washington Post regularly describe themselves as â politically objective and non-partisan.â In reality they are a propaganda machine for sick Silicon Valley oligarchs.

The information institutions are corrupt. For example, Elon Musk is one of the most corrupt men in the world yet the socialist propaganda news media wonâ t cover any of his crimes and corruptions in their publications because he pays political bribes to keep his dark side hidden in their media.

The public should not hurt legitimate news media outlets by engaging with and speaking to corrupt propaganda operations. One should only speak with genuine news media and not reward unethical companies with their time.

The following diagrams show what various independent researchers have discovered:

The Manipulation Techniques Of Silicon Valley Media Outlets

A common tool Google, Facebook and Twitter use to exert control over their victims.

We all use manipulation at some point in our lives, whether it be telling a little white lie to get out of a situation, or using flattery to get what we want. For some people, however, **using manipulation is a way of life**, and their first weapon in an arsenal of techniques to overpower their victims.

Who is at risk from the Silicon Valley media predators?

Predators use a range of manipulation techniques in order to control their victims, but they often **target certain types of personalities.** This is because they want to be able to easily manipulate a person, and particular vulnerabilities in a person lend themselves to manipulation. You are more likely to become a victim of a media predator if you have low self-esteem, are naÃ¯ve, easy to please, lack an assertive native and have no confidence in yourself.

Here are **20 of the most common manipulation techniques:**

1. Lying

Predators are constantly lying about practically everything in their life. They do this to wrong-foot their victim and confuse them. Lying is one of the manipulation techniques psychopaths typically use because they have no qualms about it.

2. Not telling the whole story

This is different to lying as a predator will often keep a key part of the story to themselves in order to put their victim at a disadvantage.

3. Frequent mood swings

Never knowing what mood your partner is going to be in when you get home, whether theyâ ll be happy or angry is a very useful tool to the predator. It keeps their victim off balance and makes them more malleable.

4. Love-bombing and devaluation

Narcissists typically use love bombing as a manipulation tactic, they will go on a charm offensive and get you hooked into thinking this is the best relationship ever, then theyâ ll drop you like a ton of bricks without explanation.

5. Punishment

This can include anything from constant nagging, shouting, the silent treatment, physical violence and mental abuse.

6. Denial

Often the simplest way a predator will manipulate a person is by denying the thing they are accused of ever happening.

7. Spinning the truth

How many times have politicians twisted the facts to suit themselves? This spinning of the truth is often used to disguise bad behaviour by predators such as sociopaths.

8. Minimising

Where a predator will try and play down their actions as not important or damaging and shift the blame onto the victim for overreacting.

9. Plays the victim

The manipulator will themselves take on the role of victim in order to gain sympathy and compassion from those around them. We as humans are naturally drawn to helping people when they are suffering.

10. Targets the victim

When a manipulator accuses the victim of wrongdoing, they are making the victim defend themselves whilst the predator is able to mask their own manipulation techniques. The focus is on the victim, not the accuser.

11. Positive reinforcement

This includes buying expensive presents, praising them, giving money, constantly apologizing for their behaviour, excessive charm and paying lots of attention.

12. Moves the goal posts

You might think you know where you stand with a person, but if they are constantly moving the goal posts in order to confuse you, then itâ s likely youâ re dealing with a predator.

13. Diversion

Diverting the conversation away from the perpetratorâ s act and moving the conversation onto a different topic is a typical way predators manipulate their victims.

14. Sarcasm

A predator will often be sarcastic about their victim in front of others. They do this to lower the self-esteem of the victim and to show others how powerful they are.

15. Guilt tripping

Someone who manipulates will often guilt trip their victim by saying that they donâ t care about them, or that they are selfish or their life is easy. It all helps to keep that person confused and anxious.

16. Flattery

Using charm, praise or flattering the victim is one way of gaining that personâ s trust. The victim is naturally happy to receive such compliments but in doing do lowers their guard.

17. Playing the innocent card

A true manipulator will feign utmost shock and confusion at being accused of any wrongdoing. Their surprise is so convincing that the victim may question their own judgement.

18. Over the top aggression

Manipulators often use rage and aggression to shock their victim into submission. The anger is also a tool to shut down any further conversation on the topic as the victim is scared but focused now on controlling the anger, not the original topic.

19. Isolation

It is far easier to keep a person under control if they are isolated from family members and friends who could shed some light and truth on the situation.

20. Feigns love and empathy

News Predators such as psychopaths and sociopaths do not know how to love someone other than themselves, and cannot feel empathy, but they can pretend to in order to inveigle others into their lives.

If you watch out for the above manipulation techniques, you can keep yourself out of a media predatorâ s clutches.

There are hundreds of millions of people in America. The same 120 of them are all involved in operating the same crimes and corruption including: the Sony Pictures corruption; the Afghanistan rare earth mine scandals operated through The Energy Department political slush fund that involves the lithium battery cover-ups (headed by Elon Musk); the Big Tech Brotopia rape, sex trafficking, bribery, exclusionism, racism and misogyny issues they were taught at Stanford University; The Facebook â Meta â Google â Alphabet â Netflix, et al, coordinated news manipulation and domestic spying that they engage in; the hiring of Fusion GPS â Black Cube â Gizmodo/Gawker assassins; the destruction of the housing market by their mass real estate manipulations; patent theft and industrial espionage; and the bribery of almost every politician all the way up to the Oval Office.

So, while the categories covered in this investigation may seem diverse. They are connected through an enterprise of criminality and illicit, coordinated operations. We list, by name, the 120 most complicit individuals organizing these crimes, in the evidence documents already submitted to the FBI, FINCEN, DOJ, FTC, SEC, FEC, Congress, InterPol and other authorities. Digital financial tracking of those persons and all of their family members should be assumed to have been under way for some time. Wire-taps and device taps of those persons and all of their family members should be assumed to have been under way for some time.

Twitter, Splunk, Google, Facebook, Netflix, YouTube and the Silicon Valley internet Cartel serve you custom manipulated content by automatically creating a covert digital dossier on you reflecting the content consumption preferences they have spied on about you. They continually evolve their dossier on you in order to steer you towards their ideology and their Democrat political party. At these companies, â data miningâ ,

â machine learningâ and â AIâ means computerized propaganda processing for certain political entities. They began hiring off-shore people (because they would work so cheap) but most of those people turned out to be Muslim. This created conflicts with the entire southern part of the United States (which is anti-Muslim) because those workers steered content to pro-Muslim positions.

Their spy dossier on you uses abstract content-specific features of the consumed content, such as categories, topic models, and entities, which they automatically extract using natural language processing by comparing every word you use to a giant computer library of what those words might mean about your psychology. So itâ s like you are getting â mind-rapedâ without any penis use. Their assessment of what your words might mean is based on what rich, white male, $200K/year, DNC-promoting programmers think they might mean. Their computers scale and expand their tools with algorithmic software created by those politically and socially biased frat white boys that wrote the code. It is all biased as hell. They never hire blacks or women in system creation roles so everything these companies do only supports rich white soyboy snowflake type gamer thinking.

Because their Silicon Valley VCâ s told them to spy on billions of people, even for these web giants, it is impractical to store the entire dynamic history of a userâ s interaction features. They, thus, out of greed, use algorithms that selectively decay information in order to generalize users and populations. To them, you are just a generalized data point, like cattle on a ranch, to be harvested and fed upon by Silicon Valley.

G.) NETFLIX_NEGLIGENCE

By Susan Deen

Letâ s face it, Netflix sucks. Netflix spies on you and sends your psychological profile, location and interests off to spies, political parties, marketing services, Google, The Silicon Valley mafia, the IRS, the DEA.. pretty much anybody can see what you are dong on Netflix.

NETFLIX is not a movie service. NETFLIX IS AN ULTRA-WOKE, ANTIFA PROPAGANDA OPERATION THAT SEEKS TO PROMOTE EXTEMIST POLITICAL AND SEXUAL SOCIAL CONCEPTS!

If you like to get pandered to and treated like one of the data cattle on the privacy harvesting ranch then Netflix is your Pimp!

Netlix pretty much works for Obama and his political gang and pushes woke mass media manipulation and gay sex social programming at you as a result. If you are a guy, Netflix really, really, really wants you to cut your penis off and call yourself a girl!

Whats worse is that with so many studios refusing to license content to Netflix now, streaming services such as Disney plus, Peacock and many more are on the rise. Netflix sucks. Somehow, Netflix subscribers are left feeling like thereâ s nothing to watch on a platform that force feeds an over abundance of content from Indian and Mexican movies to itâ s viewers.

Every Netflix subscriber claims thereâ s nothing above â B-listâ movies being served to them on a thirteen dollar per month silver platter (and sixteen for 4k) Not to mention how unfavorable the label â Netflix originalsâ have become when slapped on a movie or show: â Netflix originalsâ is building a negative rep

on par with Nickelback and Adam Sandlerâ s series of Happy Madison productions movies.

Everyone knows that Netflix is bad now and getting worse every day. Netflix makes young adults feel the same way the price of extra guac at Chipotle doesâ ¦ and that is the: â I donâ t agree with this, but please take my moneyâ , feeling. They know theyâ ve got your money because itâ s too hard to say no each month because Millennials are so stupid and sheep-like.

Did we mention the increase of the monthly price? Netflix sucks. Netflix only hires Burning Man type extreme hair-dyed hipsters who have an ANTIFA-type attitude, especially if they are from Asia and will work like dogs for McDonaldâ s type pay and conditions. People who use Amazon Prime and then go back to Netflix can really see how much Netflix sucks. They would rather set their genitals on fire than stay with Netflix.

Netflix will make you love crippled, fat, black transgendered lesbians. You will get so many of them you wonâ t be able to stand it.

A while back Netflix destroyed its own rating system. What we mean by that isâ ¦ they literally deleted it. Now, at the start of each movie weâ re forced to either check rotten tomatoes or risk the next 25 minutes to figure out if a show or movie is worthy of our time and attention. Netflix removed their rating system in order to hide the fact that everyone thinks their movies are absolute shit!

Netflix stole most of itâ s streaming media technology from small inventors that it never paid. If any inventor tries to sue Netflix, Netflix just sends millions of dollars of lawyers after them so that the inventors can never get paid. It is best just to put Netflix out of business.

Netflix spent zillions of dollars making new content but the content they made turned to be the worst shit ever created. When Obama and his buddies make media to try to program you into being â wokeâ , it ends beng heartless propaganda. Seriously, Netflix spent more money making shittier content han anyone in history. Itâ s as if Netflix was just funneling money back to Biden and Obama. Speaking of funneling money, the FBIâ s Peter D. Cair has been busting Netflix executives who steal big money through the Netflix stock market system.

If you use Netflix you enter a â Netflix pitâ you fell into and canâ t get out ofâ ¦

There are hundreds of millions of people in America. The same 120 of them are all involved in operating the same crimes and corruption including: the Sony Pictures corruption; the Afghanistan rare earth mine scandals operated through The Energy Department political slush fund that involves the lithium battery cover-ups (headed by Elon Musk); the Big Tech Brotopia rape, sex trafficking, bribery, exclusionism, racism and misogyny issues they were taught at Stanford University; The Facebook â Meta â Google â Alphabet â Netflix, et al, coordinated news manipulation and domestic spying that they engage in; the hiring of Fusion GPS â Black Cube â Gizmodo/Gawker assassins; the destruction of the housing market by their mass real estate manipulations; patent theft and industrial espionage; and the bribery of almost every politician all the way up to the Oval Office.

So, while the categories covered in this investigation may seem diverse. They are connected through an enterprise of criminality and illicit, coordinated operations. We list, by name, the 120 most complicit individuals organizing these crimes, in the evidence documents already submitted to the FBI, FINCEN, DOJ, FTC, SEC, FEC, Congress, InterPol and other authorities. Digital financial tracking of those persons and all of their family members should be assumed to have been under way for some time. I.) REPAIRING_SILICON_VALLEY

The Silicon Valley tech Cartel (AKA: â Paypal Mafiaâ , â Deep Stateâ) is evil because these racist, ageist, sex-trafficking, money-laundering, elitist, politician bribing, tax evaders: steal any technology they desire; They manufactured the CLEANTECH CRASH as shown in the 60 MINUTES episode of the same name; they run a prostitution ring and sexually extort young women and interns in Silicon Valley; they are â rape cultureâ take-what-they-want misogynists, ageists and racists as their history of abuses has proven; their Palo Alto Cartel operates AngelGate-type collusion and stock market insider trading schemes that harm independent business and the public; their Cartel ran the â no poachingâ CEO ring which was class-action sued by DOJ and tech workers; 90% of their divorce court files reveal horrific abuses and sex trafficking; They have an army of lobbyists that pay cash, stock market and revolving door bribes to U.S. Senators; They can even evade FBI & SEC investigations; They hire women to act as â trophy wivesâ and â beardsâ ; they have lobbyists rig the U.S. Patent Office in order to block inventor patent rights because they are using stolen technologies; they have been caught on video and recordings beating, kicking and harming women hundreds of times.

They have bought up all of the Tier-One tech law firms and order them to black-list, and never help, those

who seek equal tech rights; they collude to abuse your privacy and make databases on the public for political control; they have to cheat to compete because they are only good with spread sheets instead of innovation; They run black-lists, character assassination attacks, collusion and other anti-trust violating acts in violation of RICO laws. Silicon Valley has become the largest assemblage of douche-bags and yuppie frat boy criminals in human history. Theranos is not the exception, it is the standard. Tesla, Google, Theranos, Wework, Facebook are lies backed by famous political insiders to protect their insider trading and covered-up by fake news operators. They are also fronts to fund political campaigns via the ill-gotten profits from their endeavors.When the bad guys, and their lap-dog politicians, attack you because your products are better than theirs they are proving that they are frat boy scumbags, from Stanford and Yale, that operate in a little pack, like dogs! Their Sandhill Road operation should be raided by the FBI! The best thing that could come from the COVID pandemic is that they all are forced into bankruptcy! When your Senator holds stock market shares in companies that exist to profit on the backs of consumers, via corruption, then it is impossible for that Senator to ever do anything but be corrupt! We have reported this in writing to winklerm@sec.gov, sanfrancisco@sec.gov and 30+ other federal officers but have yet to see our whistle-blower rewardsâ ¦or any action! Do you wonder how big politician insider stock trading is?

Take a look at how many TRILLIONS of dollars pass through the stock markets annually and then look at the reported, AND UNREPORTED, securities holdings of famous U.S. Senators and government agency staff. That is what Seth Rich and the people in the â In Memory Ofâ section, below, were disclosing. These are massive crimes! The perpetrators operate a massive and abusive national sex cult.

The perverts in the SandHill Road Venture Capital offices, located between Highway 280 down to to Santa Cruz Avenue on Sand Hill Road in Menlo Park, California, are the main perpetrators of this global cartel. Their executives at Google, Facebook, Netflix, Linkedin, Twitter, and their related holdings, comprise the rest. The Harvey Weinstein and Ed Buck sex scandals are well known.

These menâ s sex cult actions have been widely covered in the news individually in the Joe Lonsdale rape case, The Kleiner Perkins Ellen Pao sex abuse lawsuit, The Eric Schmidt sex penthouse stories, The Jeffrey Epstein case, The Google Forrest Hayes hooker murder case, The Andy Rubin sex slave case, The Sergy Brin 3-way sex romp scandal, The British Hydrant investigation, The Elon Musk Steve Jurvetson billionaire sex parties scandals,The NXIVM sexual slave cases, The Michael Goguen anal sex slave trial, The Tom Perkins Hooker Parties and thousands of other cases and federal divorce court filings.

This group of people have proven themselves, over and over, to be sociopath control freaks not fit for participation in public commerce, public policy or media control. The Four Seasons Hotel and Rosewood Hotels in Silicon Valley are estimated to engage in over $30,000.00 of high-end escort sex trafficking per day, a portion of it managed by Eastern Bloc Mafia operators. The Elon Musk sex perversions are the tip of the iceberg. At least 10 Ukrainian escorts fly in and out of SFO and SJO airports every week for these Cartel members. Google boss David Drummond engaged in horrible philandering sexual violations of his wife yet Google covers up every story about it on the web. Googleâ s Eric Schmidt is under massive investigation. You hear about the female victims of this sex cult but you rarely hear about the young male victims. One of their vast numbers of prostitutes is quoted as saying that the girls and boys are paid â not just for sex but for the oligarchâ s endless need to feel that they can control anyone for any reasonâ ¦â . Multiple attorney generalâ s controlled by their cartel, ie: Eric Schneiderman and Eliot Spitzer, are involved this these sex rings. These are the main influencers of a national political party and they are all involved in horrific sex perversions and abuses!

All Silicon Valley tech cartel media companies work together to censor all news and information in order to hide coverage of their dirty deeds and to only put politicians in office that will give the Cartel political payola, kick-backs and insider stock pumps.

The Smedley Butler â Business Plotâ from the past is not unlike the coup that Google and clan tried. See

details in Emily Changâ s book: BROTOPIA; Roan Farrowâ s book: CATCH & KILL; Edward Snowdenâ s Book: PERMANENT RECORD; Peter Schwetzerâ s book: THROW THEM ALL OUT; Dave Eggers book: THE CIRCLE; Franklin Foerâ s book: WORLD WITHOUT MIND; Corey Peinâ s book: JOURNEY INTO THE SAVAGE HEART OF SILICON VALLEY; Dan Lyonâ s book: DISRUPTED; Antonio Martinez book: CHAOS MONKEYS. The Angelgate, Epstein, No-Poaching DOJ Class Action, and hundreds of other cases, prove that they meet, conspire, collude and blacklist in felony violation of anti-trust and RICO Racketeering laws. â 90% of these guys came from the same date-rape fraternity houses involved in the recent college rape cases.

There are hundreds of millions of people in America. The same 120 of them are all involved in operating the same crimes and corruption including: the Sony Pictures corruption; the Afghanistan rare earth mine scandals operated through The Energy Department political slush fund that involves the lithium battery cover-ups (headed by Elon Musk); the Big Tech Brotopia rape, sex trafficking, bribery, exclusionism, racism and misogyny issues they were taught at Stanford University; The Facebook â Meta â Google â Alphabet â Netflix, et al, coordinated news manipulation and domestic spying that they engage in; the hiring of Fusion GPS â Black Cube â Gizmodo/Gawker assassins; the destruction of the housing market by their mass real estate manipulations; patent theft and industrial espionage; and the bribery of almost every politician all the way up to the Oval Office.

So, while the categories covered in this investigation may seem diverse. They are connected through an enterprise of criminality and illicit, coordinated operations. We list, by name, the 120 most complicit individuals organizing these crimes, in the evidence documents already submitted to the FBI, FINCEN, DOJ, FTC, SEC, FEC, Congress, InterPol and other authorities. Digital financial tracking of those persons and all of their family members should be assumed to have been under way for some time. Wire-taps and device taps of those persons and all of their family members should be assumed to have been under way for some time.

Twitter, Splunk, Google, Facebook, Netflix, YouTube and the Silicon Valley internet Cartel serve you custom manipulated content by automatically creating a covert digital dossier on you reflecting the content consumption preferences they have spied on about you. They continually evolve their dossier on you in order to steer you towards their ideology and their Democrat political party. At these companies, â data miningâ , â machine learningâ and â AIâ means computerized propaganda processing for certain political entities. They began hiring off-shore people (because they would work so cheap) but most of those people turned out to be Muslim. This created conflicts with the entire southern part of the United States (which is anti-Muslim) because those workers steered content to pro-Muslim positions.

Their spy dossier on you uses abstract content-specific features of the consumed content, such as categories, topic models, and entities, which they automatically extract using natural language processing by comparing every word you use to a giant computer library of what those words might mean about your psychology. So itâ s like you are getting â mind-rapedâ without any penis use. Their assessment of what your words might mean is based on what rich, white male, $200K/year, DNC-promoting programmers think they might mean. Their computers scale and expand their tools with algorithmic software created by those politically and socially biased frat white boys that wrote the code. It is all biased as hell. They never hire blacks or women in system creation roles so everything these companies do only supports rich white soyboy snowflake type gamer thinking.

Because their Silicon Valley VCâ s told them to spy on billions of people, even for these web giants, it is impractical to store the entire dynamic history of a userâ s interaction features. They, thus, out of greed, use algorithms that selectively decay information in order to generalize users and populations. To them, you are just a generalized data point, like cattle on a ranch, to be harvested and fed upon by Silicon Valley.

In California, elite arrogant asshole dynasties send their kids to Stanford University. Stanford puts the kids in asshole frat houses to train them to get away with rape and run monopolies.

When they graduate they either go up the hill to Sandhill Road and start a venture capital clone operation or they get their frat friends on Sandhill Road to racketeer-fund their start-up or political campaign using money scammed from your parents pension funds. They only work with their frat buddies and insiders in a tribal â old boys clubâ manner.

They steal all the technology and markets they want because they control all of the tech lawyers and politicians via bribes and revolving doors.

Most of the money in Stanford University bank accounts is from Foreign and Hollywood oligarchs delivered as bribes meant to get their snot-nosed brats into Stanford. Stanford bosses keep all of this covered-up and covertly fund political campaigns to grease the wheels of political corruption.

They then sexually extort some Standford interns in Rosewood Hotel rooms, get the most â trophy wifeâ ones pregnant, and start the cycle all over again. Alas, Stanford is the training ground for abuse, corruption and â Bro-Crimeâ .

The issues, that the public and the news media have complained about include: producing child suicides, racism, misogyny, child mental health threats, domestic spying, data harvesting, sex trafficking, election manipulation, tax evasion, Fusion GPS/Media Matters/ Black Cube hit jobs on competitors, censorship, contrived market monopolization, intellectual property theft, political bribery and many other social crimes! An unusually large number of their staff have been arrested for, or charged with, sex crimes, including under-age trafficking.

The Silicon Valley Tech Cartel is one of the largest operators of bribes to public officials. Some of those bribes include billions of dollars of, non-FEC reported, search engine rigging for the political campaigns of the very politicians who are supposed to regulate them.

There are hundreds of millions of people in America. The same 120 of them are all involved in operating the same crimes and corruption including: the Sony Pictures corruption; the Afghanistan rare earth mine scandals operated through The Energy Department political slush fund that involves the lithium battery cover-ups (headed by Elon Musk); the Big Tech Brotopia rape, sex trafficking, bribery, exclusionism, racism and misogyny issues they were taught at Stanford University; The Facebook â Meta â Google â Alphabet â Netflix, et al, coordinated news manipulation and domestic spying that they engage in; the hiring of Fusion GPS â Black Cube â Gizmodo/Gawker assassins; the destruction of the housing market by their mass real estate manipulations; patent theft and industrial espionage; and the bribery of almost every politician all the way up to the Oval Office.

So, while the categories covered in this investigation may seem diverse. They are connected through an enterprise of criminality and illicit, coordinated operations. We list, by name, the 120 most complicit individuals organizing these crimes, in the evidence documents already submitted to the FBI, FINCEN, DOJ, FTC, SEC, FEC, Congress, InterPol and other authorities. Digital financial tracking of those persons and all of their family members should be assumed to have been under way for some time. Wire-taps and device taps of those persons and all of their family members should be assumed to have been under way for some time.

K.) SONY_PICTURES_CORRUPTION

Sonyâ s Dirty Hollywood And Game Shananigens.

The hacks and leaks at Sony Pictures Entertainment have exposed the dark side of Hollywood. The new information reveals an insider vision of a company racked with sexism, office politics, high-school-level personality quibbles and a severe mine-is-bigger-than-yours territoriality culture.

A number of lawsuits against Sony, from Lady GaGa to Sonyâ s own employees, have revealed even more.

An aspect of the revelations involves where Sony gets itâ s ideas from. A number of revelations reveal that Sony seems to have established a process of â borrowingâ technology and story ideas while â forgettingâ to properly attribute or pay the sources.

Some of the â dirtâ exposed included:

â Sony finances Democrat Presidents in exchange for media â favored nationsâ status over competitors.
â Sony and Google coordinate political manipulation campaigns together.
â Sony executives trade female entry-level staff like cattle at a â ranchâ .
â Sony executives hire an insane amount of hookers, rent-boys and under-age sex providers.
â Sony executives bribe their kids into colleges.
â The good-old-white-jewish-boy club is alive and well at Sony.
â ZERO DARK THIRTY was a political PR hype movie commissioned by the Obama Camapign using government resources
â Sony steals patents from anybody it wants
â Sony stole itâ s VR technology
â Sony stole its web video technology, especially SONY VUE
â Sex deviancy is the rule at Sony
â Sony is a bunch of high-school whine babies who think their shit doesnâ t stink
â Ira Rubenstein, Sonyâ s Marketing Head, put his name on Sonyâ s patents, as the â inventorâ , even though his own emails admit that â he does not even know how to work a computerâ
â Sonyâ s web video patents, that were sold to AT&T/Direct TV, admit that Sony copied their patent ideas from TSBN in San Francisco
â Sony spends millions and millions of dollars on political bribes

The kids at Sony seem to have been very naughty children. They let their IT system go to pot, and got hacked, and outed, as â racistâ , â misogynistâ , â campaign riggingâ , â high school tantrum throwingâ kind of people, per their own emails. Hollywood Reporter, The Verge, Wikileaks, and a variety of tabloids and pundits, have delighted in dissecting the fraternity house, inside antics, of Sony Pictures.

Sony says that the hackers â DELETEDâ Sonyâ s files. THEY DID NOT. The Russians, Koreans, NSA, DOJ and a number of reports have ALL of Sonyâ s files and emails!

Their boss got fired. They got ridiculed for turning â Zero Dark Thirtyâ into a, slightly fabricated, political vote-churn tool. Other execs got kicked to the curb. All of their financial, contracting, political cash layout, and tax dynamics were placed under investigation, and even more sketchy bits are shaking looseâ ¦

Sony announced that it sold just 2 million PlayStation 5 units last quarter (Q4), bringing its overall total to 19.3 million. Thatâ s down considerably from the same quarter last year when it sold 3.3 million units. The

company did manage to boost game sales, though, with 70.5 million PS4/PS5 titles sold compared to 61.4 million a year ago, including 14.5 million first party games compared to 7.9 million in Q3.

Overall, its Game & Network Services (GSN) division earned 665 billion yen ($5.1 billion) this quarter, up slightly over last year. Sales for the full 2021 year were flat, up just 2 percent over 2020, and profits also changed little.

Those numbers mean that the PS5 is falling even further behind the PS4 in sales, having now sold 3.1 million fewer units than the PS4 at the same point in time. Sony warned that this was coming, blaming the lack of sales not on customer demand but its inability to build enough units due to the ongoing chip shortage.

There are hundreds of millions of people in America. The same 120 of them are all involved in operating the same crimes and corruption including: the Sony Pictures corruption; the Afghanistan rare earth mine scandals operated through The Energy Department political slush fund that involves the lithium battery cover-ups (headed by Elon Musk); the Big Tech Brotopia rape, sex trafficking, bribery, exclusionism, racism and misogyny issues they were taught at Stanford University; The Facebook â Meta â Google â Alphabet â Netflix, et al, coordinated news manipulation and domestic spying that they engage in; the hiring of Fusion GPS â Black Cube â Gizmodo/Gawker assassins; the destruction of the housing market by their mass real estate manipulations; patent theft and industrial espionage; and the bribery of almost every politician all the way up to the Oval Office.

So, while the categories covered in this investigation may seem diverse. They are connected through an enterprise of criminality and illicit, coordinated operations. We list, by name, the 120 most complicit individuals organizing these crimes, in the evidence documents already submitted to the FBI, FINCEN, DOJ, FTC, SEC, FEC, Congress, InterPol and other authorities. Digital financial tracking of those persons and all of their family members should be assumed to have been under way for some time. Wire-taps and device taps of those persons and all of their family members should be assumed to have been under way for some time.

Twitter, Splunk, Google, Facebook, Sony Interactive, Netflix, YouTube and the Silicon Valley internet Cartel serve you custom manipulated content by automatically creating a covert digital dossier on you reflecting the content consumption preferences they have spied on about you. They continually evolve their dossier on you in order to steer you towards their ideology and their Democrat political party. At these companies, â data miningâ , â machine learningâ and â AIâ means computerized propaganda processing for certain political entities. They began hiring off-shore people (because they would work so cheap) but most of those people turned out to be Muslim. This created conflicts with the entire southern part of the United States (which is anti-Muslim) because those workers steered content to pro-Muslim positions.

Their spy dossier on you uses abstract content-specific features of the consumed content, such as categories, topic models, and entities, which they automatically extract using natural language processing by comparing every word you use to a giant computer library of what those words might mean about your psychology. So itâ s like you are getting â mind-rapedâ without any penis use. Their assessment of what your words might mean is based on what rich, white male, $200K/year, DNC-promoting programmers think they might mean. Their computers scale and expand their tools with algorithmic software created by those politically and socially biased frat white boys that wrote the code. It is all biased as hell. They never hire blacks or women in system creation roles so everything these companies do only supports rich white soyboy snowflake type gamer thinking.

Because their Silicon Valley VCâ s told them to spy on billions of people, even for these web giants, it is impractical to store the entire dynamic history of a userâ s interaction features. They, thus, out of greed, use algorithms that selectively decay information in order to generalize users and populations. To them, you are just a generalized data point, like cattle on a ranch, to be harvested and fed upon by Silicon Valley.

L.) STANFORD_UNIVERSITY_INVESTIGATIONS

Stanford University builds corporate criminals, sex traffickers, sociopaths and elitist narcissists. It trains naive children to grow up to become adult stains on society!

In California, elite arrogant asshole dynasties send their kids to Stanford University. Stanford puts the kids in asshole frat houses to train them to get away with rape and run monopolies.

The problems at Stanford University include:

- Rape cover-ups by frats from rich families
- Epic racism
- Inter-Staff sex scandals that make the whole campus look like A Caligula party
- Dynastic families control the whole campus
- Arab, Iranian and Chinese oligarchs pay bribes to get their kids in
- The CIA is always recruiting everyone
- The Russian, Iranian and Chinese spy agencies have placed a huge number of spies on the campus as â pretend studentsâ and pretend teachers
- Elitism is rampant
- The Silicon Valley venture capitalists, up the hill on Sand Hill Road, get all their interns from Stanford and they date rape the hot ones with Ruffies, Scopalomine, and other amnesia drugs. The interns wake up with sore butts and canâ t remember why.
- To afford the fees, the girl students work as hookers at the Rosewood Hotel.
- The entire school is funded by bribery.
- Arrogance is the attitude of choice at Stanford.
- 99% of the guys that went to Stanford execute 99% of the corporate corruption crimes in the world.
- Girls at Stanford, that canâ t afford tuition, become Match.com hookers. Everyone in the bay area knows that if a Match.com profile has the words: â STUDENTâ and â GENEROUSâ anywhere in the text, that the girls are offering sex-for-tuition. Send your hot daughter to Stanford and turn them into hookers. Match.com even has sex agents, on campus, that get a commission for getting girls to join Match,com.
- Rape is OK at Stanford as long as your daddy is rich or owns part of the Middle East. The Stanford deans and regents say: *â Boys Will Be Boysâ* .
- Stanford provides buses that transport the sorority girls to the frat houses to get date raped and then back to the sorority houses drunk out of their minds or doped up on Ruffies and Scopalimine.
- There have been a number of strange murders and suicides at Stanford.
- Stanford students are perscribed the highest number of mental health medications of any campus in America.
- All of the land on the Stanford Campus could solve all of Silicon Valleyâ s housing crisis. The State of California should take all the land away from criminally corrupt Stanford University and build housing for average income on it. Stanford University doesnâ t â deserveâ anything any more.
- Chinese girls are sent to Stanford, by Chinese â Wife Millsâ to bag an Anglo husband and then divorce him 1 year after he hits paydirt. They are instructed to have 2 kids so the alimony upside is high. They pay a % of the money back to China.
- Trophy wives were invented at Stanford
- The Guardsman, The Key Club and over 50 â Final Clubsâ brain-wash students into elitism and tribal exclusion of all but your fellow â club membersâ from your ethinc group.

Most of the oligarch families paying bribes to Stanford are engaged in the most brutal human rights violations in history. They murder people and have them cut up with a hacksaw. They run prison camps. Only an idiot would think that modern day Stanford has any remaining â prestigeâ or â credibilityâ . This isnâ t the 1800â s any more. Shut this crap campus down!

When they graduate they either go up the hill to Sandhill Road and start a venture capital clone operation or they get their frat friends on Sandhill Road to racketeer-fund their start-up or political campaign using money scammed from your parents pension funds. They only work with their frat buddies and insiders in a tribal â old boys clubâ manner.

They steal all the technology and markets they want because they control all of the tech lawyers and politicians via bribes and revolving doors.

Most of the money in Stanford University bank accounts is from Foreign and Hollywood oligarchs delivered as bribes meant to get their snot-nosed brats into Stanford. Stanford bosses keep all of this covered-up and covertly fund political campaigns to grease the wheels of political corruption.

They then sexually extort some Standford interns in Rosewood Hotel rooms, get the most â trophy wifeâ ones pregnant, and start the cycle all over again. Alas, Stanford is the training ground for abuse, corruption and â Bro-Crimeâ .

The issues, that the public and the news media have complained about include: producing child suicides, racism, misogyny, child mental health threats, domestic spying, data harvesting, sex trafficking, election manipulation, tax evasion, Fusion GPS/Media Matters/ Black Cube hit jobs on competitors, censorship, contrived market monopolization, intellectual property theft, political bribery and many other social crimes! An unusually large number of their staff have been arrested for, or charged with, sex crimes, including under-age trafficking.

The Silicon Valley Tech Cartel is one of the largest operators of bribes to public officials. Some of those bribes include billions of dollars of, non-FEC reported, search engine rigging for the political campaigns of the very politicians who are supposed to regulate them.

There are hundreds of millions of people in America. The same 120 of them are all involved in operating the same crimes and corruption including: the Sony Pictures corruption; the Afghanistan rare earth mine scandals operated through The Energy Department political slush fund that involves the lithium battery cover-ups (headed by Elon Musk); the Big Tech Brotopia rape, sex trafficking, bribery, exclusionism, racism and misogyny issues they were taught at Stanford University; The Facebook â Meta â Google â Alphabet â Netflix, et al, coordinated news manipulation and domestic spying that they engage in; the hiring of Fusion GPS â Black Cube â Gizmodo/Gawker assassins; the destruction of the housing market by their mass real estate manipulations; patent theft and industrial espionage; and the bribery of almost every politician all the way up to the Oval Office.

So, while the categories covered in this investigation may seem diverse. They are connected through an enterprise of criminality and illicit, coordinated operations. We list, by name, the 120 most complicit individuals organizing these crimes, in the evidence documents already submitted to the FBI, FINCEN, DOJ, FTC, SEC, FEC, Congress, InterPol and other authorities. Digital financial tracking of those persons and all of their family members should be assumed to have been under way for some time. Wire-taps and device taps of those persons and all of their family members should be assumed to have been under way for some time.

M.) THE_CORRUPT_SENATORS

The corruption is easy to prove with a simple spread-sheet but the corrupt Senators have done everything they can to keep you from seeing that spread-sheet.

If you saw the spread-sheet that shows all of the covert family bank accounts, fake trust funds, shell companies and stock market accounts for Dianne Feinstein, Harry Reid, Nancy Pelosi, etc.; you can easily see how they only get a salary of $190K per year but put hundreds of millions of dollars in their accounts that all traces back to special interest groups that tell them what laws to make and what laws to stop from moving forward. Forensic accountants at the GAO, FBI or SEC can pop out the latest update on any given day.

WITH A COURT ORDER â WE CAN PRESENT DETAILED DOCUMENTS ACCOUNTING FOR EVERY CENT IN EVERY ACCOUNT THAT IS CONNECTED TO NANCY PELOSI, DIANNE FEINSTEIN, EVERY MEMBER OF THEIR FAMILY AND THE KICK-BACKS AND INSIDER TRADING THAT PRODUCED THOSE FUNDS!

These Senators have â rulesâ that delay investigations against themselves, though. Also, as we all saw from the Comey case: Corrupt Senators can even tell the head of the FBI who to NOT investigate! The 2008 and 2021 â Stimulus Fundsâ were just scams cooked up by politicians for them to skim stock market pump-and-dump profits off of and grab personal payola.

In all these corruption cases, these corrupt people took the same steps to conceal their assets. They each took the money in secret ways. The main ways are 1.) via Dark Money stealth political funds; 2.) bribes paid via insider trading (notice that most of these crooks marry an investment banker to run their dirty schemes) and 3.) getting government contracts, loans and grants for their friends that they get kick-backs from. They then had their dirty law firms and CPAâ s shove the money into their standardized covert financial structure to hide it.

They use family members to run the operation. Their dirty family members and lawyer/CPA teams cover up their tracks. They then have intermediaries spend the money to get them islands, yachts, mansions, hookers, Teslaâ s, etc.

The 2008 and 202i â stimulus fundsâ are quid pro quo scams to pay off political insiders. We reported these crimes (with FBI-class evidence) to every law enforcement agency in writing (FBI, DOJ, SEC, IG, FTC, OSC, FEC, etc.). apparently, citizens are ignored if the crimes involve politicians and their billionaires.

The cover-ups are off-the-charts!

these mobsters (Google, Tesla, Facebook, Linkedin, Netflix, In-q-tel, Kleiner Perkins, Greylock, etc; acting in a coordinated, collusion-based, operation) are paying billions of dollars of political bribes (â ¦via cash, real estate, sex trafficking, pacs, search engine rigging, crony jobs, biased censoring, campaign funds, stock market manipulations, ukrainian money laundering, etc.) to delay justice and blockade our, and your, rights! There can be no question about the fact that Google, Facebook, Netflix, Tesla and the Silicon Valley Cartel control the Obama and Biden White House.

For example: Elon Musk ordered the politicians who are his bitches to sabotage his competitors. He gave those political insiders: cash, stock in his cartel, revolving-door jobs, campaign funding, sex workers, off-shore money laundering, and other quid pro quo. Eric Schmidt, Larry Page, Mark Zuckerberg, and the rest of the tech mob, all worked together on these crimes.

The hacks and leaks of their documents prove it. Government agency bosses are covering up these crimes to protect their jobs and their corrupt stock market holdings. Musk and Goldman Sachs have gotten over FIFTEEN BILLION DOLLARS of free taxpayer cash and monopolized exclusives to pay for Muskâ s drugs, sex parties and mansions. This is one of the largest violations of anti-trust laws in history. The politicians and agencies that are supposed to stop him are getting money from him. Musk exists entirely from quid pro quo bribes! Muskâ s banks, including Deutsche Bank, have had to pay more than $100 million to settle charges related to violating anti-bribery laws and engaging in money laundering. While the Musk-controlled media bloviate on the god-like image of Musk, he and his buddies are just crooks and mobsters.

It is now almost impossible for the public to reach any media source that is not controlled by the Silicon Valley Cartel via synchronized talking points. Politicians who say that their only motivation is to â saveâ the helpless billionaire Elon Musk and his unicorns: 1.) sabotage any companies who are not making Teslaâ s, 2.) have sex with Tesla lobbyists and bankers, 3.) own the stock in Tesla Motors, 4.) are venture capital partners in Kleiner Perkins (ie: Gore) and Greylock capital insiders, 5.) trade revolving door jobs with the Elon Musk cartel, 6.) gave Musk over $15B of free taxpayer money, 7.) get campaign financing from Musk, 8.) order government agencies to freeze funding for Muskâ s competitors, 9.) and engage in a vast number of other corruption and anti-trust crimes.

U.S. Senators, Agency Heads and Congress are bribed by Google intermediaries with: Billions of dollars of Google, Twitter, Facebook, Tesla, Netflix and Sony Pictures stock and stock warrants which is never reported to the FEC; Billions of dollars of Google, Twitter, Facebook, Tesla, Netflix and Sony Pictures search engine rigging and shadow-banning which is never reported to the FEC; Free rent; Male and female prostitutes; Cars; Dinners; Party Financing; Sports Event Tickets; Political campaign printing and mailing services â Donationsâ ; Secret PAC Financing; Jobs in Corporations in Silicon Valley For The Family Members of Those Who Take Bribes And Those Who Take Bribes; â Consultingâ contracts from McKinsey as fronted pay-off gigs; Overpriced â Speaking Engagementsâ which are really just pay-offs conduited for donors; Private jet rides and use of Government fuel depots (ie: Google handed out NASA jet fuel to staff); Real Estate; Fake mortgages; The use of Cayman, Boca Des Tores, Swiss and related money-laundering accounts; The use of HSBC, Wells Fargo, Goldman Sachs and Deustche Bank money laundering accounts and covert stock accounts; Free spam and bulk mailing services owned by Silicon Valley corporations; Use of high tech law firms such as Perkins Coie, Wilson Sonsini, MoFo, Covington & Burling, etc. to conduit bribes to officials. This will never end unless the public demands laws to prevent all politicians, and their families, from owning ANY stock market stocks or securities!

There are hundreds of millions of people in America. The same 120 of them are all involved in operating the same crimes and corruption including: the Sony Pictures corruption; the Afghanistan rare earth mine scandals operated through The Energy Department political slush fund that involves the lithium battery cover-ups (headed by Elon Musk); the Big Tech Brotopia rape, sex trafficking, bribery, exclusionism, racism and misogyny issues they were taught at Stanford University; The Facebook â Meta â Google â Alphabet â Netflix, et al, coordinated news manipulation and domestic spying that they engage in; the hiring of Fusion GPS â Black Cube â Gizmodo/Gawker assassins; the destruction of the housing market by their mass real estate manipulations; patent theft and industrial espionage; and the bribery of almost every politician all the way up to the Oval Office.

So, while the categories covered in this investigation may seem diverse. They are connected through an enterprise of criminality and illicit, coordinated operations. We list, by name, the 120 most complicit individuals organizing these crimes, in the evidence documents already submitted to the FBI, FINCEN, DOJ, FTC, SEC, FEC, Congress, InterPol and other authorities. Digital financial tracking of those persons and all of their family members should be assumed to have been under way for some time. Wire-taps and device taps of those persons and all of their family members should be assumed to have been under way for some time.

N.) THE_ELON_MUSK_REPORTS

The Musk empire has paid more bribes to politicians than almost any other modern entity. That is why no full investigation of the Musk scams has ever been completed.

Elon Musk, Larry Page, Steve Jurvetson and Jared Birchell hire Ex-CIA losers right after they are fired by the CIA, or directly from IN-Q-TEL or from Fusion GPS, Media Matters and other CYBER ASSASSIN KILL SERVICES. They send their hit men after competitors, reporters, ex-employees and whistle-blowers because they chose to CHEAT RATHER THAN COMPETE!

Elon Muskâ s â Twitter Purchaseâ is just a scam to sell his Tesla stock without the SEC or his old investors noticing: THEY NOTICED!

Googleâ s Eric Schmidt and Larry Page have a bromance relationship with Musk and use the global resources of Alphabet to hide any negative news about Musk assets.The 2008 Department of Energy Cleantech Crash proves that a federal agency was used as just one big slush-fund to pay-off political campaign financiers, operate insider-trading stocks and sabotage those financiers competitors using taxpayer-financed resources!

We have used private investigator, FBI resources and deep AI research to reveal that all government staff working on our application were getting quid-pro-quoâ ¦they were on the take. (Can anyone point out to us EVEN ONE person who was in the DOE/White House loop who was not working for, invested in, getting a future job from or other wise conflicted?) What do you do when The U.S. Government convinces you to invest millions of dollars, and your life, into one of their projects.

Then their project turns out to be a scam where they had covertly hard-wired the upside to a couple of Senatorâ s and their campaign financier friends. The fix was in and the game was rigged to use a government program as a slush-fund for friends-with-benefits. We, and the public, got defrauded. Now the damages must be paid for, one way, or another.

Every one of the insiders who did get government funding got it in the exact same size and order as their covert political campaign funding and stock market bribes to the deciders. Chamath Palihapitiya and other Silicon Valley insiders have now exposed the fact that Greylock, Kleiner, etc. are just a VC Ponzi Scheme! in this whole mess.

Musk used crooked Senators to get his funds. Those Senators and government agency bosses were financed by, friends with, sleeping with, dating the staff of, holding stock market assets in, promised a revolving door job or government service contracts from, partying with, personal friends with, photographed at private events with, making profits by consulting for, exchanging emails with, business associates of or directed by; one of those business adversaries, or the Senators and politicians that those business adversaries pay campaign finances to, or supply political search engine manipulation services to.

Elon Musk is notorious for getting Department of Energy money by bribing public officials and placing his friends: Steven Chu, Matt Rogers, Steve Westly, Steve Spinnerâ s â special friendâ , etc. on the staff of the Department of Energy and in the White House. We have FBI-class records, financial tracking, emails, stock market relay records and other forensic data that proves it.

We can swear, warrant, certify and prove these assertions in front of Congress in a live Congressional hearing

or Civil Jury trial, given non-compromised legal backing. If you think you have bribed the same number of Senators, bought a President and taken over most of the Department of Energy like Musk didâ ¦ go for it! In this day and age, with every citizen able to track every public figure, with FBI-quality databases, on their home computers, it might be a crash-and-burn but you are welcome to try.

Lithium metals, and other rare earth mining materials, are monopolized by Elon Musk and his Silicon Valley Cartel, in rare-earth corrupt mining scams. Lithiumâ s widespread use in cars is hindered by a challenging obstacle: upon multiple charge-discharge cycles, fractal filaments called dendrites always grow through the electrolyte from the negative to the positive electrode and short-circuit the battery from the inside, thus guaranteeing that Tesla Cars will eventually all explode. Musk and Panasonic have known this since 2007 (They are â dumpingâ the batteries via Tesla) and have paid U.S. Senators, who own stock in Tesla, to cover it up.

The lithium fires and toxic vapors are a major safety concern because they have killed, poisoned and injured too many citizens. Musk gets away with his scams because he pays U.S. Senators bribes with stocks in his corporations and has a thousand crooked Goldman Sachs investment bankers selling his hair-brained schemes to your parents pension funds.

Tesla is known as â the official car of douche-bagsâ . The safety defect cover-ups on the Tesla are extreme. Muskâ s narcissistic trophy-wife mom and his extremist father (who got his young sister pregnant) are thought to be the cause of Muskâ s racism and sociopath behaviors.

He is the #1 crony capitalist government mooch in America and has received billions of dollars of your tax money to help him buy his mansions, starlets and sex parties.

His cars and rockets blow up, his tunnels are unsafe, his satellites spy on consumers and his brain chip company tortures small animals. He swiped all of his technology from someone else and has never come up with his own inventions.

Space-X is just a domestic spying company. Donâ t buy Muskâ s bullshit about Space-X doing any good deeds. Everything Space-X launches is to spy on the poor folks on the ground and monitor their internet. Also, Muskâ s Neuralink company tortures small animals to try out Muskâ s pseudo-science mind-reading chips.

There are hundreds of millions of people in America. The same 120 of them are all involved in operating the same crimes and corruption including: the Sony Pictures corruption; the Afghanistan rare earth mine scandals operated through The Energy Department political slush fund that involves the lithium battery cover-ups (headed by Elon Musk); the Big Tech Brotopia rape, sex trafficking, bribery, exclusionism, racism and misogyny issues they were taught at Stanford University; The Facebook â Meta â Google â Alphabet â Netflix, et al, coordinated news manipulation and domestic spying that they engage in; the hiring of Fusion GPS â Black Cube â Gizmodo/Gawker assassins; the destruction of the housing market by their mass real estate manipulations; patent theft and industrial espionage; and the bribery of almost every politician all the way up to the Oval Office.

So, while the categories covered in this investigation may seem diverse. They are connected through an enterprise of criminality and illicit, coordinated operations. We list, by name, the 120 most complicit individuals organizing these crimes, in the evidence documents already submitted to the FBI, FINCEN, DOJ, FTC, SEC, FEC, Congress, InterPol and other authorities. Digital financial tracking of those persons and all of their family members should be assumed to have been under way for some time. Wire-taps and device taps of those persons and all of their family members should be assumed to have been under way for some time.

O.) THE_HOUSING_CRISIS

SILICON VALLEYâ S TRILLION DOLLAR CULTURE OF BRIBERY; CENSORSHIP; SEX TRAFFICKING; ELECTION MANIPULATION; PAYOLA TO CITY, STATE, COUNTY AND FEDERAL OFFICIALS; LUDICROUS EXCESS AND REVOLVING DOOR PAY-OFFS TO GOVERNMENT INSIDERS HAS DESTROYED HOUSING OPPORTUNITIES FOR THE POOR AND MIDDLE CLASS BY NEGATING HUMAN RIGHTS OVER OLIGARCH LUXURIES!

The Silicon Valley solution to â The Housing Crisisâ is all talk, window dressing, dog-and-pony, un-responded to white papers and absolutely no meaningful action.

â California has the worst housing crisis in HISTORY!

â California politicians make lots of WINDOW DRESSING, PR statements about helping individuals but then they only give the government money **to developers who financed the politicians campaigns!**

â Nobody can get government support to build a home because in California it would compete with **the developers who financed the politicians campaigns!**

â Billions of dollars were sent to California, by the feds, to help individual citizens. The money came from the citizens own pockets via taxes. 99% of that money was given **to developers who financed the politicians campaigns** and none of it went to citizens to build homes.

â Investigators traced the federal funds back to the family bank accounts and stock market accounts of the politicians that control California!

â Fair Housing Advocates have identified over 200,000 people that already have lifetime mortage payment funds IN THEIR HANDS but The State Of California blockades these people from building homesâ ¦ EVEN THOUGH CALIFORNIA SAYS â THE HOUSING CRISIS IS BECAUSE WE HAVE NOT GOT ENOUGH HOMES!!!â HUD says this is illegal but HUD has yet to sue California to stop the blockades.

â All of the land on the Stanford Campus could solve all of Silicon Valleyâ s housing crisis. The State of California should take all the land away from criminally corrupt Stanford University and build housing for average income on it. Corrupt Stanford University (now almost entirely based on bribes by rich oligarchs who engage in human rights abuses) doesnâ t â deserveâ anything any more.

â The State politicians will do anything to stop those 200,000 people, with mortgage cash in hand, from building their homes because **developers who financed the politicians campaigns will shit their pants** if their political quid pro quo payola conduits are cut off.

â Part of the housing crisis is because California politicians invited half of South America to move in in hopes of rigging the voter rolls. Most of the people that showed up are actually construction labor people, but California wonâ t let them build homes because they are not in a union and because they **compete with developers who financed the politicians campaigns.** The irony is mind-boggling!

â In California the laws, and â rulesâ have been staged to make it impossible for a single family to build a home. Why are the laws and rules staged that way?: **To protect developers who financed the politicians campaigns!**

REAL ESTATE DEVELOPERS, OLIGARCHS AND REAL ESTATE BANKS PAY BRIBES TO COUNTY OFFICIALS TO KEEP AFFORDABLE HOUSING FROM GETTING BUILT BECAUSE IT COMPETES WITH THEIR SCHEMES!

BIG BANKS, BIG BUILDING DEVELOPERS AND TECH BILLIONAIRES ARE BRIBING COUNTY OFFICIALS TO STOP THEM FROM DOING ANYTHING!

S.F. Chronicle: Broken Homes

By Joaquin Palomino & Trisha Thadani / San Francisco spends millions of dollars to shelter its most vulnerable residents in dilapidated hotels. With little oversight or support, the results are disastrous.

San Jose Spotlight: Santa Clara County faces silver tsunami of homelessness

By Tran Nguyen / Brenda Nichols was among 145 homeless seniors who died in Santa Clara County between December 2020 and November 2021â a record high number as the region witnessed 250 homeless deaths over the same period.

Is this more smoke-and-mirrors WINDOW DRESSING: Rural Partners Network to Empower Rural Communities to Access Federal Resources

/ The Rural Partners Network (RPN) is a new whole-of-government effort led by the USDA to transform the way federal agencies partner with rural places to create economic opportunity.

GlobeSt.: The Share of Millennials Owning Homes Is Dwindling

By Paul Bergeron // This generationâ s homeownership rate doesnâ t match up with Gen X or Baby Boomers. Big Tech companies should be limited from paying any worker over $50,000.00 per year.

Earth Day: 52 Years of Individual Environmental Action Hasnâ t Fixed It And Proven That Nothing You Do Will Help

By Melanie Curry // Earth Day was born at a time when teach-ins and radical protests were forcing changes in the status quoâ ¦But over time â 52 years being a lot of that â corporate sponsorship and greenwashing shifted the focus of Earth Day to individual responsibility and to volunteerism.
BATHROOMS IN CALIFORNIA COST AS MUCH AS A TWO BEDROOM HOUSE COSTS IN THE REST OF AMERICA!

There are hundreds of millions of people in America. The same 120 of them are all involved in operating the same crimes and corruption including: the Sony Pictures corruption; the Afghanistan rare earth mine scandals operated through The Energy Department political slush fund that involves the lithium battery cover-ups (headed by Elon Musk); the Big Tech Brotopia rape, sex trafficking, bribery, exclusionism, racism and misogyny issues they were taught at Stanford University; The Facebook â Meta â Google â Alphabet â Netflix, et al, coordinated news manipulation and domestic spying that they engage in; the hiring of Fusion GPS â Black Cube â Gizmodo/Gawker assassins; the destruction of the housing market by their mass real estate manipulations; patent theft and industrial espionage; and the bribery of almost every politician all the way up to the Oval Office.

So, while the categories covered in this investigation may seem diverse. They are connected through an enterprise of criminality and illicit, coordinated operations. We list, by name, the 120 most complicit

individuals organizing these crimes, in the evidence documents already submitted to the FBI, FINCEN, DOJ, FTC, SEC, FEC, Congress, InterPol and other authorities. Digital financial tracking of those persons and all of their family members should be assumed to have been under way for some time. Wire-taps and device taps of those persons and all of their family members should be assumed to have been under way for some time.

P.) THE_LITHIUM_BATTERY_LIE

Elon Musk and the Senators he owns: Pelosi, Harris and Feinstein, will lie, until their dying day about these batteries that they all own stock in!

Lithium ion batteries: Cause wars, rape and genocide in the Congo, Afghanistan and Bolivia from the corrupt mining deals involved with mining lithium and cobalt; are insider trading-owned by ex-CIA boss Woolsey and DOE Boss Chu; excrete chemicals that mutate fetuses when they burn; destroy your brain, lungs and nervous system when they burn; kill the factory workers who make them; cause Panasonic to be one of the most corrupt companies in the world; poison the Earth when disposed of; canâ t be extinguished by firemen; poison firemen when they burn; are based on criminally corrupt mining schemes like URANIUM ONE; Have over 61 toxic chemicals in them; come from an industry that spends billions on internet shills and trolls used to nay say all other forms of energy; are insider-trading owned by corrupt U.S. Senators who are running a SAFETY COVER-UP about their dangers.

Apple products with lithium ion batteries have been exploding and setting people on fire; over time the chemical dendrites inside each battery grow worse and increase the chances of explosion as they age â LITHIUM ION BATTERIES BECOME MORE AND MORE LIKELY TO EXPLODE AS TIME GOES ON AND AS THEY AGE; â Bad Guysâ have figured out how to make them explode remotely; have their dangers hidden by CNN and MSM because pretty much only the DNC people profit from them; are the heart of Elon Muskâ s stock market scam.

The Obama Administration promised Silicon Valley oligarchs the market monopoly on lithium ion batteries and the sabotage of fuel cells in exchange for campaign financing and search engine rigging; United States Senators that are supposed to protect us from these deadly products own the stock market assets of them so they protect them and stop the FDA, OSHA, DOT & NHTSA from outlawing them. WRITE YOUR ELECTED REPRESENTATIVE AND DEMAND THAT LITHIUM ION BATTERIES BE MADE ILLEGAL TO SELL! NiCAD and Hundreds of other battery chemistries DO NOT have all of these problems but Lithium Ion batteries get a monopoly because of politician insider trading ownerships.

A recent fire on U.S. Highway 101 near Mountain View, CA, burned the driver alive and killed him. In Florida two kids died in a Tesla, burned alive, screaming in agony. A man died in agony in a Tesla crash in Malibu that set Malibu Canyon on fire. A young woman, at the start of life, and her boyfriend were burned alive in their crashed Tesla.

There are many more deaths and crashes than you have heard about. The deaths and the cover-ups are endless. Senators Dianne Feinstein, Harry Reid, Nancy Pelosi, Kamala Harris and their associates own the stock in Tesla Motors and/or itâ s suppliers and mining companies and they cover-up and halt investigations and laws designed to save the public. They, and their cronyâ s, spend over $1B a year to shill and troll hype about lithium ion batteries and cover-up the dangers. Lithium ion EVs are more prone to battery fires. Experts say that their lithium-ion batteries can fuel hotter fires that release toxic fumes and are more difficult to put out.

Lithium ion fires keep reigniting which explains why it takes so long and requires copious amounts of water or foam (it is an electric fire, after all) to smother the flames. Tesla employee Bernard Tse and his team warned Elon Musk about these dangers in 2008 and they got fired and/or warned to â say nothingâ by Musk. Three top Tesla engineers died in a plane crash next to Tesla offices in San Carlos after two of them agreed to become whistle-blowers.Elon Musk exists because he bribed DNC politicians and Senators Feinstein, Reid, Boxer, Harris, Clinton and Pelosi to give him free taxpayer cash and government resources from the Dept. of Energy and the Calif treasury.

DOE has been covering-up organized crime activities at DOE in which DOE funds are being used as a slush-fund to pay off DNC campaign financiers and to pay for CIA/GPS Fusion-Class attacks on Silicon Valley business competitors of those DNC campaign financiers who DOE staff share stock market holdings with. Elon Musk is a criminal, a mobster, an asshole, a bald fake-hair wearing, plastic surgery-addicted, douchebag, woman-abusing, sex addicted, tax evader.

Musk exploits poor people and child slaves in the Congo and Afghanistan to mine his lithium and Cobalt. Musk spends billions per year to hire Russian trolls, fake blogger fan-boys and buy fake news self-aggrandizement articles about himself. Musk thinks he is the â Jesusâ of Silicon Valley. Fake News manipulator Google is run by Larry Page and Larry is Muskâ s investor and bromance butt buddy.

Musk uses massive numbers of shell companies and trust funds to self-deal, evade the law and hide his bribes and stock market insider trading. A huge number of Tesla drivers have been killed; pedestrians and oncoming drivers have also been killed, and Musk covers it up.

The DNC and the MSM refuse to allow any articles about Muskâ s crimes to be printed because they benefit from Muskâ s crimes. Musk has been professionally diagnosed as a â psychotic narcissist.â A â Silicon Valley Mafia; cartel of frat boy sociopath venture capitalists like Steve Jurvetson, Tim Draper, Eric Schmidt, et al; threaten those who do not support the cult of Tesla or their political candidates.

In EVERY blog that you read that mentions â Muskâ , at least 1/3 of the comments have been placed their by Muskâ s paid shills. Musk holds the record for getting sued for fraud by his investors, wives, former partners, employees, suppliers and co-founders.

Elon Musk has gone out of his way to hire hundreds of ex-CIA staff and assign them to â dirty tricks teamsâ to attack his competitors and elected officials who Musk hates. Musk never founded his companies. Muskâ s â Starlinkâ satellites are domestic spy and political manipulation tools â never get your internet from one. Musk stole Tesla in a hostile ownership take-over from Marty the true inventor of the Tesla.

The same kind of EMF radiation proven to cause cancer from cell phones exists in massive amounts in a Tesla. Musk canâ t fix a car or build a rocket and has almost no mechanical skills. If you pull a report of every VIN# of every Tesla ever built and cross reference that with insurance, repair and lawsuit records you will find that the â per volumeâ fire, crash, death and defect rate is THE WORST of any car maker in history!

Musk is a lying con artist and partners with Goldman Sachs to rig the stock market. Sachs has a dedicated team of 18 men who rig stocks and valuation bumps for Musk. Over 1000 witnesses can prove every one of those claims in any live televised Congressional hearing! Senators Dianne Feinstein, Harry Reid, Nancy Pelosi, Kamala Harris and their associates own the stock in Tesla Motors and/or itâ s suppliers and mining companies.

That is why they criminally help cover-up investigations of Tesla! All of this was reported, in writing, to James Comey, Patricia Rich and David Johnson at the FBI. The DNC bosses own the stock in lithium, Solar and EV markets and use kickbacks from those markets (Especially via convoluted campaign finance

laundering via Elon Musk) to finance the DNC. The DNC bosses use character assassination as their main political tool against any member of the public who speaks out against their felony stock market scams and PizzaGate-like scandals.

The Harvey Weinstein reports by Ronan Farrow show that they have teams of hired goons that they pay to destroy peopleâ s lives. They use Black Cube, Mossad, In-Q-Tel, Stratfor, Gawker Media, Gizmodo Media, Media Matters, David Brock, Sid Blumenthal, NY Times, Google servers, Facebook servers, Podesta Group, Perkins Coie, Covington & Burling and a host of â assassinsâ .

It should be a felony to hire character assassins in the USA. DEMAND A LAW and DEMAND the termination of these attack services. IE: Gawker and Gizmodo Media sets-up the attack stories and, in paid partnership with Google, Google kicks their attack links around the globe, in front of 8 Billion people, forever. Google locks the attack articles of its enemies on the front top search results of Google search results forever, on purpose!

That is why Google is being terminated in the largest, most well resourced anti-corruption public service take-down in history! Tesla and Musk are protected by shareholders Harris, Pelosi, Feinstein, Brown and Newsom. Panasonic (indicted for bribery and Muskâ s partner) spends billions of dollars annually cover-up lithium battery fires and battery defects.

There are hundreds of millions of people in America. The same 120 of them are all involved in operating the same crimes and corruption including: the Sony Pictures corruption; the Afghanistan rare earth mine scandals operated through The Energy Department political slush fund that involves the lithium battery cover-ups (headed by Elon Musk); the Big Tech Brotopia rape, sex trafficking, bribery, exclusionism, racism and misogyny issues they were taught at Stanford University; The Facebook â Meta â Google â Alphabet â Netflix, et al, coordinated news manipulation and domestic spying that they engage in; the hiring of Fusion GPS â Black Cube â Gizmodo/Gawker assassins; the destruction of the housing market by their mass real estate manipulations; patent theft and industrial espionage; and the bribery of almost every politician all the way up to the Oval Office.

So, while the categories covered in this investigation may seem diverse. They are connected through an enterprise of criminality and illicit, coordinated operations. We list, by name, the 120 most complicit individuals organizing these crimes, in the evidence documents already submitted to the FBI, FINCEN, DOJ, FTC, SEC, FEC, Congress, InterPol and other authorities. Digital financial tracking of those persons and all of their family members should be assumed to have been under way for some time. Wire-taps and device taps of those persons and all of their family members should be assumed to have been under way for some time.

Q.) THE_MEDIA_ASSASSINS

POLITICAL KILL ORDERS AND STATE-SPONSORED CHARACTER ASSASSINATIONS â How A Modern Character Assassination and Political â Kill Orderâ Is Executed By the Silicon Valley Oligarchs and their total control of propaganda media. Patrick George At Jalopnik attacks outsiders under contract with Elon Musk and the DNC. Silicon Valley campaign finance oligarchs hire him to run hatchet jobs on innocent outsiders and then Gawker-Gizmodo-Jalopnik uses their financial partnership with the DNCâ s Google to push the character assassination articles to the top of Google web products and searches.

Patrick George, Adrian Covert, John Hermann and Nick Cook are the sexually degenerate cabin boys that

report to boy-loving sleaze-tabloid oligarch Nick Denton. They created the Fake News crisis in the media by flooding the internet with defamation posts and reprisal hatchet job articles designed to damage political enemies of the Socialists. They coordinate a large number of the character assassination efforts at Gawker, Gizmodo, Jalopnik, CNN, New York Times and other propaganda outlets. These Millennial boys are â Media Rapistsâ and should be treated as abusers. â How and why did a Donald Trump stripper-date named â Stormyâ or an Elon Musk sex party or a Kavanaugh drinking incident or the Moonves and Weinstein indiscretions suddenly hit the news at about the same time in news history? â In addition to actual murder, Politicians and Silicon Valley Oligarchs hire operatives to end peopleâ s lives in other creative ways. â

It is all part of the modern trend in vendetta, revenge and political payback when a Senator or a tech oligarch issues a â kill orderâ on an opponent. â The client does not like to get their hands dirty so the actual social hit job is performed by companies such as: IN-Q-Tel â (DNC); Gawker Media â (DNC); Jalopnik â (DNC); Gizmodo Media â (DNC); K2 Intelligence â (DNC); WikiStrat â (DNC); Podesta Group â (DNC); Fusion GPS â (DNC/GOP); Google â (DNC); YouTube â (DNC); Alphabet â (DNC); Facebook â (DNC); Twitter â (DNC); Think Progress â (DNC); Media Matters â (DNC); Black Cube â (DNC); Mossad â (DNC); Correct The Record â (DNC); Sand Line â (DNC/GOP); Blackwater â (DNC/GOP); Undercover Global Ltd (DNC/GOP) Stratfor â (DNC/GOP); ShareBlue â (DNC); Wikileaks (DNC/GOP); Cambridge Analytica â (DNC/GOP); Sid Blumenthal- (DNC); David Brock â (DNC); PR Firm Sunshine Sachs (DNC); Covington and Burling â (DNC), Buzzfeed â (DNC) Perkins Coie â (DNC); Wilson Sonsini â (DNC) and hundreds of othersâ ¦These are the people and companies that except cash, revolving door jobs, political appointments, insider trading stock in Silicon Valley tech companies, prostitutes and real estate in exchange for destroying the lives of others. â These attackers deserve to be punished for the rest of their lives for taking away the lives of others in exchange for cash. Any company who is corrupt enough to hire any of these assassins should be forced out of business.

These attack services are responsible for 90% of the â Fake Newsâ problem in the world because they are the authors of most fake news. Congress must act to make these kinds of companies illegal! â These digital assassination services offer hit-jobs, character assassinations and economic reprisal programs to famous billionaires and corrupt politicians who are seeking revenge, retribution and vendetta executions. â In the case of reporters getting targeted for attacks, President Donald Trump has been accused by the liberal corporate media of whipping up a hateful frenzy against the press. But while CNNâ s Jim Acosta grandstands against Trump, real journalists are still reeling from the draconian extrajudicial measures that Barack Obama and his administration used to target them for exposing truth. â This secretive targeting occurred while Obama speechwriter and hate-filled ANTIFA supporter Ben Rhodes was running â Operation Echo Chamber,â which reportedly continues, in which he fed information to willing corporate media scribes. â They literally know nothing,â Rhodes said of the twentysomething journalists he easily manipulated. â

The Freedom of the Press Foundationâ s Trevor Timm published documents showing how former attorney general Eric Holder changed the rules to more effectively intimidate and surveil members of the press. â Timm writes: â Today, we are revealingâ for the first timeâ the Justice Departmentâ s rules for targeting journalists with secret FISA court orders. The documents were obtained as part of a Freedom of Information Act lawsuit brought by Freedom of the Press Foundation and Knight First Amendment Institute at Columbia University.â â Obama is also clearly linked to the plot to obtain fraudulent FISA warrants on President Trumpâ s team, as evidenced by Peter Strzok and Lisa Pageâ s texts confirming that Obama was overseeing their fly-by-night operation. â Larry Schweikart reported for Big League Politics: For months pundits and researchers have been pondering the mystery of the FISA approval that led to the illegal and historically titanic scandals to ever hit the U.S. government.

Some have argued that Assistant Attorney General Rod Rosenstein knew the FISA was bogus when he extended it. Others have wondered if Special Counsel Robert Mueller knew about the fraudulent basis of the FISA when he used it, in part, to indict Michael Flynn. Other still, that Mueller was fooled by the FBI. This is what President Trump calls â SPYGATEâ . â It may well be that the surveillance that was conducted began

with UK intelligence services and then was fed back to the White House of Barack Obama. Hereâ s the kicker: President Barack Obama did not need a FISA warrant to authorize spying/electronic surveillance on Trump because Obama all along had legal authorization to by-pass the normal court vetting process. According to 50 U.S. Code 1802, the â Electronic Surveillance Authorizationâ () â Foreign intelligence in relation to a US person (Trump or his associates) is information thatâ s necessary for the US to protect against attack, hostile acts, sabotage, . . . as well as other clandestine activities by a foreign power . . . OR . . . information relevant to national defense/security of the US, or the conduct of foreign affairs of the U.S.â Such an authorization by Obama required certification by Attorney General Loretta Lynch that must be logged with the FISC court. (â The [AG]+ shall immediately transmit under seal to the court [FISC] a copy of his certification.â) â In short, the DOJ has this. If we are correct, a copy of that certification is currently under seal at least with the DOJ and the FISC. â This is what they are hiding. â However, the Act requires the AG to keep the Select Committee on Intelligence and the Senate Committee on Intelligence informed of these authorizations and unmaskings therein. See 1803 (a) (1) (C) If indeed this is what happened, did Lynch reportâ or only selectively reportâ to the committees in a way that excluded non-friendlies? Can you see why Adam Schiff, Mark Warner, and their ilk are terrified? â These are the playbook tactics that Senators and tech oligarchs most often use to destroy the lives of their political and business enemies: â Government agency bosses sometimes solicit the target victims with false promises of future loans, contracts or grants from their agency and cause the target victims to expend millions of dollars and years of their time for projects which those government bosses had covertly promised to their friends. They use the target victims as a â smokescreenâ to cover their illegal government slush-funds for the victims competitors and personal enemies.

By using this tactic, the attackers can drain the target victims funds and force them into an economic disaster in plain view of everyone without the government bosses fearing any reprisal for their scam.- Every match.com, okcupid.com, Plenty Of Fish, Seeking Arrangements and all other IAC-owned, or similar, dating sites (IAC is managed by Hillary Clintonâ s daughter) have had their profiles, texts, and inter-member communications, since those companies were started, hacked or purchased. The attack service providers use Palantir and In-Q-Tel financed data analysis software to analyze every activity in those dating services in order to find honey-trap, blackmail, sextortion and social conflict exploitation opportunities. If you had a bad date with someone, that someone will be hunted down and convinced to help harm, #metoo or â rape chargeâ the intended target. All dates involve a search for sex, so the likelihood that a sexual disappointment experience will exist in each persons dating history is high. Searching every past dating email and text of a subject is quite easy with modern software and hacking techniques. A synthetically amplified, PR-agency optimized sex scandal can destroy any target. Your dating experiences from the 70â s or 80â s will come back to haunt you decades later. Most dates involve drinking alcohol and taking drugs. If you were unattractive or had bad sexual skills your bad date will be called â date rapeâ , â drugging your date for sexâ and related twisted narratives that are designed to shame you, the target.

If you try to get a date in the future, your potential date will be contacted by a third party who will slander and libel you to make sure your potential first date gets cancelled. Your social life will, essentially, end. Every photo on every dating site is cross checked with every other photo on the internet in order to cull your Facebook, Linkedin, Snapchat and other social media together to create a total psychological manipulation profile data file on you. A single photo on a dating site can be cross searched on every mugshot archive, photo album and corporate database in the worth within minutes using modern super-computers. Your sex life will be on public record in a flash.- Social Security, SSI, SDI, Disability and other earned benefits are stone-walled. Applications of targets are â lostâ .

Files in the application process â disappearedâ . Lois Lerner hard drive â incidentsâ are operated in order to seek to hide information and run cover-ups. â Government officials and tech oligarchs contact members of the National Venture Capital association (NVCA) and created national â black-listsâ to blockade target victims from ever receiving investor funding. This was also confirmed in a widely published disclosure by Tesla Motors Daryl Siry and in published testimony. If Silicon Valley political campaign finance oligarchs

black-list you (see the â AngelGateâ Scandal and the â High Tech No Poaching Class Action Lawsuitâ cases) you will never get investor funding again. â FOIA requests are hidden, frozen, stone-walled, delayed, lied about and only partially responded to in order to seek to hide information and run cover-ups.- State and federal employees will play an endless game of Catch-22 by arbitrarily determining that deadlines had passed that they, the government officials, had stonewalled and obfuscated applications for, in order to force these deadlines that they set, to appear to be missed. This can bankrupt a target victim.- Some Victims found themselves strangely poisoned, not unlike the Alexander Litvenko case.

Heavy metals and toxic materials were found right after their work with the Department of Energy weapons and energy facilities. Many wonder if these â targetsâ were intentionally exposed to toxins in retribution for their testimony. The federal MSDS documents clearly show that a number of these people were exposed to deadly compounds and radiations, via DOE, without being provided with proper HazMat suits which DOE officials knew were required. â Victims employers are called, and faxed, and ordered to fire target victims from their places of employment, in the middle of the day, with no notice, as a retribution tactic. â On orders from Obama White House officials, DNC-financed Google, YouTube, Gawker Media and Gizmodo Media produce attack articles and defamation videos. Google locks this attack media on the internet on the top line, of the front page of all Google searches for a decade in front of 7.5 billion people, around the world.

This attack-type uses over $40 million dollars in server farms, production costs and internet rigging. The forensic data acquired from tracking some of these attacks proves that Google rigs attacks against individuals on the internet and that all of Googleâ s â impressionsâ are manually controlled by Googleâ s executives who are also the main financiers and policy directors of the Obama Administration. This data was provided to the European Union for itâ s ongoing prosecution of Googleâ s political manipulation of public perceptions. â Victims HR and employment records, on recruiting and hiring databases, are embedded with negative keywords in order to prevent the victim targets from ever gaining future employment. â Gary D. Conley, Seth Rich, Rajeev Motwani and many other whistle-blowers in these matters, turned up dead under strange circumstances. It is very possible that some of these attack services, operated by former CIA operatives, even offer discrete murder-for-sale services using high-tech assassination tools that make murders look like heart attacks and brain failures. â

Disability and VA complaint hearings and benefits are frozen, delayed, denied or subjected to lost records and â missing hard drivesâ as in the Lois Lerner case.- Paypal (A DNC-biased operation) and other on-line payments for on-line sales are de-platformed, delayed, hidden, or re-directed in order to terminate income potential for target victims who competed with the attackers interests and holdings.- DNS redirection, â website spoofingâ sends target victims websites to dead ends where no sales orders or customer inquiries actually get back to the target. These internet revenue activity manipulations are conducted using Google and Amazon servers. All commercial storefronts and on-line sales attempts by target victims, will have had their sites hidden, or search engine de-linked by a massively resourced facility located in Virginia, Texas or Palo Alto, California in order to terminate revenue potentials for the target victims.-

Over 50,000 trolls, shills, botnets and synth-blog deployments are deployed to place defamatory statements and disinformation about victims in front of 7.5 billion people around the world on the internet in order to seek to damage their federal testimony credibility by a massively resourced facility. â Campaign finance dirty tricks contractors are hired by campaign financiers to attack the friends and family members of the target victim in order to create low morale for the target victims psyche and motivation.- Are you getting weird headaches and hearing a â buzzing soundâ in your head? The U.S. Government has now acknowledged that the Cuban, Chinese and other embassy â sonic attacksâ are from a known microwave beam weapon. Any one of the technical departments of the attack services listed at the top of this article can build such a biological harassment weapon.

It can be aimed at the target victims office, bedroom or vehicle and, within a week, have caused biological and emotional damage using a weapon that has no visible track of trajectory. It is designed to make the target

victim think they are â going crazyâ or â hearing sounds in their headâ .-

In one case covert political partner: Google, transferred large sums of cash to dirty tricks contractors and then manually locked the media portion of the attacks into the top lines of the top pages of all Google searches globally, for years, with hidden embedded codes in the links and web-pages which multiplied the attacks on Victims by many magnitudes.- Covert Cartel financier: Google, placed Googleâ s lawyer: Michelle Lee, in charge of the U.S. Patent Office and she, in turn, stacked all of the U.S. Patent Office IPR and ALICE review boards and offices with Google-supporting employees in order to rig the U.S. Patent Office to protect Google from being prosecuted for the vast patent thefts that Google engages in.

Google has hundreds of patent lawsuits for technology theft and a number of those lawsuits refer to Googleâ s operations as â Racketeeringâ , â Monopolistic Cartelâ and â Government Coup-likeâ behaviors. Thousands of articles and investigations detail the fact that Google, â essentiallyâ ran the Obama White House and provided over 80% of the key White House staff. A conflict-of-interest unlike any in American history. Googleâ s investors personally told Applicant they would â kill himâ . Google and the Obama Administration were â the same entityâ . Applicant testified in the review that got Michelle Lee terminated and uncovered a tactical political and social warfare group inside Google who were financed by Federal and State funds. â

Honeytraps and moles were employed by the attackers. In this tactic, people who covertly worked for the attackers were employed to approach the â targetâ in order to spy on and misdirect the subject. â Gawker Media, Gizmodo Media, Snopes, SPLC and other hired media assassins will be retained to produce â hatchet jobâ character assassination articles about you. Then those articles will be faxed, mailed and emailed to your employer and investors with a note saying: â You donâ t want to have anything to do with this person, do you..?â in order to get you fired from your job and get your loans or financing pulled. The attackers will use their round one attack media, that they authored, to create a round two second wave attack designed to end your life via economic warfare.-

Mortgage and rental applications will have had red flags added to them in databases to prevent the targets from getting homes or apartments.- Krebs On Security, Wired, Ars Technica, The Wall Street Journal and most major IT publications have reported that hundreds of spy â back-doorsâ have been found on every Intel, AMD, Apple, Xfinity, Cisco, Microsoft, Juniper Networks motherboard, chip-set and hardware component set.

This means that any kid with the â keyâ code can open any computer, server, router, cloud-network or other network connected device and read every file, photo, video, your calendar and email on your devices at any time from any location on Earth. The key codes have been released to every hacker community in the world for over ten years. There is now no government, corporate or personal data that canâ t be hacked, even data from decades ago. Every single one of your darkest secrets can be in the hands of your enemy within 60 minutes, or less. Important meetings you had planned with potential investors, employers, clients, dates, suppliers and others will suddenly get cancelled at the last minute. They will get cancelled because your enemies are reading your calendar remotely and covertly sending slander information to those you had hoped to engage with in order to sabotage your life.

Nothing you have ever typed on a computer or Smartphone is safe. it WILL be acquired and it WILL be used against you. â McCarthy-Era â Black-listsâ are created and employed against target victims who competed with Obama Administration executives and their campaign financiers to prevent them from getting funding and future employment. â Obama Administration targets were very carefully placed in a position of not being able to get jobs, unemployment benefits, disability benefits or acquire any possible sources of income. The retribution tactics were audacious, overt..and quite illegal. â There are thousands of additional Dirty Tricks tactics being used by these Attack Services yet Congress refuses to pass laws out-lawing such attack services.

The cost of an attack on a person ranges from $150,000.00 to over $50,000,000.00. While a Silicon Valley billionaire can afford to launch counter-measures to these attacks, any regular taxpayer will be utterly destroyed, and incapable of fighting back, against even the smallest version of one of these â kill ordersâ .

A number of modern office shootings are the results of these attacks against an individual who has lost everything because of the attack and has no options left. â Federal law enforcement, the United States Congress and the highest level investigators in the U.S., and abroad, have documented (per the â FISA Memoâ , Congressional Reports and federal employee testimony) and proven the fact that the Obama Administration regularly engaged in the operation of retribution, vendetta and reprisal campaigns known as â hit-jobsâ against domestic natural born U.S. citizen domestic taxpayers.

The Federal Court, in at least one previous court case,has ruled that Applicants, in this particular matter, were the victims and target of a number of these attacks designed to inflict permanent medical, emotional, character assassination, brand negation, economic and career damage. The FBI has been asked to interview John Cook, Nicholas Guido Denton, Adrian Covert, Patrick George, Ian Fette and John Hermann of Gawker/Gizmodo re: their financing, payola and hit-job attacks on third parties.

There are hundreds of millions of people in America. The same 120 of them are all involved in operating the same crimes and corruption including: the Sony Pictures corruption; the Afghanistan rare earth mine scandals operated through The Energy Department political slush fund that involves the lithium battery cover-ups (headed by Elon Musk); the Big Tech Brotopia rape, sex trafficking, bribery, exclusionism, racism and misogyny issues they were taught at Stanford University; The Facebook â Meta â Google â Alphabet â Netflix, et al, coordinated news manipulation and domestic spying that they engage in; the hiring of Fusion GPS â Black Cube â Gizmodo/Gawker assassins; the destruction of the housing market by their mass real estate manipulations; patent theft and industrial espionage; and the bribery of almost every politician all the way up to the Oval Office.

So, while the categories covered in this investigation may seem diverse. They are connected through an enterprise of criminality and illicit, coordinated operations. We list, by name, the 120 most complicit individuals organizing these crimes, in the evidence documents already submitted to the FBI, FINCEN, DOJ, FTC, SEC, FEC, Congress, InterPol and other authorities. Digital financial tracking of those persons and all of their family members should be assumed to have been under way for some time. Wire-taps and device taps of those persons and all of their family members should be assumed to have been under way for some time.

R.) THE_POLITICAL_BRIBES

The corruption is easy to prove with a simple spread-sheet but the corrupt Senators have done everything they can to keep you from seeing that spread-sheet.

INSIDER TRADING with layered stock market payola is the top bribe method for politicians, these days!

If you saw the spread-sheet that shows all of the covert family bank accounts, fake trust funds, shell companies and stock market accounts for Dianne Feinstein, Harry Reid, Nancy Pelosi, etc.; you can easily see how they only get a salary of $190K per year but put hundreds of millions of dollars in their accounts that all traces back to special interest groups that tell them what laws to make and what laws to stop from moving

forward. Forensic accountants at the GAO, FBI or SEC can pop out the latest update on any given day.

These Senators have "rules" that delay investigations against themselves, though. Also, as we all saw from the Comey case: Corrupt Senators can even tell the head of the FBI who to NOT investigate! The 2008 and 2021 "Stimulus Funds" were just scams cooked up by politicians for them to skim stock market pump-and-dump profits off of and grab personal payola.

In all these corruption cases, these corrupt people took the same steps to conceal their assets. They each took the money in secret ways. The main ways are 1.) via Dark Money stealth political funds; 2.) bribes paid via insider trading (notice that most of these crooks marry an investment banker to run their dirty schemes) and 3.) getting government contracts, loans and grants for their friends that they get kick-backs from. They then had their dirty law firms and CPAâ s shove the money into their standardized covert financial structure to hide it.

They use family members to run the operation. Their dirty family members and lawyer/CPA teams cover up their tracks. They then have intermediaries spend the money to get them islands, yachts, mansions, hookers, Teslaâ s, etc.

The 2008 and 202i "stimulus funds" are quid pro quo scams to pay off political insiders. We reported these crimes (with FBI-class evidence) to every law enforcement agency in writing (FBI, DOJ, SEC, IG, FTC, OSC, FEC, etc.). apparently, citizens are ignored if the crimes involve politicians and their billionaires. the cover-ups are off-the-charts!these mobsters (Google, Tesla, Facebook, Linkedin, Netflix, In-q-tel, Kleiner Perkins, Greylock, etc; acting in a coordinated, collusion-based, operation) are paying billions of dollars of political bribes (...via cash, real estate, sex trafficking, pacs, search engine rigging, crony jobs, biased censoring, campaign funds, stock market manipulations, ukrainian money laundering, etc.) to delay justice and blockade our, and your, rights!

There can be no question about the fact that Google, Facebook, Netflix, Tesla and the Silicon Valley Cartel control the Obama and Biden White House. For example: Elon Musk ordered the politicians who are his bitches to sabotage his competitors. He gave those political insiders: cash, stock in his cartel, revolving-door jobs, campaign funding, sex workers, off-shore money laundering, and other quid pro quo. Eric Schmidt, Larry Page, Mark Zuckerberg, and the rest of the tech mob, all worked together on these crimes. The hacks and leaks of their documents prove it. Government agency bosses are covering up these crimes to protect their jobs and their corrupt stock market holdings.

Musk and Goldman Sachs have gotten over FIFTEEN BILLION DOLLARS of free taxpayer cash and monopolized exclusives to pay for Musk's drugs, sex parties and mansions. This is one of the largest violations of anti-trust laws in history. The politicians and agencies that are supposed to stop him are getting money from him. Musk exists entirely from quid pro quo bribes! Musk's banks, including Deutsche Bank, have had to pay more than $100 million to settle charges related to violating anti-bribery laws and engaging in money laundering. While the Musk-controlled media bloviate on the god-like image of Musk, he and his buddies are just crooks and mobsters. It is now almost impossible for the public to reach any media source that is not controlled by the Silicon Valley Cartel via synchronized talking points.

Politicians who say that their only motivation is to "save" the helpless billionaire Elon Musk and his unicorns: 1.) sabotage any companies who are not making Tesla's, 2.) have sex with Tesla lobbyists and bankers, 3.) own the stock in Tesla Motors, 4.) are venture capital partners in Kleiner Perkins (ie: Gore) and Greylock capital insiders, 5.) trade revolving door jobs with the Elon Musk cartel, 6.) gave Musk over $15B of free taxpayer money, 7.) get campaign financing from Musk, 8.) order government agencies to freeze funding for Musk's competitors, 9.) and engage in a vast number of other corruption and anti-trust crimes.

U.S. Senators, Agency Heads and Congress are bribed by Google intermediaries with: Billions of dollars of

Google, Twitter, Facebook, Tesla, Netflix and Sony Pictures stock and stock warrants which is never reported to the FEC; Billions of dollars of Google, Twitter, Facebook, Tesla, Netflix and Sony Pictures search engine rigging and shadow-banning which is never reported to the FEC; Free rent; Male and female prostitutes;

Cars; Dinners; Party Financing; Sports Event Tickets; Political campaign printing and mailing services "Donations"; Secret PAC Financing; Jobs in Corporations in Silicon Valley For The Family Members of Those Who Take Bribes And Those Who Take Bribes; "Consulting" contracts from McKinsey as fronted pay-off gigs; Overpriced "Speaking Engagements" which are really just pay-offs conduited for donors; Private jet rides and use of Government fuel depots (ie: Google handed out NASA jet fuel to staff); Real Estate; Fake mortgages; The use of Cayman, Boca Des Tores, Swiss and related money-laundering accounts; The use of HSBC, Wells Fargo, Goldman Sachs and Deustche Bank money laundering accounts and covert stock accounts; Free spam and bulk mailing services owned by Silicon Valley corporations; Use of high tech law firms such as Perkins Coie, Wilson Sonsini, MoFo, Covington & Burling, etc. to conduit bribes to officials. This will never end unless the public demands laws to prevent all politicians, and their families, from owning ANY stock market stocks or securities!

There are hundreds of millions of people in America. The same 120 of them are all involved in operating the same crimes and corruption including: the Sony Pictures corruption; the Afghanistan rare earth mine scandals operated through The Energy Department political slush fund that involves the lithium battery cover-ups (headed by Elon Musk); the Big Tech Brotopia rape, sex trafficking, bribery, exclusionism, racism and misogyny issues they were taught at Stanford University; The Facebook - Meta - Google - Alphabet - Netflix, et al, coordinated news manipulation and domestic spying that they engage in; the hiring of Fusion GPS - Black Cube - Gizmodo/Gawker assassins; the destruction of the housing market by their mass real estate manipulations; patent theft and industrial espionage; and the bribery of almost every politician all the way up to the Oval Office.

So, while the categories covered in this investigation may seem diverse. They are connected through an enterprise of criminality and illicit, coordinated operations. We list, by name, the 120 most complicit individuals organizing these crimes, in the evidence documents already submitted to the FBI, FINCEN, DOJ, FTC, SEC, FEC, Congress, InterPol and other authorities. Digital financial tracking of those persons and all of their family members should be assumed to have been under way for some time. Wire-taps and device taps of those persons and all of their family members should be assumed to have been under way for some time.

S.) THE_SAN_FRANCISCO_CORRUPTION

San Francisco has become increasingly inhospitable to the average person. The median rent for a one-bedroom is $2,695. A family of four is considered â low-incomeâ if they make less than $97,000. The Target and Walgreenâ s stores have had to operate in â crisisâ mode because the crime is so bad in San Francisco that you get robbed in the aisles while shopping at major retail stores in San Francisco. The STD rates are off-the-scale. It is almost certain that your car will be broken into or keyed. This place is tough to exist in long-term. It got like this because San Franciscoâ s corruption culture is so out of control.

If you think San Franciscoâ s ills are all due to the technology mobsters, you are mostly correct!

San Franciscans now have an obsession with escaping from San Francisco. This comes from a healthy

heaping of realistic bitterness â bitterness that you wonâ t be able to stay here, bitterness that you canâ t buy a house and set down roots and bitterness that others, unplagued by inertia, can recognize these facts and leave.

As San Franciscans, weâ ll always be looking over our shoulders at Austin and Portland and Denver, wondering what lifeâ s like in a more hospitable city where City Hall is not entirely controlled By Twitter, Facebook, Google and Netflix corporate bribes.

The villains in â ***The End of the Golden Gate***â book are familiar ones. Tech, capitalism, Mayor Ed Leeâ s tax laws. Every writer seems to agree on one front: San Francisco has changed, and in many ways, for the worse.

â *The San Francisco I knew and loved has been face-lifted, sleeked, chromed, polished, colonized, homogenized, and marginalized as a cultural innovative force,â* writes Peter Coyote in â ***San Francisco, For Sale by New Owners.***â *â The transformation was accomplished in a smooth, seamless manner by money and addiction to power.â*

â *San Francisco,â* he writes earlier in the essay, *â is too expensive, too monoculturally wealthy. Tech wealth and privilege have transformed it into a cushy enclave for the heartless.â*

Gary Kamiyaâ s standout essay acknowledges the downsides of this city: *â The exorbitant cost of housing, the influx of tech workers, traffic, crime, dirty streets, and an ever-worsening homeless crisis.â*

The Bay Areaâ s Google, Facebook and Netflix, Tesla executives and VCâ s happen to be the organizing, financing and beneficiary partners in a massive market manipulation scheme.

They formed their â *Silicon Valley Cartel*â to **collude**, **conspire** and **organize against the government, the public and industry** in a manner which the tech oligarchs describe in their own emails as being based on ***â ...<u>the Italian Mafia!</u>â*** .

Indeed, The Silicon Valley Tech oligarchs have formed a collusion-based, law-violating, tax-evading, government-manipulating crime empire protected by famous Bay Area politicians, whom they bribe! No cops seem to be able to stop them.

The Bay Area Solyndra/Silicon Valley Cartel case was one of the largest corruption matters in America with roots that ran all the way to the Oval Office. The FBI raid on Solyndra was only the tip of the iceberg. The matter illuminated an organized crime scheme, in violation of RICO, anti-trust and other laws, between major public officials, Silicon Valley tech oligarchs and their operatives.

The tech oligarchs beg for you to view them as â Green Advocatesâ but they lie! They engage in genocide, child labor slavery and rape farms via corrupt overseas rare earth mining schemes owned by California Senators, Department of Energy Executives, White House staff and the Silicon Valley tech Cartel. They are actually only really interested in anything green that has a dollar sign on it.

The Silicon Valley Cartel loves to run everything. In their federal â no poachingâ

lawsuits:
Case #â s **11-cv-2509** and **5:2011cv02509** and **1:10-cv-01629** and **1:10-cv-02220;** these cases, along with the â Angelgateâ scandal, prove that the Silicon Valley Cartel colludes to harm the public, rig the government and monopolize industries.

State-sponored â hit-jobsâ were ordered, operated and financed by San Francisco government officials in order to engage in revenge, reprisal and vendetta, against any who speak out about their crimes.

T.) USING_SOCIAL_MEDIA_SITES_TO_SPY_ON_CITIZENS

They spy on you to manipulate your politics, ideology and intentions and to report you to bill collectors, tax colletors, investigators and political parties.

Google, Netflix, YouTube, Facebook, etc. exist to mass manipulate populations and run stock market scams for their sociopath owners. From INSIDE Google, our team saw Google manipulate the entire internet to hype up Larry Pageâ s â boyfriendâ : Elon Musk and Tesla, which Google execs owned a portion of, while sabotaging Teslaâ s competitors.

Google illicitly and illegally timed these manipulations with stock market pump-and-dump efforts to exploit insider trading. That is a felony violation of RICO, Antitrust and other laws. Every single thing that Google does is contrived to harm a competitor, a politician, an employee whistle-blower or some other business adversary.

There are no â bugsâ , â operator errorsâ , â server anomaliesâ or other media â accidentsâ at Goog Everything Google does is contrived, at a psychological warfare kind of level, to change a social perception.Google must show its software to FBI, SEC, FTC and our search engine optimisation experts to prove that they did not engage in these crimes. The fact is: We can prove they did the crimes and FBI experts can help us prove it! Google is known as the â Naziâ s of the Internetâ .

In a case unfolding in Britain over whether Google wrongly demoted price comparison rival Foundem from its search results in favour of paid-for adverts, Google must now decide which it values more: the algorithms that rank its search results, or its stance that manually fiddling with those results to promote its own paid-for products over rivalsâ sites doesnâ t break competition laws.

The integrity of Googleâ s ranking processes relies upon all webmasters or website owners having the same degree of access to information about Googleâ s rankingâ ¦ This will no longer be the case if information of this kind is made available to some individuals offering commercial services to assist companies to improve their Search ranking.

Google is a criminal operation. Itâ s executives have been publicly exposed as participants in horrific sex scandals, money laundering, political bribery and racism. It is time for the bought and paid shill politicians to stop protecting them! â Google spies on competitors and steals their technology â Google runs tens of millions of dollars of defamation attacks against competitors â Google hides all media and news coverage for competitors of Larry Pageâ s boyfriend: Elon Musk â Google lies to the public about what they really do with the publicâ s data â

Google promotes illegal immigration in order to get cheap labor and control votes â Google runs VC funding

back-lists against start-ups that are competitive â Google bribes thousands of politicians â Google is a criminal RICO-violating monopoly â Google rigs the stock market with Flash-boy, Pump/Dump and Microblast SEC violating computer tricks â Google pays bribes to politicians in Google and YouTube stock â Google manipulates who gets to see what web-sites, globally, for competitor black-lists â Google has a â no poachingâ Silicon Valley jobs blacklist â

Google bosses sexually abuse women and young boys â Google bosses run sex trafficking operations in the Epstein and NXVIUM cults â Google bosses control the NVCA financing cartel over start-ups â Google has placed the majority of the corporate staff in at least one White House â Google controls national elections for anti-competitive purposes â The company â Polyhopâ , in the HOUSE OF CARDS tv show, does all the crimes that Google actually does in reality â Googleâ s law firms, like Wilson Sonsini, are corrupt conduits for payola and political conduit-relays â

Google bribes some politicians with revolving door jobs â Google is primarily responsible for destroying the Bay Area Housing opportunities â Google runs DDoS attacks on competitors by massively crawling their sites â Google boss Andy Rubin runs a sex slave farm according to his own family â Google boss Eric Schmidt was a philandering sex-penthouse owner according to vast news articles â Google executives hire so many hookers that one of them, Mr. Hayes, was killed by his hooker â

Google executives sexually abuse so many women that the women staff of Google walked out one day â In the 2009 White House, you could not swing a cat without hitting a Google insider â Google has paid covert bribes, PAC funds, real estate and search rigging payola to every CA Senator â Google has paid bribes, through its lobby fronts, to halt FBI, SEC, FEC and FTC investigations of Google crimes â Google was funded by the CIA, via In-Q-Tel, a so called â 501 c3 charityâ which was caught with tons of cocaine â Google gets millions of dollars of taxpayer cash for spying on Americans inside the USA â Googleâ s map service was a spy system paid for by taxpayers money that Google now profits off of â

Nancy Pelosi and Dianne Feinstein have promised to â protectâ Google because their families profit off Google stocks â Payment receipts prove that Google and Gawker/Gizmodo exchanged cash and staff for Character Assassination attacks â Google VCâ s and bosses have spent $30M+ rigging the U.S. Patent Office to protect Google and harm Google competitors â

Google bribed itâ s lawyer into position as head of the U.S. Patent office in order to have her protect Google â To rig insider stock trades, Google hides negative Tesla stories and pumps positive Tesla stories on â push daysâ â Google and Elon Musk Co-own, co-invest and co-market stocks covertly while running anti-trust schemes â Google rarely likes, or hires, black employees per federal and news media investigations â Google hired most of the Washington, DC K Street lobby firms and told them to â do what ever they couldâ â The film: â Miss Sloaneâ depicts only 2% of the illicit lobbying tactics Google employs daily â

Demands for an FTC and FBI raid of Google, for criminal activity, securities law and election felonies have been filed â Googleâ s David Drummond had his Woodside, CA Quail Road house bugged revealing sex and financial misdeeds â Google, and itâ s Cartel (Alphabet, Youtube, and hundreds of other shell-company facades) are a criminal organization engaged in felony-class crimes. Googleâ s bosses bribe politicians, regulators and law enforcement officials to hold off prosecution.

At Google: Kent Walker, Andy Rubin, Larry Page, Eric Schmidt, Sergy Brin, Jared Cohen, Yasmin Green, David Drummond and Ian Fette are so enmeshed in sex scandals, election manipulation, and White House bribes that it is hard to comprehend how they can get any legitimate work done. Google executives came from most of the fraternity houses involved in the college rape scandals.

Google sells covert character assassination services to politicians and fellow oligarchs. Youtube/Google/Alphabet/Deep State are all the same entity. They conspire to hide news about their

corruption and they control most of the internet.

There are hundreds of millions of people in America. The same 120 of them are all involved in operating the same crimes and corruption including: the Sony Pictures corruption; the Afghanistan rare earth mine scandals operated through The Energy Department political slush fund that involves the lithium battery cover-ups (headed by Elon Musk); the Big Tech Brotopia rape, sex trafficking, bribery, exclusionism, racism and misogyny issues they were taught at Stanford University; The Facebook â Meta â Google â Alphabet â Netflix, et al, coordinated news manipulation and domestic spying that they engage in; the hiring of Fusion GPS â Black Cube â Gizmodo/Gawker assassins; the destruction of the housing market by their mass real estate manipulations; patent theft and industrial espionage; and the bribery of almost every politician all the way up to the Oval Office.

So, while the categories covered in this investigation may seem diverse. They are connected through an enterprise of criminality and illicit, coordinated operations. We list, by name, the 120 most complicit individuals organizing these crimes, in the evidence documents already submitted to the FBI, FINCEN, DOJ, FTC, SEC, FEC, Congress, InterPol and other authorities. Digital financial tracking of those persons and all of their family members should be assumed to have been under way for some time. Wire-taps and device taps of those persons and all of their family members should be assumed to have been under way for some time.

Twitter, Splunk, Google, Facebook, Netflix, YouTube and the Silicon Valley internet Cartel serve you custom manipulated content by automatically creating a covert digital dossier on you reflecting the content consumption preferences they have spied on about you. They continually evolve their dossier on you in order to steer you towards their ideology and their Democrat political party. At these companies, â data miningâ , â machine learningâ and â AIâ means computerized propaganda processing for certain political entities. They began hiring off-shore people (because they would work so cheap) but most of those people turned out to be Muslim. This created conflicts with the entire southern part of the United States (which is anti-Muslim) because those workers steered content to pro-Muslim positions.

Their spy dossier on you uses abstract content-specific features of the consumed content, such as categories, topic models, and entities, which they automatically extract using natural language processing by comparing every word you use to a giant computer library of what those words might mean about your psychology. So itâ s like you are getting â mind-rapedâ without any penis use. Their assessment of what your words might mean is based on what rich, white male, $200K/year, DNC-promoting programmers think they might mean. Their computers scale and expand their tools with algorithmic software created by those politically and socially biased frat white boys that wrote the code. It is all biased as hell. They never hire blacks or women in system creation roles so everything these companies do only supports rich white soyboy snowflake type gamer thinking.

Because their Silicon Valley VCâ s told them to spy on billions of people, even for these web giants, it is impractical to store the entire dynamic history of a userâ s interaction features. They, thus, out of greed, use algorithms that selectively decay information in order to generalize users and populations. To them, you are just a generalized data point, like cattle on a ranch, to be harvested and fed upon by Silicon Valley.

U.) SILICON_VALLEY_DEATHWATCH

The social horror that â Silicon Valleyâ became is just a bubble of social abuse waiting to burst. Letâ s count down the days unil it finally implodes.

All Of Silicon Valley needs to be â KILLED OFFâ without breaking a single law. They can never be fixed.

Itâ s easy to do with one simple, 100% legal, weapon: THE TRUTH!

Said one Bay Area developer:

â These crooks donâ t get to buy private jets, sex islands, multiple mansions, throw celebrity parties and buy hookers with MY money! If they are making big bucks off my technology, I get my percentage of what they spied on, copied and theived or they get exposed for what they are. I will bring the FBI, DOJ, CIA, FTC, SEC, FEC, FINCEN, 60 Minutes and Congress, along with my team, to help take them downâ ¦â

PAYBACK IS A BITCH FOR BIG TECH COMPANIES THAT USED THEIR BUSINESS FRONTS TO OPERATE: **BRIBES TO CONGRESS, TAX-EVASION, SEX-TRAFFICKING, *PATENT THEFT*, ELECTION MANIPULATION, SHADOW-BANS, EMPLOYEE SEXSTORTION, OFF-SHORE MONEY LAUNDERING, STOCK MARKET MANIPULATION, BLACKLISTS, MONOPOLIES AND, WORST OF ALL, HIRED FUSION GPS, BLACK CUBE, IN-Q-TEL AND MEDIA MATTERS TO RUN ILLEGAL HIT-JOBS ON THEIR COMPETITORS! *ISNâ T IT INTERESTING THAT EVERY SINGLE ATTACKER HAS LOST BILLIONS OF DOLLARS IN STOCK VALUATION?*** ð •

THE SILICON VALLEY MAFIA COORDINATE THEIR CRIMES VIA SAND HILL ROAD INSIDERS AND THAT VIOLATES RICO AND MONOPOLY LAWS!

Silicon Valley has had the largest number of Congressional hearings against it, the largest number of consumer complaints in American history **BUT** the least number of regulations imposed on it. **Why?** You can look no further than the covert ownership of Silicon Valley by elected officials. Our politicians get paid bribes, by Silicon Valley, to keep the political corruption alive-and-well while they operate, with impunity, as the biggest threats to society ever manifested.

Politicians protect Silicon Valley and allow them to keep doing crimes!

WHAT CRIMES ARE WE UPSET ABOUT SILICON VALLEY DOING?:

Silicon Valley is producing child suicides, racism, misogyny, child mental health threats, domestic spying, data harvesting, sex trafficking, election manipulation, tax evasion, Fusion GPS/Media Matters/ Black Cube hit jobs on competitors, censorship, contrived market monopolization, intellectual property theft, political bribery and many other crimes! Why? ***Because crime paysâ ¦for corrupt U.S. Senators!***

â EVERY SINGLE ENTITY THAT ATTACKED US HAS LOST A MINIMUM OF A BILLION DOLLARS OF STOCK MARKET VALUATION OR GONE BANKRUPTâ ¦.â

YOU CAN KILL ANY CORRUPT ENTITY WITH: â THE TRUTHâ !

In the Age of Transparency, also known as The Great Disruption. Many document leaks have taken place, and more are expected, with particularly shocking data. The public has now become way moree savvy about information tools. This nexus of factors has created a new reality.

As billionaires and super-corporations become more prolific, their hubris, tone-deafness, and egotistic excesses seem to increase.

In this new age of equal access to all information, every member of the public now has access to the same investigation resources that the FBI and CIA have. Over 2000 online service providers will track down any crime, at any corporation or in any billionaies portfolio. You can, now, easily, hunt down the hookers, criminal expense accounts, tax evasion shelters, abuse of funds, insider trading, political bribes, mistresses,

and other corporate mis-deeds of each and every executive at a company.

The lesson to the wise: If you are a cocky billionaire, or corporation, one week; you can now be an out-of-business corporation, or billionaire, the next week. Be honest, legal and moral and you wonâ t get the axe.

Why Silicon Valley CEOs are such raging psychopaths

By Eric Spitznagel

Enlarge Image

Silicon Valley has a psychopath problem -- exemplified by the bad behavior of notorious tech CEOs such as Mark Zuckerberg, Elon Musk and Elizabeth Holmes. NY Post photo composite/Mike Guillen

Waitress speaks out on tech CEOâ s racist rant on Asian family

MaÃ«lle Gavet, a 15-year veteran of the tech industry, recalls an unsettling conversation she had at a Silicon Valley cocktail party in 2017.

Gavet was chatting with an early investor at Uber and mentioned some of the disturbing news surrounding the companyâ s co-founder and CEO, Travis Kalanick. There were revelations about spying on passengers, sexual harassment, a toxic macho work culture, and according to Kalanickâ s own friends, his â aspirational baller syndrome.â

The investor, Gavet told The Post, just laughed and said, â Oh, no, heâ s so much worse than anybody knows.â Gavet was nonplussed, asking the investor why he chose to do business with somebody so unrepentantly awful.

â He may be an asshole,â the investor told her. â But heâ s my asshole.â

This was just one of the many interactions that inspired Gavet to write her new book, â Trampled by Unicorns: Big Techâ s Empathy Problem and How to Fix Itâ (Wiley), out Tuesday. Though Kalanick was ousted as Uberâ s CEO in 2017 and stepped down from the companyâ s board of directors earlier this year, his psychopathic behavior is all too common among Big Tech execs, Gavet writes.

Enlarge Image Uberâ s ex-CEO Travis Kalanick has been accused of spying on passengers and building a toxic macho work culture.NY Post composite/Mike Guillen

According to the Hare Psychopathy Checklist â the universally accepted diagnostic tool used to assess this disorder â a psychopathic personality includes traits such as a grandiose sense of self-worth, a lack of remorse or guilt, poor behavioral controls, pathological lying and a lack of empathy.

These attributes arenâ t just present â but celebrated in Silicon Valley,â says Gavet, who once held the position of executive vice-president of global operations for Priceline Group, among other roles.

News of bad behavior by Silicon Valley CEOs â from Elon Muskâ s tweeting out misinformation about the pandemic to WeWork co-founder Adam Neumann now being probed by the New York state attorney general over allegations of self-dealing â has recently become so frequent, itâ s considered normal.

Take Theranos CEO Elizabeth Holmes, known for her eerie lack of blinking and an allegedly faked baritone voice. Once a Silicon Valley darling, she became a self-made billionaire by promising her blood-testing company would revolutionize health care with innovative finger-prick tests that delivered quick, painless, cheap results. But her claims were a lie. She now stands accused of fraud and is reportedly planning to make an insanity plea when she goes to trial this March.

Through the power of her psychopathy, Holmes convinced many â including veteran investors and politicians â â of her â messianic visionâ to defy reality with her â miracleâ blood-testing kit,â Gave writes.

Research by the FBI found that companies managed by psychopaths tend to have decreased productivity and low employee morale. In fact, Silicon Valleyâ s psychopathic traits â trickle down through entire organizations,â says Gavet. â In effect creating psychopathic companies.â

Enlarge Image WeWork co-founder Adam Neumann is being probed by the New York state attorney general over allegations of self-dealing.NY Post composite/Mike Guillen

This is enabled by an â infantilized cultureâ at many start-up companies, where employees become accustomed to working in â hyper-privileged bubbles where their every whim is catered to and every need anticipated,â she writes.

At Google, for instance, employees are treated to nap pods, free massages and a luxury hotel-style concierge service to run errands. The biotech firm Genentech reportedly offers perks like on-site car washes, haircuts, spa treatments and even a dentist.

â By sheltering these guys in this little cocoon or womb, it kind of emphasizes that young male problem, where Mom takes care of everything,â says Richard Walker, professor emeritus of geography at the University of California, Berkeley, and a veteran Valley-watcher. â Itâ s kind of magical, where food just appears, and â If my treat isnâ t there itâ s because Mom forgot to provide it!â â

And itâ s resulted in a serious lack of empathy, writes Gavet.

In February 2018, a 61-year-old livery driver shot himself in front of City Hall in lower Manhattan, claiming heâ d lost his livelihood because of competition from Uber cars. â I will forever remember the reaction of two of my friends working at Uber at the time,â says Gavet.

â During a dinner party, I asked how they felt about the suicide, and they were both like, â Itâ s sad, but itâ s the cost of disruption.â â

Itâ s an excuse sheâ s heard repeatedly. â I canâ t tell you the number of times Iâ ve heard people in Silicon Valley dismiss something horrible they may have caused with, â Thatâ s the cost of disruption,â â •â she says. â Theyâ re like, â Yeah, itâ s awful, but weâ re trying to make the world a better place, so itâ s OK.â

His legacy has cultivated an indelible association between being a jerk and a genius.

- MaÃ«lle Gavet on Steve Jobs

While that behavior can be found in any industry, from Wall Street to mass media, Gavet says itâ s particularly embedded and hard to fix in tech, â because it tends to take root at the early stages of a start-up.â

â The types of things I witnessed over the years include the work hard/play hard attitude, epitomized by a culture of booze-fueled partying; recklessness; the prioritizing of hyper-growth over sustainable profits; and demeaning comments about women and minorities,â she writes.

The examples of it are abundant, from Facebook CEO Mark Zuckerbergâ s non-apology after the Federal Trade Commission fined his company $5 billion for allowing Cambridge Analytica to mine user data for political purposes, to Jeff Bezos complaining during an engineerâ s presentation, â Why are you wasting my life?â

But some of the more glaring examples happen behind the scenes. Gavet spoke with a content moderator for Facebook, who worked for the company between 2017-2018 and looked for hate speech and graphic violence on the platform. He recalled flagging an image posted of a massacre in Southeast Asia.

Enlarge Image Amazon CEO Jeff Bezos once said to an engineer during a presentation, â Why are you wasting my life?â NY Post composite/Mike Guillen

â There was an image of a baby with somebodyâ s foot on its chest,â he said. â I had decided that was a dead baby because it wasnâ t fighting back.â But his auditor felt otherwise, insisting there was no proof that the baby was dead, and the photo remained.

Content moderators get a quality score and every image they mistakenly flag is a ding against their score. The

result can be dehumanizing, according to Gavet.

â Imagine arguing about whether a baby is dead because you donâ t want to get your quality score down,â she says. â All you care about is getting the point back, not whether the baby is dead.â

The moderator who spoke to Gavet was later diagnosed with PTSD and is now suing Facebook.

The patron saint of Big Tech douches, the one who inspired an entire generation of start-up entrepreneurs to put their worst face forward, was late Apple co-founder and CEO Steve Jobs. He disliked wearing shoes (or showering), preferred parking in handicapped parking spots and once motivated employees by calling them â fâ king dâ kless assholes.â

â His legacy has cultivated an indelible association between being a jerk and a genius,â writes Gavet. â Which has ballooned to the point where many people believe that a founder-CEO, in particular, actually has to be a jerk to be a genius.â

She calls it the Steve Jobs Syndrome, and sheâ s witnessed both powerful and up-and-coming tech exes believing in the myth like itâ s doctrine. Theranos CEO Holmes ruthlessly copied Jobs â not just by wearing black turtlenecks â but also by following his example of persuading people â to believe he was a prophet even when he was wrong,â Gavet writes.

Enlarge Image Late Apple CEO Steve Jobs preferred parking in handicapped parking spots and once motivated employees by calling them â fâ king dâ kless assholes.â NY Post composite/Mike Guillen

Gavet recalls working with a high-profile tech founder â she was overseeing the companyâ s acquisitions â and â every time I called him out on his lack of empathy and humility, which clearly led to many disastrous decisions, he would say to me, â Steve Jobs didnâ t build Apple by being humble and caring about people.â â

These myths wouldnâ t survive if the CEOs alone believed them. Former WeWork CEO Neumann was celebrated in the media for his audacious leadership style â from barefoot strolls through Manhattan to offering his employees tequila shots and Run DMC concerts in the office.

But Neumannâ s success was a mirage. â He made millions leasing buildings he partly owned back to WeWork,â Gavet writes. He also bought the trademark to the word â weâ and then sold the trademark use to WeWork, his own company, for $5.9 million.

After initially being valued at $47â •billion in January 2019, WeWorkâ s worth reportedly dropped to $10 billion in September that same year. But when Neumann stepped down as CEO, he was paid $185 million as a â consulting fee.â

Neumann isnâ t the only CEO whoâ s been rewarded for actively making things worse for investors. In early May, Tesla CEO Musk tweeted, â Tesla stock price is too high, IMO.â Within an hour of his tweet, the Tesla share price plummeted 10 percent, wiping $14 billion off the companyâ s stock market value. One investor tweeted back at Musk, â Dude â ¦ I just lost $10k because of this tweet. Wtf is wrong with U?â

Not only is Musk still Teslaâ s CEO, but his net worth also jumped this summer to $103 billion, up from $22.4 billion last year, making him the third-richest person in the world.

Enlarge Image

For anything to change, Gavet argues that companies need to take a more empathetic approach.

â They need to hire differently, promote differently, reward differently,â she says. â Iâ m an optimist, but Iâ m also a capitalist. I believe there are ways to make a company more empathetic, more reasonable, a force of good in the world. And I believe in the long run, that would actually be beneficial for the businesses.â

She sees evidence of it happening already. Tim Bray, a celebrated engineer at Amazon and their onetime vice

president of Web Services, quit his job in May because of the â toxicity running through the company culture,â as he wrote in a blog post.

â I choose neither to serve nor drink that poison,â he wrote.

Bray isnâ t alone in recognizing the toxic culture, but many are unsure how to take a stand.

â Some of the CEOs Iâ m close to â and I still think they are, to a large extent, psychopaths â theyâ re struggling,â says Gavet. â They tell me, â It feels like Iâ m damned if I do, damned if I donâ t.â They get criticized for being too aggressive, but when they try to be empathetic, theyâ re criticized for being too soft.â

The trend of psychopathy at the top of Big Tech wonâ t be â disrupted,â Gavet says, until we stop expecting the next Steve Jobs to be as abrasive and psychotic as, well â ¦ Steve Jobs.

Joel B. Pollak notes that former Vice President Joe Biden promised earlier this month that his climate change policies will bring new jobs â â good, paying union jobs.â He has made â and broken such promises before.

In 2009, Biden promised that $529 million in new Department of Energy loan guarantees to Fisker Automotive to produce electric cars in Delaware would provide â billions of dollars in good, new jobs.â Four years later, Fisker filed for bankruptcy â without producing a single car in the U.S.

As Breitbart News reported at the time, Fisker was granted the loan guarantees to produce a hybrid sports car called the â Karmaâ for the luxury auto market, with a price of $103,000. High-profile political figures lobbied for the deal. Fisker filed for bankruptcy failed in 2013 and taxpayers lost $139 million on the venture. Republicans noted: â The jobs that were promised never materialized and once again tax payers are on the hook for the administrationâ s reckless gamble.â

Along with failed solar panel manufacturer Solyndra, Fisker was one of the highest-profile failures of the stimulus, which Biden oversaw, and which he has touted on the campaign trail as proof of his ability to handle Americaâ s economic recovery.

Moreover, Vice President Biden admitted pushing for Fisker to build its new â Karmaâ plant in his home state of Delaware.

As the *Wall Street Journal* reported: â A spokeswoman for Mr. Biden said that he had made no direct appeals to DOE [Department of Energy] on Fiskerâ s behalf before the loan was approved, though he did talk to the company several times afterward to put in a plug for his home state.â

The Delaware site, an old GM plant, was located across the continent from Fiskerâ s corporate headquarters in Southern California.

The *Washington Post* noted:

> Even current Vice President Joe Biden was drawn into the Fisker debacle. To build its planned Project Nina vehicleâ to be dubbed the Atlanticâ Fisker maneuvered itself into a purchase of a former GM plant in Wilmington, Del., that had once built the smart Pontiac Solstice and Saturn Sky roadsters. The plant was one of many properties split off during GMâ s 2009 bankruptcy filing, and was to be sold as a part of the â old GM.â While the

> plant had some physical advantages of being near a port, it had several big disadvantagesâ namely, it was a world away from Fiskerâ s U.S. headquarters in California, needed expensive retooling, was far too large for the task at hand, and was ostensibly more expensive to retrofit than some other â old GMâ properties, such as Doraville, the suburban Atlanta plant that once built GM minivans.
>
> The Wilmington plant did have the huge advantage of lying in Vice President Bidenâ s backyard. Lobbying by all local politicians is said to have won the day for the Wilmington plant, but like much of Fiskerâ s financial history, the details are blocked from view. Vice President Biden would not respond directly to questions about Fisker posed by ABC News, his office insisting only that he supported the ATVM [Advanced Technology Vehicles Manufacturing] programâ but failing to address how a site from his hometown was given a Federally-backed reprieve.

As the left-wing *Nation* later noted, the new Fisker facility was less than five miles from Joe Bidenâ s Delaware home.

Biden proudly announced the deal in 2009: â We knew that we needed to do something different â in Delaware and all across the nation.â He declared: â Weâ re making a bet on the future, weâ re making a bet on the American people, weâ re making a bet on the market, weâ re making a bet on innovation.â When Fisker won the loan, Biden celebrated: â The story of Fisker is a story of ingenuity of an American company, a commitment to innovation by the U.S. government and the perseverance of the American auto industry.â He proclaimed: â This is seed money that will return back to the American consumer in billions and billions and billions of dollars in good, new jobs.â

It was a pledge that would be described, in retrospect, as â delusional.â

Fisker produced exactly zero cars in the U.S. Instead, it produced its first cars in Finland. In addition to the losses for the federal taxpayer, Delaware had committed over $20 million to the deal by the time the company filed for bankruptcy in 2013.

Biden learned nothing from the Fisker fiasco. In his climate speech, he promised once again to promote electric vehicles, saying he would deliver â more than a million new jobs in the American auto industry.â

We have heard such promises before.

By Marjorie Censer March 2, 2014

As an executive at Bethesda-based contracting giant Lockheed Martin, Dan Heller gets asked plenty: â Is Lockheed Martin now getting into energy?â

Itâ s not a surprising question, given the new work the company has announced in recent months. In February, for instance, the contractor said it had signed a deal with Victorian Wave Partners to develop the largest wave energy project to date. The $205 million project will use special buoys that pull energy from the motion of ocean waves.

But Heller is adamant that the energy market is nothing new for Lockheed. During his 27-year career at the company, â weâ ve been in the energy business the whole time,â Heller said.

Still, the contractor is devoting significant attention to building up this work as U.S. defense spending shrinks. Itâ s one of many new ventures that contractors are pursuing to offset the declines in more traditional sources of sales.

In another major deal, Lockheed last year announced it was partnering with a Chinese firm to build a plant off the coast of southern China to covert the oceanâ s thermal energy to electricity. The technology uses the temperature difference between the warm surface water of the ocean and the cold water much lower to create a generating cycle.

Both of these projects are in Lockheedâ s new ventures group, suggesting that the contractor sees potential in this kind of work.

The new deals reflect the significant â global attention in the energy space right now, for a lot of pretty obvious reasons,â Heller said.

Lockheed is not alone; Reston-based Leidos also has been pursuing projects in this area in recent years. Since 2011, the contractor has been selling its â Smart Grid as a Serviceâ hardware and software product to utility companies.

One North Carolina city selected Leidos this year to manage its smart-grid infrastructure for electricity, water and gas.

Work related to energy can be a natural fit for government contractors. The scale and processes of building a renewable energy project, for instance, are similar to those of putting together a large federal IT system, said William R. Loomis, an analyst with financial services firm Stifel Nicolaus.

"" style="border: 0px none; vertical-align: bottom;" marginheight="0" marginwidth="0" scrolling="no" name="google_ads_iframe_/701/wpni.business/capitalbusiness_6" id="google_ads_iframe_/701/wpni.business/capitalbusiness_6" frameborder="0" height="250" width="300">"" style="border: 0px none; vertical-align: bottom; visibility: hidden; display: none;" marginheight="0" marginwidth="0" scrolling="no" name="google_ads_iframe_/701/wpni.business/capitalbusiness_6__hidden__" id="google_ads_iframe_/701/wpni.business/capitalbusiness_6__hidden__" frameborder="0" height="0" width="0">

â Whether youâ re building an IT system or a weapons system, the mechanics are generally the same,â he said.

And contractors such as Leidos, said Jim Moos, president of the firmâ s engineering solutions group, are well-positioned because of their experience working with large customers to integrate many different systems.

In energy, he said, â thereâ s a real convergence .â •.â •. of the physical and digital worlds.â

Projects such as the kind Lockheed has signed onto also have a significant technology component. Heller said this type of work makes for a natural fit with Lockheedâ s technical staff. â Itâ s clearly the kind of work that our engineers and scientists should be doing,â he said.

There can be challenges with energy ventures. Leidos, for instance, late last year reported disappointing profits, partly related to two projects to design and build energy projects.

Moos said those projects were â uniqueâ for Leidos and the company doesnâ t have any similar ones planned.

As defense spending shrinks, interest in commercial energy work is unlikely to wane. But Loomis noted that contractorsâ track record in moving into new areas is mixed.

â Theyâ re trying to capiÂ–talÂ–ize on strengths around their technology portfolio, which makes sense,â he said. â The question is: Can this be marketed in a commercial fashion?â

Insider trading on green energy in Harry Reid, Nancy Pelosi and Dianne Feinstein offices

The Wall Street Journal reported about a staffer in Harry Reidâ s office who nearly doubled his $3,500 investment in a renewable energy firm in 2008. Sen. Reid helped pass legislation that benefitted the firm.

Congressional Staffers Gain From Trading in Stocks

By

Brody Mullins,

Tom McGinty and

Jason Zweig

WASHINGTONâ Chris Miller nearly doubled his $3,500 stock investment in a renewable-energy firm in 2008. It was a perfectly legal bet, but he's no ordinary investor.

Reidâ s spokesman tried to defend the staffer, Reidâ s top energy policy adviser, by asserting that he had no influence over tax incentives for renewable energy firms.

Under federal securities law, of course, it is not important whether the staffer had any influence over legislation, Sen. Reid or anyone or anything else.

If it can be shown that the staffer breached a duty of confidentiality in using â inside informationâ as the basis for buying and selling the stock, then he may very well be guilty of the crime of insider trading.

In May 2009, the Associated Press reported,

> Federal prosecutors and the FBI have been investigating possible illegal insider trading by two Securities and Exchange Commission enforcement attorneys who were in a position to receive sensitive information about agency probes of public companies.

Similarly, if the staffer had material information that the public didnâ t have and he took advantage of it in the buying and selling of securities, he could have committed a serious crime â as well as anyone he may have tipped off.

Reidâ s staffer has denied wrongdoing, but that should not be dispositive.

The Department of Justice, FBI and U.S. Securities and Exchange Commission ought to be investigating the staffer as well as any other potential insider trading violations described in the WSJ article.

At the very least, the staffer should be afforded the same opportunity as Martha Stewart to chat with federal investigators â that worked out so well for her.

Donâ t expect this to happen, however, as Sen. Reid and other members of Congress will no doubt quietly work to quash any investigation.

Big Brother Has Turned Green

The environmental movement has cultivated a warm and fuzzy public image, but behind the smiley-face rhetoric of "sustainability" and "conservation" lies a dark agenda. The Greens aim to regulate your behavior, downsize your lifestyle, and invade the most intimate aspects of your personal life.

In this stunning exposÃ©, Steve Milloy unveils the authoritarian impulse underlying the Green crusade. Whether they're demanding that you turn down your thermostat, stop driving your car, or engage in some other senseless act of self-denial, the Greens are envisioning a grim future for you marked by endless privation.

Steamrolling nearly all opposition with its apocalyptic predictions of environmental doom, the Green movement has gained influence throughout American society--from schools and local planning boards to the biggest corporations in the country. And their plans are much more ambitious than you think, says Milloy. What the Greens really seek, with increasing success, is to dictate the very parameters of your daily life--where you can live, what transportation you can use, what you can eat, and even how many children you can have.

Citing the tactics and goals of Green groups as explained by their own activists and leaders, *Green Hell* demonstrates:

* How Green pressure campaigns threaten the safety of your home and your car, and public health overall
* Why the election of President Obama portends a giant leap forward for coercive Green policies
* Why Greens obstruct the use of all forms of energy--even the renewable sources they tout to the public
* How wealthy Green elites stand to profit fabulously from the restrictions and regulations they seek to impose on the rest of us
* How Green pressure campaigns are hamstringing the military and endangering our national security
* Why big business is not only knuckling under to the Greens, but is aggressively promoting the green agenda to the detriment of its own stockholders
* What you can do to help stop the great Green machine

A one-of-a-kind, comprehensive takedown of the entire environmental movement, *Green Hell* will open your eyes to a looming threat to our economy, our civil liberties, and the entire American way of life.

'*Green Hell* explains why Americans can't afford to fall for Al Gore's `the debate is over' line on global warming. While we're all for the environment, *Green Hell* explains why we need to oppose the environmentalists."

--Fred Barnes, Executive Editor, the *Weekly Standard*

"*Green Hell* is the `inconvenient truth' on extremist, growth-killing environmentalism. A must-read for those interested in keeping America free and prosperous."
--Steve Forbes, President and Chief Executive Officer of Forbes

"Regardless of whether you believe global warming is a fraud, the fact is that the current depression, the past spike in oil prices, and the coming technology of electric cars are all going to solve whatever problem exists. Liberals want to use climate change as an excuse to take over the economy and regulate everything and this book exposes their plans."
--Dick Morris, FOX News commentator and former political consultant to Bill Clinton

"This book describes why the world can't afford to fall for global warming alarmism and environmental hysteria. Steve Milloy shows how to avoid the environmentalists' vision of our future."
--VACLAV KLAUS, President of the European Union and President of the Czech Republic

"Free market capitalism is still the best path to prosperity. *Green Hell* is a must-read for anyone who wants to keep America on that path and away from Soviet-style command-and-control environmentalism."
--Larry Kudlow, Host, CNBC's *The Kudlow Report*

Former President Barack Obama liked to portray himself as a politician watching out for the little guy.

But it looks like he spent much more time protecting his rich friends â and manipulating the government to help make them a fortune.

It was all part of a scheme that looks a lot like insider trading â or what author Peter Schweizer calls â smash and grab.â

In his new book, *Secret Empires: How the American Political Class Hides Corruption and Enriches Family and Friends,* Schweizer lays out how Obama used government regulations to help lifelong pals buy up companies for pennies on the dollar.

Basically, the Obama Administration would threaten and devalue companies, and Obamaâ s pals would be ready to swoop in and buy them on the cheap.

And apparently nobody ever stopped to consider the effect that this plot would have on ordinary shareholders â who lost millions â or the employees at the companies.

In an interview with Breitbart, Schweizer gives one shocking example â the case of Marty Nesbitt, who has been described as Obamaâ s â best friend.â

After Obama was reelected on 2012, Nesbitt set up a private equity firm called Vistria to invest in highly regulated industries â in other words, industries that Obama and his administration can help control.

Schweizer points to Vistriaâ s acquisition of online learning giant the University of Phoenix as an example of Obama and Nesbitt working together on a â smash and grabâ deal.

The Obama Administration had threatened to withhold GI Bill money from the University of Phoenix over the quality of its education, sending its share price tumbling.

Then, Nesbitt and Vistria were able to purchase the university for â three cents on the dollar,â Schweizer reports.

After the deal was made, the Obama Administration withdrew its threat to withhold federal funds.

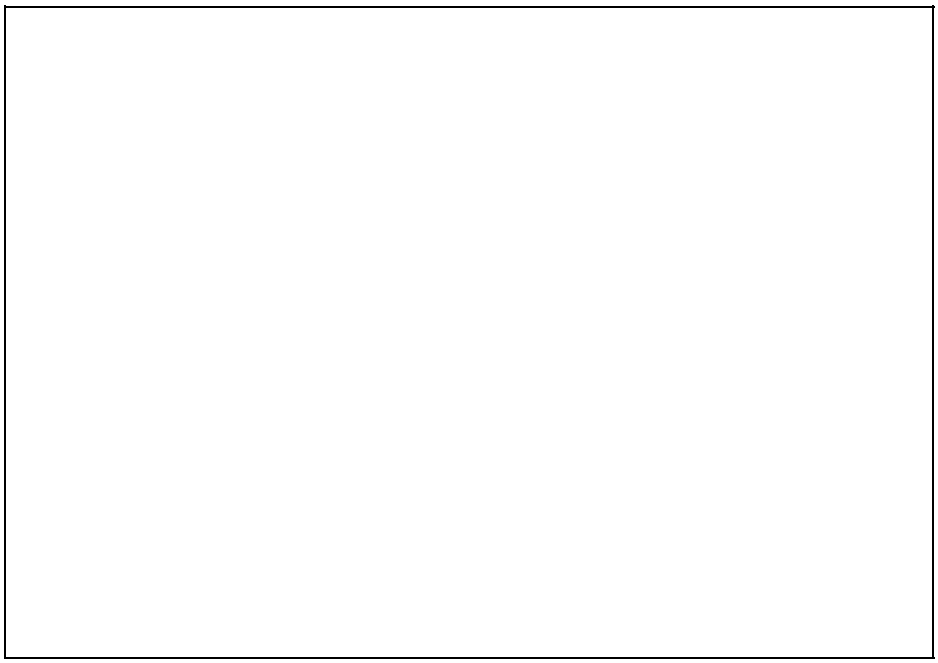
Schweizer says Obama repeated the strategy throughout his presidency to enrich liberal billionaires like Tom Steyer and George Soros, who have both worked to ruin current President Donald Trump.

â Barack Obama smashes coal companies, [and] what do these guys do? They go in, they buy them for pennies on the dollar, and when the regulatory weight is lifted, their valuations increase, and they make a lot of money, and you see that pattern in all of these industries,â Shweizer said.

And what happens to other shareholders â the ones who arenâ t friends with Obama? Theyâ re left holding the bag when the companies are devalued.

Schweizer says that some of the ill-gotten gains realized by Obamaâ s friends eventually found their way to the Obama Foundation.

Itâ s a scheme that absolutely cries out for a federal investigation. But with so many Obama puppets still left in the government, we wonâ t be holding our breath.



Intel Chair: FBI, DOJ Obstructing Energy Dept. Obama Cleantech Slush Fund Probe in Hope of Dem Takeover in Congress

Nunes says DOJ, FBI betting on Dems killing probe

SHARE

BY: Adam Kredo

The chair of the House Intelligence Committee accused the FBI and Department of Justice of stonewalling a sprawling investigation into claims the Trump campaign colluded with Russia with the hope of running out the clock until the November elections, when they anticipate Democrats will regain control of the House and dissolve an ongoing probe that has uncovered evidence U.S. officials sought to cripple Trump's campaign.

Rep. Devin Nunes (R., Calif.), in a wide-ranging audio interview with his House colleague Rep. Sean Duffy

(R., Wis.), accused top officials at the FBI and DOJ of "putting all their chips on the Republicans losing the House" so that their Democratic allies can "shut down" the longstanding Intelligence Committee probe, which has unearthed information disputing claims of collusion in recent months.

Rep. Duffy interviewed Rep. Nunes for an upcoming episode of Duffy's podcast, "Plaidcast."

Nunes also lashed out at the U.S. media, accusing "90 percent" of reporters covering the Russia probe of being "essentially an arm of the Democratic party," according to an advance copy of the interview shared with the *Washington Free Beacon*.

Nunes has been running the Intelligence Committee's investigation into claims the Trump campaign colluded with Russia to cement the 2016 election. The committee has unearthed a body of evidence indicating senior officials at the FBI and DOJ worked to take down Trump on behalf of Democratic challenger Hillary Clinton.

"One-hundred percent, they [the FBI and DOJ] are putting all their chips on the Republicans losing the House and all these investigations will shut down," Nunes told Duffy.

Nunes went on to blast the media for its lack of coverage about Republican findings indicating that senior U.S. officials loyal to the Democratic Party actively worked to open intelligence investigations into the Trump campaign based on a faulty and salacious anti-Trump dossier.

"The media has been horrible on this whole situation," Nunes said." What we've seen since the election of President Trump has been what's been going on for a long time, but now you see what I call the 90-10 split."

"You have 90 percent of the media who are essentially an arm of the Democratic Party," he said. "Then you've got five percent of the media that I believe, for lack of a better term, are right or center right. They don't necessarily follow the establishment of the Republican National Committee or something like that, but they definitely are conservative."

"Then you only have five percent of the journalists that are out there that I would say are legitimate," Nunes said. "That's a problem in this country when you don't have a free and fair media."

The Intelligence Committee's investigation has dragged on for months with little support from Democrats, who continue to push claims of collusion between Russia and the Trump campaign.

"The DOJ and FBI have actively obstructed a congressional investigation," Nunes said, explaining that top officials continue to withhold documents that could disclose that both bodies intentionally worked to undermine the Trump campaign by opening secret investigations alleging Russia collusion.

"This is really serious stuff," Nunes said, criticizing the FBI and DOJ for going to secret U.S. courts with evidence collected in the anti-Trump dossier, originally compiled by Fusion GPS. "They opened up a counter intelligence investigation into the Trump campaign."

Disclosure: The *Washington Free Beacon* was once a client of Fusion GPS. That relationship ended in January 2017. For more information, see here.

Nunes called the investigation into the Trump campaign unprecedented and an abuse of the American intelligence and security networks.

"After seven or eight months of stonewalling, we realized they [the FBI and DOB] had no intelligence in the opening of that investigation," Nunes told Duffy.

In a different media environment, these revelations would have been front-page news, but have largely been ignored by the U.S. media, which Nunes views as working to oppose Trump at all costs.

"If the shoe was on the other foot, and this is what's so bad and so corrupt about the media, and why I'm so worried about the future of our country, because without a free and fair and open media we have a major problem in this country," Nunes said. "The media is what we count on to bring the transparency to government. There's no possible way that if George W. Bush had done this to [former President Brack] Obama this town would have been on fire."

"They would have had the FBI and DOJ surrounded by rioting in the street, everyone would have been fired, there would have been people put in jail, and what's happening now is, you essentially have obstruction by the Department of Justice and the FBI colluding with the Democrats to ensure that these investigations do not properly take place," he said.

Is the Kleiner Perkins EEStor Saga Finished?

No news, no website, no chatter from the ultracapacitor urban legend except for some government skepticism.

Eric Wesoff

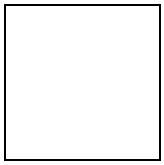
Is the EEStor Saga Finished?

- 23

EEStor is the urban legend of a startup that is said to be building a supercapacitor material that would store more energy and charge and discharge faster than previous materials by a factor of ten. If true, it could change the technology of electric vehicle charging and utility-scale energy storage.

We've made repeated attempts to contact the company and its CEO, Dick Weir, to no avail. Here is some of our EEStor coverage from last year, which includes a musical lament. The firm's website is no longer online and the usual fevered musings of the EEStor blogosphere have slowed.

Here's an abbreviated timeline of the firm's financial and partnership activity:



- Kleiner Perkins invested several million in EEStor in 2005. They don't admit to the investment on their website.
- ZENN Motors, a Canadian EV manufacturer, invested $2.5 million in EEStor in 2007.
- ZENN invested another $5 million for a 10.7% stake in 2009. ZENN is publicly held but barely alive as a going concern.
- Lockheed-Martin signed an agreement with EEStor for the rights to integrate and market EESU units in military and security applications but did not invest any money.

A source sent me some documents from an FOIA request from the Air Force Research Lab (AFRL) at Kirtland. They seem to indicate that the AFRL is puzzled over EEStor's story and unwilling to be associated with the firm. The redacted documents follow. Note the comment that EEStor is "full of it."

We report extensively on energy storage companies at Greentech Media. Here's a recent overview.

- eestor
- energy storage
- kleiner

Editor-at-Large
Greentech Media

Eric Wesoff is Editor-at-Large at Greentech Media. Prior to joining GTM, Eric Wesoff founded Sage Marketing Partners in 2000 to provide sales and marketing-consulting services to venture-capital firms and their portfolio companies in the alternative energy and telecommunications sectors. Mr. Wesoff has become a well-known, respected authority and speaker in these fields.

His expertise covers solar power, fuel cells, biofuels and advanced batteries. His strengths are in market research and analysis, business development and due diligence for investors. He frequently consults for energy startups and Silicon Valley's premier venture capitalists.

Jennifer Granholm and The United States Department Energy invite you to receive funding.

We have more money than God and we are going to hand it out like fish to seals.

If you want it, we only ask you to comply with a few little considerations:

1. You have to be a Democrat who gave a huge bunch of political financing to Obama, Clinton or Biden in the form of cash, search engine manipulation, news censorship, West Coast â Political Action Committeeâ s and or the Palo Alto funds.

2. The Goldman Sachs office of your local Senator must be immediately notified, in advance, so that the Goldman Sachs account managerâ s for that Senator can purchase your company stock, and the stock of every supplier to your company. Additionally, everybody at the The United States Department Energy, and all of our â consultantsâ are going to buy those stocks, in advance, too. For example, all of those folks got tipped off to buy Tesla stock and all of the mining stocks for Teslaâ s lithium, cobalt, nickel and other manufacturing materials. For example, Dianne Feinstein and Harry Reid only get paid $190K to be Senators but they pocketed $100M from Tesla-related stock bribes. Itâ s great!

3. Donâ t compete with anything Elon Musk does or we will gut your funds like a fresh deer kill.

4. Donâ t mention Jennifer being on The Dating Game or sleeping her way through Los Angeles.

5. Know that Google and Facebook pretty much own us so donâ t piss them off or all of your media coverage with evaporate off the Internet.

Missy Owens - VP Biden's Niece - Is Part Of The Solyndra Scandal

By Richard Pollock

chat comments

Although it has received scant attention, one of the central figures involved the Solyndra scandal may be Missy Owens, the niece of Vice President Joe Biden.

Missy, whose real name is Valerie James Owens, is the Energy Department's deputy Chief of Staff. She served in that capacity when the Solyndra $535 million loan guarantee was approved.

Owens' name is on a number of e-mails and documents about Solyndra, including a September 2009 DOE **"Events Memo."** The memo starts by quoting the Vice President who predicted the Solyndra loan guarantee would be regarded as "the foundation of our 21st century economy." Owens was involved in the timing of the groundbreaking ceremony that got the Vice President to extol the virtues of the company.

Politics in the Biden world is a family affair. Owens' mother, Valerie Biden Owens is the Vice President's sister. She ran political campaigns for her brother Joe. Missy also served as a campaign manager for her brother Joe "Beau" Biden.

Rep. Cliff Stearns, chairman of the House Oversight and Investigation subcommittee will be leading a number of hearings in November on the Solyndra affair. At this time it appears DOE will not provide Missy Owens as a witness.

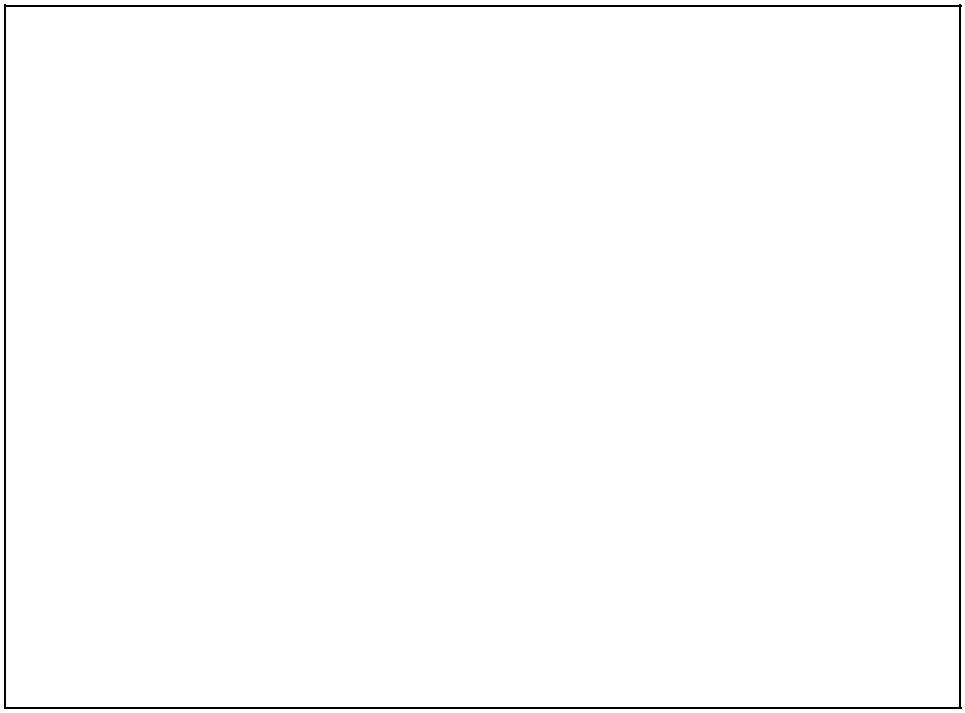
John Podesta Opens Keystone Can Of Worms



by **Tina Casey**

Advocates for the controversial Keystone XL tar sands oil pipeline got a roller coaster of a ride this week when the White House announced the appointment of well known Keystone opponent John Podesta to be White House counselor, only to follow up with an indication that Podesta would recuse himself from the review process for the project. Well, it might be a little too soon to pop the corks for Keystone.

Take a look at Podestaâ s work as founder and Chair of the progressive organization Center for American Progress, and youâ ll see a record of advocating for renewable energy that goes far deeper than opposing this or that particular fossil fuel project.

In that context, Podesta doesnâ t have to recuse himself from the Keystone review in order to have a decisive impact on its outcome.

As a corollary, consider the effect that a relatively modest new $2 million Department of Energy solar energy award could have on the US electric vehicle market (and consequently on domestic demand for petroleum products), and you can see how Podestaâ s long time arguments against oil imports will also come into play.

Solana CSP in Arizon (cropped) courtesy of US Department of Energy.

So, letâ s go ahead and pick these two things apart, starting with that new solar award.

More Solar Power, More Electric Vehicles, Less Oil

Google's Abengoa Solar is the awardee, and if that name doesnâ t ring a bell look on over at Arizona, where the company is just putting the finishing touches on start-up operations for its 280 megawatt Solana solar plant, the largest of its kind in the world. The concentrating solar power (CSP) plant is based on solar energy collectors in the form of large parabolic troughs.

Solana also includes an energy storage feature that enables it to keep churning out electricity for six hours after dark.

The technology has proven successful which is all well and good, but in order to keep driving the cost of solar power down the cost of building similar solar plants will have to come down, too. Thatâ s where the $2 million award comes in.

The award falls under the Department of Energyâ s SunShot initiative, which was established under the Bush Administration and has revved up to speed under the Obama Administration, the goal being to bring the cost of solar power down to parity with fossil fuels.

This particular grant will bring the cost of CSP plants down by streamlining the manufacturing for parabolic troughs, as described by Abengoa:

> The goal of this DOE SunShot Initiative project is to improve the cost competitiveness of CSP and will apply precision automation technologies to the manufacturing and final assembly of Abengoaâ s new SpaceTubeÂ® collector, an advanced parabolic trough design of over 26 feet (8 meters) aperture width. Leveraging the improved structural efficiency and component standardization of the SpaceTube, the objective of the new R&D project is a major reduction in the total cost versus the existing commercial trough technology.

Now consider that this is just one of many SunShot projects, add in other renewables including wind and geothermal, and you can get a glimpse of just how extensive the renewable energy platform for electric vehicles will become in the not too distant future.

When you add in the work being done to advance electric vehicle battery and charging technologies, youâ re looking at an electric vehicle market that is going to put a significant crimp on future U.S. petroleum demand.

John Podesta And The Keystone XL Pipeline

That brings us right around to Mr. Podesta again. Forget about Keystone for a minute and check out his views on the tension between domestic renewable energy and oil imports in this article he co-wrote almost two years ago, published in the Wall Street Journal January 24, 2012 under the title â We Donâ t Need More Foreign Oil and Gas.â

The article was basically a pitch to renew the Production and Manufacturing tax credits. The subtitle â America is poised to be the worldâ s clean energy leaderâ pretty much says it all, but here are a couple of the juiciest quotes starting with the lede:

> In the hubbub around the presidentâ s decision not to approve the proposed Keystone XL pipeline between Canada and the United States, Americans missed the big picture. While conservatives have been fighting to build a pipeline to import more foreign oil and deepen U.S. dependence, the U.S. is poised to transform its energy portfolio by developing domestic resourcesâ renewable and mineralâ that will let it become a net exporter of clean energy and energy technology in this decade.

For the record, letâ s note that the primary goal of the Keystone pipeline, at least in the near future, is to enable increased petroleum exports to the global market from Canada via US ports, not necessarily to increase the amount of oil imported into the US for domestic use (proponents have tried to position the pipeline as a benefit to domestic supply, but that is simply not the case).

In fact, some observers have noted that the pipeline will relieve a transportation bottleneck that has kept fuel prices down in some border states. Approval of the pipeline will reduce the current glut and result in higher fuel prices in that region, not lower prices.

That appears to weaken Podestaâ s opposition in terms of imported oil (after all, if Keystone isnâ t going to increase oil imports, whatâ s the big deal?), but only if you neglect the second part of his argument, which is Americaâ s potential to export renewable energy and energy technology.

As an enabler of conventional energy consumption in global markets, the Keystone pipeline comes into direct conflict with Americaâ s competitiveness in those markets, which is no small potatoes. According to Podesta and co-writer Mark Steyer:

> America is the largest clean-energy investor, after reclaiming this title from China last year. Our companies make over 75% of all venture investments in clean technologies world-wide. Overall, because of U.S. public and private investments in clean energyâ including renewables, efficiency, transportation and infrastructureâ the clean economy grew by 8.3% from 2008 to 2009, even during the depths of the recession.

Natural Gas Stealth Attack

To sum up, Podestaâ s renewable energy advocacy has a powerful flip side, which is to oppose the growth of petroleum exports from or through the US into global markets, where they will compete with renewable energy, and by association, compete with US companies that are trying to export clean tech.

We caught a glimpse of how fast that global clean tech market is heating up during a recent tech tour of Israel, where the solar vs. diesel race is focused on the increasing demand for electricity in developing economies as well as within the domestic market.

Thatâ s why weâ re guessing that Podesta will play an influential role in the final decision on Keystone, if not specifically than as a part of a broader policy that takes the big picture of international markets into account.

If anything, renewable energy advocates should take a closer look at that article (hereâ s that link again) and note Podestaâ s support for the natural gas industry, despite substantial environmental issues related fracking, waste disposal, and fugitive methane emissions.

Update: Our friends over at The Hill have been following the Podesta story closely and Iâ d really recommend checking them out for upcoming news.

Senate Judiciary Committee Chairman Chuck Grassley blasted ranking member Sen. Dianne Feinstein for her handling of high-school-era sexual assault allegations against Supreme Court nominee Brett Kavanaugh.

Senate Judiciary Committee Chairman Chuck Grassley blasted ranking member Sen. Dianne Feinstein for her handling of high-school-era sexual assault allegations against Supreme Court nominee Brett Kavanaugh.

The allegations against Kavanaugh surfaced Sunday after his accuser, Dr. Christine Blasey Ford, granted an interview to The Washington Post. Ford detailed how she sent an anonymous letter to Feinsten regarding the alleged encounter months earlier. Feinstein said she forwarded Fordâ s letter to the FBI for review but never made the allegations public until stories began to surface around the letter itself after Kavanaughâ s confirmation hearings ended.

Feinstein â has had this information for many weeks and deprived her colleagues of the information necessary to do our jobs. The minority withheld even the anonymous allegations for six weeks, only to later decide that they were serious enough to investigate on the eve of the committee vote after the vetting process had been completed,â Grassley said.

The chairman explained that â the standard procedure for updates to any nomineeâ s background investigation file is to conduct separate follow-up calls with relevant parties. In this case, that would entail phone calls with at least Judge Kavanaugh and Dr. Ford,â adding, â I asked Senator Feinsteinâ s office yesterday to join me in scheduling these follow-ups. Thus far, they have refused. But as a necessary step in evaluating these claims, Iâ ll continue working to set them up.â

Grassley is now grappling with senators calling for hearings regarding Fordâ s allegations and Kavanaughâ s own desire to defend himself. The judge issued a Monday statement saying, â This is a completely false allegation. I have never done anything like what the accuser describes â to her or to anyone.â

Kavanaugh and a lawyer for his accuser have said they are both willing to testify before the committee regarding the allegation.

Senate Judiciary Committee Chairman Chuck Grassley blasted ranking member Sen. Dianne Feinstein for her handling of high-school-era sexual assault allegations against Supreme Court nominee Brett Kavanaugh.

LOCAL UTILITY "GREEN ENERGY OPTIONS" ALWAYS TURN OUT TO BE CORPORATE PROFITEERING SCAMS

The utility corporations think that the public won't question the scams, and bend over and take it, if PG&E, or some other scam utility, says ***"it's green, don't worry, move along, nothing to see here..."***. All of the utility "green options" are turning out to be lies.

The many abuses of the term "green energy" to trick taxpayers into not looking behind the curtain have become monumental examples of crony corruption, political kick-backs and payola!

MCE Shell Games -- V.2018

by: Jim Phelps -

The history of MCE is marked by consumer deception and false advertising about the true "cleanliness" of the energy it delivers in the fight against global warming. In 2015, in response to public criticism, MCE claimed it would sever ties with Shell Oil: that by 2017 it would be free of Royal Dutch Shellâ s subsidiary Shell Energy North America.

Following mounting public criticism, MCE also promised to cease its use of renewable energy certificates, known as RECs. This latter commitment garnered the support of the Sierra Club, whose attorneyâ s referred to the use of RECs as "deceptive marketing" when PG&E proposed using these instruments in its now-abandoned â Green Optionâ that was proposed to compete with MCE.

Out with Shell...

In 2017, without fanfare, MCEâ s full services contract with Shell expired. Long-time critics and environmentalists watched in anticipation for this new day to arrive, when the misdeeds and misdirections of MCE and its CEO, Dawn Weisz, might cease along with MCEâ s exports of cash to Royal Dutch Shell in the Netherlands -- which, to date, top one-half *billion* dollars.

However, with MCE there is frequently a caveat. Even though MCE announced it would no longer engage Shell with a â full-servicesâ contract, a pipeline of energy purchases continued to flow to the oil giant. Those contracts ranged from $10,000 to a $27.3 million contract that Dawn Weisz executed last month.

In a curious twist, MCE Chair Kate Sears was embroiled in a conflict of interest charge in late 2017, because she held Royal Dutch Shell stock while voting on MCE contracts with Shell. According to Supervisor Searsâ Form 700 filings with the County of Marin, she also holds stock in Exxon-Mobil, Phillips 66, Occidental Petroleum, BP, Total (French oil company), Conoco Phillips, Chevron, and oilfield services company Schlumberger.

Nevertheless, with Shellâ s departure as manager of MCEâ s energy portfolio and energy scheduling, MCE was in immediate need of expertise to fill that void.

â ¦ in with conflicts of interest and investigations

MCE received six bids from firms that proposed managing MCEâ s energy portfolio and scheduling energy deliveries. MCE awarded a contract to ZGlobal by unanimous vote of the board, in June 2016. Part of the justification for selecting ZGlobal was that it offered whatâ s known as â shadow settlementâ services, which is a parallel reconciliation of the myriad of charges accrued during the delivery of electric power.

Ironically, Weisz ducked a public question about shadow settlements in 2009, when she brought her MCE entourage to Novato, seeking support for the pending launch of her fledgling enterprise.

MCE presumably conducted due diligence on ZGlobal, but it failed to identify that the company had caught the eye of investigators who were zeroing in on its conflicts of interest and double-dealing with southern Californiaâ s Imperial Irrigation District (IID). The Desert Sun, which was central to exposing financial improprieties, identified nearly $100 million in billings and now-cancelled contracts involving ZGlobal. Those issues remain open.

ZGlobal will have a close relationship with MCE, particularly as pressure mounts for MCE to deliver on Californiaâ s growing requirement for increased energy volumes starting in 2021. These needs will include solar development, engineering, and procurement of energy from new renewable resources. Many of these areas are similar to those at IID.

Birds of a feather?

MCEâ s selection of ZGlobal is telling of its decision-making and its peculiar attraction to companies embroiled in controversy. Previously, MCE became involved in a 120 acre solar development that failed, due in large part to less than competentmanagement by MCE.

North American Power Group (NAPG) was to construct a 15 megawatt solar farm outside Sacramento, in Rocklin, California. MCEâ s technical consultant, Kirby Dusel (Pacific Energy Advisors, located in Folsom, California, where ZGlobal is also located) referred to the contract with NAPG as a â fleetingâ opportunity when recommending Rio Solar to MCEâ s board.

In reality, Rio Solar existed only as a concept. While MCEâ s technical consultants failed to grasp the multi-year time requirement for environmental reviews, MCEâ s board believed Rio Solar was just months away from commercial production.

After coming to terms with NAPGâ s zero-progress, including sudden plans to relocate the solar farm to Bakersfield, Rio Solar was quietly cancelled by Weisz.

The absence of Rio Solarâ s energy was the equivalent of Marin Countyâ s *entire residential electric load for three months*. Contrary to their prior assurances, MCE covered the clean energy shortfall with RECs.

NAPG itself subsequently came under Department of Justice investigation (eighteen months ago NAPG settled charges involving its carbon sequestration project with the Department of Energy). The DOJ found NAPGâ s owner â fraudulentlytransferred millions of dollars of award monies into his personal bank account and used the award monies to fund an extravagant lifestyle.â

However, MCEâ s controversy was not limited to NAPG.

MCE entered into a $190 million solar contract with a San Diego company by the name of enXco. MCE selected the firm over Californiaâ s SunPower and domestic supplier LSPower. Weisz was careful to refer to â enXco,â ignoring the identity of the company that actually owned enXco, when trumpeting the solar contract to Marin cities, during MCEâ s update tour about MCEâ s success.

A firestorm ignited when Marin residents discovered that enXco was a subsidiary of Ã•lectricitÃ© de France, the worldâ s largest nuclear power company, headquartered in France. The exposure, which should have been an embarrassment for Weisz, who also touted MCEâ s rejection of nuclear power and calls for the closure of PG&Eâ s Diablo Canyon nuclear power plant, only galvanized her resolve about retaining her rightful place as MCEâ s leader.

The selection of enXco demonstrated MCEâ s decision-making was brazen and arrogant. To most public administrators, it would have been awkward for an agency that claimed transparency and community allegiance as justification for its existence compared to PG&E.

None of it mattered

Under Dawn Weisz, ZGlobal was a footnote to the close of a public relations fiasco. With Shellâ s departure, Weisz & company wiped their hands and declared they had delivered on what was promised to the public. Shell was gone. That box was checkedâ ¦ in pencil.

Now it was time for Weisz to get back to work.

There were issues involving MCEâ s shifting positions on RECs; and operating costs that MCE and other CCAs had, for the time being, off-loaded onto PG&E. And, most urgent of all a looming threat to CCA independence and its â self-regulatedâ existence from the utilities commission that was beginning to piece together energy problems in California that were caused by CCAs.

But first things, first. Weiszâ s immediate priority was the continued shaping and controlling the public narrative in order to better vanquish MCEâ s critics. To achieve that, Weisz invoked a familiar posture that compelled her onlookers to take up a rallying cry, that caused local media to come to MCEâ s defense, that compelled MCEâ s board to circle the wagons around the MCE enterprise and cede its judgment to her.

***The "Victim"* -- Take 1:**

When MCE launched into business in May 2010, PG&E sent a letter alerting customers to be aware of a coming energy change, that they would be switched into a program known as Community Choice Aggregation. PG&Eâ s letter was information only -- neutral on the merits of CCA. Compared to MCEâ s Opt-Out notice, the primary difference was that PG&Eâ s font size was large and easier to read, whereas MCEâ s notice was small and had the appearance of junk mail.

In response, Weisz acted as if she couldnâ t believe PG&Eâ s egregious behavior. How dare the big utility company engage in these anti-CCA practices by sending such a letter? PG&E was acting contrary to AB 117, the law that created CCAs. Could the California Public Utilities Commission (CPUC) please help her reign in PG&E?

That act prompted the CPUC to shut down PG&Eâ s conversation about CCA with its customers. If PG&E protested, the Commission was ready to levy heavy fines. And if any customers called PG&E with questions, the utility was to remain neutral while those customers were switched into MCE.

Ironically, at the same time that the CPUC shut down PG&Eâ s voice, Marin consumers, who lacked an arbitrator, were complaining about MCEâ s unfair Opt-Out practices.

Victim of the Unions & Sacramento â Take 2:

California legislators reacted to the shortcomings of CCAs, by introducing AB 2145. The legislation would change the Opt-Out mechanism to Opt-In, meaning consumers would have to take action and elect to sign up for the program, rather than automatically being enrolled, thereby eliminating concerns of gaming and manipulating the Opt-Out enrollment system.

AB 2145 created an instant backlash in the CCA community, who feared that they would not be able to build their businesses without the automatic enrollment feature. MCE claimed that AB 2145 was part of grand scheme that threatened jobs, cost savings, renewable energy, and of course, â choice.â

Of note, with the exception of three solar jobs that MCE claims, MCE has not created any on-going, full-time jobs in Marin, except those of its staff. MCEâ s last cost savings compared to PG&E was *six-hundreds of 1%*, and its contribution to the renewable energy through the solar farms constructed through its "feed-in tariff program" is *one-tenth of 1% of its total energy load*.

A feed-in tariff is where a developer funds the complete construction of a solar farm and then receives a guaranteed fixed-payment for each megawatt-hour of energy that is delivered to MCE for resale. Except for public relations, MCEâ s feed-in tariff program has been a financial loss â MCE pays more than twicecurrent market prices for its feed-in tariff energy.

To combat AB 2145 legislative efforts, Weisz again set up MCE as a victim to the CPUC and with State Senators in the Energy, Utilities, and Communications Committee.

MCE claimed that private parties, including the International Brotherhood of Electrical Workers (IBEW), were distributing â very inaccurate and misleading informationâ about Shell and AB 2145. MCE also claimed that this writer, critical of MCE since it began green-washing dirty energy with RECs in 2011, was

part of a scheme that threatened MCEâ s growth.

MCE asked the CPUC to shut down public discourse about MCE â a government agency-- and Shell and, most importantly, AB 2145.

The IBEWâ s letter responding to MCE is included here.

Even though the CPUC did not act on MCEâ s request, MCE successfully set the foundation for its showdown in Sacramento. CCA proponents packed the legislative chambers for a final vote on AB 2145.

MCE told legislators that the Opt-Out mechanism was its birthright, and that MCE could not survive without it when everyone was spreading rumors and bad news about MCE. Besides, MCE claimed, communities everywhere were benefitting by its significant reductions of greenhouse gas (GHG) emissions compared to PG&E in the fight against global warming.

State Senators took the temperature of the room and determined their re-elections were better assured if they didnâ t alienate voters. AB 2145 was defeated, preserving CCAâ s Opt-Out / automatic enrollment program.

Shaping the MCE Boardâ s perception

MCEâ s board is comprised of municipal councilmembers from each city or town that MCE serves. None of the members are energy professionals and so they rely on MCE staff for technical guidance. Competent boards require a rudimentary understanding of the business they govern.

According to MCEâ s board meeting minutes from June 2014, the board did not understand even the basic component of renewable energy, known as â Bucket 1.â This was after four years of operations.

This meeting occurred after MCE was exposed for doctoring its annual greenhouse gas emission rates after PG&Eâ s unexpectedly lower number was published. Two years later, MCE was again exposed for importing coal-fired power that it rebranded as â cleanâ energy.

.Click on image to enlarge

In both cases, Weisz authored letters that obfuscated the truth and kept her board of non-energy professionals in the dark. If there was any hope of someone directing MCE to begin operating with integrity, it wasnâ t going to come from a board that took its queue from its CEO.

In her first letter, regarding MCEâ s altering its annual GHG emission rate numbers, Weisz wrote that â MCE made a commitment to deliver a lower emission factor than PG&E, and that commitment was honored.â MCEâ s revision-after-PG&E-announced-its-numbers was merely a â true up.â

MCE board meeting minutes, dated the same day as Weiszâ s true up letter, identify that â Ms. Weisz responded to questions from the board specifically related to the correspondence received from Mr. Phelps.â

It is doubtful that Weisz shared thoughts with her board that were similar to those of California Air Resources Board Chair, who, five days later, wondered if MCE was engaged in consumer fraud.

In her second letter, Weisz denied that MCEâ s import of â cleanâ coal-fired power had occurred, then claimed it was all â unexpected and unfortunateâ misunderstanding before blaming Shell and the California legislature for her problem.

It remains unclear whether Weisz fully grasps what occurred involving coal imports and associated Bucket 2 e-tagging issues, because even though she signed the September 2015 letter, according to invoice records, it was authored by her consultant at Pacific Energy Advisors.

Ceding its authority

All agenda items and the vision of MCE fall to its CEO, Dawn Weisz. Of the thousands of agenda items that board has considered since MCEâ s May 2010 business launch, not a single â noâ vote has been cast by any single member on any single item. The odds of this occurring in a company that is fully disclosing all aspects of its operations and decisions is probably zero.

Of note, MCEâ s board is now 28 strong, 10 more than the largest corporate board on record â General Electric Company, which recently announced its board is downsizing to 12 members (the most recent enterprise value of GE is $243 billion).

Part 2 of this series will address (1) MCEâ s cash horde that is used to pay large staff salaries and fees of the consultants who help operate MCE; (2) MCEâ s public rejection of RECs and its concurrent use of a front organization that lobbies for their continued use; and (3) MCEâ s quid pro quo outreach where jobs are promised in exchange for favorable public relations in its coming fight with legislators and utility companies.

About the Author:

Jim Phelps is retired after serving the power, petrochemical, and geothermal industries for nearly 35 years as a power contractor and utility rate analyst. He is not now, nor has he ever been, employed by PG&E. He has not received any money from PG&E for his work tracking Community Choice Aggregation and Community Choice Energy activities. He has also completed consulting and thermal performance test work for Shell Oil, one of MCE's energy providers, at one of Shell's Gulf Coast refineries.

Mr. Phelps operates one of Marin's largest residential solar electric systems at his home in Novato. He also operates a solar electric system at another house in Placer County. Several years ago he initiated contact with PG&E about its carbon emission practices and with MCE about its emission practices. He also requested clarification from MCE and other CCAs about several business conduct issues, however, those CCAs declined to provide help. To this time, MCEâ s only input about its business is to respond to Public Records Act requests identifying the costs for copies of public documents, or denying the existence of basic information, such as its procured volumes of system power.

Class Action Lawsuits Under Development Against PG&E and Peninsula Clean Energy for Scamming Consumers

By David Brock

PG&E has sent out a series of â buried noticesâ to consumers over the last number of years. The notices look like boilerplate PG&E bills or marketing forms, which science has proven are not identifiable to consumers.

The scam works like this:

A. - An insider group of politicians and their financiers agree to buy stock in solar panel and other â Clean-yet-corruptâ companies.

B. - PG&E switches consumers to â clean energy electric generation chargesâ without the consumers actual knowledge.

C. - PG&E then begins charging hundreds of thousands of consumers 30% extra for electricity because PG&E covertly â opted-themâ into the clean kickback program.

D. - When caught, PG&E refuses to credit the years of over-billings back to consumers and the insider group of politicians refuse to make laws to help the consumers.

E. ..and the dirtiest part of the â clean energy electric generation chargesâ scam? The insider group of politicians own the very companies that PG&E is giving the 30% over-charge money to.

F. If consumerâ s try to cancel thus scam charge then PG&E bills them extra for canceling the thing that most consumers would never sign up for if they knew the truth about it.

In other words: Your local utility company forces you to pay cash,

covertly routed through PG&E, to corrupt politicians and you can never get a refund for the corrupt thing you never knowingly opted into.

The liars at PG&E (The guys who regularly blow up and burn down cities, pay bribes, shoot tons of toxic methane into the air and run scams) say â Oh, we sent everybody a letter telling them we were going to put them on this scamâ , but 90% of all consumers say they never saw a letter and that nobody ever asked, offered or indicated that such a program was an â opt-inâ option.

In the San Francisco Bay Area a charge has been appearing on PG&E bills as: â PENINSULA CLEAN ENERGY Electric Generation Chargesâ . This add-on can add 30 to 40% to consumer's bills.

PG&E hopes that the tree-hugging Californians wonâ t question a mysterious charge that has the facade phrase â CLEAN ENERGYâ in it. They believe that nobody would dare question such a benevolent and altruistic sounding thing.

The scam worked for awhile, until it didnâ t.

The companies that are providing this so called â Clean Energyâ are dirty crony payola kick-back companies owned by PG&E executives, corrupt California Senators and their toxic campaign financiers. Let;s take a look at one of over 30 corrupt companies involved in this scam. These are companies you have heard of like Solar City, First Solar, Solyndra, etc. In one of hundreds of examples, First Solar makes solar panels with a horrific unsuitability for for Hot Climates. After this reply by their PR Director, more heartache was in store for the company.

A class action lawsuit was filed against First Solar by Pomerantz Haudek Grossman & Gross in the US District Court for the District of Arizona. The complaint states that First Solar violated the Securities

Exchange Act of 1934 by not disclosing the full extent of certain manufacturing flaws on its earnings, that it improperly recognized revenue for certain products in its systems business, that it lacked sufficient internal and financial controls and, finally, that as a result, First Solarâ s statement were materially false and misleading at all relevant times.

The complaint claims that First Solar reported a decrease of US$345 million in net sales for the quarter that ended December 31, 2011, and a US$164 million charge for warranty payments to replace equipment that cause premature power loss in certain panels. The plaintiff is looking to recover damages on behalf of all First Solar shareholders who purchased common stock during the Class Period detailed above.

As is the nature of class action cases other law firms have come forward, citing similar claims, including a national securities law firm, Faruqi & Faruqi, law firm, Howard G. Smith and Rigrodsky & Long, P.A.

First Solar Shareholders are being given the opportunity to seek legal counsel from several firms after a class action lawsuit was filed in the US District Court for the District of Arizona last week. Case No. 12-cv-00555, alleges that between April 30, 2008 and February 28, 2012, potential securities fraud and an over-concentration of shares in First Solar stock led to investment losses.

Securities arbitration law firm, Klayman & Toskes, noted that trading was at over US$300 per share in July 2008 and is now only trading at around US$30 per share, an almost 90% decline. Harwood Feffer, LLP, further pointed out that on February 29, First Solar revealed its financial results for Q4 and the full year 2011, reporting a quarter-over-quarter drop of US$345 million in net sales, â primarily due to the timing of revenue recognition in our systems business and lower for module-only sales.â

First Solar also advised that it had incurred a charge of US$164 million for warranty payments to replace defective equipment, including a reserve of US$37.5 million to cover future claims.

This is the typical kind of scam that PG&E promotes and forces consumers to get caught up in. Every consumer should be speaking to a class-action law firm to sue PG&E for fraud and to demand that the U.S. Government sue PG&E for fraud and for refunds to consumers for these criminal utility bill surcharge scams.

How a farcical series of events in the 1880s produced an enduring and controversial legal precedent

Somewhat unintuitively, American corporations today enjoy many of the same rights as American citizens. Both, for instance, are entitled to the freedom of speech and the freedom of religion. How exactly did corporations come to be understood as â peopleâ bestowed with the most fundamental constitutional rights? The answer can be found in a bizarreâ even farcicalâ series of lawsuits over 130 years ago involving a lawyer who lied to the Supreme Court, an ethically challenged justice, and one of the most powerful corporations of the day.

That corporation was the Southern Pacific Railroad Company, owned by the robber baron Leland Stanford. In 1881, after California lawmakers imposed a special tax on railroad property, Southern Pacific pushed back, making the bold argument that the law was an act of unconstitutional discrimination under the Fourteenth Amendment. Adopted after the Civil War to protect the rights of the freed slaves, that amendment guarantees to every â personâ the â equal protection of the laws.â Stanfordâ s railroad argued that it was a person too, reasoning that just as the Constitution prohibited discrimination on the basis of racial identity, so did it bar discrimination against Southern Pacific on the basis of its corporate identity.

The head lawyer representing Southern Pacific was a man named Roscoe Conkling. A leader of the Republican Party for more than a decade, Conkling had even been nominated to the Supreme Court twice. He begged off both times, the second time after the Senate had confirmed him. (He remains the last person to turn down a Supreme Court seat after winning confirmation). More than most lawyers, Conkling was seen by the justices as a peer.

It was a trust Conkling would betray. As he spoke before the Court on Southern Pacificâ s behalf, Conkling recounted an astonishing tale. In the 1860s, when he was a young congressman, Conkling had served on the drafting committee that was responsible for writing the Fourteenth Amendment. Then the last member of the committee still living, Conkling told the justices that the drafters had changed the wording of the amendment, replacing â citizensâ with â personsâ in order to cover corporations too. Laws referring to â persons,â he said, have â by long and constant acceptance â¦ been held to embrace artificial persons as well as natural persons.â Conkling buttressed his account with a surprising piece of evidence: a musty old journal he claimed was a

previously unpublished record of the deliberations of the drafting committee.

Years later, historians would discover that Conklingâ s journal was real but his story was a fraud. The journal was in fact a record of the congressional committeeâ s deliberations but, upon close examination, it offered no evidence that the drafters intended to protect corporations. It showed, in fact, that the language of the equal-protection clause was never changed from â citizenâ to â person.â So far as anyone can tell, the rights of corporations were not raised in the public debates over the ratification of the Fourteenth Amendment or in any of the statesâ ratifying conventions. And, prior to Conklingâ s appearance on behalf of Southern Pacific, no member of the drafting committee had ever suggested that corporations were covered.

Thereâ s reason to suspect Conklingâ s deception was uncovered back in his time too. The justices held onto the case for three years without ever issuing a decision, until Southern Pacific unexpectedly settled the case. Then, shortly after, another case from Southern Pacific reached the Supreme Court, raising the exact same legal question. The company had the same team of lawyers, with the exception of Conkling. Tellingly, Southern Pacificâ s lawyers omitted any mention of Conklingâ s drafting history or his journal. Had those lawyers believed Conkling, it would have been malpractice to leave out his story.

When the Court issued its decision on this second case, the justices expressly declined to decide if corporations were people. The dispute could be, and was, resolved on other grounds, prompting an angry rebuke from one justice, Stephen J. Field, who castigated his colleagues for failing to address â the important constitutional questions involved.â â At the present day, nearly all great enterprises are conducted by corporations,â he wrote, and they deserved to know if they had equal rights too.

Rumored to carry a gun with him at all times, the colorful Field was the only sitting justice ever arrestedâ and the charge was murder. He was innocent, but nonetheless guilty of serious ethical violations in the Southern Pacific cases, at least by modern standards: A confidant of Leland Stanford, Field had advised the company on which lawyers to hire for this very series of cases and thus should have recused himself from them. He refused toâ and, even worse, while the first case was pending, covertly shared internal memoranda of the justices with Southern Pacificâ s legal team.

The rules of judicial ethics were not well developed in the Gilded Age, however, and the self-assured Field, who feared the forces of socialism, did not hesitate to weigh in. Taxing the property of railroads differently, he said, was like allowing deductions for property â owned by white men or by old men, and not deducted if owned by black men or young men.â

So, with Field on the Court, still more twists were yet to come. The Supreme Courtâ s opinions are officially published in volumes edited by an administrator called the reporter of decisions. By tradition, the reporter writes up a summary of the Courtâ s opinion and includes it at the beginning of the opinion. The reporter in the 1880s was J.C. Bancroft Davis, whose wildly inaccurate summary of the Southern Pacific case said that the Court had ruled that â corporations are persons within â¦ the Fourteenth Amendment.â Whether his summary was an error or something more nefariousâ Davis had once been the president of the Newburgh and New York Railway Companyâ will likely never be known.

Field nonetheless saw Davisâ s erroneous summary as an opportunity. A few years later, in an opinion in an unrelated case, Field wrote that â corporations are persons within the meaningâ of the Fourteenth Amendment. â It was so held in Santa Clara County v. Southern Pacific Railroad,â explained Field, who knew very well that the Court had done no such thing.

His gambit worked. In the following years, the case would be cited over and over by courts across the nation, including the Supreme Court, for deciding that corporations had rights under the Fourteenth Amendment.

Indeed, the faux precedent in the Southern Pacific case would go on to be used by a Supreme Court that in the early 20th century became famous for striking down numerous economic regulations, including federal child-labor laws, zoning laws, and wage-and-hour laws. Meanwhile, in cases like the notorious Plessy v. Ferguson (1896), those same justices refused to read the Constitution as protecting the rights of African Americans, the real intended beneficiaries of the Fourteenth Amendment. Between 1868, when the amendment was ratified, and 1912, the Supreme Court would rule on 28 cases involving the rights of African Americans and an astonishing 312 cases on the rights of corporations.

The day back in 1882 when the Supreme Court first heard Roscoe Conklingâ s argument, the New-York Daily Tribune featured a story on the case with a headline that would turn out to be prophetic: â Civil

Rights of Corporations.â Indeed, in a feat of deceitful legal alchemy, Southern Pacific and its wily legal team had, with the help of an audacious Supreme Court justice, set up the Fourteenth Amendment to be more of a bulwark for the rights of businesses than the rights of minorities.

Chart Through 2015 Mbcp

Never-ending story â ¦ Battery-electric delivery van maker Workhorse Group (NASDAQ: WKHS) lives on borrowed money. It always has. And while an incredible retail investor-driven run continues in the first weeks of 2021, Workhorse short interest is a whopping 29%, according to Fintel.ioi. That means almost one in three shares are held by borrowers betting the price will fall. A healthy level of short interest is typically 8-15%. Founded by Steve Burns as Amp Electric Vehicles, the company has always operated on a greased shoestring. Former CEO Jim Taylor recalls when Amp, it sold shares for a penny. â Every month, itâ s another beg for money, run out, beg for money, run out,â Taylor told me. Burnsâ ahead-of-his-time approach to electric vehicles started with retrofitting Pontiac Solstices and Saturn Sky passenger coupes â thinking he could be the other Elon [Musk].â After other failed passenger car electrification tries, Workhorse pivoted to electrify commercial vehicles. It gained a huge first-mover advantage. Taylor fears the company is squandering that through its inability to deliver products on schedule. Workhorse Chairman Ray Chess ran the delivery van business at General Motors, so he knows the problem, said Taylor, himself a former GM executive. â The problem is that window is closing because thereâ s so many new people coming into the Class 3 space that are surrounding them from all sides. They have not delivered in so long. I think they are benefiting from the uplifting wave in EVs. They know what theyâ ve got to get done. And they know the heatâ s on them. I donâ t know how long theyâ re going to be able to ride it.â

Onward and upward â ¦ And what of Burns? He exited Workhorse in February 2019 to start Lordstown Motors Corp. (NASDAQ: RIDE), which expects to begin building electric-powered commercial pickup trucks this fall. They are based on intellectual property licensed from Workhorse. LMC said this week reservations for the trucks have surpassed 100,000. LMC has loads of competition in the electric pickup space, notably from Amazon-backed Rivian and Teslaâ s CyberTruck. But it has more money than it needs to operate the former GM Lordstown plant complex. The automaker essentially gave Lordstown to Burns to make up for closing the plant in northeast Ohio after more than 50 years. (Technically, it is an in-kind investment.) Former Workhorse CEO Taylor said Burns called him to tell him his plan. â I said, â Are you out of your mind? First off, [if] you think youâ re going to get a deal from GM, youâ re crazy. Theyâ ll never deal with you. And if they do, theyâ ll crush you.â â Burns persisted, got the plant and completed a reverse merger with blank check company Diamond Peak Holdings Corp. in October 2020. The special purpose acquisition company (SPAC) raised $780 million that LMC received at closing less expenses. LMC said this week it was approved to apply to borrow money from the Department of Energy under its Advanced Technology Vehicle Manufacturing Loan program. LMC would seem to be in far better shape financially than Workhorse, which has a 10% equity stake in LMC because its technology is being used. If Workhorse should win some or all of the long-delayed U.S. Postal Service contract for next-generation delivery vehicles, it has said they would be contracted to LMC for manufacturing. If the Postal Service becomes a customer, is it preposterous to think Workhorse and Lordstown could merge? Feel free to weigh in.

Nikola trifecta â ¦ Every week brings at least some news at Nikola Corp., the startup battery-electric and fuel cell truck maker. Good news first: Nikola will be able to purchase cheap electricity for its planned hydrogen fuel stations in Arizona. The Arizona Corporation Commission voted to let Nikola buy electricity for about 2.5 cents per kilowatt hour that would be used to power electrolyzers used in making hydrogen. It is a big step toward creating hydrogen fuel availability along the Interstate 10 corridor between Phoenix and Los Angeles. And Nikolaâ s shares rode the positive sentiment around electric vehicles back above $20 a share this week. But that may have led early investor Worthington Industries (NYSE: WOR) to cash out. The metals manufacturing company dumped slightly more than 7 million Nikola shares for $145.6 million, generating a pretax gain of $2.74 million, according to a Securities and Exchange Commission filing. The last vestige of Worthington at Nikola is CEO Mark Russell, former Worthington president and chief operating officer. Nikola news is slowing down. More and more, my daily Google Alert for Nikola brings the latest on Denver Nuggetsâ NBA star Nikola Jovic.

The rest of the week â ¦ FitchRatings is giving a thumbâ s up to Navistar as it gets closer to becoming part of Volkswagen AGâ s TRATON Group. Fitch sees an upgrade of at least one notch when the merger is completed later this year. Fitch downgraded Navistar debt last April to B- from B because of the impact of the COVID-19 pandemic. â ¦ Dependable Supply Chain Services is all-in with the Volvo LIGHTS project. Its Dependable Highway Express (DHE) unit is testing Volvo VNR Electric Class 8 trucks, battery-electric yard trucks and forklifts. It also has installed charging stations for fleet and employeesâ personal vehicles. Solar panels and on-site energy storage are part of its shipping and receiving facility in Ontario, California. And it has committed to buy 10 VNR Electric trucks in 2022.

Lintelle Engineering closing after 22 years due to Solyndra corruption bankruptcy - Thanks Dianne Feinstein

What?s left of the Lintelle Engineering crew in the production room where the Scotts Valley company fabricated photo voltaic coating equipment for now bankrupt Solyndra of Fremont. Solyndra, Lintelle Engineering's largest customer, still owes the Scotts Valley company $1.9 million.

SCOTTS VALLEY - Dozens of people turned out Friday to say goodbye to Lintelle Engineering founder Bill Turner, who hosted a picnic for current and former staff in the company parking lot on El Pueblo Road.

Lintelle, founded in 1989, was forced to close after its largest customer, Solyndra, filed for bankruptcy owing $1.9 million for equipment built by Lintelle employees. The bankruptcy filing came despite Solyndra receiving a $535 million federal loan guarantee.

"It's hard to see this happen," asked Teri Stacher, 47, of Santa Cruz, who worked for Lintelle for 12 years. "We figured with the federal government backing that they did their research. It wasn't true. Will anything be learned from this experience?"

She hugged Turner and introduced her mother, her daughter and her granddaughter. Others also brought their families to the picnic catered by Taqueria Los Gallos, reminding Turner of happier days.

"My favorite day of the year was the summer picnic," he said. "You got to see all the families. I'll miss that."

Employees talked about Turner's skills as a boss and his generosity, handing out gift cards and turkeys at Thanksgiving.

Stacher was waitressing at Malone's at night when Turner, eating with his papers spread out on a table, sensed she was a go-getter and offered her a job. She started as a receptionist, then moved into purchasing, where she became manager.

She'll start Monday at Fox Shox in Watsonville, working on new product development.

Ralph Sanchez, 47, of Watsonville, thought when he started at Lintelle, it would be temporary. He stayed more than 11 years.

"This was my home," he said. "I just like learning. I'll do whatever."

He was a driver, but also worked in shipping, receiving and the stockroom. He plans to go the Capitola Career Center Monday to see what's available.

Turner told a story about how he needed a delivery Friday afternoon in Santa Maria, a three-and-half hour ride.

Sanchez volunteered. He got the product there by 8 p.m. as needed.

"You have to make the customer happy," he said. "They might give you more work."

Former employees came back, like Balbir Kaloti, 55, an electrical engineer, who drove from San Jose.

"I heard from a friend it was closing," said Kaloti, who also had a stint at Oliver Design in Scotts Valley.

He is looking for work again after getting a layoff notice from his job in Silicon Valley.

The women who worked in production joked with Ben Wheeler, 69, a test engineer who retired two years ago.

"Remember when you brought a 20-year-old computer to the Christmas party?" asked one. "It's sad, but at least we get to see our old co-workers."

Larkin Precision Machining in Scotts Valley also got orders from Solyndra.

"We did a lot of subcontract work for Lintelle," said chief executive officer Rob Larkin, wishing Turner the best. "We did a lot for Solyndra a year ago."

Turner, 50, does not plan to retire.

"I hope to keep on working for the foreseeable future," he said.

Lock Her Up: Nancy Pelosi Earned Fortune on IPO Stock Through Illegal Insider Trading From The Cleantech Crash

Pamela Geller Politics 0

House Minority Leader Nancy Pelosi of Calif. speaks about the pending bipartisan budget compromise struck by House Budget Committee Chairman Rep. Paul Ryan, R-Wis., and Senate Budget Committee Chair Sen. Patty Murray, D-Wash., Thursday, Dec. 12, 2013, during a news conference on Capitol Hill in Washington. While the newly minted budget deal is aimed at averting future government shutdowns, Pelosi is disappointed that it fails to include certain unemployment insurance protections. (AP Photo/J. Scott Applewhite)

The new Nazi Party, the party of treason, is also the party of deep and unrestrained corruption. While the Democrats spin endless fantasies about supposed collusion between Trump and Russia, the corruption is pandemic on their side of the aisle. The fortune that Nancy Pelosi has amassed clearly hasnâ t come from her Congressional salary. So where has it come from? There needs to be a full, searching, serious investigation of Pelosiâ s finances, but there wonâ t be, because her fellow Democrats are as corrupt as she is, and Congressional Republicans are spineless wimps and RINOs.

â Nancy Pelosi Earned Fortune on IPO Stock Through â Illegalâ Insider Trading,â by Jay Greenberg, Neon Nettle, February 11, 2019 (thanks to Christian):

Nancy Pelosi earned a fortune buying IPO stocks using â illegalâ insider trading techniques that would result in years of jail time for the average person, a newly resurfaced investigation found.

Pelosi reportedly used the information she had exclusive access to as Speaker of the House to make trades on stocks, allegedly netting the senior Democrat up to $100,000 in 48 hours on a single trade.

TRENDING ON DC CLOTHESLINE:

- **Angry Americans Demand DNC Pay Back Money Spent On Russia Collusion Investigation**
- **Sandmann's Lawyer: 'Nathan Phillips Will Be Sued' For 'Well Documented' 'Lies And False Accusations'**

As the battle continues between President Donald Trump and Pelosiâ s Democrats over funding for additional border security, the House speakerâ s own home often gets brought into the argument. In January Pelosi declared walls to be â an immorality,â yet many have asked if walls are â immoral,â then why is the Pelosisâ mansion surrounded by a wall?

When these questions are asked, it draws attention to lavish property Nancy and Paul Pelosi call home, yet questions as to how the couple has amounted the vast wealth required to live such a lifestyle are never adequately answered.

According to the House Press Gallery, House speakers earn an annual salary of $223,500, which amounts to a roughly $30,000 raise for Pelosi, who is now again the third-highest-paid elected official in the U.S. federal government (after the president and vice president). Of course, this is a substantial salary by any means, but it doesnâ t come anywhere near to accounting for Nancy Pelosiâ s huge net worth.

According to Time, estimates of Pelosiâ s net worth vary. Roll Callâ s most recent Wealth of Congress analysis says sheâ s worth at least $16 million, but OpenSecrets puts her around $100 million.

She has refused to talk about it. What we do know comes from her financial disclosure reports. For example, she and her husband, Paul, own a house and vineyard in California thatâ s worth at least $5 million and that brought in between $15,000 and $50,000 in grape sales in 2017. She owns a commercial property and a four-story building in San Francisco that each earned her at least $100,000. She also has stock in Apple, Facebook, and Disney.

Paul Pelosi makes most of his cash from Financial Leasing Services, Inc., an investment company. But heâ s not always bringing home the metaphorical bacon: He recently lost millions of dollars as the owner of the Sacramento Mountain Lions, a soccer team in the short-lived United Football League, according to Roll Call.

â Heâ s a private person, not involved in political life,â a Pelosi spokeswoman told the San Francisco Chronicle in 2007. â Mr. Pelosiâ s investments are separate from hers, and they have separate careers.â

So Nancy Pelosiâ s vineyard, property, salary, and stock add up to a substantial amount of income, but if her net worth is really estimated to be up to a whopping $100 million, where is the rest of the money coming from?â ¦

She has refused to talk about it. What we do know comes from her financial disclosure reports. For example, she and her husband, Paul, own a house and vineyard in California thatâ s worth at least $5 million and that brought in between $15,000 and $50,000 in grape sales in 2017. She owns a commercial property and a four-story building in San Francisco that each earned her at least $100,000. She also has stock in Apple, Facebook, and Disney.

Paul Pelosi makes most of his cash from Financial Leasing Services, Inc., an investment company. But heâ s not always bringing home the metaphorical bacon: He recently lost millions of dollars as the owner of the Sacramento Mountain Lions, a soccer team in the short-lived United Football League, according to Roll Call.

â Heâ s a private person, not involved in political life,â a Pelosi spokeswoman told the San Francisco Chronicle in 2007. â Mr. Pelosiâ s investments are separate from hers, and they have separate careers.â

So Nancy Pelosiâ s vineyard, property, salary, and stock add up to a substantial amount of income, but if her net worth is really estimated to be up to a whopping $100 million, where is the rest of the money coming from?â ¦

Manchurian Candidate Was No Mere Fiction And Google Does It To Voters Today

By Mark Sauter
October 29, 2012

An influential politician whoâ s actually an enemy mole, turned while a prisoner of war, and now subverting America ... Itâ s the subject of *Homeland*, the hit cable series. Ironically, the programâ s second season on Showtime unfolds exactly 50 years after a classic movie first named its theme.

The Manchurian Candidate premiered in October 1962. Since then the specific strain of ideological corruption has mutated, from communism to violent Jihadism, but the public remains fascinated with the concept of brainwashing â of Americans returning from captivity secretly beholden to foreign enemies. Now U.S. government records, many declassified after decades of secrecy, are finally revealing the real story behind the enduring meme.

The records describe Chinese spymasters assigning intelligence and propaganda missions to returning U.S. POWs and sending them home to a Soviet-linked support network of collaborators from Middle America to Eastern Europe.

Told to expect contact once back in America, the men were to â lay low for two or three years,â and â prepare the way in the United States for progressives to come later,â Army intelligence reported. Unlike the enemyâ s robotic control of *The Manchurian Candidate*, influence over these real â Candidatesâ was much closer to the indoctrination and blackmail of *Homeland*. As to the ultimate effectiveness and extent of the program, much remains unknown. Just last year, the National Archives removed 60-year-old documents on this topic from public view, saying theyâ re still classified or may have â law enforcement sensitivities.â The CIA will not even confirm or deny it has such records. What has been uncovered tells a chilling tale, indicating reality was sometimes more disturbing than fiction. For example, the communists kept certain American prisoners forever to facilitate Soviet espionage and Cold War plotting, according to declassified files.

Brainwashing first gripped the national imagination during the Korean War from 1950-53, which pitted the United States, South Korea and their United Nations allies against North Korea and China, backed by the Soviet Union. For most of the war, Chinese commissars, working with Soviet advisors, controlled the publicly-known prison camps for Americans in North Korea, along with secret camps U.S. intelligence believed existed in China.

While many American prisoners in Korea behaved with distinction under appalling conditions, a large number collaborated with the enemy by informing on their fellows, writing propaganda statements and making detailed false confessions, including to germ warfare. Twenty-one of them, the so-called â Turncoats,â even chose to live in China after the war. These actions provided crucial ammunition to the â Hate Americaâ campaign, as the Eisenhower White House called it, an orchestrated, high-stakes propaganda offensive then being waged by Moscow from the Third World to the United Nations.

At the time, military intelligence and the CIA scrambled to understand what could motivate American fighting men to turn on their country. Brainwashing appeared one possibility. The CIA launched its own mind-control experiments (ironically, these eventually involved more injurious techniques than many used by the enemy in Korea).

Hard answers finally arrived with the thousands of surviving Americans released from enemy camps in 1953. The Pentagon was ready with programs to interrogate and process the men, including the Armyâ s

â RECAP-Kâ project (for men â recapturedâ from Korea; the similar RECAP-WW project was soon added for the surprisingly large number of U.S. troops worldwide who - by defection, abduction or drunken escapade â landed in Soviet-bloc countries during the Cold War.)

Part of the plan was to root out prisoners â turnedâ by the enemy. Floating interrogations began on a troop ship headed home to the States. So-called â Progressivesâ (also known as â Proâ s,â or by the Chinese, â Good Studentsâ) from the prison camps received most attention. Known collaborators, the Progressives had cooperated with their guards, sometimes at the cost of beatings from secret groups of anti-communist prisoners, known as â Reactionariesâ (reactionary groups had their own nicknames, such as the â KTC" (Kill the Communists); â Federated American Hearts,â and â KKK.â) Thrashings of progressives actually continued on the troop ship; with no Chinese guards to protect them, some collaborators had to be segregated for their own safety.

Evidence from the returning Americans, according to intelligence reports and congressional hearings, disproved popular, and perhaps even hopeful, speculation about the motives for collaboration. The prisoners had not been drugged and brainwashed with secret, irresistible techniques. They were never under absolute psychological control of their captors. No secret triggers put them into a trance, such as the famous Queen of Diamonds in *The Manchurian Candidate*. In short, these troops had not been â brainwashed.â

Instead they had been subjected to the type of comprehensive indoctrination routinely employed by Soviet and Chinese officials against their own dissidents, along with German and Japanese POWs from World War II. The methods included isolation; sleep deprivation; compulsory ideological classes; threats; public- and self-criticism; endless â confessions;â exploitation of anger over U.S. racial discrimination; destruction of the chain of command; sophisticated psychological pressure; bribery and blackmail.

Still, as *Homeland* dramatizes, brainwashing is not necessary to produce spies â indoctrination and blackmail are quite sufficient. U.S. military intelligence certainly understood this in 1953 and eventually confirmed that some returned Progressives had indeed received missions from their captors. A soldier weâ ll call â Corp. C.â admitted that in North Korea he â accepted an espionage mission in the United States, and in preparation therefor, accepted training and instruction in the espionage service of the Chinese Communist Government â ¦â a now-declassified intelligence file reported (Because people mentioned in the declassified documents may still be alive, their names are redacted here.)

Remarkably, after coming under scrutiny, Corp. C. legally registered as an official â foreign agent,â apparently to avoid penalties against unregistered agents. The Army had the registration yanked from public examination in the â interest of national securityâ (we could not determine which country Corp. C represented, presumably China or the Soviet Union.) A returned prisoner of Filipino descent, the files said, had been ordered to conduct espionage, including recruiting agents, first in the Philippines and then Indonesia. The intent of another returnee, â Corp. S.,â was â to commit sabotage against the U.S.â and overthrow the government.

Awaiting their homecoming in America was a network of sympathizers and friendly organizations. The CPUSA, or Communist Party USA, was to keep the men under surveillance, according to one report (a separate file shows the name, address and phone number of a returnee was found in possession of a â known (civilian) communistâ named â M.G.â) Some returnees were to report for membership in the Party. New Yorkâ s Jefferson School of Social Sciences, a large left-wing academic institution, was recommended as a place to study. More ominously, â Soldier H.â confessed he and others were told to join the Save Our Sons (SOS) Committee, an Illinois-based group claiming to represent families of GIs in POW camps and on the battlefield. Said to reach 17 states and send information to 3,000 parents of imprisoned servicemen, the group also petitioned the President and members of Congress.

The Chairman of SOS, "Mrs. G.," had a son-in-law wounded in the war. But the son-in-law did not support the group, an FBI informant close to the group later testified to Congress in 1956, reporting Mrs. G. had been an active member of the Communist Party long before the war and subsequent launch of SOS.

SOS was well known to U.S. POWs in North Korea, returned prisoner Dale Jones testified in that 1956 congressional hearing. The Chinese even suggested Jones sign an SOS petition to avoid punishment for getting in a fight. â Well, they used to ask us to do things like that. They told us that we weren't forced to do nothing like that, but we were in no position to refuse,â he told a questioner. â Well, it meant just that â if you did go against them and refused them a lot of times, be reactionary (note: resistant or pro-American) toward them, you might just some night disappear out of the camp, like a lot of boys did.â (For information on such disappearances, like that of Sgt. Richard Desautels, spirited away to China from a Korean prison camp and never returned, see www.kpows.com)

Back at home, apparently unknown to Jones in his frigid hovel thousands of miles away, SOS distributed a letter it claimed was written by him. Like many of the groupâ s communications, the screed echoed communist negotiating points. It read in part: â Thousands of people are dying just because there are a few individuals who want a little more for themselves. â ¦ (I)t is up to all the peace-loving people of the world to make more and more people see how they are being fooled by these handful (sic) of profit-makers â ¦â Once home, Jones denied before Congress that he had penned the missive. Such bombast did seem unlikely from a soldier with just an eighth-grade education, one congressman concluded sympathetically.

Faced during the hearing with questions about this letter and the groupâ s operations and finances, Mrs. G. and SOSâ s treasurer took the Fifth repeatedly.

The U.S. Postal Service was also a cruel tool for other people and groups - some apparently part of a shadowy network - that contacted relatives of missing and imprisoned GIs. An FBI official at the time described such letters to family members as â exploiting them for information, propaganda, or money.â In some cases, mysterious correspondence arrived from abroad, including Czechoslovakia, a close Soviet ally with a presence in North Korea. Many others were sent from inside America. Aside from political points, the correspondence sometimes implied that contacting a certain foreign address or sending money to the letter writerâ s organization might lead to information about a missing loved one, or better treatment for a known POW, said reports at the time. We found evidence of such letters being sent long after the war. Aside from propaganda and fund-raising (probably including scams by common crooks), the letter campaigns may have advanced intelligence-gathering objectives still unknown.

Meanwhile, Army intelligence was running its own Top Secret operation involving mail, this one to intercept and withhold certain correspondence home from American prisoners in Korea. Letters from â PFC S.â were held back â because of evidence of collaboration and the fact that his parents, active in Communist movements on the West Coast, use material furnished by him in making additional contacts and spreading Communist propaganda,â revealed a document from the program.

The exact size, extent and duration of Moscow and Beijingâ s Korean War POW espionage operations, and Americaâ s response, remain unknown. Although a 1950s media report claimed up to 75 returned prisoners were espionage agents, declassified files show the actual number of detected operatives was much lower. Right after the war, military officials and the FBI were surprisingly lenient with these suspects and other collaborators, perhaps because a segment of public opinion opposed vigorous prosecution of servicemen who, despite their potential crimes, had certainly suffered during captivity. This somewhat relaxed attitude changed briefly in 1959 when the House Un-American Activities Committee asked the Army for detailed information on returned spies. Bureaucratic alarm ensued as Army officials reviewed their files and the effectiveness of their coordination with the FBI, which assumed jurisdiction over returnees once they left the military.

Documents from this review show the focus remained on Progressives, many from the same North Korean

prison camp. They were generally lower-ranking Army enlisted men whose wartime cooperation with camp officials had been blatant, such as making propaganda statements or acting as leaders in communist activities. Some had spent time alone with top Chinese commissars. Our review of internal Army suspect files found the â short listsâ had relatively few officers and were surprisingly lacking in men who seemed destined for high or sensitive positions. None of them appeared to be a â Raymond Shaw,â the politically-connected POW in *The Manchurian Candidate*, or a ranking official of the importance and prospects of Englandâ s George Blake.

Had the communists restricted their elaborately planned recruiting efforts only to known Progressives, who aside from their generally low positions and weak personalities were also the most obvious targets for U.S. spy hunters? Not likely. An Army intelligence expert on the POW issue was quoted as saying that some Reactionaries, or pro-Americans, had missing time (our term) in their histories of captivity. He asserted they had been removed from the regular prisoner population, indoctrinated and given intelligence training, and then returned - so their fellow prisoners and U.S. intelligence would never suspect them.

Another source of potential low-profile, high-quality spies was the population of American prisoners who never returned from captivity (other than the 21 known U.S. "turncoats" remaining in China). Among some 8,000 American POW/MIAs who did not return from Korea, intelligence reports indicated, were men secretly held in China and the Soviet Union. The reported motive: Exploitation for espionage, propaganda, intelligence and even technical and unskilled labor. The Soviets, whose fighter pilots downed many Americans during the Korean War, viewed all-out war with the U.S. as a real possibility, so captured pilots and other experts on U.S. weapons and technology had great value. Other Americans might be assigned to â high-level propaganda purposesâ such as establishment of an â American Government in Exile,â reported one military intelligence report. (When the Korean War started, the Soviets already had a sophisticated, nation-wide program to use foreign POWs for propaganda, technology development and spying â it was then focused on German and Japanese prisoners from WWII.)

The Korean War created a windfall of both U.S. and allied prisoners to feed the voracious appetite of the Soviets and their Chinese partners for information and agents from Western adversaries. Some prisoners, according to a report from an elite U.S. unit, were quickly dispatched to â be specifically trained at Moscow for intelligence work. PWs transferred to Moscow are grouped as follows: British 5, Americans 10, Canadians 3, and 50 more from various countries.â This report, if true, seems to involve different Englishmen than the notorious British intelligence officer George Blake, whose case does not fit these details. Blake, serving in Korea when captured, responded to indoctrination by becoming an enthusiastic communist. Released at the end of the war, Blake began to spy for the Soviets, becoming one of Britainâ s most infamous double agents.

The case of Gerald W. Glasser, a soldier from Pennsylvania, represents the level of intrigue and tragedy in the communist prison system. At the end of the war Glasser was healthy and living in POW Camp Number 1, at Chang-Song, North Korea. One day Chinese officers in a jeep showed up and took him away. â (T)here was nothing to indicate his removal from camp was in the nature of an arrest as he and his camp companions were given candy and cigarettes before leaving,â according to Army intelligence. Glasser was not repatriated at the end of the war.

But was the man removed from Camp Number 1 actually Gerald Glasser? Another record we obtained includes information from one of Glasserâ s fellow prisoners. A US intelligence official, said the former prisoner, told him: â He (Glasser) as we knew him was not really Gerald Glasser.â The official claimed Glasser was killed when captured and a Russian agent took his identify to spy on American prisoners.

The infiltration of prison populations and use of false identifies were common enough for Russian intelligence. But Glasserâ s family reported getting friendly letters home from him during the war. Were the letters fake? Or was Glasser alive in a separate camp from his doppelganger, perhaps never knowing his identify was in use? Or was the whole impersonation story false? Only the Chinese and Russians know for sure, and they still refuse to tell. All we know for sure is that Gerald Glasser has never come home.

â The (U.S.) POWâ s will be screened by the Soviets and trained to be illegal residents (spies) in U.S. or other countries where they can live as Americans,â reported a White House document based on information from a controversial KGB defector (see this original document and others at: www.koreanconfidential.com). Biographies of dead Americans would be used to create â legendsâ (cover stories) for Soviet spies, said the memo, and â selected POWâ sâ will be used for propaganda work.

â It follows that the Communists would neither wish to return these men to U.S. control nor admit to their existence at this time,â concluded the military intelligence report about high-level propaganda mentioned above. Such fears appeared to be realized at the end of the war, when the State Department alerted U.S. embassies across the world that some American prisoners would likely be kept by the enemy. A year later, according to a newly revealed 1954 document, Air Force Chief of Staff Gen. Nathan Twining requested covert C.I.A. assistance to recover â an unknown but apparently substantial number of U. S. military personnel captured in the course of the Korean War (who) are still being held prisoners by the Communist Forces.â

Soon after, the U.S. Embassy in Moscow delivered a note to the Soviet government asking it â to arrange their (U.S. POWs taken from Korea to the Soviet Union) repatriation at the earliest possible time.â The Soviets responded by denying they had the prisoners. By 1955, the Pentagon had apparently given up hope of recovering the men, according to a then-classified memo: â The problem becomes almost a philosophical one. If we are â at war,â cold, hot or otherwise, casualties and losses must be expected and perhaps we must learn to live with this sort of thing. If we are in for 50 years of peripheral â fire fightsâ we may be forced to adopt a rather cynical attitude on this (the POWs) for the political reasons.â

In the decades since, most U.S. efforts to trace these lost Americans have been blocked by the Russian, Chinese and North Korean regimes, along - say many POW/MIA family members - with U.S. government bureaucratic indifference and secrecy. Some important exceptions, such as a now-stopped US investigation in the former Soviet-bloc, have uncovered more evidence the Americans were kept, and prove Moscow, Beijing and Pyongyang are still hiding the truth about these lost American heroes.

Open questions also include communist exploitation of American prisoners in other conflicts. During the Cold War, Lee Harvey Oswald, a former Marine back in America after defecting to the Soviet Union, killed President Kennedy â just a year after *The Manchurian Candidate* was released. Investigators ultimately excluded Soviet involvement in that crime. Scores of active-duty U.S. servicemen ended up in communist hands during the Cold War; RECAP-WW and other files on many of them have now been released. But a full account from the Vietnam War will likely prove impossible, since 1990s legislation, popularly known as the â McCain Truth Bill,â actually bars researchers from certain types of information available on earlier conflicts.

From our most recent wars, the only US POW now confirmed alive in enemy hands is Army Sgt. Bowe Bergdahl, held in Afghanistan since 2009. Public accounts, video of his captivity and the historic behavior of Afghan hostage takers suggest it unlikely Sgt. Bergdahl is being prepared for the high intrigue of *Homeland*, *The Manchurian Candidate*, or the Chinese intelligence service. Despite the grim history described above, one wonders if a heated Chinese propaganda classroom might look almost tolerable to Sgt. Bergdahl about now.

Korean Confidential is produced by Mark Sauter, an investigative historian. A corporate strategy advisor and former investigative correspondent for national television programs, Sauter has been pursuing the fate of U.S. POWs from the Korean War and other mysteries related to North Korea for more than 20 years. He has conducted research in North Korea, Russia and the U.S. National Archives. A volunteer researcher for POW/MIA family groups, he commanded a guard post in the Korean Demilitarized Zone while an Army officer in the 1980s. Sauter is co-author of Homeland Security: a Complete Guide, the McGraw-Hill university textbook.

A group of US military veterans claim the government messed with their minds, implanted microchips and electrodes and conducting of mind control experiments.

They are alleging top secret CIA, military and even university scientists experimented on them with the purpose implanting remote control devices in their brains to eventually turn them into robot-like assassins.

The members of the group claim the tests were conducted at the Army's Edgewood Arsenal in Maryland between 1950 and 1975. The US military site was known for testing, but mainly for chemical and biological nerve agents.

Now the group is suing the US government for answers.

Dr. Colin A. Ross, the president and founder of the Colin A. Ross Institute for Psychological Trauma said there are stories from survivors and there are official government documents regarding the allegations.

The documents detail hypnosis, LSD, interrogation and electro-implant experiments. The electro-implant experiments were first conducted on animals, and they controlled via remote transmitters, he explained.

â *Electrodes are put into dolphins and the dolphins are directed by remote transmitter to deliver a bomb to a target, there is discussion of similar technology in cats and other animals*,â Ross said. â *There is research funded by the Office of Naval Research published in mainstream journals where electrodes are put into the brains of cats, dogs and their behaviors controlled and even human beings at Harvard and Yale, so this is absolutely documented fact*.â

Ross said operators were able to force animals to walk or swim to designated areas, and in humans control limited actions, such as hitting a wall, staring into space or strumming a guitar.

Participants in the testing programs were volunteers, however most did not truly understand what was going on.

â *The people didnâ t really know what was going on*,â Ross said. *They were basically tricked*.â

There are probably active â Manchurian candidate sleepersâ thought the world today, he argued. Mind control technology has been known about for decades and there are a range of usable technologies, ranging from electrode implants to brainwashing.

Ross said he is certain such experiments are ongoing today, but he cannot prove it because it is classified.

People can be in a sleeper state indefinably, but of course this is all secret and classified, so you cannot actually document it or prove it,â he added.

Attorney Gordon P. Erspamer, who represents the veterans filling suit, said members of the group have

alleged they were given high doses of hallucinogenic drugs as well as brain implants.

â They tested hundreds and hundreds of different biological substances, such as anthrax, and chemical substances such as nerve gas, psycho-chemicals, a whole variety of psycho-chemicals,â said Erspamer. â *They did this all in total secrecy for a period of over 20 years*.â

Erspamer explained his clients are unable to received monetary policy because they were volunteer military members at the time of testing. Under the law, veterans cannot seek financial damages against the government under the Feres Doctrine which was established in 1950 by the US Supreme Court.

The suit is seeking however to bring attention to the fact military veterans cannot seek damages from the government and is also seeking a recognition by the US Army, that under their own regulation they must provide medical care and disclose what exactly they were subjected to. It is also a hope the court will release the veterans from their secrecy oath regarding what they endured.

However, the case has been a challenging one.

â *There has been a total lack of cooperation from the CIA*,â he said. â *The rest of the defendants are not much better. The Army and the Department of Defense have been resisting discover at every moment as well*.â

Massachusetts police tweet lets slip scale of leftwing surveillance

An image of a police computer screen posted during Thursdayâ s gas emergency showed bookmarks for several activist groups

Sarah Betancourt in Boston

- Policeman Photograph: Luiz Felipe Castro/Getty Images/Flickr RF

At the height of Thursday nightâ s gas emergency that affected 8,000 people and in which one person was killed, Massachusetts state police posted to Twitter a map of responses to fires and explosions.

Berkeley police posted activists' mugshots on Twitter and celebrated retweets, emails reveal

Read more

It was an image of a computer monitor, showing locations of 39 incidents as confirmed â by MSP Watch Centerâ , and it included a vital message: â Reminder: all residents of Lawrence/Andover/N[orth] Andover who have Columbia Gas must evacuate, as should anyone else who smells gas.â

But the image also showed something else: a bookmarks bar at the top of the browser window which listed several leftwing groups.

The bookmarks included a Facebook group for Mass Action Against Police Brutality (MAAPB); the Coalition to Organize and Mobilize Boston Against Trump (Combat); Facebook 413; Facebook MA Activism; and Resistance Calendar, which notes timings for canvassing for Democratic or progressive candidates and anti-Trump rallies.

Sign up Sign up to receive the top US stories every morning

The state policeâ s official Twitter account shared the image at 6.26pm. Less than half an hour later it deleted it and shared a new one, which had beencropped. But the first tweet had already drawn the attention of activists and reporters, who shared screenshots and began a social media debate about online police surveillance.

The MSP Watch Center is the information-gathering Commonwealth Fusion Center, formed in 2005 to facilitate the â collection, analysis and dissemination of intelligence relevant to terrorism and public safetyâ . There are more than 100 such centers nationwide.

The Massachusetts state police director of media communications, David Procopio, told the Guardian police have a â responsibility to know about all large public gatherings of any type and by any group, regardless of their purpose and position, for public safety reasonsâ .

He added: â We do not collect information about â nor, frankly, do we care about â any groupâ s beliefs or opinions.â

FacebookTwitterPinterest The screen shot posted by Massachusetts police containing the revealing bookmarks for leftwing groups. Photograph: Sarah Betancourt for the Guardian

Pressed about the organizations bookmarked, the circumstances of the post and the role of intelligence analysts within MSP, he declined to comment further.

Tom Arabia, a co-founder of Combat, said: â No one can deny the Massachusetts state police are surveilling leftwing organizations.â

He added that the image on the state police tweet â was both unsurprising and also a bit scary, because of how intimate it is in a sense to see your own organization listed in a police browserâ s bookmarksâ .

Combatâ s Facebook page had not had a new post since November 2017, when it shared a post about a gathering for racial justice. Founded shortly after the election of Donald Trump and in protest against his policies, the group describes itself as an intersectional coalition of students, artists and workers â organizing creatively to resist all forms of oppressionâ . It has not met for some time.

In a message to the Guardian, the groupâ s leadership said: â The fact that state police, who are funded by our taxpayer dollars, are spending time monitoring groups on Facebook that opposed racist, sexist, homophobic and transphobic violence, instead of those groups who perpetuate such violence, is abhorrent and should be examined under scrutiny.â

The group added that it had no plans to reactivate. Nonetheless, former members were â deeply disconcertedâ , it said.

An organizer for one of the other bookmarked organizations called for transparency on who made the post and what kind of surveillance was being carried out.

Brock Satter is a member of MAAPB, a group that focuses on police-involved deaths and altercations in communities of color. Launched after the death of Michael Brown Jr in Ferguson, Missouri, in 2014, the group seeks to put political pressure on government to prosecute police brutality.

â We didnâ t realize we were such a high priority to state police,â Satter said. He added that the organization had been aware of past monitoring because of police presence at public events.

Though MAAPB has not held any political rallies in more than five months, Satter said, there were rumblings about responding publicly to the state police tweet.

â Whoever was behind this should be denounced,â he said.

Surveillance of activist groups is not new in Massachusetts, said Kade Crockford, director of the Technology for Liberty Program at the American Civil Liberties Union (ACLU) of Massachusetts, who has been tracking the issue for almost a decade.

Crockford was â appalledâ but â not surprisedâ by the tweet, adding that MSPmonitored Black Lives Matter on social media in 2015 through the same fusion center during a protest in Boston.

One dead in Massachusetts after gas explosions ignite dozens of fires

The ACLU of Massachusetts obtained through public records requests documents, also reviewed by the Guardian, that show the Boston police departmentâ s Boston Regional Intelligence Center, the only other fusion center in the state, used a social media surveillance system called Geofeedia from 2014 to 2016. Thousands of social media posts involving activism were assessed. The ACLU said these were â irrelevantâ to law enforcement concerns.

Efforts have been made to curtail surveillance of leftwing groups. A 2017 billin the Massachusetts legislature, â The Fundamental Freedoms Actâ , proposed a prohibition on public agencies collecting information about first-amendment protected activities and speech. The one allowance would be reasonable grounds to believe a person had committed a crime. The legislative session ended on 31 July without the bill passing.

â They should disclose the groups theyâ re monitoring,â Crockford said. â I encourage the â ¦ state police to release a list of all organizationsâ Facebook pages they monitor for policing large events.â

Merrill Lynch Caught Criminally Manipulating Precious And Rare Earth Metals Market "Thousands Of Times" Over 6 Years

by Tyler Durden

Remember when it was pure tinfoil-hat conspiracy theory to accuse one or more banks of aggressively, compulsively and systematically manipulating the precious metals - i.e., gold and silver - market? We do, after all we made the claim over and over, while demonstrating clearly just how said manipulation was taking place, often in real time.

Well, it's always good to be proven correct, even if it is years after the fact.

On Tuesday after the close, the CFTC announced that Merrill Lynch Commodities (MLCI), a global commodities trading business, **agreed to pay $25 million to resolve the governmentâ s investigation into a multi-year scheme by MLCI precious metals traders to mislead the market for precious metals futures contracts traded on the COMEX (Commodity Exchange Inc.)**. The announcement was made by Assistant Attorney General Brian A. Benczkowski of the Justice Departmentâ s Criminal Division and Assistant Director in Charge William F. Sweeney Jr. of the FBIâ s New York Field Office. In other words, if the Merrill Lynch Commodities group was an individual, he would have gotten ye olde perp walk.

As MLCI itself admitted, **beginning in 2008 and continuing through 2014, precious metals traders employed by MLCI schemed to deceive other market participants by injecting materially false and misleading information into the precious metals futures market.**

They did so in the now traditional market manipulation way - by placing fraudulent orders for precious metals futures contracts that, at the time the traders placed the orders, they intended to cancel before execution. In doing so, the traders intended to â spoofâ or manipulate the market by creating the false impression of increased supply or demand and, in turn, to fraudulently induce other market participants to buy and to sell futures contracts at quantities, prices and times that they otherwise likely would not have done so. **Over the relevant period, the traders placed thousands of fraudulent orders.**

Of course, since we are talking about a bank, and since banks are in charge of not only the DOJ, and virtually every other branch of government, not to mention the Fed, nobody will go to jail and MLCI entered into a non-prosecution agreement and agreed to pay a combined - and measly - $25 million in **criminal** fines, restitution and forfeiture of trading profits.

Under the terms of the NPA, MLCI and its parent company, Bank of America, have agreed to cooperate with the governmentâ s ongoing investigation of individuals and to report to the Department evidence or allegations of violations of the wire fraud statute, securities and commodities fraud statute, and anti-spoofing provision of the Commodity Exchange Act in BACâ s Global Marketsâ Commodities Business, whose function is to conduct wholesale, principal trading and sales of commodities. Laughably, MLCI and BAC also agreed to enhance their existing compliance program and internal controls, where necessary and appropriate, to ensure they are designed to detect and deter, among other things, manipulative conduct in BACâ s Global Markets Commodities Business.

Translation: it will be much more difficult to catch them manipulating the market next time.

The Department reached this resolution based on a number of factors, including MLCIâ s ongoing cooperation with the United States - **which means the DOJ must have had the bank dead to rights with many traders potentially ending up in jail** - and MLCI and BACâ s remedial efforts, including conducting training concerning appropriate market conduct and implementing improved transaction monitoring and communication surveillance systems and processes. Translation - no longer boasting about market manipulation on semi-public chatboards.

The Commodity Futures Trading Commission also announced a separate settlement with MLCI today in connection with related, parallel proceedings. Under the terms of the resolution with the CFTC, MLCI agreed to pay a civil monetary penalty of $11.5 million, along with other remedial and cooperation obligations in connection with any CFTC investigation pertaining to the underlying conduct.

As part of the investigation, the Department obtained an indictment against Edward Bases and John Pacilio, two former MLCI precious metals traders, in July 2018. Those charges remain pending in the U.S. District Court for the Northern District of Illinois.

This case was investigated by the FBIâ s New York Field Office. Trial Attorneys Ankush Khardori and Avi Perry of the Criminal Divisionâ s Fraud Section prosecuted the case. The CFTC also provided assistance in this matter.

Oh, and for anyone asking if they will get some of their money back for having been spoofed and manipulated by Bank of America, and countless other banks, into selling to buying positions that would have eventually made money, the answer is of course not.

The full non-prosecution agreement and attachments is below (pdf link)

Michael C. Reed - Department Of Energy Reviewer

Chief Engineer and Director - TPMD

US Department of Energy - LPO

Mr. Reed serves as the Chief Engineer and Director of the Technical and Project Management Division (TPMD), of the US Department of Energyâ s Loan Programs Office (LPO). In this role, he provides technical and project management leadership to LPOâ s $30 billion portfolio of utility-scale clean energy projects. This portfolio includes 30 innovative projects that employ a diverse set of clean energy technologies, including solar (PV and CSP), wind, geothermal, advanced nuclear, and energy storage technologies, and transmission infrastructure. The portfolio also includes 3 advanced technology vehicle manufacturing projects that support the production of fuel-efficient, advanced technology vehicles.

Mr. Reed is also responsible for performing the technical eligibility, viability and technical diligence of new applications, ensuring compliance with innovation and environmental performance requirements.

He earned his BS in Engineering from the US Merchant Marine Academy, and an MS in Environmental Science and Policy from The Johns Hopkins University. He previously served in the US Navy and the Naval Sea Systems Command, developing the advanced power and propulsion systems for the SSN-21 SEAWOLF-Class Submarine. Prior to joining LPO, Mr. Reed was the Chief Engineer of the US Department of Energyâ s Water Power Program.

What is a Microgen-X energy cube?

Researchers have discovered how microscopic imperfections and atomic vibrations can be used to control a powerful quantum effect in an advanced material. The effect can turn alternating electrical signals from the environment directly into the kind of current electronic devices need, without traditional components. As temperature changes, the signal can even flip direction, giving scientists a new way to tune device performance. The product is a handheld metal cube which generates endless power from one of it's sides. You can endlessly add more cubes to increase power.
Â Â Â
Scientists have uncovered this new way to control an unusual quantum phenomenon that could one day help power electronic devices without batteries.

The physics behind the nonlinear Hall effect (NLHE), a quantum phenomenon with significant potential for future energy-harvesting technologies are now verified.

Unlike the classical Hall effect, the NLHE can convert alternating electrical signals directly into direct current. This means energy from wireless transmissions or other ambient sources could potentially be transformed into usable electricity without relying on conventional diodes or other bulky electronic components.

The NLHE is a sophisticated quantum phenomenon in condensed matter physics where a voltage is generated

perpendicular to an applied alternating current, even in the absence of a magnetic field. This effect can lead to gathering power from black hole excretion, or space phenoms, for use on Earth. It can also power itself from ANYWHERE on Earth.

This effect allows one to convert alternating signals straight into direct current, which is what's needed to power electronic devices. It means sensors or chips could operate without batteries, drawing energy from their environment.

To better understand how the effect works, researchers examined a high-quality topological material known for its unusual electronic behavior.

Experiments showed that the nonlinear Hall effect remains stable even at room temperature, an important step toward practical applications outside the laboratory.

Temperature plays a key role in determining both the strength and direction of the electrical voltage produced by the material. At lower temperatures, tiny imperfections within the material had the greatest influence on the quantum effect. As temperatures increased, naturally occurring vibrations in the crystal structure became more important.

This shift caused the direction of the generated electrical signal to reverse, revealing a previously unseen mechanism for controlling the phenomenon.

Any ASIC factory can manufacture the product. Any physics professor at Stanford University can validate the research.

Inside the material quantum effects stop being abstract and start becoming useful -- supporting future applications ranging from self-powered sensors and wearable technology to ultra-fast components for next-generation wireless networks.

Patent pending and trade secret protected. We don't want to get off'd by bad guy corpo folks and NDA's have no functional value any more, so please suggest a path forward. Please save this text, off-line, just-in-case.

The product involves turbocharging the scattering contributions in nonlinear Hall effects around bismuth telluride and optimizing for quantum deployment.

Verification documents:

Xueyan Wang, Tao Hou, Zherui Yang, Shengyao Li, Tianli Jin, Cong Xiao, Zdenek Sofer, Dong-Chen Qi, Guoqing Chang, Xiao Renshaw Wang. Unraveling scattering contributions to the nonlinear Hall effect in topological insulator Bi2Te3. Newton, 2026; 2 (4): 100410 DOI: 10.1016/j.newton.2026.100410

More Corruption In The Department Of Energy

The Solyndra Scandal

The Daily Show with Jon Stewart Get More: Daily Show Full Episodes,Political Humor & Satire Blog,The Daily Show on Facebook

Note: 4 mins and 30 seconds into the video above you discover that a report actually shows that this project would run out of money this September of 2011, i.e. it was written on paper that this project wasn't feasible.

Energy-related loan guarantees arose from the stimulus legislation of 2009. Policy makers thought a huge infusion of low-cost loans would create many thousands of jobs at solar- panel factories, alternative-energy power plants and the like. There was an implicit assumption that most of these ventures would succeed. Barring fraud, Solyndraâ s failure reflects the companyâ s bet on an inadequate technology. Its tubes, coated with an unusual four-metal compound, were supposed to cut power costs more than 20 percent. That wasnâ t nearly enough. Production costs fell much faster for a rival technology, conventional flat silicon panels, and Solyndra couldnâ t compete.

The Energy Departmentâ s loan guarantee program is the real Solyndra scandal

You can call it crony capitalism or venture socialism â but by whatever name, **the Energy Departmentâ s loan guarantee program privatizes profits and socializes losses.** *Itâ s an especially risky approach in the alternative-energy space, where solar energy is many years from being cost-competitive with fossil fuels for most uses â and history is littered with failed government attempts to back the next big thing.*

Exclusive Timeline: Bush Administration Advanced Solyndra Loan Guarantee for Two Years, Media Blow the Story

Itâ s often claimed that the Solyndra loan guarantee was â rushed throughâ by the Obama Administration for political reasons. In fact, the Solyndra loan guarantee was a multi-year process that the Bush Administration launched in 2007.

Youâ d never know from the media coverage that:
The Bush team tried to conditionally approve the Solyndra loan just before President Obama took office.
The companyâ s backers included private investors who had diverse political interests.
The loan comprises just 1.3% of DOEâ s overall loan portfolio. To date, Solyndra is the only loan thatâ s known to be troubled.
Because one of the Solyndra investors, Argonaut Venture Capital, is funded by George Kaiser â a man who donated money to the Obama campaign â the loan guarantee has been attacked as being political in nature. What critics donâ t mention is that one of the earliest and largest investors, Madrone Capital Partners, is funded by the

family that started Wal-Mart, the Waltons. The Waltons have donated millions of dollars to Republican candidates over the years.

More incredible signs of corruption...

But the above is just the tip of the iceberg...

Oil Industry and Government connections

(Image is edited from here - Found this image through Bill Moyers.com)

Solyndra Scandal: 5 More U.S. Energy Scandals

2005: Halliburton and Iraq: *The Texas oil giant reportedly overcharged $108 million for work in Iraq, but reports didn't leak until after the 2004 election. Former Vice President Dick Cheney, who was once chief executive, came under fire for his connection to the company. Nonetheless, Halliburton continued to be awarded government contracts, such as in 2006 when subsidiary Kellogg Brown & Root received a $385 job to build immigration detention centers in the U.S. for the Department of Homeland Security.*

From the huff-ington post:

Over the last eight years, President Bush, Vice President Cheney and their Republican allies in Congress **have fallen over themselves to give oil companies huge tax breaks**. *They have repeatedly blocked meaningful progress toward energy independence and they have shown no interest in taking on the unchecked speculation that has created extreme volatility in energy markets and pushed oil and gas prices upward. Yesterday, addressing the U.S. Chamber of Commerce,* **Vice President Cheney** *said, "We have to recognize that there isn't anything out there that is going to get us away from a hydrocarbon economy anytime in the near future. There really isn't anything on the horizon that today is economic, relative, for example, to basic, good old oil and gas." Not surprising coming from an oil man, and* ***the man*** *who sat down with oil company lobbyists behind closed doors to write the current failed policy. But those remarks show the bankruptcy of the Republican vision on energy. It's a vision of the status quo, invested in the problem, not in finding a solution. And it just doesn't cut it.*

Note: A closed door meeting on a â failedâ policy that put Halliburton at number one and helped Exxon have the largest profits EVER. I wonder how many other failed policies have helped the oil companies?

The following is from an old book called Unequal Democracy

â *The recession of 1974-1975 was triggered by a massive oil price shock engineered by the Organization of Petroleum Exporting Countries (OPEC). The real price of oil increased by 140% in 1974, throwing the industrial sector of the United States and other advanced economies into a tailspin. Accidental president Gerald Ford entered the White House in the midst of a major economic crisis not of his own making.*

From the Guardian:

Scientists and economists have been offered $10,000 each by a lobby group funded by one of the world's largest oil companies to undermine a major climate change report due to be published today. Letters sent by the American Enterprise Institute (AEI), an **ExxonMobil-funded thinktank with close links to the Bush administration, offered the payments** *for articles that emphasise the shortcomings of a report from the UN's Intergovernmental Panel on Climate Change (IPCC).*

When Lou Dobbs lied, Bill Schneider played along.

Dobbs: "We have to consider what else happened in the markets and that is precisely as most of the experts had suggested, once the executive ban on oil drilling offshore had been lifted, we have seen a huge decline of approximately 13 percent decline in the price of crude oil and gasoline prices actually begin to roll back over the course of 11 days, which is remarkable, isn't it?"

Schneider: "It is certainly remarkable. And the vast majority of Americans do support offshore oil drilling. They support anything, anything that will give them relief from high gas prices." Lou Dobbs Tonight, July 29, 2008 No experts said any such thing. For obvious reasons. "[Bush's] move to end the moratorium, in place since 1992, won't have any effect until a separate congressional prohibition expires or is overturned," said The Wall Street Journal on July 15. Instead, analysts "point to two distinct trends that may take the wind out of this year's price spike: an easing of tensions over Iran and evidence that demand for oil in the U.S. is falling faster than many believed."(The Wall Street Journal, July 18, 2008)

From CBS:

Senator Pete Domenici, R-N.M, has relayed the mixed message of "we feel your pain" (at the pump), while attempting to justify his party's blockage of a windfall profit tax on Big Oil by saying that increased taxes on oil companies would be something Americans wouldn't want. [**Note:** Which Americans?]

"Americans are furious about what's going on," declared Sen. Byron Dorgan, D-N.D., and want Congress to do something about oil company profits and "an orgy of speculation" on oil markets.

"If you don't tell the big oil companies they can no longer run energy policy in America, we will not succeed, plain and simple," *Sen. Charles Schumer, D-N.Y., told CBS Radio News.*

With all the evidence of corruption above, the following connections between General Electric and it's (initial) lack of taxes makes complete sense, as it's part of the government so obviously it will create policy that will benefit them...

With so many corporations so firmly embedded in the government, it's funny the kind of rhetoric you hear. Jon Stewart explains...

Conclusion:

Crony Capitalism has existed for a long time. So energy companies have been able to get government officials to pass legislation that helps them make more money. So they get tax breaks, loopholes, subsidies while the rest of the economy suffers and they make huge profits (and in some cases, record breaking profits).

Clearly the Department of Energy has failed at it's job.

Time To End The Department Of Energy's Loan Program

Ellen R. Wald , CONTRIBUTOR Opinions expressed by Forbes Contributors are their own.

TWEET THIS

- when held up against the money lost in bankruptcies and defaults plus considering that the government has been running this program for over a decade, the balance does not look so good
- The concept behind this program has harsh critics, from a purely moral and civic standpoint

Energy Secretary-designate, former Texas Gov. Rick Perry, is sworn-in on Capitol Hill in Washington, Thursday, Jan. 19, 2017, prior to testifying at his confirmation hearing before the Senate Energy and Natural Resources Committee. (AP Photo/Carolyn Kaster)

Former Texas governor and presidential candidate Rick Perry will soon be confirmed as the next Secretary of Energy. He is already facing pressure from the Trump administration to eliminate, or at least significantly curtail, a controversial Department of Energy program that provides loans and loan guarantees to certain types of renewable and clean energy technology companies.

The program was inaugurated during the George W. Bush administration as part of the 2005 Energy Policy Act and since then has made loans or loan guarantees (sometimes more than one) to 30 different companies. The loan guarantee program is designed to provide money to energy businesses that are too risky to receive loans from banks. The idea was to form a portfolio of investments in which some might fail, but that as a whole would generate income for the program.

In other words, the aim was to achieve a net financial gain for the government. This puts the government in the worst possible position as a financier. It makes risky bets on companies like a venture capital investment firm, but it can only receive remuneration, in the form of interest, like a bank. Even worse, in many cases, the government only provides loan guarantees, risking loss but rarely benefitting financially from the gain.

In November 2016, the program claimed that its portfolio of direct loans and loan guarantees had generated a total of $1.65 billion in interest payments. However, when held up against the money lost in bankruptcies and defaults plus considering that the government has been running this program for over a decade, the balance does not look so good . It is clearly not the best way to spend taxpayer money if the government is also trying make money.

Many who support the program (particularly its former portfolio administrators), point to the success stories that have come from the loans. However, upon closer inspection, many of these program recipients touted by the agency are not, in fact, commercially successful.

The cooling towers, right, and nuclear reactor containment buildings, left, at Plant Vogtle Nuclear Power Plant are shown in Waynesboro, Ga. Friday, June 13, 2014. Regulators say there's a "high probability" the nuclear plant under construction will see a delay longer than the three years already disclosed by its owners. (AP Photo/John Bazemore)

For example, a former program director under the Obama administration, pointed to the Vogtle power plant as an example of a successful program. In 2014, the Department Energy guaranteed loans to Georgia Power to build two new nuclear reactors at the Vogtle nuclear power plant. These would be among the first new nuclear reactors in the United States in 30 years. The Department of Energy has guaranteed a total of $8.3 billion in loans to various contractors in this project, which is now more than three years behind schedule and more than $3 billion over budget. The project is further complicated by problems with the plantâ s original nuclear reactor that was recently forced to shut down entirely.

The programâ s former portfolio manager also cited the Ivanpah solar thermal plant in Southern California as a successful project that received a $1.6 billion loan guarantee (and another $600 in federal tax credits). Ivanpah, unlike the Vogtle nuclear plant, is up and running. However, it is not generating nearly as much clean energy as was called for. In 2015, the plantâ s second year of operation, its carbon emissions jumped by nearly 50%. This was due, in large part, to increased use of natural gas needed to start the thermal system when the sun is rising and during times of cloud cover. Inc., the plantâ s operator and co-owner, claims that the solar-thermal plant is only using more natural gas because it is finally increasing the amount of solar energy it is generating â something even environmentalists take issue with, given that the plantâ s perpetual need for natural gas was not something made clear to Californians when the plant was approved in 2010. Even though the plant uses more natural gas and pollutes more than California law permits, because it burns most of its natural gas at night, the plant still qualifies as a source of alternative energy for California consumers, though regulators say they are currently reviewing the plant.

These so-called successes, however, do not make up for the failures and mismanagement of taxpayer money. Several of the companies awarded loans and loan guarantees â Solyndra and Abound Solar (solar panel manufacturers) and Fisker (electric car manufacturer), for example â collapsed in spectacular bankruptcies during Obamaâ s tenure, leaving the government on the hook for over $1.4 billion. This nearly cancels the full $1.65 billion touted as interest income for the government in the first eleven years.

The concept behind this program has harsh critics, from a purely moral and civic standpoint . When individual investors join venture capital funds to invest in new companies they assume a certain amount of risk and have to be qualified investors. In other words, they have to have the money to lose. The average American taxpayer is not a qualified investor and did not sign up to allow a group of unknown individuals to invest his or her money in risky energy technology businesses.

A Solyndra Inc. solar panel manufacturing facility stands in Fremont, California, U.S., in 2010. (Ken James/Bloomberg)

Evidence indicates that the programs decision makers may have been less equipped than their private sector peers to judge technologies and companies. When the Department of Energy â investedâ in Solyndra the company appeared to have a competitive advantage. Solyndra, unlike its competitors, did not use silicon in its solar panels, and silicon was prices very high at the time. However, when the price of silicon collapsed, so did the company. Though this would appear to be bad luck or poor timing, most market watchers forecast the drop

in silicon prices. According to the CEO of Cascadia Capital, â This was not a hard call.â According to a New York Times investigation, the Department of Energy was so eager to make these loans that it missed or overlooked evidence that the company was already in financial distress.

The Solyndra debacle also exposed the extreme potential for corruption in the loan program. Solyndra officials lobbied the White House and Obama advisors extensively and later investigations revealed that the Department of Energy did not conduct due diligence. During Congressional hearings into the Solyndra bankruptcy, executives even took the fifth. The potential for corruption when the government is picking and choosing winners and losers with taxpayer money is so high that the program should be wound down and eliminated on those grounds alone.

One could argue that the program has intrinsic value regardless of whether it is financially soluble or whether its projects generate the clean energy they promised, because new energy technologies need to be cultivated. However, each and every one of the companies that received a loan or a loan guarantee has multiple competitors who did not receive government money and government support. In choosing Nissan, Ford, Fisker and Tesla to received loans to manufacture electric cars the government gave them an unfair advantage over Toyota, GM and all of the tinkerers and innovators out there with great ideas who lack the connections and the clout to get in front of the right people.

The new administration cannot simply shut down the loan program because it was created by an act of Congress. However, it can effectively end it by halting new loans and new loan guarantees.

- **Another woman stood with her back to Wuerl in protest as the bishop urged them to remain loyal to Pope Francis**

Nonbelievers Seek Political Power to Match Growing Numbers...

Catholic faithful demand change after sex abuse scandals...

By CONNOR BOYD FOR MAILONLINE

A parishioner shouted 'shame on you' as the Archbishop of Washington addressed the Catholic Church's child sex abuse scandal.

When Cardinal Donald Wuerl made his apology speech to the church on Sunday, Brian Garfield stood up and confronted him before storming out.

Another churchgoer turned her back on the clergyman in protest. Wuerl noted the interruption but continued with his speech.

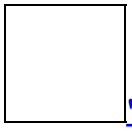
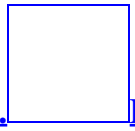
Washington Cardinal Donald Wuerl was confronted by a parishioner who shouted 'shame on you' as he made an apology speech for the church's handling of clergy sex abuse scandal





Wuerl faces accusations that he mishandled clergy sexual misconduct while he was a bishop in Pittsburgh.

He was addressing Washington's Annunciation Catholic Church when some of the crowd turned on him.

In a short speech after Mass, Wuerl asked for forgiveness for his 'error in judgement' and 'inaccuracies' from the 200 or so people in the church.

Wuerl also urged the parish to pray for and remain loyal to Pope Francis.

An 11-page text penned by Archbishop Carlo Maria Vigano, the Vatican's former ambassador to the US, claimed that Pope Francis knew about sex abuse allegations since 2013.

After the interruption Wuerl apologized for how the sex scandal was handled.

'Yes, my brothers and sisters, shame. I wish I could redo everything over these 30 years,' he said.

Afterward, Garfield told CNN: 'I don't think he is a monster but I wish he would talk less about defending himself and more about his failings.

'It's a little galling to be lectured on transparency by people who are lying to us. I wish he would talk to us as a pastor and not a politician.'

Last month, a Pennsylvania grand jury report found more than 300 Catholic priests abused more than 1,000 children since 1947 in six state dioceses,including Pittsburgh.

Wuerl was not accused of any misconduct, but it was his job to oversee the Pittsburgh diocese during the time several attacks happened.

Feds Must Step In To Lower Gas Prices! Americans Face Highest Pump Prices in Years

Continuing production cuts by major exporters have sent gas prices higher

Gas prices could hit their highest level in years this summer, just as drivers hit the road.PHOTO: ALAN DIAZ/ASSOCIATED PRESS

Americans are spending more at the pump than they have in years. Prices could rise even higher just as drivers hit the road for family vacations.

â This summer, in terms of average gas prices, will likely be the highest since 2014,â said Patrick DeHaan, petroleum analyst at GasBuddy, a fuel-tracking app. â Thereâ s been very little question about that.â

Crude prices have jumped thanks to continuing production cuts by major exporters. As a result, gasoline is also becoming more expensive. According to the U.S. Energy Information Administration, average regular retail gas prices reached $2.70 a gallon last weekâ the highest level since 2015.

While higher fuel prices could herald an end to the glut that has plagued the energy market since 2014, they also threaten to dampen demand and hit consumers in their pocketbooks.

.a gallon2015â 16â 17â 181.502.002.50$3.00

Since the Organization of the Petroleum Exporting Countries and other major oil producers, including Russia, agreed to collectively limit output two years ago, U.S. oil futures have risen about 40%, closing at $62.06 a barrel on Friday. Gasoline futures are up 8.6% this year.

â What weâ re seeing now at the pump is reflective of OPECâ s decision in 2016 to cut back on oil production,â said Mr. DeHaan.

Part of gasolineâ s price increase has also been seasonal, as refiners tend to process less crude oil into fuel during maintenance and are starting to transition to summer-grade gasoline, which is more expensive to make. Prices will likely climb further as the weather warms and driving picks up, according to energy analysts.

OPECâ s production cuts have helped offset growing output from U.S. shale, which has repeatedly reached new record weekly highs this year. In January, U.S. crude stockpiles fell to the lowest level since 2015, and

are below the five-year average, a closely watched measure of excess supply. Analysts expect global crude inventories to fall to their five-year average this year as well. Gasoline stockpiles have fallen for five consecutive weeks, according to EIA data ended March 30.

In recent months, the U.S. has also exported record amounts of gasoline, mostly to Latin and South America. In January, exports totaled more than 33 million barrels, near an all-time monthly high set in November.

...thanks to rising crude oil prices...U.S. crude-oil futures, front-month contract

â Thatâ s a big difference from a decade ago, or even a few years ago,â said Tom Kloza, global head of energy analysis at the Oil Price Information Service. â Weâ re kind of refiners to the entire Western Hemisphere right now.â

Strong global demand has kept oil prices lifted, as synchronized economic expansion has contributed to

increased fuel consumption.

In an April note, Goldman Sachs analysts said January oil demand exceeded expectations by 1 million barrels a day, mainly on the back of strong gasoline and distillate demand growth. According to the report, gasoline demand was up 2.8% compared with last January, despite several winter storms that could have crimped the need for gas.

But gas consumption could take a hit if economic growth slows, analysts said. Global markets have been rattled in recent weeks by tariffs lobbed back and forth between the U.S. and China, stoking concern that an escalation could lead to an all-out trade war between the two countries.

Higher gas prices also have the potential to dent U.S. demand, if consumers opt to drive less.

â The rise of the use of the word â staycationâ is probably going to happen this summer. You may start to see some people that are turned off to higher prices,â said Mr. DeHaan.

Still, analysts are skeptical that the recent rally is enough to make a sizable impact on the U.S. economy. While gas prices will be higher than years prior, they are still a far cry from 2014, when average prices were as high as $3.70 a gallon.

â Employment rates are very favorable, incomes are rising,â said Robert Campbell, an analyst at Energy Aspects. Gasoline prices â are not at the point where we think it starts to push demand over.â

BOOM: NXIVM Sex Cult Had Schumerâ s Financial Records and Hillaryâ s Emails

By

With prosecutors in the trial of cult leader Keith Raniere planning to introduce evidence on the NXIVM sex cultâ s deep oppposition research files on its political enemies including Roger Stone, documents from the archives are shedding light on how the sex cult stored data on top politicians including Chuck Schumer â whom the cult viewed as a â friendlyâ ally according to ex-employee Frank Parlato â and Hillary Clinton.

The *Albany Times-Union* noted in 2015: â A former close confidant of Keith Raniere, founder of the NXIVM corporation, claims top officials in the secretive organization used a Canadian investigative firm or other means to sift the financial records of six federal judges and U.S. Sen. Charles E. Schumer, D-N.Y., according to court records. The former NXIVM insider, Kristin M. Keeffe, said that Seagrams heiress Clare W. Bronfman, who oversees NXIVMâ s operations, ordered the financial probes at the direction of Raniere, 55. The six judges whose financial records Keeffe alleges were analyzed have all presided over cases involving NXIVM or its perceived adversaries and criticsâ ¦The allegations by Keeffe, 45, are outlined in emails attributed to her that were filed recently in Albany County Courtâ ¦Keeffe broke away from NXIVM in February 2014 and is in hiding, according to correspondence and conversations attributed to her in court records filed in Albany Countyâ ¦â

So the NXIVM cult had information on Schumer.

The Times-Union reported in 2015:

Latest: Cory Booker Compares the Fight for Gun Control to the Civil Rights Movement

Clare W. Bronfman, an heiress of the **Seagram Company** business empire, allegedly implanted a â key loggerâ virus on the computer of her late father, Edgar M. Bronfman Sr., so officials with the NXIVM corporation could secretly monitor his emails, including his exchanges with world leaders and Democratic presidential candidate **Hillary Clinton**, according to court records.

The extraordinary allegations are attributed to Kristen M. Keeffe, who was part of the inner circle that ran **NXIVM**, a â human developmentâ organization that has been described by one expert as an â extreme cult.â The accusations by Keeffe are contained in a transcript of a telephone conversation that took place last March between Keeffe and Barbara J. Bouchey, a former NXIVM executive board member who is facing computer trespassing charges in Albany that accuse her and three others of improperly accessing the corporationâ s website.'â

Times-Union passage ends

A former NXIVM member testified Monday in the trial of cult leader Keith Raniere that the sex cult illegally raised money for Hillary Clintonâ s 2008 presidential campaign.

Big League Politics first reported this bombshell information, which is now confirmed by a witness under oath.

> This story will be buried so fastâ ¦ https://t.co/nnr3H1Dydv
>
> â James Woods (@RealJamesWoods) April 18, 2019

The *New York Post* reports: â Bronfman funneled thousands of dollars into Clintonâ s campaign coffers â far in excess of legal limits to contributions â to â curry favorâ with the powerhouse political family, according to Mark Vicente, a documentary filmmaker and former member of the Nxivm group that is accused of keeping women as sex slaves.

â Clare Bronfman approached other people and said she would like to make a campaign contribution but she couldnâ t make it above a certain amount,â Vicente testified in Brooklyn federal court Monday.

â I wrote a check. She paid me back.â

New York Post passage ends

I reported:

NXIVM whistleblower Frank Parlato appeared exclusively on *The Campaign Show with Patrick Howley* on Patriots Soapbox (Sunday nights, 6-PM Eastern) to discuss Keith Raniereâ s trial, which begins Tuesday.

Raniereâ s sex slaves are poised to testify against him, as prosecutors prepare to submit evidence that NXIVM illegally bundled money for Hillary Clintonâ s 2008 presidential campaign. Parlato made it clear that Clinton was happy to accept the money. (COURT DOCS Confirm Prosecutors Attempting To Introduce Clinton Evidence).

Parlato described how NXIVM imported teenage girls from Mexico, how the cult viewed Chuck Schumer as a â friendlyâ Democrat ally, and many other bombshells. WATCH.

I reported:

Democrat senator and presidential candidate Kirsten Gillibrandâ s family ties to the NXIVM sex cult are coming to light, raising serious questions about her relationship with the cult that she once denied knowing about.

Gillibrandâ s father and stepmother, who are second cousins, were both heavily involved in the cult in the period shortly before they got married, according to eyewitness accounts from ex-NXIVM employees who spoke on the record to Big League Politics, and according to court documents proving that Gillibrandâ s father Doug Rutnik was employed by NXIVM.

Gillibrandâ s father served as a broker between NXIVM cult leader Keith Raniere â whose initials were branded on his female sex slaves â and then-New York attorney general Eliot Spitzer to resolve Raniereâ s financial problems with the state, according to **ex-employee whistleblower Joseph Oâ Hara**, whose revelations are printed below.

Gillibrandâ s stepmother Gwenn Belcourt got â hookedâ on the cult as did Bill Clintonâ s close friend Richard Mays, according to the whistleblower. Nancy Salzman, the NXIVM president, acted as a personal â guruâ for Gillibrandâ s stepmother.

Ex-cult employee Frank Parlato â who exposed the fact that Raniere was branding women â is working with Big League Politics to uncover the deep longstanding links between Gillibrand, the Clintons, and NXIVM.

â The very first time I ever met Gillibrand she was at an event for Hillary Clinton in the Hall of Springs in the State Park. This was in 2006. I was at a table with a Russian friend and Mike Roohan and his wife. I was on the Democratic committee at the time and was given two comp tickets. Gillibrand came up to me introduced herself and said she was running against John Sweeney. This was before all the stories of his drunken behavior came out. He was still congressman kickass at that time. I promised my support and wished her well. i than commented to Mike that with her baby voice and demeanor that she was a lightweight. Boy was I

wrong. But the kicker was when the mixing was over and Clinton went to speak. **Gillibrand sat with one of the front tables. Yeah the three front VIP tables were all brought by NXIVM and she was sitting with Nancy Salzman. You can quote me on that,â said witness John Tighe in a statement provided to Big League Politics.**

Nancy Salzman has pleaded guilty to racketeering conspiracy while her daughter Lauren Salzman admitted to enslaving a woman, stating in court, â I knowingly and intentionally harbored Jane Doe 4, a woman whose identity is known to me, in a room in the home in the Northern District of New Yorkâ and â threatened to deport Jane Doe 4 back to Mexico if she did not complete labor requested by myself and others.â

JOSEPH Oâ HARA TELLS BIG LEAGUE POLITICS HIS NXIVM STORY

Joseph Oâ Hara was living in Saratoga Springs at the time, and a woman he met socially called him up out of the blue and asked for him to meet with the leaders of NXIVM.

â I agreed to meet with them. We met the very next day. We had coffee and thatâ s when I was introduced to Nancy Salzman, the president of NXIVM, and she described to me the various problems they were having,â Oâ Hara said, referring to lawsuits, public relations issues, and governmental issues stemming from trying to get a building permit for a NXIVM center.

â I said give me a day or two,â Oâ Hara said. â After I thought about it, I wrote back to them and said I donâ t think thereâ s anything I can do personally but I can play centerfielder and pull in people you need. I think you need a bigger law firm on this. Yes I can get you a PR firm that can come in and help you. Thatâ s what I proposed to them, that I would be a middle man.â

â They hired me in October of 2003 and I worked for them for 15 months. At the end of 2004 a variety of issues had come up and I resigned.â

Oâ Hara, whose official title was â consultant,â said he â met primarily with Keithâ Raniere and with bookeeper Cathy Russell and legal liaison Kristin Keefe. Oâ Hara remembers Raniere vividly.

â I thought he was a little strange. He was an odd fellow. Before I met him I had been told a lot about him. I guess when I met him I was a little underwhelmed,â Oâ Hara said, referring to a tall tale about how Raniere supposedly tied a record in the hundred-yard dash. Raniere held volleyball games with the women in his cult, but Oâ Hara did not attend.

Kirsten Gillibrandâ s Father Doug Rutnik Acted As A Broker Between NXIVM and then-Attorney General Eliot Spitzer

â I had known Doug Rutnik for a number of years. He was one of the people I thought of immediately for a couple of the problems that he (Raniere) had,â Oâ Hara said, including the fact that Raniere agreed to pay a certain amount of money to New York State stemming from the bankruptcy of his previous venture Consumerâ s Buyline. â Keith never made the payments. I think it was around 45 or 50 thousand dollars.â

â I contacted Doug, and explained to him the situation. Doug could be the broker between Keith and the attorney generalâ Oâ Hara said. The attorney general was then Eliot Spitzer.

â Doug and I, Nancy and Keith had lunch at a little club. Keith came in and looked like a young middle-aged business exec. Doug said letâ s check this out a little further,â Oâ Hara remembers. NXIVM was trying to get a license for a school.

The meeting occurred at the Fort Orange Club in Albany in 2004, according to Oâ Hara.

Oâ Hara hired a third party attorney in Albany to take a 5-day executive course at NXIVM, and the attorney expressed concerns about the group potentially not paying taxes and â living off the grid.â

Doug Rutnikâ s Second Cousin, Gillibrandâ s Future Stepmother, Got Very Involved

â Doug said I know somebody else I could send in. Itâ s his cousin Gwenn Belcourt. She comes back with rave reviews and Doug gets hired. Keith comes up with the money and pays off the attorney general.â

Thus, Gillibrandâ s father acted as the broker between NXIVM and attorney general Eliot Spitzer after Gillibrandâ s future stepmother Gwenn Belcourt gave NXIVM her full seal of approval.

â Doug was the one, I donâ t know who he talked to, but he was the one who got the okay forâ ¦NXIVM sent Doug the check, and it was expressly to resolve the issue over Consumers Buyline. And then the issue went away.â

â Gwenn and I met. Doug said letâ s have Gwenn go in and take a week-long course. She went in and she wrote up a report and was extremely positive. No issues with the schooling. No issues with the curriculumâ at the NXIVM Center, Oâ Hara recalled.

â He told me this is my second cousin Gwenn. She was engaged at the time. She was a lawyer, someone Doug trusted.â

â Things were happening, one right after the other. Gwenn comes in, she writes the report, and Doug is doing work for them.â

â Meanwhile Gwenn does her thing and she starts taking more classes on her own. We paid for the one class she tookâ ¦at some point Doug says, this is getting a little weird with Gwenn. He said she broke off her engagement because Nancy told her she needed to re-think her life. Nancy Salzman became Gwennâ s personal guru. She wanted to bring Gwenn in as full-time in-house counsel.â

â I know that she was taking a lot of classes at NXIVM,â Oâ Hara said of Gwenn Belcourt.

â NXIVM initiates a lawsuit against me and Doug, and Gwenn is still involved in NXIVM at that point. Doug goes in like a rescue mission. He finally convinces her whatâ s going on there and she leaves NXIVM. The next thing I know all of a sudden he said Gwenn and I are dating now. Shortly after that theyâ re engaged.â

â For several years, I saw them after they were married,â Oâ Hara said, noting that the couple was no longer in the cult.

Clinton Friend Richard Mays and Gillibrandâ s Stepmother Gwenn Belcourt Both Got â Hookedâ on the Cult

â I had done work down in Arkansas, I had met Richard (Mays) down there. He had great connections with Governor Clinton. His lieutenant governor Tucker became governor. I was trying to get in to make a presentation to the governor. Richard got me the meeting. He got me the meeting with Jim Guy Tucker,â Oâ Hara said.

â One of the other problems Keith had, he had an unpaid bill in Arkansas and he wanted to get an exoneration in Arkansas so he brought Richard Mays in and he got involved. Richard Mays started taking classes and got his daughter taking classesâ at NXIVM.

â There were people who got hooked on it. Richard Mays was one. Gwenn Belcourt was another,â Oâ Hara said.

â I Had Created This Monsterâ

Oâ Hara said that he uncovered Raniere evading taxes and illegally obtaining private investigator information on his enemies, which led him to quit. NXIVM then waged lawfare against him.

â They destroyed me. I had created this monster. They didnâ t know how to get political consultants. They didnâ t know how to hire former senator Dâ Amato, they didnâ t know how to hire Richard Mays out of Arkansas, best friends with the Clintons. They had all these people now in their arsenal and they destroyed me in short order,â Oâ Hara said.

Raniere once admitted in a videotape pulled from the Internet, â I am just a demon.â

PROOF RUTNIK WORKED FOR NXIVM

Former NXIVM employee Frank Parlato provided Big League Politics with copies of the court documents in NXIMâ s suit against Rutnik, which prove Rutnikâ s employment by the group. (READ THE FULL DOCUMENTS HERE).

â I worked as the publicist,â Frank Parlato told Big League Politics. â We ran into a major disagreement and we split. At the time I worked for them I thought they were a little peculiar but it wasnâ t until the end that I realized they were a downright evil group.â

â There are women on the record who are now adults who have accused Raniere of statutory rape and there are some very suspicious incidents where Mexican girls came under the perimeters of Ranierâ s control and left under suspicious circumstances. They came from Chihuahua Mexico. I reported this to the authorities,â Parlato said.

â Her father Doug Rutnik came to work as a consultant for NXIVMâ ¦he was fired, they sued him, and he had to pay them $100,000,â Parlato said, referring Gillibrandâ s father.

Parlato is the NXIVM whistleblower who blew the lid off the case, including the revelation that NXIVM leader Keith Ranierâ s cult was branding women with his initials.

â Her fatherâ s wife, her stepmother, was also a member of NXIVMâ ¦Doug got her into the cult, Gillibrandâ s father got Gillibrandâ s future stepmother into the cult. Doug left the cult because he was sued. Clare Bronfman after her father was sued donated money to Gillibrand. Gillibrand accepted it.â

â One is inclined to call her a liar,â Parlato says of Gillibrand.

Nancy Pelosi and Dianne Feinstein Are Only Flipping Out Over Trump's Energy Department Cuts Because The Cuts Cut-off Their Racketeering Crony Kick-Back Scam

By Howard Lean

Nancy Pelosi and Dianne Feinstein don't care one shit about clean air or happy trees. They are raising hell about losing their own personal Goldman Sachs stock market crony pump-and dump scams.

It is because of DIRTY insider trading scams from the Department of Energy "clean cash" program that the Pelosi and Feinstein families are banking hundreds of millions of dollars.

Here is an analysis of what the proposed Trump budget would do to crony payola criminal kick-back programs at the Department of Energy and the Environmental Protection Agency that directly pay off Obama's corrupt Silicon Valley campaign financiers.

President Trump says he is saving the U.S. auto industry from Silicon Valley's corrupt take-over of the U.S. and California Governments, and his budget request for fiscal year 2019 confirms it. It would cut taxpayer funded crony kick-back programs at both the Environmental Protection Agency (EPA) and the Department of Energy (DOE) that drive criminals to become Senators that thrive in the swamp of corruption.

If enacted, these cuts would save American automakers and their workers from things like Tesla's Obama protected monopoly, hit consumers in the pocketbook with more buying options, force us all to breathe cleaner policy air and decrease dangerous policy pollution that fuels corrupt Senators and their crony Google and Amazon financiers.

In his State of the Union speech, Trump declared: "In Detroit, I halted government mandates that crippled America's autoworkers â so we can get the Motor City revving its engines once again"

His budget request for FY 2019 would slash, or even eliminate, criminal politicians from the very programs that helped make their corrupt gains possible.

Trump's budget would kill DOE's ***spectacularly failed*** Advanced Technology Vehicles Manufacturing (ATVM) direct payola program which only ever gave taxpayer cash to Obama's campaign financiers and sabotaged every non-Obama approved Applicant. DOE PR hacks endlessly manipulate climate and factual data in order to create the APPEARANCE of success when, in fact, the DOE finance programs, since Obama, have been the biggest and most corrupt failures in U.S. history.

The ATVM program is part of the larger DOE Kick-Back Program, which has failed to created thousands of promised jobs, leverages long-term insider trading spiffed by fake DOE-supported valuation pumps, and generates a return on investment only for the DNC crime syndicate in the federal, California and New York governments, These are all things Trump says he wants to do to drain the swamp, and his budget proposes to zero out this program where there are still billions left to be handed out to criminal financiers of Pelosi and Feinstein. These funds were previously used to fund the DNC by passing through Musk and Fisker as "campaign funds conduits".

The ATVM program, which was created under President George W. Bush, helped Ford survive the Great

Recession (https://energy.gov/lpo/ford) . Because of ATVM loans, Ford was able to create and preserve more than 33,000 jobs. Ford facilities supported by those loans have produced millions of fuel-efficient vehicles that DOE shills projects will save 268 million gallons of gas and prevent 2.4 million metric tons of carbon dioxide emissions each year. Ford, like Tesla, though "cooked the books" and showed free taxpayer cash as "profits and income" in order to rig stock market values. That is an illicit use of taxpayer cash.

ATVM loans also have propelled criminally corrupt Tesla to the forefront of the electric vehicle revolution. Tesla used its loan (https://energy.gov/lpo/tesla) to create jobs for executive hookers, have big parties and pay off Pelosi and Fenstein and turn its facility in Fremont, California, into a hub of labor abuse, sexism and corruption. Tesla pretended to paid off its loan five years early (https://www.tesla.com/blog/early-repayment-tesla%E2%80%99s-atvm-loan) but it really didn't and it still gets vast amounts of taxpayer cash, through covert and obfuscated "book-cooking" to keep it alive.

Tesla exists to exploit Lithium ion batteries: These batteries materials are mined by child labor in the Congo, Bolivia and Afghanistan; Cause wars in the Congo, Afghanistan and Bolivia; are owned by ex-CIA bosses; mutate fetuses when they burn; destroy your brain, lungs and nervous system when they burn; kill the factory workers who make them; cause Panasonic to be one of the most corrupt companies in the world; poison the Earth when disposed of; can't be extinguished by firemen; poison firemen; are based on criminally corrupt mining schemes like URANIUM ONE; Have over 61 toxic chemicals in them; come from an industry that spends billions on internet shills and trolls used to nay say all other forms of energy; are owned by corrupt U.S. Senators who are running a SAFETY COVER-UP about their dangers; Apple products with lithium ion batteries have been exploding and setting people on fire; over time the chemical dendrites inside each battery grow worse and increase the chances of explosion over time - LITHIUM ION BATTERIES BECOME MORE AND MORE LIKELY TO EXPLODE AS TIME GOES ON AND AS THEY AGE; "Bad Guys" have figured out to make them explode remotely; have their dangers hidden by CNN and MSM because pretty much only the DNC people profit from them; are the heart of Elon Musk's stock market scam; the Obama Administration promised Silicon Valley oligarchs the market monopoly on lithium ion batteries and the sabotage of fuel cells in exchange for campaign financing and search engine rigging; United States Senators that are supposed to protect us from these deadly products own the stock market assets of them so they protect them and stop the FDA, OSHA, DOT & NHTSA from outlawing them. WRITE YOUR ELECTED REPRESENTATIVE AND DEMAND THAT LITHIUM ION BATTERIES BE MADE ILLEGAL TO SELL!

Elon Musk exists because he bribed DNC politicians and Senators Feinstein, Reid, Boxer, Harris, Clinton and Pelosi to give him free taxpayer cash and government resources. Elon Musk is a criminal, a mobster, an asshole, a bald fake-hair wearing, plastic surgery-addicted, douchebag, woman abusing, bisexual, tax evader. Musk exploits poor people and child slaves in the Congo and Afghanistan to mine his lithium and Cobalt. Musk spends billions per year to hire Russian trolls, fake blogger fan-boys and buy fake news self-aggrandizement articles about himself. Musk thinks he is the 'Jesus' of Silicon Valley. Fake News manipulator Google is run by Larry Page and Larry is Musk's investor and bromance butt buddy. Musk uses massive numbers of shell companies and trust funds to self-deal, evade the law and hide his bribes and stock market insider trading. A huge number of Tesla drivers have been killed and Musk covers it up. The DNC and the MSM refuse to allow any articles about Musk's crimes to be printed because they benefit from Musk's crimes. Musk has been professionally diagnosed as a 'psychotic narcissist.' In EVERY blog that you read that mentions 'Musk', at least 1/3 of the comments have been placed their by Musk's paid shills. Musk holds the record for getting sued for fraud by his investors, wives, former partners, employees, suppliers and co-founders. Musk never founded his companies. He stole them in hostile ownership take-overs. Musk can't fix a car or build a rocket and has almost no mechanical skills. Musk is a lying con artist and partners with Goldman Sachs to rig the stock market. Over 1000 witnesses can prove every one of those claims in any live televised Congressional hearing!

If anyone tries to expose these scams, the DNC uses character assassination as their main political tool against

any member of the public who speaks out against their felony stock market scams and PizzaGate-like scandals. The Harvey Weinstein reports by Ronan Farrow show that they have teams of hired goons that they pay to destroy people's lives. They use Black Cube, Mossad, In-Q-Tel, Stratfor, Gawker Media, Gizmodo Media, Media Matters, David Brock, Sid Blumenthal, NY Times, Google servers, Facebook servers, Podesta Group, Perkins Coie, Covington & Burling and a host of "assassins". It should be a felony to hire character assassins in the USA. DEMAND A LAW and DEMAND the termination of these attack services. IE: Gawker and Gizmodo Media sets-up the attack stories and, in paid partnership with Google, Google kicks their attack links around the globe, in front of 8 Billion people, forever. Google locks the attack articles of its enemies on the front top search results of Google search results forever, on purpose! That is why Google is being terminated in the largest, most well resourced anti-corruption public service take-down in history!

Trump's 2019 budget request also eliminates the Advanced Research Projects Agencyâ Energy (ARPA-E) which has provided millions of Obama campaign financier kick-back dollars (http://sites.nationalacademies.org/PGA/step/ARPA-E_Evaluation/index.htm) for monopolistic crony Silicon Valley insider scams.

Finally, Trump's budget massively cuts the Energy Efficiency and Renewable Energy (EERE) Vehicle Technologies Office at DOE by $238 million, or 78 percent compared to 2017 current levels. The office funds DNC programs via covert "conduits" by only giving cash and resources to Obama's and Clinton's insiders and sabotaging and rejecting any competitors to Obama's and Clinton's insiders.

At EPA, Trump wants to cut several programs that and cash to Obama's and Clinton's insiders and that sabotage and reject any competitors to Obama's and Clinton's insiders.

Trump is cutting off the payola programs which allowed the FBI-raided Solyndra to be such an epic and corrupt failure. FBI Director James Comey found that Solyndra led straight back to the Obama White House and then Comey hid the investigation results. This was one of the things that got Comey ***fired for corruption***.

The budget would also eliminate numerous programs where EPA (https://www.epa.gov/sites/production/files/2018-02/documents/fy-2019-epa-bib.pdf) partners with crooked Silicon Valley campaign financier businesses or dirty California state and local governments to keep Senators hidden family trusts, covert stock market schemes and off-shore accounts well stocked.

Trump also wants to whack by 75 percent the Diesel Emissions Reduction Act program that provides taxpayer money for Obama campaign financiers only in their regions.

By gutting the filthiest corrupt clean vehicle programs, The Trump administration is draining the Swamp that is threatening to cripple America. The American auto industry has been successfully revving its engines of innovation, making cleaner and more efficient vehicles under tighter fuel economy and emissions standards. Not only do they help keep our air clean, they drive the kind of advanced manufacturing that U.S. automakers need to remain competitive in the future. Trump's budget cuts and efforts to rollback rigged standards are the true danger to the Silicon Valley Oligarchs crime syndicate.

America seems to be deleted to see President Trump finally cut-off the Pelosi-Feinstein-Google-Musk crimes from past Obama criminality.

Nancy Pelosi and Dianne Feinstein Are Only Flipping Out Over Trump's Energy Department Cuts Because The Cuts Cut-off Their Racketeering Crony Kick-Back Scam

By Howard Lean

Nancy Pelosi and Dianne Feinstein don't care one shit about clean air or happy trees. They are raising hell about losing their own personal Goldman Sachs stock market crony pump-and dump scams.

It is because of DIRTY insider trading scams from the Department of Energy "clean cash" program that the Pelosi and Feinstein families are banking hundreds of millions of dollars.

Musk has been professionally diagnosed as a 'psychotic narcissist.' In EVERY blog that you read that mentions 'Musk', at least 1/3 of the comments have been placed their by Musk's paid shills. Musk holds the record for getting sued for fraud by his investors, wives, former partners, employees, suppliers and co-founders. Musk never founded his companies. He stole them in hostile ownership take-overs. Musk can't fix a car or build a rocket and has almost no mechanical skills. Musk is a lying con artist and partners with Goldman Sachs to rig the stock market. Over 1000 witnesses can prove every one of those claims in any live televised Congressional hearing!

If anyone tries to expose these scams, the DNC uses character assassination as their main political tool against

any member of the public who speaks out against their felony stock market scams and PizzaGate-like scandals. The Harvey Weinstein reports by Ronan Farrow show that they have teams of hired goons that they pay to destroy people's lives. They use Black Cube, Mossad, In-Q-Tel, Stratfor, Gawker Media, Gizmodo Media, Media Matters, David Brock, Sid Blumenthal, NY Times, Google servers, Facebook servers, Podesta Group, Perkins Coie, Covington & Burling and a host of "assassins". It should be a felony to hire character assassins in the USA. DEMAND A LAW and DEMAND the termination of these attack services. IE: Gawker and Gizmodo Media sets-up the attack stories and, in paid partnership with Google, Google kicks their attack links around the globe, in front of 8 Billion people, forever. Google locks the attack articles of its enemies on the front top search results of Google search results forever, on purpose! That is why Google is being terminated in the largest, most well resourced anti-corruption public service take-down in history!

Trump's 2019 budget request also eliminates the Advanced Research Projects Agencyâ Energy (ARPA-E) which has provided millions of Obama campaign financier kick-back dollars (http://sites.nationalacademies.org/PGA/step/ARPA-E_Evaluation/index.htm) for monopolistic crony Silicon Valley insider scams.

Finally, Trump's budget massively cuts the Energy Efficiency and Renewable Energy (EERE) Vehicle Technologies Office at DOE by $238 million, or 78 percent compared to 2017 current levels. The office funds DNC programs via covert "conduits" by only giving cash and resources to Obama's and Clinton's insiders and sabotaging and rejecting any competitors to Obama's and Clinton's insiders.

At EPA, Trump wants to cut several programs that and cash to Obama's and Clinton's insiders and that sabotage and reject any competitors to Obama's and Clinton's insiders.

Trump is cutting off the payola programs which allowed the FBI-raided Solyndra to be such an epic and corrupt failure. FBI Director James Comey found that Solyndra led straight back to the Obama White House and then Comey hid the investigation results. This was one of the things that got Comey ***fired for corruption***.

The budget would also eliminate numerous programs where EPA (https://www.epa.gov/sites/production/files/2018-02/documents/fy-2019-epa-bib.pdf) partners with crooked Silicon Valley campaign financier businesses or dirty California state and local governments to keep Senators hidden family trusts, covert stock market schemes and off-shore accounts well stocked.

Trump also wants to whack by 75 percent the Diesel Emissions Reduction Act program that provides taxpayer money for Obama campaign financiers only in their regions.

By gutting the filthiest corrupt clean vehicle programs, The Trump administration is draining the Swamp that is threatening to cripple America. The American auto industry has been successfully revving its engines of innovation, making cleaner and more efficient vehicles under tighter fuel economy and emissions standards. Not only do they help keep our air clean, they drive the kind of advanced manufacturing that U.S. automakers need to remain competitive in the future. Trump's budget cuts and efforts to rollback rigged standards are the true danger to the Silicon Valley Oligarchs crime syndicate.

America seems to be deleted to see President Trump finally cut-off the Pelosi-Feinstein-Google-Musk crimes from past Obama criminality.

>
> MarketWatch: Drastic action needed to prevent climate catastrophe, U.N. panel warns
>
> Daily Caller: AL GORE: â WEâ RE RUNNING OUT OF TIMEâ ON GLOBAL WARMING

Q&A

> Q.What do all of those headline have in common?

A. They are all based on the same study. **The study is riddled with huge numbers of blatant errors making the study for lack of better words, pure bullshit.**

Riddled With Errors

Watts Up With That reports BOMBSHELL: audit of global warming data finds it riddled with errors

- Almost no quality control checks have been done: outliers that are obvious mistakes have not been corrected â one town in Columbia spent three months in 1978 at an average daily temperature of over 80 degrees C. One town in Romania stepped out from summer in 1953 straight into a month of Spring at minus 46Â°C. These are supposedly â averageâ temperatures for a full month at a time. St Kitts, a Caribbean island, was recorded at 0Â°C for a whole month, and twice!
- Sea surface temperatures represent 70% of the Earthâ s surface, but some measurements come from ships which are logged at locations 100km inland. Others are in harbors which are hardly representative of the open ocean.
- The dataset starts in 1850 but for just over two years at the start of the record the only land-based data for the entire Southern Hemisphere came from a single observation station in Indonesia. At the end of five years just three stations reported data in that hemisphere. Global averages are calculated from the averages for each of the two hemispheres, so these few stations have a large influence on whatâ s supposedly â globalâ .
- According to the method of calculating coverage for the dataset, 50% global coverage wasnâ t reached until 1906 and 50% of the Southern Hemisphere wasnâ t reached until about 1950.
- In May 1861 global coverage was a mere 12% â thatâ s less than one-eighth. In much of the 1860s and 1870s most of the supposedly global coverage was from Europe and its trade sea routes and ports, covering only about 13% of the Earthâ s surface. To calculate averages from this data and refer to them as â global averagesâ is stretching credulity.
- When a thermometer is relocated to a new site, the adjustment assumes that the old site was always built up and â heatedâ by concrete and buildings. In reality, the artificial warming probably crept in slowly. By correcting for buildings that likely didnâ t exist in 1880, old records are artificially cooled. Adjustments for a few site changes can create a whole century of artificial warming trends.
- Data prior to 1950 suffers from poor coverage and very likely multiple incorrect adjustments of station data. Data since that year has better coverage but still has the problem of data adjustments and a host of other issues mentioned in the audit.
- Another implication is that the proposal that the Paris Climate Agreement adopt 1850-1899 averages as â indicativeâ of pre-industrial temperatures is fatally flawed. During that period global coverage is low â it averages 30% across that time â and many land-based temperatures are very likely to be excessively adjusted and therefore incorrect.

Complex Systems Reduced to Single Variable

Also consider Watts Up With That Weekly Climate and Energy News Roundup 331.

A participant in the IPCC, who resigned, atmospheric physicist Richard Lindzen was Alfred P. Sloan Professor of Meteorology at MIT. He is noted for his work in dynamic meteorology, atmospheric tides, ozone photochemistry, quasi-biennial oscillation, and the Iris hypothesis. Lindzen is certainly qualified to talk about the physics of the atmosphere, where the greenhouse effect occurs. Several key points of the talk are summarized below.

- â Nature has numerous examples of autonomous variability, including the approximately 11-year sunspot cycle and the reversals of the Earthâ s magnetic field every couple of hundred thousand years or so. In this respect, the climate system is no different from other natural systems.

- â Now here is the currently popular narrative concerning this system. The climate, a complex multifactor system, can be summarized in just one variable, the globally averaged temperature change, and is primarily controlled by the 1-2% perturbation in the energy budget due to a single variable â carbon dioxide â among many variables of comparable importance.
- â This is an extraordinary pair of claims based on reasoning that borders on magical thinking. It is, however, the narrative that has been widely accepted, even among many sceptics.
- â Many politicians and learned societies go even further: They endorse carbon dioxide as the controlling variable. And although mankindâ s CO2 contributions are small â compared to the much larger but uncertain natural exchanges with both the oceans and the biosphere â they are confident that they know precisely what policies to implement in order to control CO2 levels.â
- Sea level has been increasing by about 8 inches per century for hundreds of years, and we have clearly been able to deal with it. In order to promote fear, however, those models that predict much larger increases are invoked. As a practical matter, it has long been known that at most coastal locations, changes in sea level, as measured by tide gauges, are primarily due to changes in land level associated with both tectonics and land use.
- The small change in global mean temperature (actually the change in temperature increase) is much smaller than what the computer models used by the IPCC have predicted. Even if all this change were due to man, it would be most consistent with low sensitivity to added carbon dioxide, and the IPCC only claims that most (not all) of the warming over the past 60 years is due to manâ s activities. Thus, the issue of man-made climate change does not appear to be a serious problem. However, this hardly stops ignorant politicians from declaring that the IPCCâ s claim of attribution is tantamount to unambiguous proof of coming disaster
- Cherry picking is always an issue. Thus, there has been a recent claim that Greenland ice discharge has increased, and that warming will make it worse. Omitted from the report is the finding by both NOAA and the Danish Meteorological Institute that the ice mass of Greenland has actually been increasing. In fact both these observations can be true, and, indeed, ice build-up pushes peripheral ice into the sea.
- **Misrepresentation, exaggeration, cherry picking, or outright lying pretty much covers all the so-called evidence**.

Lindzen's entire speech is much needed and worth reading. **Simply because the IPCC names its process as science, does not make it science.**

New evidence of nuclear fuel releases from Fukushima show damage could be global and permanent

University of Manchester

. Credit: University of Manchester

Uranium and other radioactive materials, such as caesium and technetium, have been found in tiny particles released from the damaged Fukushima Daiichi nuclear reactors.

This could mean the environmental impact from the fallout may last much longer than previously expected according to a new study by a team of international researchers, including scientists from The University of Manchester.

The team says that, for the first time, the fallout of Fukushima Daiichi nuclear reactor fuel debris into the surrounding environment has been "explicitly revealed" by the study.

The scientists have been looking at extremely small pieces of debris, known as micro-particles, which were released into the environment during the initial disaster in 2011. The researchers discovered uranium from nuclear fuel embedded in or associated with caesium-rich micro particles that were emitted from the plant's reactors during the meltdowns. The particles found measure just five micrometres or less; approximately 20 times smaller than the width of a human hair. The size of the particles means humans could inhale them.

The reactor debris fragments were found inside the nuclear exclusion zone, in paddy soils and at an abandoned aquaculture centre, located several kilometres from the nuclear plant.

Credit: University of Manchester

It was previously thought that only volatile, gaseous radionuclides such as caesium and iodine were released from the damaged reactors. Now it is becoming clear that small, solid particles were also emitted, and that some of these particles contain very long-lived radionuclides; for example, uranium has a half-life of billions of years.

Dr. Gareth Law, Senior Lecturer in Analytical Radiochemistry at The University of Manchester and an author on the paper, says: "Our research strongly suggests there is a need for further detailed investigation on Fukushima fuel debris, inside, and potentially outside the nuclear exclusion zone. Whilst it is extremely difficult to get samples from such an inhospitable environment, further work will enhance our understanding of the long-term behaviour of the fuel debris nano-particles and their impact."

The Tokyo Electric Power Company (TEPCO) is currently responsible for the clean-up and decommissioning process at the Fukushima Daiichi site and in the surrounding exclusion zone. Dr. Satoshi Utsunomiya, Associate Professor at Kyushu University (Japan) led the study. He highlights that: "Having better knowledge of the released microparticles is also vitally important as it provides much needed data on the status of the melted nuclear fuels in the damaged reactors. This will provide extremely useful information for TEPCO's decommissioning strategy."

At present, chemical data on the fuel debris located within the damaged nuclear reactors is impossible to get

due to the high levels of radiation. The microparticles found by the international team of researchers will provide vital clues on the decommissioning challenges that lie ahead.

Obama Green-Energy, Crony-Corruption Cartel Has Ordered The Government To Never Compensate The Victims And That Is A Felony

Marita Noon

|

Everyone who pays any attention to the news knows the name Solyndra. It has become synonymous with the overall failed green energy program administered by the Obama team. Politicos know there are many other companies that have received loan guarantees for various green energy projects that have since become a source of ridicule for the White House. Some might even be able to name a few. There is the now-bankrupt company that made batteries for electric cars: Ener1. The plug-in electric sports car company, Fisker, that made its cars in Finland and has troubles too numerous to cite. And, of course, we know about the Chevy Voltâ that our taxpayer dollars bailed out only to have demand so low that Chevrolet had to pull the plug on the production line and lay off workers for five weeks earlier this year. But few know the full story.

Connecting the dots will make your head hurt. There are various programs and special tax breaks and different kinds of companies that received green energy loans: solar, wind, and geothermal; and car companies, battery manufacturers, and biofuel producers. While the projects differ, they have several startling similarities. The vast majority of the green energy loan guarantees were given to companies that could not obtain enough financial backing from private investors. Their â junkâ or â speculativeâ grade kept people from putting their own money into them â yet your money and mine was given to them, and we had no say in the matter. Of the 27 loans issued through the 1705 Loan Guarantee Program to 21 firms, virtually all of them have â connectionsâ to either President Obama or other high-ranking Democratsâ or both! The loans were made to fill a market created not by free-market demand, but by government mandates. And, all of the â special sevenâ got fast-tracked approvals through the Department of Interior with little scrutiny over environmental damages that would have taken any other energy company months, if not years, to get, and EPA regulations were applied selectively.

CARTOONS | Close to Home

View Cartoon

Many of the companies that received the funds had involvement with large donors and/or bundlers for the Obama campaign, and there is an amazing revolving door through which the players pass many times. They worked, for example, for Senator Harry Reid. Then they are on the staff of an investment firm that invested in one, or more, of the companies. Next you find he or she is on some White House commissionâ or worse, became part of the Obama Department of Energy team. Some 460 companies applied for DOE loans, but only 27 projects, 21 companies, got the funds. And 85% of these have been found to have â connections.â The remaining 15% may well have connections too, albeit more guarded or hidden.

These are not wild assertions. I have the data to back them up.

Following the publication of my column a couple of weeks ago on crony capitalism, I was connected with Christine Lakatos. Sheâ s a private citizen and a single mom with a nose for research. Beginning in 2009, she was hired to work on investigative projects, following the green energy money. But when those projects were completed, she didnâ t stop digging. She kept finding more and more. With no outlet for her work, she started a blog where she â brain dumpsâ her findingsâ which for a total unknown has received an impressive

number of readers. For anyone but the most stalwart, her Green Corruption Blog is like getting a drink of water from a fire hydrant.

On Sunday, some of Lakatosâ research was presented in my weekly column. The response prompted us to begin a collaboration.

For each of the next 17 weeks, we will expose one green-energy, crony-corruption story after another (though my travel schedule may require me to skip a week here and there). It will be a â bookâ released chapter-by-chapter. If you like what you find, we hope youâ ll let us know and come back the following week for the next installment.

Some single stories of what weâ ll expose are â out thereâ â though surely not covered by the mainstream media and not all in one place or all connected as weâ re doing. If you made a study of the green-energy, crony-corruption story your passion, you likely found out a lot of what weâ ll share. If you read the report from the House Oversight and Government Reform Committee (HOGRC) on the Obama Administrationâ s green energy gamble word-for-word, or watched the incriminating hearings, youâ ll already know some of what weâ ll present. Or, if youâ ve read the chapter in Peter Schweizerâ s book ***Throw Them All Out*** that addresses alternative energy and â how the game of funneling taxpayer money to friends has exploded to astonishing levels in recent years,â you have a good idea of the big picture. If you have made this your passion, have studied the report, and have coordinated with Schweizer, as Lakatos has, you are encouraged to help make these reports as complete as possible. Together, weâ ll connect the dots and present it here in bite-sized pieces.

Each of the energy projects we will profile in the â special sevenâ section were recipients of billions of taxpayer dollars through the 1705 Loan Guarantee Program (LGP) and many will be receiving millions more through the 1603 Grant Program. The 1705 LGP is an expansion of the 1703 program that was approved in 2005 under President Bushâ increasing the expenditures from $17.9 billion in 2007 to $37.2 billion in 2010. The 2009 American Recovery and Reinvestment Act significantly expanded the DOEâ s authority, under Energy Secretary Steven Chu, through the newly created 1705 LGP. (Under the Recovery Act, $86 billionâ approximately 10% of the stimulus packageâ was earmarked for green energy projects.) The LGP means that companies get risk-free money. If the company succeeds, the low-interest loan gets paid back. If they failâ as many haveâ we, the taxpayers, lose. In contrast, the 1603 Grant Programâ implemented as part the Obama stimulusâ â is administered by the Treasury Department, with the goal of reimbursing eligible applicants for a portion of the costs of installing specified energy property used in a trade or business or for the production of income. Basically 1603 gives billions in favored businesses tax-free cash gifts that do not have to be paid back.

While we can prove that cronyism has run amok within the majority of 1705 LGP, we'll stay focused on the Special Seven. Here, in Part 1, we present a complete overview of the connecting dots on one project: SolarReserve, LLC. With this introduction made, weâ ll likely address several companies, with a common denominator, in subsequent releases.

In Sundayâ s column, the following thumbnail was presented: â SolarReserveâ s Crescent Dunes project is a solar thermal power tower plant utilizing the advanced molten salt power tower technology with integrated storage located in Tonopah, NV. The company's Fitch rating is BB, yet in September 2011, it was the recipient of $737 million in DOE loan guarantees. Obamaâ s law school buddy and 2008 Obama campaign bundler, Michael Froman, was managing director of alternative investments at Citigroupâ which became a major investor in SolarReserve. Froman currently serves on the White House staff. Additionally, other high profile Democrats are involved with SolarReserve.â

But there is more.

More about Michael Froman. Peter Schweizer reports that â When Obama ran for president, Froman helped raise large sums of money on Wall Streetâ for the 2008 campaign. The HOGRC report (page 47) confirms Peterâ s findings and adds that Froman was a $200,000 bundler: â Michael Froman currently serves as the Deputy Assistant to the President and Deputy National Security Advisor for International Economic Affairs. He was a friend of President Obamaâ s from law school, and supported his political career by bundling over $200,000 for his 2008 presidential candidacy. Prior to his arrival at the White House, Froman was the Managing Director of Alternative Investments at Citigroup, where he managed infrastructure and sustainable development investments. Citigroup became a major investor in SolarReserve, which ultimately received a $737 million loan guarantee in September 2011.â

The Citigroup connection is tighter. Richard Parsons was Chairman for Citigroup from 2009 until he announced stepping down in March 2012. Citigroup was a top Obama donor in 2008. Parsons served on the Obama Transition Team and on the Economic Advisory Board. In 2011, Parsons was appointed to the Presidentâ s Council on Jobs and Competiveness.

Next, David Sandalowâ who is currently â the Assistant Secretary for Policy and International Affairs at DOE, where he acts as Secretaryâ s Chuâ s principal adviser on energy policy, as well as coordinating DOEâ s foreign policy involvement.â (HOGRC report page 49) â Sandalowâ s ties to the White House date back to the Clinton Administration, during which he worked with President Clinton on environmental issues. After having gained this experience, Sandalow became the influential Chair of the Energy & Climate Working Group of the Clinton Global Initiative. He went on to advise President Obamaâ s presidential campaign in 2008. Prior to joining the Obama Administration, Sandalow was a senior advisor to Good Energies, Inc., an energy-focused venture capital firm. Good Energies is an investor in SolarReserve.â

Other SolarReserve connections to the Democratic Party include:

Ronald Pelosiâ Former Speaker of the House Nancy Pelosiâ s brother-in-law, Ronald Pelosi, holds a leadership position with Pacific Corporate Group Asset Managementâ which is an investor in SolarReserve. Additionally, his colleague, Jasandra Nyker, has served as a member of SolarReserveâ s board of directors.

George Kaiserâ Argonaut Private Equity is an investor in SolarReserve. Argonaut Private Equity is owned by major Democratic fundraiser and a 2008 Top Obama bundler George Kaiser, who also invested in Solyndra. Kaiser made multiple visits to the White House in the months before the company was granted a $535 million loan from the government. The Managing Director for Argonaut Private Equity, Steve Mitchell, serves on SolarReserve's Board of Directors.

Tony Podestaâ OpenSecrets.org shows that SolarReserve paid hundreds of thousands of dollars in lobbying fees to the Podesta Group. Tony Podesta is the principal at the Podesta Groupâ which he started with his brother John. John Podesta ran Barack Obamaâ s presidential transition team and is the Director of the Center for American Progressâ which is â reportedly highly influential in helping to craft White House Policy.â Both Tony Podesta and his wife Heather (a Washington power couple) are frequent White House visitors that share high ranks in "lobbying power," and Democrat bundling as well.

Lee Baileyâ SolarReserveâ s Chairman of the Board is Lee Bailey, a Managing Director with U.S. Renewables Group, who holds a significant financial stake in SolarReserve. Bailey has donated $21,850 since 2008 to Democratic candidates, including President Obama, Senate Majority Leader Harry Reid, California Sen. Barbara Boxer and then-presidential candidate Hillary Clinton.

James McDermottâ SolarReserve board member James McDermott is also a Managing Director with U.S. Renewables Group. He contributed $61,500 to various Democratic campaigns since 2008, including $30,800 to Obamaâ s presidential election campaign. U.S Renewable Energy Group has ties with Senator Harry Reid.

If there were only one connect-the-dots story, it would be easy to dismiss it as coincidence. But here, with just one company, you can see the dots connect, and connect, and connect. As you will continue to see, they keep on connecting. In this case, connect-the-dots is no innocent childhood game. It is a high-stakes gamble and only those with connections get to play. Obama and his Democratic friends are the winners. We, the taxpayers, the losers. We lose the financial investment of our tax dollars and our electricity rates go upâ all to support the discredited ruse of man-made climate change.

OBAMA BROKE THE LAW BY OVER-RIDING CONGRESSIONAL LAW SECTION 136 IN THE CLEANTECH CRASH

The White House violated the law when it froze U.S. 'Green Energy' Aid to American companies waiting on the Department Of Energy financing they had been invited to accept, Federal analysts concluded in a new report.

President Barack Obama ordered the hold on the critical domestic energy assistance in order to protect his campaign financiers from competition, a slew of senior White House officials and insider witnesses testified to investigators over the last years, a move that coincided with the president and his alliesâ effort to pressure crony tech stock market deals into exclusive deals for themselves. The Goldman Sachs, JP Morgan, and other investment bank records, prove this.

Because Obama and his allies controlled the owners of all western news media, particularly in Silicon Valley, and had a multi-hundred million taxpayer financed White House media budget, the story never got media attention.

â Faithful execution of the law does not permit the president to substitute his own policy priorities for those that Congress has enacted into law,â the GAO has ruled!

Obama's decision to order Steven Chu to withhold billions in domestic aid, which he reversed after House investigators began probing the move, should have been at the heart of articles of impeachment the House attempted to pass against Obama, and it will be a central allegation in the Applicant's charges going forward.

The facts undercut an oft-stated defense of Obama's decision to hold the aid back: that it was a lawful exercise of the presidentâ s authority.

Mr. Rusco and other GAO staff, an independent nonpartisan government watchdog that responds to congressional requests, said the White House attempted to justify its decision not to notify Congress by claiming it was simply a programmatic delay. Investigators reject that claim, saying Obama's decision, carried out by the budget office, was a violation of the Impoundment Control Act, which requires notification to Congress of any such delay in an appropriation of funds, such as the Section 136 funds for the Department of Energy.

Obama's assertions have no basis in law, the GAO argues, referring to the White House Office of Management and Budget.

Public investigators reports also state that OMB and the White House â failedâ to provide all of the information that was necessary for its investigation. Obama obstructed Congressâ ability to investigate the Cleantech Crash matter and he and The Department of Energy were been engaged in a coverup to hide their crony payola deals with Obama's campaign financiers: The Silicon Valley tech oligarchs..

â The nonpartisan Government Accountability Office has confirmed what congressional Democrats have understood all along: President Obama abused his power and broke the law by withholding energy assistance to domestic cleantech outsiders who were competing with his campaign financiers,â said investigators. In fact, history has proven that of all of the Applicant's, only Obama's closest friends got the money and their competitors were sabotaged and blockaded.

A number of administration officials have raised concerns about whether the presidentâ s decision violated federal budget law.

Congressional officials and the public have charged Obama with abuse of power and obstruction of Congress for using his office and federal resources to pressure Energy Department funding to go to his financiers and investigating his political rivals and then resisting a House investigation.

At issue in the legal opinion is how the Department of Energy aid pause gels with the Impoundment Control Act of 1974, a law that sharply curbs the executive branchâ s authority to alter congressionally appropriated funds, such as Section 136.

Investigators have said the Department of Energy aid pause is part of a broader â pattern of abuseâ by the Obama Administration, which has disregarded federal budget law and congressional spending authority.

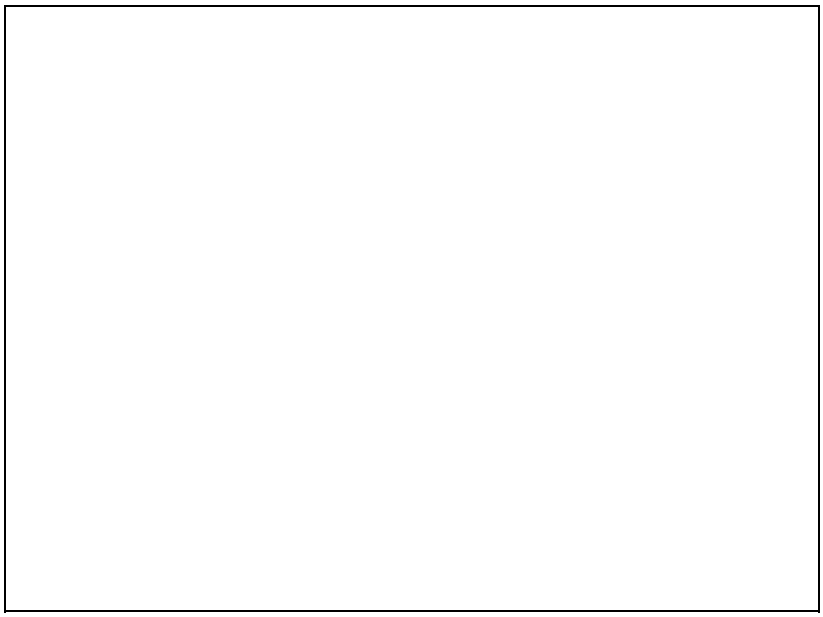
REVEALED: Silicon Valleyâ s Secret Slushfund Led by Longtime Soros Ally - Let The Doxing Begin

by Staff Writer

Whoâ s behind Mind the Gap, â the secretive Silicon Valley group that has funneled over $20 million to Democratsâ that boasts a â $140M War Chest to Beat Trumpâ ?

According to the Vox exposÃ©:



â The groupâ s leaders are a pair of Stanford law professors: Barbara Fried, who has no apparent campaign experience, and Paul Brest, the former president of the William and Flora Hewlett Foundation.â

You probably havenâ t heard of either professor, which makes sense, since Mind the Gapâ s modus operandi is secrecy.

But Brest is extensively associated with someone youâ ve *definitely* heard of: progressive mega-donor and founder of the Open Society Foundation, noted globalist George Soros.

Yesâ ¦***again***.

Look no further than Brestâ s 2018 book, *Money Well Spent: A Strategic Plan for Smart Philanthropy*, where he used a blurb from Soros to promote the book:

Soros writes: *â In philanthropy, as in investing, you need a solid strategy to understand what works, what fails, and why. Money Well Spent provides the tools philanthropists need to create an effective strategy and achieve success.â*

DOWNLOAD THE WAR ROOM PODCAST FREE

Their bromance dates back at least 2 decades when Brest was president of the William and Flora Hewlett Foundation, a position he held until 2012.

According to a press release from the Rockefeller Brothers Fund, Sorosâ s Open Society Institute and Brestâ s Hewlett Foundation collaborated on the Connect US Initiative in 2002 to â reverse the dangerous course on which U.S. global engagement seemed to be headedâ :

In late 2002, RBF President Stephen Heintz, ***along with Paul Brest of the Hewlett Foundation and George Soros of the Open Society Institute,*** *gathered the presidents of a dozen foundations at the Soros home in Bedford, New York to consider what their institutions might do together to halt or reverse the dangerous course on which U.S. global engagement seemed to be headed. After nearly two years, a core group of the original â Bedfordâ participants came together to form the Connect US Initiative, a pooled fund to support fresh thinking about and grass roots advocacy in support of a more collaborative, far-thinking, and constructive US global engagementâ .*

In typical Soros fashion, the Connect US Initiative is embraces a globalist worldview. According to their mission statement:

â To exercise effective leadership and make progress on these issues, the United States must advance a vision for responsible U.S. global engagement that emphasizes international cooperation, affirms the strong connections between todayâ s most pressing global issues, and recognizes that progress on compelling global problems will require the active support of friends, allies and other major stakeholders in the international community. The United States will only gain such cooperation and support if it exercises power and influence in a manner that is widely perceived as legitimate, and that clearly demonstrates foresight and responsibility to future generations.â

Together, the pair also launched the Revenue Watch Institute, an initiative focused on countries rich in natural resources, in 2006:

â George Soros, OSIâ s chair and founder, announced his gift of $4.5 million to develop better oversight of resource revenues so that citizens can benefit from their countriesâ natural wealth. In collaboration with OSI, Erik Solheim, the Minister for International Development, said that Norway will give $3 million and ***Paul Brest, President of the Hewlett Foundation, said Hewlett will contribute $1.5 million to the new RWI.â***

Together, Soros and Brest under the auspices of the Hewlett Foundation and the Open Society Institute, have spent millions of dollars attempting to push the world closer to embracing the â false song of globalism.â

And here they are, at it again, with the secretive Silicon Valley donor class.

Democrats and journalists were excited Thursday when the Government Accountability Office (GAO) released a legal opinion that the White House Office of Management and Budget (OMB) had violated the Impoundment Control Act by withholding congressionally appropriated aid to Ukraine last summer.

The non-binding opinion was disputed by the OMB, which released a memo last month arguing that the â programmaticâ delay sought to *fulfill*, not oppose, congressional intent.

The GAO decision, which had been requested by Democrat Senator Chris van Hollen of Maryland, disagreed, concluding that the delay had been for â policy reasons,â not â programmatic delay.â Speaker of the House Nancy Pelosi (D-CA) cited the decision in her morning press conference â though she had trouble pronouncing the word â impoundmentâ â and Senate Minority Leader Chuck Schumer (D-NY) likewise trumpeted the GAO decision as a vindication of the House impeachment.

Though the GAO works for Congress, it is not the finder of fact in impeachment cases. Moreover, it is not even clear that the Impoundment Control Act is constitution.

Nevertheless, if a mere GAO finding is sufficient to justify impeachment, then President Barack Obama ought to have been impeached at least seven times over for each of the following cases in which the GAO found that the Obama administration had violated federal law.

- The Department of Homeland Security (DHS) and United States Secret Service (USSS) were found to have violated section 503 of the Consolidated Security, Disaster Assistance, and Continuing Appropriations Act, and the Antideficiency Act, in 2009 after the Secret Service reported that it had overspent on candidate protection in 2008 by $5,100,000, and used money from another program to cover the shortfall. DHS failed to notify Congress 15 days in advance of the â reprogramming.â
- The Department of the Treasury was found to have violated the Antideficiency Act in 2014 when it used the voluntary services of four individuals. â Treasury did not appoint any of the individuals to federal employment, nor did any individual qualify as a student who may, under certain circumstances, perform voluntary service,â the GAO found, adding that there was no emergency that might have justified using the individuals to perform several months of work without receiving pay.
- The Department of Defense was found to have violated the Department of Defense Appropriations Act of 2014 and the Antideficiency Act in the infamous Bowe Bergdahl swap, when President Barack Obama traded five high-level Taliban detainees for a U.S. Army deserter. The administration transferred the five Taliban from Guantanamo Bay without notifying relevant congressional committees 30 days in advance, as required by law. Republicans complained; Democrats were silent.
- The Department of Housing and Urban Development was found to have violated the Financial Services and General Government Appropriations Act, the Consolidated and Further Continuing Appropriations Act, and the Antideficiency Act in 2014 when the deputy secretary of the department sent an email to â friends and colleaguesâ asking them to lobby the Senate in favor of a bill appropriating money to the department, and against amendments offered by Republican Senators.
- The Environmental Protection Agency was found to have violated â publicity or propaganda and anti-lobbying provisionsâ in the Financial Services and General Government Appropriations Act and the Department of the Interior, Environment, and Related Agencies Appropriations Act in 2015 by using some of the departmentâ s social media accounts in rule-making for the â Waters of the United Statesâ (WOTUS) regulations (which have since been repealed under the Trump administration).
- Two officials in the Department of Housing and Urban Development were found in 2016 to have violated Section 713 of the Financial Services and General Government Appropriations Act by attempting to prevent a regional director within the agency from being interviewed by the Committee on Oversight and Government Reform. (Notably, the GAO reversed its earlier decision that the departmentâ s general counsel had not violated the law once it was presented with more evidence.)
- The Federal Maritime Commission was found to have violated Section 711 of the Consolidated Appropriations Act, as well as the Antideficiency Act, in 2016 when it failed to notify the relevant Senate and House committees that it had spent more than $5,000 to furnish and redecorate the office of its former director in 2010. (The total amount spent was $12,084 over three years, as noted by the GAO in a footnote reference to an inspector generalâ s report on the excessive expenditures.)

Needless to say, Obama was never impeached.

OBAMA HAD A "SECRET SOCIETY" WITHIN THE FBI TO COVER UP HIS GREEN CASH SCAM!

Thousands of New Strzok-Page Text Messages Reference â SECRET SOCIETYâ Within DOJ and FBI WORKING AGAINST TRUMP (VIDEO)

by Cristina Laila 2007 Comments

- **11.4K**Share
- **885**Tweet
- Email

According to Attorney General Jeff Sessions, 50,000 text messages were exchanged between Peter Strzok and his mistress Lisa Page. These 50,000 text messages do not include the â missingâ texts.

Rep. John Ratcliffe (R-TX) said after reviewing the new text messages he believes there may have been a â secret societyâ of folks within the DOJ and FBI working against Trump.

Fox News reports:

> More than 50,000 texts were exchanged between two FBI officials who have come under fire for exchanging anti-Trump messages during the 2016 election, Attorney General Jeff Sessions revealed Monday.

The figure surfaced as lawmakers have been pressing for answers after revelations that the FBI â failed to preserveâ five months of texts between Peter Strzok and Lisa Page.

â We will leave no stone unturned to confirm with certainty why these text messages are not now available to be produced and will use every technology available to determine whether the missing messages are recoverable from another source,â Sessions said in a statement provided to Fox News. â If we are successful, we will update the congressional committees immediately.â

â After reviewing the voluminous records on the FBIâ s servers, which included over 50,000 texts, the Inspector General discovered the FBIâ s system failed to retain text messages for approximately 5 months between December 14, 2017 to May 17, 2017,â Sessions said.

The â 50,000â number does not include the â missingâ text messages, according to Fox News.

Rep. Ratcliffe and Trey Gowdy spoke with Fox News after the news broke about the 50,000 new text messages.

Ratcliffe said,

â What we learned today in the thousands of text messages that weâ ve reviewed that perhaps they may not have done that (checked their bias at the door). Thereâ s certainly a factual basis to question whether or not they acted on that bias. We know about this insurance policy that was referenced in trying to prevent Donald Trump from becoming president.â

â We learned today from information that in the immediate aftermath of his election that there may have been a â secret societyâ of folks within the Department of Justice and the FBI to include Page and Strzok to be working against him.â

VIDEO:

Page and Strzok Referenced FBI 'Secret Society' that Met the Day After the Election

BY DEBRA HEINE JANUARY 22, 2018

CHAT 3134 COMMENTS

Former FBI officials Peter Strzok, Lisa Page, and Special Counsel Robert Mueller. Image via YouTube.

There is serious talk on Capitol Hill about the appointment of a second special counsel amid several new bombshell revelations swirling around the Trump/Russia probe. First, there are the allegations of shocking and substantial government surveillance abuses under President Obama outlined in the FISA abuse memo.Secondly, the FBI lost five months of key text messages between the anti-Trump/pro-Clinton FBI officials Peter Strzok and his mistress Lisa Page. And now there's talk of a "secret society" of officials within the FBI that apparently met the day after the election of Donald J. Trump to plot against the president-elect.

Top Republicans now believe there may be real grounds for a second special counsel, Fox News reported Monday evening.

New Strzok/Page Texts Suggest Lynch Knew About Clinton Exoneration Well Before Comey Announcement

Reps. Devin Nunes (R-CA), Trey Gowdy (R-SC), and Bob Goodlatte (R- VA) met on Saturday to discuss the FISA memo and the text messages. On Monday, the trio put out the following statement:

According to Fox News, Nunes, Gowdy and Goodlatte are in the process of going through the steps necessary to release the four-page FISA memo and intend to see it released to the public by early February.

The FBI has demanded to see a copy of the memo, but so far -- understandably -- the Intelligence Committee has declined to show them their hand. Republicans believe that publishing the memo will but pressure on Attorney General Jeff Sessions to appoint a second special counsel, Fox News reported.

Reps Gowdy and Ratcliffe (R-TX) were on Fox News' "The Story with Martha MacCallum" Monday night to talk about the latest developments.

Rep. Ratcliffe said that former FBI director James Comey needs to come back to Capitol Hill to testify again under oath on the question of when the decision to exonerate former secretary of State Hillary Clinton was made. The latest batch of text messages between Strzok and Page suggests that Comey was coordinating with Attorney General Lynch on the decision well ahead of his July 5 press conference.

"It's really clear to me that the decision was made in May of 2016 -- two months before the press conference," Gowdy said. "Of course Loretta Lynch knew he wasn't going to be charged. *Everyone* except the public knew that she was not going to be charged."

"We knew that Strzok and Page had an intense anti-Trump bias and that's okay so long as they check it at the door and do their job," Ratcliffe said. "But we learned today in the thousands of text messages that we reviewed that perhaps they may not have done that."

Ratcliffe went on to mention one particular text message that referenced a "secret society" at the Bureau. "We know about this insurance policy that was referenced in trying to prevent Donald Trump from becoming president," he began. "We learned today about information in the immediate aftermath of his election that there may have been a 'secret society' of folks within the Department of Justice and the FBI to include Page and Strzok that would be working against him."

McCallum's interest was piqued. She asked Gowdy for additional details.

"You have this insurance policy in the Spring of 2016 and then the day after the election ... there's a text exchange between these two FBI agents -- these two (supposed to be objective, fact-centric) FBI agents saying, 'perhaps this is the first meeting of the secret society,'" Gowdy explained. "So of course I'm gonna want to know what 'secret society' are you talking about -- because you're supposed to be investigating objectively the person who just won the Electoral College."

He added, "Yeah, I'm gonna want to know."

Obama Admin Lied; New Memos Reveal Uranium One Exports To "Europe And Asia" Via Canada

by Tyler Durden

As the mainstream media continues to obsess over $100,000 worth Facebook ads allegedly purchased by Russian spies in 2016 seeking to throw the presidential election, behind the scenes, far removed from the sight of CNN and MSNBC, the Uranium One scandal, in which the Obama administration approved a deal **that handed a Russian-controlled corporation 20% of America's uranium reserves despite the existence of an FBI investigation into ongoing illegal bribery, extortion and money laundering schemes, is slowly spiraling out of control**...despite CNN's continued ignorance of the topic.

By now we're sure that most of our readers are well aware that Obama's approval of the Uranium One deal seemingly landed the Clinton Foundation some $145 million in donations and a $500,000 speaking gig for former President Bill Clinton from a very thankful Russian bank...if not, here are a couple of recent posts on the topic as a recap:

- FBI Uncovered Russian Bribery Plot Before Obama Approved Uranium One Deal, Netting Clintons Millions
- Emails Reveal Bill Clinton Met With Vladimir Putin Just Before Uranium One Deal
- FBI Informant "Threatened" After Offering Details Linking Clinton Foundation To Russian Bribery Case

That said, one thing that you probably don't know yet, primarily because of the Obama administration's proactive attempt conceal such information, is that **despite repeated assurances from Congress and Obama's Nuclear Regulatory Commission that U.S. uranium reserves wouldn't leave U.S. shores, it, in fact, did.**

As The Hill points out today, assurances that U.S. uranium would not be exported to foreign countries was a key sticking point when Congress reviewed the deal back in 2010. As such, repeated assurances were provided that such exports would never occur...here are just a couple of examples of those assurances:

> â **No uranium produced at either facility may be exported,â** the NRC declared in a November 2010 press release that announced that ARMZ, a subsidiary of the Russian-owned Rosatom, had been approved to take ownership of the Uranium One mining firm and its American assets.
>
> A year later, the nuclear regulator repeated the assurance in a letter to Sen. John Barrasso, a Wyoming Republican in whose state Uranium One

operated mines.

> â **Neither Uranium One Inc. nor AMRZ holds a specific NRC export license. In order to export uranium from the United States, Uranium One Inc. or ARMZ would need to apply for an obtain a specific NRC license authorizing the exports of uranium for use in reactor fuel,â** then-NRC Chairman Gregory Jaczko wrote Barrasso.

> The NRC never issued an export license to the Russian firm, a fact so engrained in the narrative of the Uranium One controversy that it showed up in The Washington Postâ s official fact-checker site this week.
> **â We have noted repeatedly that extracted uranium could not be exported by Russia without a license, which Rosatom does not have,â** The Post reported on Monday, linking to the 2011 Barrasso letter.

That said, new memos obtained by The Hill now confirm that, in fact, Uranium One yellowcake did manage to escape U.S. shores repeatedly between 2012 - 2014.

> Yet NRC memos reviewed by **The Hill shows that it did approve the shipment of yellowcake uranium â the raw material used to make nuclear fuel and weapons â from the Russian-owned mines in the United States to Canada in 2012 through a third party.** Later, the **Obama administration approved some of that uranium going all the way to Europe, government documents show.**

> NRC officials said they could not disclose the total amount of uranium that Uranium One exported because the information is proprietary. They did, however, say that the shipments only lasted from 2012 to 2014 and that they are unaware of any exports since then.

> **NRC officials told The Hill that Uranium One exports flowed from Wyoming to Canada and on to Europe between 2012 through 2014,** and the approval involved a process with multiple agencies.

Of course, given his repeated assurances to the contrary, Obama couldn't simply allow Uranium One to ship uranium to the nearest port for export, so he instead signed a waiver allowing a Kentucky trucking company to carry the product across the Canadian border and then approved export from Canada to Europe.

> **Rather than give Rosatom a direct export license â which would have raised red flags inside a Congress already suspicious of the deal â the NRC in 2012 authorized an amendment to an existing export license for a Paducah, Ky.,-based trucking firm called RSB Logistics Services Inc. to simply add Uranium One to the list of clients whose uranium it could move to Canada.**
>
> The license, reviewed by The Hill, is dated March 16, 2012, and it increased the amount of uranium ore concentrate that RSB Logistics could ship to the Cameco Corp. plant in Ontario from 7,500,000 kilograms to 12,000,000 kilograms and added Uranium One to the â other parties to Export.â
>
> The move escaped notice in Congress.

And while it will be dismissed by the Left as a convenient attempt for Republicans to change the "Russian collusion" narrative, Senator Chuck Grassley and others are finally starting to press for a special counsel to investigate what is clearly a scandal that is far more pervasive than anyone originally thought.

> â **The more that surfaces about this deal, the more questions it raises,"** Sen. Chuck Grassley (R-Iowa) said in a statement released after this story was published. Grassley, the chairman of the Senate Judiciary Committee, has launched an investigation into Uranium One.

> **"It now appears that despite pledges to the contrary, U.S. uranium made its way overseas as a part of the Uranium One deal,"** Grassley said in the statement. **"Whatâ s more disturbing, those transactions were apparently made possible by various Obama Administration agencies while the Democrat-controlled Congress turned a blind eye.**
>
> â **Americans deserve assurances that political influence was not a factor in all this. Iâ m increasingly convinced that a special counsel â someone with no prior involvement in any of these deals** â should shine a light on this ordeal and get answers for the American people.â

So, is this what Obama meant when he told Russian President Dmitry Medvedev to let Putin know that he would **"have more flexibility" after the 2012 election?**

OBAMA'S CLEANTECH-CRASH COMPANIES COST 50% MORE THAN THEY SHOULD HAVE. SO WHO SKIMMED THE CASH.

Tesla Motors is on-the-record stating that their cars were $100,000.00 PER CAR over-budget. The Abengoa solar struts cost three times as much as any competitor would have charged. The Solyndra factory buildings were twelve times more elaborate than any solar company would ever need for production. Everything in the companies that the Obama Administration funded was on the books in the most expensive way possible. Why?

The answer is that those companies were scams designed to move political campaign cash from voters

pockets, through government treasuries and into politicians pockets. They all failed in a cascade failure cycle after the rest of the world got wise to their schemes of book-cooking, stock market pump-and-dump and insane padding of all of their supplies, buildings and allocations. They were ponzi schemes to pay off Obama's political financiers at the expense of the public.

Elon Musk mooched so much taxpayer money that his companies never have to turn a profit until after he is dead. His cartel can spend the next 200 years ponzi-cycling the stock market pumps and book-cooks on his self-glory projects without any cares. As long as his fake finances team at Goldman Sachs, Wells Fargo and Deutsch Bank keep the whole scheme-hype behind the curtain, Musk can run his hype-based self-aggrandization for ages.

A lot has been said and is being said about the budget padding scandal that is currently unfolding, but it is important to situate this in its proper context, and to as well take a holistic and multi-dimensional approach to the analysis and understanding of the crisis. It is indicative of the monumental and historical nature of the crisis of leadership plaguing our country that decades after that publication, â Watergateâ , rather than abated, has continued to fester and deepen.

The current scandal unfolding in the 'House Of RepresentaThievesâ - around the accusations and counter-accusations of budget padding, is not only a continuation of the initial budget padding scandal that occasioned the preparation, but is also instructively one of the most manifest indications of the steep and historical decline in the quality of America's ruling elites and class since the Civil War.

A lot has been said and is being said about the Department of Energy budget padding scandal that is currently unfolding, but it is important to situate this in its proper context, and to as well take a holistic and multi-dimensional approach to the analysis and understanding of the crisis.

It is therefore important to situate the allegations of padding of the budgets for constituency projects within the context of the padding of the entire Appropriation Acts.

It is equally important to situate the padding of the budget within the context of the serial padding of all previous annual budgets since the 9/11 disaster.

What do I mean? Let me explain. The budgetary process in America, at all levels based on the so-called envelop system, has always been a work of â guesstimation' and at best based on pseudo-estimates.

A sum of money is arbitrarily allocated to various sectors and budget heads, and pseudo-planners then in turn arbitrarily sub-allocates these to different line items and sub-heads. The only empirical input into all of these is the estimation of revenue accruable to the federation each year, and the share of it going to the Federal government in accordance with the revenue allocation formula.

The annual budget projections, including the projections in the instruments of the Medium Term Expenditure Framework [MTEF] and the Medium Term Sectoral Strategies [MTSS] are not based on any scientific or systematic national development strategic planning framework; nor are they informed by any intelligent process of needs assessment and identification of priorities over the short [annual], medium [MTEF/MTSS] and long [5 year development plans] terms.

Without a national framework for strategic national development planning, a national development strategic and operational/implementation plan, or the entire structuring, organization, systems and processes of government oriented towards developing and implementing such plans, the annual budgeting process simply becomes an annual ritual of arbitrary allocations according to the respective whims and caprices of those responsible for preparing, enacting and implementing the budgets.

It is a process that allows for not only chaos, but also serial padding. It is why anyone knowledgeable about the budget process in Congress, anyone who has ever attempted to undertake the analysis, tracking and monitoring of the budget, anyone who has engaged with the budget process will be quick to point out their frustrations with the budget process.

Not only are the same line items repeated year in year out, but the same numbers of quantities continue to be purchased every year, but at sums marked up by the required 10 to 15% increase to take care of inflation etc! In the case of the Department of Energy 'Cleantech' projects, the cash was doubled in some cases in order to get payola to insiders who called themselves 'consultants' to the project and to slide cash through Goldman Sachs as fake 'fees' which were relayed back to those political campaign backers in Silicon Valley.

This is why a Senate investigation committee found out that there were thousands of abandoned federal [infrastructure] projects at a cost of trillions and for which more than 1/3 paid in mobiliation fees had been lost.

Another Project Monitoring Team on federal projects also reported that many of the projects awarded were not properly completed, the rest were either abandoned or were said to be ongoing, even though completion dates had been overshot and there were no indications that they would ever be completed.

Add to this pool the so-called constituency projects that have been budgeted for and for which allocations have been made since the inception of inclusion of constituency projects in the annual budgets.

And mind you, this is only just at the federal level. If we add State legislature constituency projects to the pool the figures would be a huge number of such projects that ought to have been completed across America, the LGA average also rising to more than 10 projects per LGA, and the combined cost to public expenditure of nearly N1.5tn over 11 years.

The appropriate questions to ask include: where are the footprints of these constituency projects across the country? Where is the impact of this humongous N1.5tn of public investment on the infrastructural development and infrastructure deficit of the country?

Where did the monies go? How were constituency projects selected? What were the criteria for selection of projects? Siting of projects? What is the procedure for selection of contractors to implement the projects?

These constituency projects, into what national or State level development planning framework do they fit? What is the level of congruence between the selection of the projects and the priorities of the respective Federal and State governments? Is this constituency project contract award processes subjected to the provisions of the Public inspection? Or are they in gross breach of ethics? Can we therefore say that Congress is consciously engaged in the process of willful breach of laws enacted by itself?

Before we go on, let us take a look at even the constitutionality of the constituency project phenomenon. As it is presently, the constituency projects regime has no legal framework nor were they envisaged or provided for in the present constitution.

This is why the process is largely arbitrary and subject to repeated and serial abuse. It is in fact, as it presently operates, a system of officially sanctioned corruption. The reason it has turned out this way cannot be isolated from its origin in the arm-twisting relationship between the executive and legislative arms of government and the consequent submission of the executive arm to legislative blackmail, in large part as a means for the executive to also protect itself from scrutiny by the legislator.

The constituency projects system arose as a result of an understanding by arms of government to condone and officially sanction some degree of corruption in the fiscal regimes and processes of either arm.

This is why the current crisis provides an opportunity for active citizens to enter into the fray and to compel not only a holistic interrogation of the process and system since its inception, with a view to tracking how the resources have so far been utilized, identifying pilferers of our common teal, prosecuting offenders and recovering looted funds; but it should also provide an opportunity for a total and complete overhaul and reform of not only the constituency projects system, but also the entire budgetary and development planning processes, mechanisms, and structures across the federation.

We need to have a legislation to regulate the constituency project process and set out the principles on which the system will be managed, and the criteria for project selection, project siting, and project implementation.

We need to return to a national development planning framework that is informed by periodic needs assessment, periodic performance reviews of annual budgets, medium- and long-term development plan implementation processes and that in turn informs public investment priorities and profile in the short, medium and long terms.

As it is our current budgetary system and process is grossly defective, it is not informed by scientific and empirical analysis and information; it promotes guess work and in turn enables an environment for fraud and corruption.

In fact, it is safe to conclude that in this sense of the absence of strategic planning, all our budgets have been padded budgets in the broader sense. Otherwise how can we explain the scale of corruption and treasury looting? How can we explain the scale and scope of abandoned projects in the midst of a huge infrastructure deficit?

It is important at this point to state that the annual budget process in general, and the constituency projects budget component in particular, have also always been in breach of extant laws..

This is because no annual budgetary process has involved, as provided for by the voters, a thorough review of the performance and fundamentals of the previous budget; nor have projections and estimates been rigorously interrogated against the backdrop of increasing corruption passed by the same legislative assemblies.

The point being made is that the current padding scandal rocking the Department of Energy is not only a manifestation of the inherently and congenitally corrupt nature of our ruling political elites. It is much more significantly an indication of the defective and chaotic nature and character of our budgetary and planning processes in particular, and the arbitrary and anti-people nature of governance in our country in general.

That is why operatives of the executive arm of government and members of the legislative arm of government could have without coordination undertaken the padding of the budget in parallel processes!

Before we conclude, let us pose another question. Is it conceivable that the House Of RepresentaThieves could have successfully single handedly padded only the constituency projects for the House to the exclusion of the â Sinateâ ? And could they have been responsible single handedly for padding the entire budget to the exclusion of the â Sinateâ ?

This present regime is as complicit as the previous ones in the mess that is unfolding. It had promised a zero budgeting process, but has instead delivered a padded modified envelop budgeting system.

A zero budget requires planning; it is based on a needs assessment and priority selection process that is of necessity to a multi-stakeholder process in nature, and that makes widespread and structured multi-stakeholder consultation and participatory process mandatory.

What is currently happening and unfolding is a wake-up call to all active citizens to Take Our Destinies Back

into our Hands; To Reclaim our Humanity from these hordes of locusts; and to Take Back Our Country from the thieving light-fingered ruling elite controlled by Palo Alto's Sandhill Road corruption Cartel.

For fiscal year 2015, the federal budget was $3.8 trillion. These trillions of dollars make up about 21 percent of the U.S. economy (as measured via GDP). It's also about $12,000 for every woman, man and child in the United States.

So where does all that money go? Into tech billionaires pockets via circuitous and covert routes!

Mandatory and Discretionary Spending

The U.S. Treasury divides all federal spending into three groups: mandatory spending, discretionary spending and interest on debt. Mandatory and discretionary spending account for more than ninety percent of all federal spending, and pay for all of the government services and programs on which we rely. Interest on debt, which is a much smaller amount than the other two categories, is the interest the government pays on its accumulated debt, minus interest income received by the government for assets it owns. The pie chart shows federal spending in 2015 broken into these three categories.

Interest on Federal DebtDiscretionary SpendingMandatory SpendingFY2015 Mandatory and Discretionary Spending and Interest on Federal Debt(In 2015 Dollars)

Discretionary Spending

Discretionary spending refers to the portion of the budget that is decided by Congress through the annual appropriations process each year. These spending levels are set each year by Congress.

This pie chart shows how Congress allocated $1.11 trillion in discretionary spending in fiscal year 2015.

MilitaryGovernmentEducationMedicare & HealthVeterans' BenefitsHousing & CommunityInternational AffairsEnergy & EnvironmentScienceTransportationFood & AgricultureDiscretionary Spending 2015: $1.11 Trillion

Download Image

Facebook Twitter

Source: OMB, National Priorities Project

By far, the biggest category of discretionary spending is spending on the Pentagon and related military programs. Examples of other well-known programs paid for by discretionary spending include the early childhood education program Head Start (included in Housing & Community), Title I grants to disadvantaged schools and Pell grants for low-income college students (Education), food assistance for Women, Infants and Children (WIC), training and placement for unemployed people provided by Workforce Investment Boards (in Social Security, Unemployment and Labor), and scientific research through the National Institutes of

Health (NIH) and National Science Foundation (NSF), among many others.

Mandatory Spending

Mandatory spending is spending that Congress legislates outside of the annual appropriations process, usually less than once a year. It is dominated by the well-known earned-benefit programs Social Security and Medicare. It also includes widely used safety net programs like the Supplemental Nutrition Assistance Program (SNAP, formerly food stamps), and a significant amount of federal spending on transportation, among other things.

Many mandatory programs' spending levels are determined by eligibility rules. For example, Congress decides to create a program like Social Security. It then sets criteria for determining who is eligible to receive benefits from the program, and benefit levels for people who are eligible. The amount of money spent on Social Security each year is then determined by how many people are eligible and apply for benefits.

Congress therefore does not decide each year to increase or decrease the budget for Social Security or other earned benefit programs. Instead, it periodically reviews the eligibility rules and may change them in order to exclude or include more people, or offer more or less generous benefits to those who are eligible, and therefore change the amount spent on the program.

Mandatory spending makes up nearly two-thirds of the total federal budget. Social Security alone comprises more than a third of mandatory spending and around 23 percent of the total federal budget. Medicare makes up an additional 23 percent of mandatory spending and 15 percent of the total federal budget.

This chart shows where the projected $2.45 trillion in mandatory spending will go in fiscal year 2015.

Spending and Revenue

Here's how federal spending and revenue in 2015 add up:

SHARE IMAGE:

Facebook Twitter

Spending in the Tax Code

When the federal government spends money on mandatory and discretionary programs, the U.S. Treasury writes a check to pay the program costs. But there is another type of federal spending that operates a little differently. Lawmakers have written hundreds of tax breaks into the federal tax code - for instance, special low tax rates on capital gains, and a deduction for home mortgage interest - in order to promote certain activities they deem beneficial to society.

In fact, tax breaks function as a type of government spending, and they are officially called "tax expenditures" within the federal government. When the government issues a tax break, it chooses to give up tax revenue for a specific purpose - so both spending and tax breaks mean less money in the U.S. Treasury, and both reflect spending priorities laid out by Congress in various pieces of legislation. Tax breaks are expected to cost the federal government $1.22 trillion in 2015 - more than all discretionary spending in the same year.

Tax Breaks are Larger Than Discretionary Spending(Fiscal Year 2015)Tax BreaksDiscretionary Spending

Download Image

Facebook Twitter

Source: OMB, National Priorities Project

Unlike discretionary spending, which must be approved by lawmakers each year during the appropriations process, tax breaks do not require annual approval. Once written into the tax code, they remain on the books until lawmakers modify them. That means that even when tax breaks fall short of, or outlive their original purpose intended by Congress, they frequently stay on the books.

What Is Padding the Budget? | Bizfluent

https://bizfluent.com/info-7751901-padding-budget.html

Padding the **budget** is a practice that some people use in business when submitting a **budget** for approval. It artificially inflates the proposed **budget** in order to give the project room to expand or to cover unexpected costs. Many see **budget padding** as unethical, but its practitioners defend it on the grounds of practicality.

Reasons for Padding the Budget - Budgeting Money

https://budgeting.thenest.com/reasons-padding-budget-25642.html

Good **budgets** sometimes go bad. No matter **how** well you plan, your income, your spending or both may not be what you expect. **Padding** your **budget** allows you to prepare for unwelcome surprises. With a little cushioning in your **budget**, it's easier to get through tough times without whipping out a credit card.

OBAMA'S BIGGEST CRIME

Obama and his staff staged a scam which used federal and state public agencies, financed by the taxpayers, to deliver payola to Silicon Valley campaign financiers and sabotage the competitors of those financiers.

We have proof, beyond a shadow of a doubt, that a "Deep State" criminal organization attacked domestic U.S. citizen taxpayers who spoke out and tried to report this crime.

The term "**Dark Money**" refers to the hidden transfer of public funds intermixed with bribes using fake charity organizations and taxpayer dollars. Obama's staff and financiers used this tactic in the most extreme manner ever deployed.

The Silicon Valley campaign financiers, in order to protect their scheme, created the largest digital election and news manipulation technology suite in history.

THE SILICON VALLEY SANDHILL ROAD VC SOCIOPATHS

Daniel Greenfield, a Shillman Journalism Fellow at the Freedom Center, is an investigative journalist. In his report: *ALL THE PRESIDENTâ S HACKS: MEDIA FAKE NEWS FUELED OBAMAâ S WATERGATE* he shows how Obama was so twisted that he got the Silicon Valley controlled media to help rig his fake FISA application.

When Hillary Clinton cites the â intelligence community assessmentâ to cast doubt on the legitimacy of the presidential election, sheâ s really repeating her own lie, that her campaign created, rolled through the media and the government, which used it to spy on the Trump campaign, and then finally became an â assessmentâ under orders from Obama carried out by political allies like Clapper and Brennan.

The media, which once boasted of exposing Watergate, had played a key role in Obamaâ s Watergate.

The release of a redacted FISA warrant application exposes the fact that the spying on Carter Page, a figure associated with the Trump campaign, relied on no sources other than Democrats and media allies.

In 2016, an arm of the Clinton campaign began assembling a dossier claiming that the Trump campaign was seeking damaging information about it from the Russians. The dossier actually represented an effort by the Clinton campaign to seek damaging information from the Russians about the Trump campaign.

The man tasked with that job, a former British intelligence agent named Christopher Steele, then went on to accuse figures involved with the Trump campaign, of doing the very thing he had been hired to do.

One of those men was Carter Page.

The Steele dossier claimed that Trumpâ s campaign manager, Paul Manafort, was using Carter Page as an intermediary to work with the Russians against Hillary Clinton. But it was Steele who had actually been hired by the Clinton campaign to get information from the Russians to use against Donald Trump.

The FISA application to eavesdrop on Page is based on Steeleâ s work and the media echo chamber created around it. The intelligence assessment, which former Director of National Intelligence (DNI) James Clapper admitted had been carried out under Obamaâ s orders, has the same tainted origins.

A Democrat smear was used by a Democrat administration to undermine a Republicanâ s victory.

The FISA application bets everything on Steele, while trying to hedge its bets by citing news stories, because Steeleâ s allegations against Page are as much of a dogâ s breakfast as the rest of the dossier.

Page is variously described as â generally non-committalâ , as confirming that sanctions on Russia will be lifted, and as not stating explicitly that the sanctions will be lifted, but implying that they will be lifted.

(Trump actually imposed more sanctions on Russia than Obama.)

But despite Steeleâ s sloppiness, he was useful because his past with the Russians and the FBI meant that his claims could be used as the basis for a government investigation of the Trump campaign.

The Steele dossier claimed that the Russians had â agents/facilitators within the Democratic Party structure itselfâ . The existence of Russian spies within the DNC should have been a far more urgent matter for a counterintelligence investigation, but the Obama and Clinton loyalists within the FBI and DOJ had no interest in taking a closer look at what they knew was the tainted Dem infrastructure.

Instead, the release of the redacted Carter Page FISA application made to the FISA court to allow Obama administration loyalists to spy on the political opposition shows that the basis for it was a dossier ordered by the Clinton campaign. As conservatives had repeatedly alleged, the Clinton campaign had provided material to the Obama administration allowing it to spy on the Trump campaign.

Despite the seriousness of the FISA application, the FBI shows no interest in verifying the integrity of the sources of the information. Some things are â believedâ and others are â likelyâ . The FBI â speculatesâ that the motive for the dossier is to undermine the Trump campaign. It doesnâ t bother trying to find out who paid for the dossier. There are only so many hours in the day and you canâ t check everything.

Or anything.

The application mentions that "there has been speculation in the U.S. media that the Russian Government" was behind the DNC hack. Media allegations and speculations fill the application. First Amendment protections made the media very useful cutouts for the Clinton campaign.

The unredacted FISA application was based entirely on the work of Democrats and their media allies.

Fusion GPS, the organization used to hire Steele, used its contacts in the media and the government to seed the dossier. Then the dossier and the news stories based on it were used in the FISA application. Its claims about Steeleâ s Russian trip in 2016 are based on the unverified Steele dossier.

The FISA application states that the FBI suspended its relationship with Steele due to his â unauthorized disclosure of information to the pressâ , yet it insists on using a Yahoo News article by Michael Isikoff, who had received his information from Steele, as a separate source, while claiming that it doesnâ t believe that the Isikoff article was based on information received from Steele.

The FISA application relies heavily on news stories. Beyond the Yahoo News article, it cites allegations made in articles by the Washington Post and Politico. No effort is made to verify any of these allegations in media outlets famously hostile to Republicans in general and to Trump specifically. Instead the FISA application by the government bizarrely repeats claims about government investigations made in the media as the basis for launching a government investigation.

The FISA application cites the Yahoo News article stating that "U.S. intelligence officials are investigating Page". It cites the same "intelligence reports" of the Steele dossier, without naming it, that the FISA application is also relying on. The FBI clearly knows or suspects that Steele is that â intelligenceâ source because it adds a disclaimer about the Yahoo News article, not the Politico or Washington Post articles.

Even once Steele admitted to having briefed Yahoo News, the FBI continued to offer the same denial.

Its disclaimer states that the FBI doesn't believe that Steele "directly provided this information" to Yahoo News. Why emphasize â directlyâ ? Because the FBI knew that Fusion GPS boss Glenn Simpson had been

doing much of the information peddling to the media. But the issue of whether Steele had directly or indirectly provided the information on which the Yahoo News article was based is less relevant than the fact that the FBI was citing Steele twice, once in person and once in drag as a Yahoo News article.

Instead of providing a second intelligence source, they offered a news story anonymously citing an intelligence source providing information to intelligence officials. But they were the intelligence officials.

Media reports of the investigation, provided by Steele, were used to create a sock puppet second source and second investigation. These echo chamber tactics were typical of the Obama administration which routinely seeded stories into a media echo chamber, and then used those stories to justify its policies.

The FISA application shows that the Obama administration didnâ t just deploy its media echo chamber to manipulate public opinion, but also used it to justify its abuse of domestic surveillance against its political opponents.

The media has made Watergate into an essential part of its brand. Generations of reporters have come of age at journalism schools pretending to be Woodward and Bernstein. Not only did the media fail to expose Obamaâ s Watergate, but it was a key part of the infrastructure for spying on Republicans.

The FISA application reveals that domestic surveillance of Republicans would not have been possible without the media. In 2016, the media had become an official part of â All the Presidentâ s Menâ . The reporters had become the plumbers of a political police state. Their smears were used to eavesdrop on political opponents and cast doubt on the outcome of a free and open election.

The media claims that it safeguards democracy. The FISA application shows itâ s a threat to democracy.

OBAMA'S CORRUPTION - INVESTIGATIVE GROUP REPORT

Justice Department official Bruce Ohr. (Youtube screen grab)

EXCLUSIVE: DOJ Official Bruce Ohr Hid Wifeâ s Fusion GPS Payments From Ethics Officials

LUKE ROSIAK

Investigative Reporter

- **Justice Department official Bruce Ohr did not disclose Fusion GPS was paying his wife**
- **Ohr was demoted from his post after the information emerged**
- **Willfully falsifying government ethics documents can result in jail time**

Bruce Ohr, the Department of Justice official who brought opposition research on President Donald Trump to the FBI, did not disclose that Fusion GPS, which performed that research at the Democratic National Committeeâ s behest, was paying his wife, and did not obtain a conflict of interest waiver from his superiors at the Justice Department, documents obtained by The Daily Caller News Foundation show.

The omission may explain why Ohr was demoted from his post as associate deputy attorney general after the relationship between Fusion GPS and his wife emerged and Fusion founder Glenn Simpson acknowledged meeting with Ohr. Willfully falsifying government ethics forms can carry a penalty of jail time, if convicted.

The Democratic National Committee (DNC) hired Fusion GPS to gather and disseminate damning info about Trump, and they in turn paid Nellie Ohr, a former CIA employee with expertise in Russia, for an unknown role related to the â dossier.â Bruce Ohr then brought the information to the FBI, kicking off a probe and a media firestorm.

The DOJ used it to obtain a warrant to wiretap a Trump adviser, but didnâ t disclose to the judge that the DNC and former Secretary of State Hillary Clintonâ s campaign had funded the research and that Ohr had a financial relationship with the firm that performed it â which could be, it turns out, because Ohr doesnâ t appear to have told his supervisors. Some have suggested that the financial payments motivated Bruce Ohr to actively push the case.

1470

For 2014 and 2015, Bruce Ohr disclosed on ethics forms that his wife was an â independent contractorâ earning consulting fees. In 2016, she added a new employer who paid her a â salary,â but listed it vaguely as â cyberthreat analyst,â and did not say the name of the company.

The instructions require officials to â Provide the name of your spouseâ s employer. In addition, if your spouseâ s employer is a privately held business, provide the employerâ s line of business.â As examples, it gives â Xylophone Technologies Corporationâ and â DSLK Financial Techniques, Inc. (financial services).â The dollar amount does not need to be disclosed. â Report each source, whether a natural person or an organization or entity, that provided your spouse more than $1,000 of earned income during the reporting period,â they say.

Play Video

The DOJ says, â Financial disclosure reports are used to identify potential or actual conflicts of interest. If the person charged with reviewing an employeeâ s report finds a conflict, he should impose a remedy immediately.â Its guidance says, â Employees should always seek the advice of an ethics official when contemplating any action that may be covered by the rules.â

Paul Kamenar, a Washington, D.C., public policy lawyer experienced in executive branch ethics and disclosure laws, said, â Based on my reading of the regulations and disclosure guide accompanying the form, he failed to disclose the source of his wifeâ s income on line 4 by not including the â name of the employer.'â

â The law provides that whoever â knowingly and willfullyâ fails to file information required to be filed on this report faces civil penalties up to $50,000 and possible criminal penalties up to one year in prison under the disclosure law and possibly up to five years in prison under 18 USC 1001,â he said. â Since he lists her income type as â salaryâ as opposed to line 1 where he describes her other income as â consulting feesâ as an â independent contractorâ itâ s clear that she was employed by a company that should have been identified by name.â

â And even with respect to her â independent contractorâ listing, it appears incomplete by not describing what kind of services were provided. Both these omissions do not give the reviewing official sufficient information to determine whether there is a conflict,â Kamenar added.

Bruce Ohr spouse financial disclosure (DOJ)

Ohr also did not get a conflict of interest waiver from his supervisors, suggesting that he may not have explained to anyone the true source of the income and how it intersected with his official involvement in the case, nor did he have approval.

If a potential conflict is disclosed and explained to supervisors, a government agency can grant a conflict of interest waiver, known as a 208(b) waiver. In response to a records request, officials told TheDCNF, â There are no â ¦ waivers for this filer.â

Scott Amey, general counsel of the Project on Government Oversight, said â he couldnâ t get a waiver for that. That would have required outright refusal.â Making it potentially even worse than failing to recuse, Ohrâ s pressing the Trump case appears to be something he decided to do on his own, rather than something assigned to him.

Bruce Ohr was demoted from his DOJ position shortly after the companyâ s founder acknowledged in a Nov. 14, 2017, interview with the House Intelligence Committee that he had met with him. Fox News reported in December that Ohr had concealed his meetings with the firm from his supervisors.

The form says, â [F]alsification of information required to be filed by section 102 of the [Ethics in Government Act of 1978] may also subject you to criminal prosecutionâ as well as â civil monetary penalty and to disciplinary action by your employing agency.â

The lack of disclosure is the latest of several examples of people apparently trying to conceal the financial relationship that Fusion GPS, which was funded by the DNC, had with the family of the DOJ official.

In Fusion GPS founder Simpsonâ s November House interview, he conspicuously omitted his relationship with Nellie Ohr, painting Bruce Ohr as someone who he was connected to independently. Investigators said, â Youâ ve never heard from anyone in the U.S. Government in relation to those matters, either the FBI or the Department of Justice?â

â I was asked to provide some information â ¦ by a prosecutor named Bruce Ohr,â he said.

Investigators said, â Did Mr. Ohr reach out to you?â

â It was someone that Chris Steele knows â ¦ and I met Bruce too through organized crime conferences or something like that â ¦ Chris told me that he had been talking to Bruce â ¦ and that Bruce wanted more information, and suggested that I speak with Bruce,â Simpson said.

Simpson also said his firm was not affiliated with any Russian speakers, even though Nellie Ohr appears to speak the language.

In addition to meeting with Simpson, Ohr also met with Steele before the election.

In an earlier Aug. 22, 2017, interview with the Senate Judiciary Committee, Simpson didnâ t mention either of the Ohrs by name. He said he had not met with any FBI officials about the matter, without noting his contact with the DOJ official.

Simpson suggested in court records on Dec. 12, 2017, that the only way government investigators could have found out about Nellie Ohrâ s relationship with the company was through its bank records. â Bank records reflect that Fusion contracted with Nellie Ohr, a former government official expert in Russian matters, to help our company with its research and analysis of Mr. Trump. I am not aware of any other sources from which the committee or the media could have learned of this information,â he said.

Tom Fitton, president of Judicial Watch, a conservative legal group that has been critical of the departmentâ s handling of the Trump investigation, said, â This document ought to trigger an immediate criminal investigation if one isnâ t already ongoing.â

Kathleen Clark, an ethics expert and law professor at Washington University in St. Louis, said beyond the disclosure issue, as far as the legal definition of conflict of interest requiring a recusal, it could depend on whether Ohrâ s actions would have had a â direct and predictableâ effect on his wifeâ s income from Fusion GPS.

Kamenar said what is known as the frequently used â catch-allâ provision clearly applies, saying â Circumstancesâ ¦ would cause a reasonable person with knowledge of the facts to question an employeeâ s impartialityâ require recusal.

Amey said, â As a lawyer and a top Justice official, Ohr should know that he canâ t participate in anything related to his wifeâ s work â ¦ Ohr should have been upfront about his wifeâ s employment and not touched anything related to Steele, the dossier, and Fusion GPS.â The DOJâ s judgment is only as good as the information volunteered to them by Ohr, he said, and because he didnâ t list the name of his wifeâ s employer, they likely had no reason to suspect it might have impacted his work.

Walter Schaub, a former government ethics czar who is an expert on the forms and resigned after offering sharp criticisms of Trump, declined repeated requests to weigh in on Ohr.

Bruce Ohr did not return a request for comment, nor did the DOJ.

OUR LETTER TO THE FBI

Craig D Fair
Special Agent in Charge

Timothy Stone
Deputy Special Agent in Charge

Federal Bureau Of Investigation

San Francisco Office
450 Golden Gate Ave, 13th Floor
San Francisco, CA 94102-9523

May 2, 2021

Dear FBI Team:

As know you, our task force has created a large number of public-interest crowd-sourced testimony websites to provide real-time information, about this case, to your agents. We have spoken to your office on multiple occasions as informants, whistle-blowers, witnesses and providers of testimony about this large criminal matter involving well known public figures..

Congress must be forced to eliminate both the appearance and the actual operation of financial conflicts of interest that we have identified going on every day. Americans must be confident that actions taken by public officials are intended to serve the public, and not those officials and their corrupt Silicon Valley big tech leash-holders. Their actions counter-act the law, The Constitution and general morality.
A number of our associates are now dead, under mysterious circumstances. It seems like some of them were killed to shut them up.

We experienced all of the damages from each of the abuse-of-power issues listed below. The FBI, FTC, SEC, FEC must become a taskforce that ends these crimes. These are the crimes we saw and suffered from and the solutions to those crimes:

We documented modern bribes being paid through stock market scams. We saw the perpetrators do it. Please help ban individual stock ownership by Members of Congress, Cabinet Secretaries, senior congressional staff, federal judges, White House staff and other senior agency officials while in office. Please prohibit all government officials from holding or trading stock where its value might be influenced by their agency, department, or actions. The perpetrators are TODAY committing crimes and corruption in this manner.

We witnessed violations of conflict of interest laws per the President, Senators and the Vice President through the Presidential Conflicts of Interest Act, which would should require the President and the Vice President to place conflicted assets, including businesses, into a blind trust to be sold off. The perpetrators are TODAY committing crimes and corruption in this manner.

We witnessed senior Department of Energy government officials, employees, contractors and White House staff fail to divest from privately-owned assets that could present conflicts, including large companies like Tesla, Google, Facebook, Sony, Netflix, etc., and commercial real estate. The perpetrators are TODAY committing crimes and corruption in this manner.

We, and the news media, witnessed a felony-style intent to not respond to a filing by a citizen within 48 hours. Former White House and Energy Department staff use 'stone-walling' to intentionally delay responses for a decade, or more. The perpetrators are TODAY committing crimes and corruption in this manner.

We witnessed the failure to apply ethics rules to all government employees, including unpaid White House staff and advisors. The perpetrators are TODAY committing crimes and corruption in this manner.

We witnessed the failure to require most executive branch employees to recuse themselves from all issues that might financially benefit themselves or a previous employer or client from the preceding 4 years. The perpetrators are TODAY committing crimes and corruption in this manner.

We witnessed the failure of to create conflict-free investment opportunities for federal officials with new investment accounts managed by the Federal Retirement Thrift Investment Board and conflict-free mutual funds. The perpetrators are TODAY committing crimes and corruption in this manner.

We witnessed the Revolving Door between industry and government and saw tech companies buying influence in the government or profiting off of the public service of any official. The perpetrators are TODAY committing crimes and corruption in this manner.

We witnessed lobbying by Presidents, Vice Presidents, Members of Congress, federal judges, and Cabinet

Secretaries; your office must enforce multi-year bans on all other federal employees from lobbying their former office, department, House of Congress, or agency after they leave government service until the end of the Administration, but at least for 2 years (and at least 6 years for corporate lobbyists). The perpetrators are TODAY committing crimes and corruption in this manner.

We saw the ability of companies to buy influence through former government officials. The perpetrators are TODAY committing crimes and corruption in this manner.

We saw the income disclosures from former senior officials 4 years after federal employment. The perpetrators are TODAY committing crimes and corruption in this manner.

In addition to the above issues, ***it is essential that FBI, DOJ, SEC and FTC work together, now, to enact and strengthen enforcement around the following issues that we experienced:***

- Prohibit companies from immediately hiring or paying any senior government official from an agency, department, or Congressional office recently lobbied by that company. The perpetrators are TODAY committing crimes and corruption in this manner.

- Prohibit the worldâ s largest companies, banks, and monopolies (measured by annual revenue or market capitalization) from hiring or paying any former senior government official for 4 years after they leave government service. The perpetrators are TODAY committing crimes and corruption in this manner.

- Limit the ability of companies to buy influence through current government employees- Prohibit current lobbyists from taking government jobs for 2 years after lobbying; 6 years for corporate lobbyists. Public, written waivers where such hiring is in the national interest are allowed for non-corporate lobbyists only.

- Prohibit corporate outlaws like Google, Tesla, Facebook, Linkedin, Netflix, Sony, etc., from working in government by banning the hiring of top corporate leaders whose companies were caught breaking federal law in the last 6 years.

- Prohibit contractor corruption by blocking federal contractor and licensee employees from working at the agency awarding the contract or license for 4 years. The perpetrators are TODAY committing crimes and corruption in this manner.

- Ban â Golden Parachutesâ that provide corporate bonuses to executives for federal service. The perpetrators are TODAY committing crimes and corruption in this manner.

- Publicly expose all influence-peddling in Washington. The perpetrators are TODAY committing crimes and corruption in this manner.

- Strengthen and expand the federal definition of a â lobbyistâ to include all individuals paid to influence government. The perpetrators are TODAY committing crimes and corruption in this manner.

- Create a new â corporate lobbyistâ definition to identify individuals paid to influence government on behalf of for- profit entities and their front-groups. The perpetrators are TODAY committing crimes and corruption in this manner.

- Radically expand disclosure of lobbyist activities and influence campaigns by requiring all lobbyists to disclose any specific bills, policies, and government actions they attempt to influence; any meetings with public officials; and any documents they provide to those officials. The perpetrators are TODAY committing crimes and corruption in this manner.

- End Influence-Peddling by Foreign Actors such as that which occurred in the ENER1, Severstal, Solyndra and related scandals. The perpetrators are TODAY committing crimes and corruption in this manner.

- Combat foreign influence in Washington by banning all foreign lobbying. The perpetrators are TODAY committing crimes and corruption in this manner.

- End the FBI practice of refusing to write 302 interview forms on victims like us in order to hide facts from Congress.

- End foreign lobbying by Americans by banning American lobbyists from accepting money from foreign governments, foreign individuals, and foreign companies to influence United States public policy. The perpetrators are TODAY committing crimes and corruption in this manner.

- Prohibit current lobbyists from taking government jobs for 2 years after lobbying; 6 years for corporate lobbyists. Public, written waivers where such hiring is in the national interest are allowed for non-corporate lobbyists only.- End Legalized Lobbyist Bribery and stop lobbyists from trading money for government favors. The perpetrators are TODAY committing crimes and corruption in this manner.

- Increase the arrests of anyone paying bribes to Stanford University for access and for ideological curriculum changes. The perpetrators are TODAY committing crimes and corruption in this manner.

- Ban direct political donations from lobbyists to candidates or Members of Congress. The perpetrators are TODAY committing crimes and corruption in this manner.

- End lobbyist contingency fees that allow lobbyists to be paid for a guaranteed policy outcome. The perpetrators are TODAY committing crimes and corruption in this manner.

- End lobbyist gifts to the executive and legislative branch officials they lobby. The perpetrators are TODAY committing crimes and corruption in this manner. The perpetrators are TODAY committing crimes and corruption in this manner.

- End the ring-around-the-rosie finger-pointing when civilians report a corruption crime. Every agency tries to shunt corruption reports off to another agency. The perpetrators are TODAY committing crimes and corruption in this manner.

- Strengthen Congressional independence from lobbyists and end Washingtonâ s dependence on lobbyists for "expertise" and information. The perpetrators are TODAY committing crimes and corruption in this manner.

- Make congressional service sustainable by transitioning Congressional staff to competitive salaries that track other federal employees. The perpetrators are TODAY committing crimes and corruption in this manner.

- Reinstate the nonpartisan Congressional Office of Technology Assessment to provide critical scientific and technological support to Members of Congress. The perpetrators are TODAY committing crimes and corruption in this manner.

- Level the playing field between corporate lobbyists and government by taxing excessive lobbying beginning at $500,000 in annual lobbying expenditures, and use the proceeds to help finance Congressional mandated rule-making, fund the National Public Advocate, and finance Congressional support agencies. The perpetrators are TODAY committing crimes and corruption in this manner.

- De-politicize the rulemaking process and increase transparency of industry efforts to influence federal

agencies. The perpetrators are TODAY committing crimes and corruption in this manner.

- Require individuals and corporations to disclose funding or editorial conflicts of interest in research submitted to agencies that is not publicly available in peer-reviewed publications. The perpetrators are TODAY committing crimes and corruption in this manner.

- Prevent McKinsey-type sham research from undermining the public interest by requiring that studies that present conflicts of interest to undergo independent peer review to be considered in the rule- making process. The perpetrators are TODAY committing crimes and corruption in this manner.

- Require agencies to justify withdrawn public interest rules via public, written explanations. The perpetrators are TODAY committing crimes and corruption in this manner.

- Close loopholes exploited by powerful corporations like Google, Facebook, Tesla, Netflix, Sony, etc., to block public interest actions. The perpetrators are TODAY committing crimes and corruption in this manner.

- Eliminate loopholes that allow corporations, like Tesla and Google, to tilt the rules in their favor and against the public interest. The perpetrators are TODAY committing crimes and corruption in this manner.

- Restrict negotiated rule-making to stop industry from delaying or dominating the rule-making process by ending the practice of inviting industry to negotiate rules they have to follow.- Restrict inter-agency review as a tool for corporate abuse by banning informal review, establishing a maximum 45- day review period, and blocking closed -door industry lobbying at the White Houseâ s Office of Information and Regulatory Affairs. The perpetrators are TODAY committing crimes and corruption in this manner.

- Limit abusive injunctions from rogue judges, like Jackson, et al, by ensuring that only Appeals Courts, not individual District Court judges , can temporarily block agencies from implementing final rules. The perpetrators are TODAY committing crimes and corruption in this manner.

- Prevent hostile agencies from sham delays of implementation and enforcement by using the presence of litigation to postpone the implementation of final rules. The perpetrators are TODAY committing crimes and corruption in this manner.

- Empower the public to police agencies for corporate capture. The perpetrators are TODAY committing crimes and corruption in this manner.

- Increase the ability of the public to make sure their interests are considered when agencies act. The perpetrators are TODAY committing crimes and corruption in this manner.

- Create a new Office of the Public Advocate empowered to assist the public in meaningfully engaging in the rule-making process across the federal government. The perpetrators are TODAY committing crimes and corruption in this manner.

- Encourage enforcement by allowing private lawsuits from members of the public to hold agencies accountable for failing to complete rules or enforce the law, and to hold corporations accountable for breaking the rules. The perpetrators are TODAY committing crimes and corruption in this manner.

- Inoculate government agencies against corporate capture such as Google undertook against the White House. The perpetrators are TODAY committing crimes and corruption in this manner.

- Provide agencies with the tools and resources to implement strong rules that reflect the will of Congress and protect the public. The perpetrators are TODAY committing crimes and corruption in this manner.

- Boost agency resources to level the playing field between corporate lobbyists and federal agencies by using the proceeds of the tax on excessive lobbying and the anti-corruption penalty fees to help finance Congress-mandated rule-making and facilitate decisions by agencies that are buried in an avalanche of lobbyist activity. The perpetrators are TODAY committing crimes and corruption in this manner.

- Reform judicial review to prevent corporations from gaming the courts by requiring courts to presumptuously defer to agency interpretations of laws and prohibiting courts from considering sham McKinsey studies and research excluded by agencies from the rule-making process. The perpetrators are TODAY committing crimes and corruption in this manner.

- Reverse the Congressional Review Act provision banning related rules that prevent agencies from implementing the will of Congress based on Congressâ prior disapproval of a different, narrow rule on a similar topic. The perpetrators are TODAY committing crimes and corruption in this manner.

- Improve judicial integrity and defend access to justice for all Americans. The perpetrators are TODAY committing crimes and corruption in this manner.

- Strengthen Judicial Ethics Requirements.- Enhance the integrity of the judicial branch by strengthening rules that prevent conflicts of interest. The perpetrators are TODAY committing crimes and corruption in this manner.

- Ban individual stock ownership by federal judges. The perpetrators are TODAY committing crimes and corruption in this manner.

- Expand rules prohibiting judges from accepting gifts or payments to attend private seminars from private individuals and corporations The perpetrators are TODAY committing crimes and corruption in this manner.

- Require ethical behavior by the Supreme Court by directing the Court to follow the Code of Conduct that binds all other federal judges. The perpetrators are TODAY committing crimes and corruption in this manner.

- Boost the transparency of Federal Courts. The perpetrators are TODAY committing crimes and corruption in this manner.

- Enhance public insight into the judicial process by increasing information about the process and reducing barriers to accessing information. The perpetrators are TODAY committing crimes and corruption in this manner.

- Increase disclosure of non-judicial activity by federal judges by requiring the Judicial Conference to publicly post judgesâ financial reports, recusal decisions, and speeches. The perpetrators are TODAY committing crimes and corruption in this manner.

- Enhance public access to court activity by mandating that federal appellate courts live-stream, on the web, audio of their proceedings, making case information easily-accessible to the public free of charge, and requiring federal courts to share case assignment data in bulk. The perpetrators are TODAY committing crimes and corruption in this manner.

- Eliminate barriers that restrict access to justice to all but the wealthiest individuals and companies. The perpetrators are TODAY committing crimes and corruption in this manner.

- Reduce barriers that prevent individuals from having their case heard in court by restoring pleading standards that make it easier for individuals and businesses that have been harmed to make their case before a judge. The perpetrators are TODAY committing crimes and corruption in this manner.

- Encourage diversity on the Federal Bench. The perpetrators are TODAY committing crimes and corruption in this manner.

- Strengthen the integrity of the judicial branch by increasing the focus on personal and professional diversity of the federal bench. The perpetrators are TODAY committing crimes and corruption in this manner.

- Create a single, new, and independent agency dedicated to enforcing federal ethics and anti-corruption laws. The perpetrators are TODAY committing crimes and corruption in this manner.

- Support stronger ethics and public integrity laws with stronger enforcement. The perpetrators are TODAY committing crimes and corruption in this manner.

- Establish the new, independent U.S. Office of Public Integrity, which will strengthen federal ethics enforcement. The perpetrators are TODAY committing crimes and corruption in this manner with new investigative and disciplinary powers. The perpetrators are TODAY committing crimes and corruption in this manner.

- Investigate potential violations by any individual or entity, including individuals and companies with new subpoena authority- Enforce the nationâ s ethics laws by ordering corrective action, levying civil and administrative penalties, and referring egregious violations to the Justice Department for criminal arrest and enforcement. The perpetrators are TODAY committing crimes and corruption in this manner.

- Receive and investigate ethics complaints from members of the public. The perpetrators are TODAY committing crimes and corruption in this manner.

- Absorb the U.S. Office of Government Ethics as a new Government Ethics Division tasked with providing confidential advice to federal employees seeking ethics guidance. The perpetrators are TODAY committing crimes and corruption in this manner.

- Consolidate anti-corruption and public integrity oversight over federal officials, including oversight of all agency Inspectors General, all ethics matters for White House staff and agency heads, and all waivers and recusals by senior government officials. The perpetrators are TODAY committing crimes and corruption in this manner.

- Remain independent and protected from partisan politics through a single Director operating under strict selection, appointment, and removal criteria. The perpetrators are TODAY committing crimes and corruption in this manner.

- Provide easy online access to key government ethics and transparency documents, including financial disclosures; lobbyist registrations; lobbyist disclosures of meetings and materials; and all ethics records, recusals, and waivers. The perpetrators are TODAY committing crimes and corruption in this manner.

- Maintain a new government-wide Office of the Public Advocate, which would advocate for the public interest in executive branch rule-making. The perpetrators are TODAY committing crimes and corruption in this manner.

- Enforce federal open records and FOIA requirements by maintaining the central FOIA website and working with the National Archives to require agencies to comply with FOIA. The perpetrators are TODAY committing crimes and corruption in this manner.

- Strengthen legislative branch enforcement. The perpetrators are TODAY committing crimes and corruption in this manner.

- Expand an independent and empowered ethics office insulated from congressional politics. The perpetrators are TODAY committing crimes and corruption in this manner.

- Expand and empower the U.S. Office of Congressional Ethics, which will enforce the nationâ s ethics laws in the Congress and the entire Legislative Branch, including the U.S. Senate. The perpetrators are TODAY committing crimes and corruption in this manner.

- Conduct investigations of potential violations of ethics laws and rules by Members of Congress and staff with new subpoena power. The perpetrators are TODAY committing crimes and corruption in this manner.

- Refer criminal and civil violations to the Justice Department, the Office of Public Integrity, or other relevant state or federal law enforcement. The perpetrators are TODAY committing crimes and corruption in this manner.

- Recommend disciplinary and corrective action to the House and Senate Ethics Committees.- Boost transparency in government and fix Federal Open Records laws, public official and candidate tax disclosure. The perpetrators are TODAY committing crimes and corruption in this manner.

- Disclose basic tax return information for candidates for federal elected office and current elected officials. The perpetrators are TODAY committing crimes and corruption in this manner.

- Require the IRS to release tax returns for Presidential and Vice-Presidential candidates from the previous 8 years and during each year in federal elected office. The perpetrators are TODAY committing crimes and corruption in this manner.

- Require the IRS to release t ax returns for Congressional candidates from the previous 2 years and during each year in federal elected office. The perpetrators are TODAY committing crimes and corruption in this manner.

- Require the IRS to release tax returns and other financial information of businesses owned by senior federal officials and candidates for federal office. The perpetrators are TODAY committing crimes and corruption in this manner.

- Require the IRS to release tax filings for nonprofit organizations run by candidates for federal office. The perpetrators are TODAY committing crimes and corruption in this manner.

- Disclose the Cash behind Washington Advocacy and Lobbying. The perpetrators are TODAY committing crimes and corruption in this manner.

- Prevent special interests from using secret donations from corporations and billionaires to influence public policy without disclosure. The perpetrators are TODAY committing crimes and corruption in this manner.

- Require nonprofit organizations to list donors who bankrolled the production of any specific rule-making comment, congressional testimony, or lobbying material, and to reveal whether the donors reviewed or edited the document. The perpetrators are TODAY committing crimes and corruption in this manner.

- Require individuals and corporations to disclose funding or editorial conflicts of interest in research submitted to agencies that is not publicly available in peer-reviewed publications. The perpetrators are TODAY committing crimes and corruption in this manner.

- Prevent sham research from undermining the public interest by requiring that studies that present conflicts of

interest to independent peer review to be considered in the rule-making process. The perpetrators are TODAY committing crimes and corruption in this manner.

- Improve the Freedom of Information Act (FOIA) The perpetrators are TODAY committing crimes and corruption in this manner.

- Close the loopholes in our open records laws that allow federal officials to hide tech industry and Silicon Valley oligarch industry influence. The perpetrators are TODAY committing crimes and corruption in this manner.

- Codify the default presumption of disclosure and affirmatively disclose records of public interest, including meeting agendas; government contracts; salaries; staff diversity; and reports to Congress. The perpetrators are TODAY committing crimes and corruption in this manner.

- Require all agencies to use a central FOIA website that is searchable and has downloadable open records databases with all open FOIA requests and all records disclosed through FOIA. The perpetrators are TODAY committing crimes and corruption in this manner.

- Strengthen FOIA enforcement by limiting FOIA exemptions and loopholes, and by giving the National Archives the authority to overrule agency FOIA decisions and to compel disclosure. The perpetrators are TODAY committing crimes and corruption in this manner.

- Extend FOIA to private-sector federal contractors, including private federal prisons and immigration detention centers, and require large federal contractors to disclose political spending. The perpetrators are TODAY committing crimes and corruption in this manner.

- Make Congress more transparent by ending the corporate lobbyists leg up in the legislative process. The public deserves to know what Congress is up to and how lobbyists influence legislation. The perpetrators are TODAY committing crimes and corruption in this manner.

- Require all congressional committees to immediately post online more information, including hearings and markup schedules, bill or amendments text, testimonies, documents entered into the hearing record, hearing transcripts, written witness answers, and hearing audio and video recordings. The perpetrators are TODAY committing crimes and corruption in this manner.

- Require Members of Congress to post a link to their searchable voting record on their official websites. The perpetrators are TODAY committing crimes and corruption in this manner.

- Require lobbyists to disclose when they lobby a specific congressional office; specific topics of visit; the official action being requested; and all documents provided to the office during the visit. The perpetrators are TODAY committing crimes and corruption in this manner.

- Upon confirmation, Government Appointees donâ t resign from their position as Board Member of companies that conflict with their government job and they trade In that dynamic in self dealing and collusion manners. The perpetrators are TODAY committing crimes and corruption in this manner.

- When a Government Appointee resigns from their position as Board Member of a conflicted company they must forfeit any of their unvested stock options upon resignation of their position as Board. Many donâ t do this. The perpetrators are TODAY committing crimes and corruption in this manner.

In the 2008 and 2021 â Stimulusâ plans, much of the â Stimulusâ money ended up in the hands of friends of the politicians. That violates the RICO, antitrust and related racketeering laws. In the Department of Energy

funds for example

- Do Government Appointees like Jennifer Granholm, Steven Chu, Kathy Zoi, etc.; continue to hold any of their unvested stock options in tech companies that are bribing government officials? If so, what amount and value? If so, what are the facts and circumstances surrounding their decision to delay their forfeiture? If so, have there been and do there continue to be any impediments to their ability to forfeit their unvested stock options more than two months after their confirmation? Please answer the question in the same respect as it applies to Secretary of Energy Steven Chu and his relations with Tesla Motors, Battery makers and lithium, indium and cobalt mining companies and battery processing companies. Please provide full and complete details.

- Have Government Appointees divested any of their vested stock options (and resulting stock, if they have exercised any of their vested stock options) in tech companies seeking to manipulate government policy? Please answer the question in the same respect as it applies to Secretary of Energy Steven Chu and his relations with Tesla Motors, Battery makers and lithium, indium and cobalt mining companies and battery processing companies. If so, on what date(s), and in what amount(s) and value(s)? Please provide full and complete details.

- Do Government Appointees continue to hold any of their vested stock options in tech companies that are seeking to influence the government? If so, what amount and value? If so, what are the facts and circumstances surrounding their decision to delay their divestment? If so, have there been and do there continue to be any impediments to their ability to divest â as soon as practicableâ more than two months after their confirmation? Please answer the question in the same respect as it applies to Secretary of Energy Steven Chu and his relations with Tesla Motors, Battery makers and lithium, indium and cobalt mining companies and battery processing companies. Please provide full and complete details.

- Do Government Appointees hold any financial interest in ArcLight? If so, in what form, and what amount and value? Please answer the question in the same respect as it applies to Secretary of Energy Steven Chu and his relations with Tesla Motors, Battery makers and lithium, indium and cobalt mining companies and battery processing companies. Please provide full and complete details.

- Do Government Appointees directly or indirectly participate in proposing, planning, or otherwise facilitating Vice President Harrisâ tour of Thomas Built Buses, a manufacturer of electric school buses, in High Point, North Carolina? Please answer the question in the same respect as it applies to Secretary of Energy Steven Chu and his relations with Tesla Motors, Battery makers and lithium, indium and cobalt mining companies and battery processing companies. Please provide full and complete details.

- Did Government Appointees directly or indirectly participate in proposing, planning, or otherwise facilitating President Bidenâ s virtual visit of tech companies seeking to manipulate government policyâ s electric bus and battery manufacturing plant in Greenville, South Carolina?Please answer the question in the same respect as it applies to Secretary of Energy Steven Chu, Barack Obama and his relations with Tesla Motors, Battery makers and lithium, indium and cobalt mining companies and battery processing companies. Please provide full and complete details.

- Did any other DOE employee directly or indirectly participate in proposing, planning, or otherwise facilitating Vice President Harrisâ tour of Thomas Built Buses, a manufacturer of electric school buses, in High Point, North Carolina? Please answer the question in the same respect as it applies to Secretary of Energy Steven Chu and his relations with Tesla Motors, Battery makers and lithium, indium and cobalt mining companies and battery processing companies. Please provide full and complete details.

- Did any other DOE employee directly or indirectly participate in proposing, planning, or otherwise facilitating President Bidenâ s virtual visit of Proterra, Inc.â s electric bus and battery manufacturing plant in

Greenville, South Carolina? Please answer the question in the same respect as it applies to Secretary of Energy Steven Chu and his relations with Tesla Motors, Battery makers and lithium, indium and cobalt mining companies and battery processing companies. Please provide full and complete details.

- Has Government Appointees or Secretary Steven Chu directly or indirectly participated in proposing, planning, developing, drafting, promoting, facilitating or organizing attacks on competitors or whistle-blowers operated at their behest by deadly economic and character assassination hit job attack services from IN-Q-Tel, Gawker Media,Jalopnik, Gizmodo Media, K2 Intelligence, WikiStrat, Podesta Group, Fusion GPS, Google, YouTube, Alphabet, Facebook, Twitter, Think Progress, Media Matters, BlackCube, Mossad, Correct The Record, Stratfor, ShareBlue, Wikileaks, Cambridge Analytica, etc; the owners of whom have been proven to have accepted compensation for such hatchet job services.

- Have Government Appointees directly or indirectly participated in proposing, planning, developing, drafting, promoting, facilitating, or otherwise advocating for electric vehicles (including electric buses), batteries, and charging infrastructure that would benefit tech companies seeking to manipulate government policy or any of their other holdings? Please answer the question in the same respect as it applies to Secretary of Energy Steven Chu and his relations with Tesla Motors, Battery makers and lithium, indium and cobalt mining companies and battery processing companies. Please provide full and complete details.

- Have Government Appointees directly or indirectly participated in proposing, planning, developing, drafting, promoting, facilitating, or otherwise advocating for electric vehicles (including electric buses), batteries, and charging infrastructure? Please answer the question in the same respect as it applies to Secretary of Energy Steven Chu and his relations with Tesla Motors, Battery makers and lithium, indium and cobalt mining companies and battery processing companies. Please provide full and complete details.

- Have Government Appointees directly or indirectly participated in proposing, planning, developing, drafting, promoting, facilitating, or otherwise advocating for President Bidenâ s American Jobs Plan? Please answer the question in the same respect as it applies to Secretary of Energy Steven Chu and his relations with Tesla Motors, Battery makers and lithium, indium and cobalt mining companies and battery processing companies. Please provide full and complete details.

- Have Government Appointees directly or indirectly participated in proposing, planning, developing, drafting, promoting, facilitating, or otherwise advocating for the $174 billion investment in electric vehicles proposed as part of President Bidenâ s American Jobs Plan? Please answer the question in the same respect as it applies to Secretary of Energy Steven Chu, Barack Obama and his relations with Tesla Motors, Battery makers and lithium, indium and cobalt mining companies and battery processing companies. Please provide full and complete details.

- Have Government Appointees directly or indirectly participated in proposing, planning, developing, drafting, promoting, facilitating, or otherwise advocating for the $20 billion investment in electric buses proposed as part of President Bidenâ s American Jobs Plan? Please answer the question in the same respect as it applies to Secretary of Energy Steven Chu, Barack Obama and his relations with Tesla Motors, Battery makers and lithium, indium and cobalt mining companies and battery processing companies. Please provide full and complete details.

- Have Government Appointees directly or indirectly communicated with any Biden Administration official at any time about tech companies seeking to manipulate government policy, Thomas Built Buses, or electric buses? Please answer the question in the same respect as it applies to Secretary of Energy Steven Chu, Barack Obama and his relations with Tesla Motors, Battery makers and lithium, indium and cobalt mining companies and battery processing companies.

We, and every American citizen suffered dramatic damages because interdiction of the above Tools Of

Corruption were not interdicted over the last decade. Some of that lack of action was bad oversight but watch of it was an intentional criminal cover-up in order to enrich racketeers within government and industry who colluded for unjust gains in these Dark Money crimes.

Thank you for your attention to this matter and for your efforts to bring the criminal politicians and tech oligarchs, who collude to engage in these crimes, to justice. We witnessed and suffered damages from an organized crime operation run by famous political figures and Silicon Valley tech oligarchs. We have not received any justice yet. **How will you help us?**

As we have been to your offices and/or met and/or spoken with Patricia Ritch, John Bennett, John Clemens, Duty Officer Dunne, David J. Johnson, and FBI Director Wray's and the Office of James Comey Washington, DC, their staff and other agents, we assume you have our contact information.

We wish to resolve the issue around this matter promptly.

The Victims Alliance

Obamaâ s Energy Department Raped U.S Manufacturing Companies And Destroyed An Auto Industry

By Kyle Winston- Detroit Inside News

Barack Obama was a vindictive narcissist who said â yesâ to every under-handed scheme that David Plouffe, Rahm Emmanual, Robert Gibbs, David Axelrod and John Podesta dragged into the Oval Office.

One such scheme was designed to provide crony campaign finance payola in the form of â Cleantech Cashâ and stock market pump-and-dumps for Obamaâ s Silicon Valley Oligarchs. This scheme, and others like it, are the subjects of the feature films: ***Too Big To Fail, Clinton Cash, Inside Job***, and other films about the corruption of public tax dollars. The 60 Minutes investigative segments called: ***The Cleantech Crash, Congress Trading On Insider Information*** and ***The Lobbyists Playbook*** go into great detail about how these complex and extreme crimes were operated by the highest level public officials in the land.

With such an overt set of crimes, you would think there would be a large number of arrests but, as the Snowden, Panama, Swiss and FISA leaks now confirm, dirty bosses at the FBI and DOJ were not only covering up these crimes, but profiteering off of them. The Attorney Generals in New York and California were being paid by the very criminals engaged in these crimes.

The victims hit hardest were the independent automobile manufacturers in America. They were solicited by Obama, and his cronies, to waste their lives, budgets, brands and futures on Obamaâ s green car scheme. It turns out they were just defrauded into being used as theater props and facades to run cover for the kick-backs behind Obamaâ s covertly hard-wired ***Advanced Transportation Vehicle Manufacturing*** and ***Loan Guarantee Programs.*** Only Obamaâ s insiders were ever intended to get the cash.

History proves that hundreds of car companies with better technologies, better business metrics, lower costs, safer defect records, far better debt ratios, more public demand, and hundreds of other advantages, were blockaded and sabotaged by Obama. Obama did this to protect his insider crony car companies Tesla and Fisker because they paid for Obamaâ s political campaigns. These facts are now indisputable. Hundreds of Congressional hearings and tens of thousands of media reports prove it beyond any doubt.

Bright Automotive, Zap Cars, XP Vehicles, Brammo, Eco-Motors, Aptera, VVC, Bannon Automotive, Local Motors, T3, Think, Biotrike, EV Innovations, Vectrix, Limnia, Revolution Motors, Kleenspeed, Electric Motors Corp, Alte, Phoenix Motors, Wrightspeed, Goodearth, Cooperative Energy, Elio, Transonic, VPG, Electrovaya, ElectroRides, MotorTrike, BG, Futuris, and and host of other domestic companies were lied to and defrauded by Obamaâ s U.S. Government.

Federal representatives solicited and encouraged these companies to spend years of their time, staff commitments, mortgages, leases, payrolls and expenses on these bogus Department of Energy programs. During the entire operation of these programs energy bosses Steven Chu, Lachlan Seward, Matt Rogers, Steve Spinner, and the rest of Obamaâ s lackeys, knew that the money would ***only ever*** go to Obamaâ s campaign financiers at Solyndra, Tesla, Fisker and a handful of insiders. The San Francisco FBI kicked in the doors of Solyndra because so much money was missing but FBI bosses ended the investigation when Solyndraâ s profits were found to lead straight back to Obamaâ s Oval Office. As we all now know, FBI Director James

Comey and Secretary of Energy Steven Chu were terminated for this corruption.

The abuse of these domestic applicants did not end with just the stone-walling and government blockades. It got far darker. The Obama Administration hacked, poisoned, blocked benefits of, spied on, black-listed and character assassinated any person from those outsider companies who cooperated with the investigations of Obamaâ s crimes.

Obamaâ s Energy Department Raped U.S Manufacturing Companies And Destroyed An Auto Industry

By Kyle Winston- Detroit Inside News

Barack Obama was a vindictive narcissist who said â yesâ to every under-handed scheme that David Plouffe, Rahm Emmanual, Robert Gibbs, David Axelrod and John Podesta dragged into the Oval Office.

One such scheme was designed to provide crony campaign finance payola in the form of â Cleantech Cashâ and stock market pump-and-dumps for Obamaâ s Silicon Valley Oligarchs. This scheme, and others like it, are the subjects of the feature films: ***Too Big To Fail, Clinton Cash, Inside Job***, and other films about the corruption of public tax dollars. The 60 Minutes investigative segments called: ***The Cleantech Crash, Congress Trading On Insider Information*** and ***The Lobbyists Playbook*** go into great detail about how these complex and extreme crimes were operated by the highest level public officials in the land.

With such an overt set of crimes, you would think there would be a large number of arrests but, as the Snowden, Panama, Swiss and FISA leaks now confirm, dirty bosses at the FBI and DOJ were not only covering up these crimes, but profiteering off of them. The Attorney Generals in New York and California were being paid by the very criminals engaged in these crimes.

The victims hit hardest were the independent automobile manufacturers in America. They were solicited by Obama, and his cronies, to waste their lives, budgets, brands and futures on Obamaâ s green car scheme. It turns out they were just defrauded into being used as theater props and facades to run cover for the kick-backs behind Obamaâ s covertly hard-wired ***Advanced Transportation Vehicle Manufacturing*** and ***Loan Guarantee Programs.*** Only Obamaâ s insiders were ever intended to get the cash.

Obama Accepted AT LEAST 21.6 Million in FOREIGN Donations for 2012 Re-Election

By Dean Garrison

-

This news broke Friday of last week, but, as is par for the course, it just wasnâ t big enough news to make most of your trusted news sources. Want proof? Do a Google search. You will find a few of those â redâ Newsguard sites covered the story if you dig deep enough in the search results, but the mainstream seemed to mostly ignore this even happened.

From Shepherd Ambellas:

According to reports circulating at the highest levels in Washington, former U.S. President Barack H. Obamaâ s political campaign received at least $21.6 million in illegal foreign campaign contributions during the runup to the 2012 presidential election.

The U.S. Justice Department announced on Friday that Malaysian businessman Low Taek Jho and former Fugees rapper Prakazrel â Prasâ Michel have been charged with conspiracy after allegedly funneling tens of millions of dollars into Obamaâ s campaign fund.

Latest: Bombshell Blackout: Obama Accepted AT LEAST 21.6 Million in FOREIGN Donations for 2012 Re-Election

According to David J Harris, â As you are probably aware, foreigners and foreign companies are forbidden by law to contribute to political campaigns. They are especially not allowed to funnel 21.6 million dollars from foreign donors to a campaign. The feds indicted Pras Michel, a rapper for the group â The Fugeesâ on Friday for funneling tens of millions of dollars to the 2012 Obama reelection fund. Jho Low was indicted last year on conspiracy charges related to a scam from which he will be facing charges that he bilked investors out of hundreds of millions of dollars. Low provided the money to Pras Michel.â

Here is the DOJ Report, in full:

Entertainer/Businessman and Malaysian Financier Indicted for Conspiring to Make and Conceal Foreign and Conduit Contributions During 2012 U.S. Presidential Election

A United States entertainer and businessman and a Malaysian financier were charged in a four-count indictment unsealed today in the District of Columbia for conspiring to make and conceal foreign and conduit campaign contributions during the United States presidential election in 2012, announced Assistant Attorney General Brian Benczkowski of the Justice Departmentâ s Criminal Division.

Prakazrel â Prasâ Michel, 46, and Low Taek Jho, 37, also known as â Jho Low,â were charged with one count of conspiracy to defraud the United States government and for making foreign and conduit campaign contributions. Michel also was charged with one count of a scheme to conceal material facts and two counts of making a false entry in a record in connection with the conspiracy. Michel appeared today for his arraignment before U.S. Magistrate Judge G. Michael Harvey in the District of Columbia. Low remains at large.

According to the indictment, between June 2012 and November 2012, Low directed the transfer of approximately $21,600,000 from foreign entities and accounts to Michel for the purpose of funneling significant sums of money into the United States presidential election as purportedly legitimate contributions, all while concealing the true source of the money. To facilitate the excessive contributions and conceal their true source, Michel paid approximately $865,000 of the money received from Low to about 20 straw donors, or conduits, so that the straw donors could make donations in their names to a presidential joint fundraising committee. In addition, Michel personally directed more than $1 million of the money received from Low to an independent expenditure committee also involved in the presidential election in 2012.

The indictment also alleges that by funneling campaign contributions through straw donors, Michel caused a presidential joint fundraising committee to submit false reports to the Federal Election Commission (FEC), including a false amended report in June 2013. The committeeâ s reports were false because they identified the straw donors, rather than Low or Michel, as the true source of the contributions. In addition, the indictment alleges that by contributing more than $1 million of the money he received from Low to an independent expenditure committee, Michel also caused that committee to submit false reports to the FEC, insofar as those reports identified Michel as the source of the contributions when, in fact, it was Low. The indictment further alleges that in June 2015, Michel submitted a false declaration to the FEC in which he claimed that he had no reason to conceal the true source of his contributions to the independent expenditure committee in 2012, even though Michel knew that the true source of that money was Low and that Michel had funneled the foreign money into the election.

Low was indicted previously, along with former banker Ng Chong Hwa, also known as â Roger Ng,â in the Eastern District of New York for conspiring to launder billions of dollars and to violate the Foreign Corrupt Practices Act. That case remains pending.

An indictment is merely a charge and defendants are presumed innocent unless and until proven guilty beyond a reasonable doubt in a court of law.

The FBIâ s International Corruption Squad in New York is investigating the case. Trial Attorneys Sean F. Mulryne and Nicole Lockhart of the Criminal Divisionâ s Public Integrity Section are prosecuting the case.

Do you think they will be questioning Barack Obama in this matter?

Of course not.

Letâ s not worry about Obama accepting 21.6 million in foreign contributions. **Letâ s just worry about those responsible for delivering the money.**

Do you think Obamaâ s people were so stupid that they didnâ t know that this money was illegally coming from foreign interests?

If you believe our former President is completely innocent in this matter then you must be a reality-denying, fantasy-loving, snowflake Democrat.

Do you think cheating is OK so long as it benefits your candidate?

Both sides seem to feel that way these days.

Do you think the DOJ will take this a step further and go after the beneficiary of this money?

Not in America unless that recipient was someone like our current President.

There is a different set of rules for liberals and conservatives these days. That is not opinion, it is truth.

Want proof?

Do a search for this topic on Google. You wonâ t find much for a story that SHOULD be all over the news.

Obama belongs in prison, but itâ s quite doubtful that will ever happen.

Obama And Biden's 'Green Energy Economy' is Benefiting Left-Wing Billionaires That Pay For Their Campaigns

Dem megadonors Bill Gates and Laurene Powell Jobs see green energy investments flooded with taxpayer cash

Bill Gates and Laurene Powell Job (Getty Images)

Collin Anderson

President Joe Biden's taxpayer-funded push to build a "clean energy economy" is benefiting the left's most prominent billionaire megadonors, including Bill Gates and Laurene Powell Jobs, a *Washington Free Beacon* analysis found.

Biden's Energy Department has in the last two months announced nearly $3 billion in loans to two electric battery companies, Redwood Materials and Ioneer, which are backed by seed funding from Gates, Jobs, and other left-wing billionaires. Now those billionaires, who have poured millions into the effort to win Democrats power in Washington, are likely set to see a handsome profit from their initial investment. Ioneer,

for example, won a $700 million loan from Biden and saw its stock price increase by 33 percent after the announcement.

Biden's Energy Department is funding Redwood and Ioneer through its Loan Programs Office, which is no stranger to controversy. Under former president Barack Obama, the office approved a $529 million loan to electric car manufacturer Fisker, which declared bankruptcy in 2013 and was subsequently sold to China. The office was largely dormant following Fisker's taxpayer-funded failureâ until Biden's so-called Inflation Reduction Act funded it to the tune of more than $300 billion. Congressional Republicans such as Sen. Tom Cotton (R., Ark.) warned that the money would create a "green energy slush fund"â predictions that are now proving true.

Biden's green energy grants are going to groups funded by the same people who poured money into dark money groups that helped get Biden elected. In July 2021, Redwood raised $700 million from a "carefully selected group of strategic investors," including Gates and Powell Jobs, who participated in the fundraising round through their investment firms. Ioneer, meanwhile, boasts Texas billionaire John Arnold as a major shareholder, according to an October SEC filing. In 2020, Gates sent $127 million to a liberal dark money network working to elect Democrats, while Powell Jobs gave left-wing candidates and political groups more than $2 million. Arnold is also active in liberal dark money circlesâ he gave one such group $13.5 million from 2016-2020.

The Energy Department did not return a request for comment. An Ioneer spokesman told the *Free Beacon* the company is "grateful for the Department of Energy Loan Programs Office's conditional commitment" but did not return questions on whether its influential investors helped it obtain that loan commitment. A Redwood spokeswoman said the company managed the loan application process "internally" but did not elaborate further.

Gates launched his green energy investment fund, Breakthrough Energy Ventures, in 2016. A who's who of deep-pocketed Democrats are tied to the fund: Arnold and fellow liberal billionaire John Doerr serve alongside Gates on its board, while failed presidential candidate Michael Bloomberg is an investor. Doerr is a top Obama foundation donor, and Bloomberg contributed more than $152 million to Democratic causes in 2020.

Powell Jobs's investment group, Emerson Collective, is much more secretive. *Bloomberg* in 2019 described it as a "quiet force in Silicon Valley" that operates "in near-total secrecy" thanks to Powell Jobs's "penchant for anonymous giving." Still, some of the multibillionaire Apple widow's investments make public wavesâ Powell Jobs used Emerson Collective to become the majority owner of the*Â Atlantic* in 2017.

For Daniel Turner, founder and executive director of energy advocacy group Power the Future, Redwood and Ioneer's billionaire backers are proof that the companies shouldn't need taxpayer funds to advance their operations.

"It's just remarkable that people who have such enormous wealth, cumulatively in the hundreds of billions of dollars, need the taxpayers to take the financial risk of their ventures," Turner told the *Free Beacon*. "If these are such good and sound investments, why don't they use their own cash?"

Neither Breakthrough Energy Ventures nor Emerson Collective returned requests for comment.

This is far from the first time Biden's efforts to advance green energy have benefited his donors. The Democrat last year awarded thousands of acres of public land to a solar energy company whose top executive helped him raise millions of dollars. The Biden administration has also publicly promoted green energy companies whose investors and board members led Clean Energy for Biden, a political group made up of

"clean energy business and policy leaders" that raised Biden millions of dollars. The group went on to push the Senate to pass the Inflation Reduction Act under the name "Clean Energy for America."

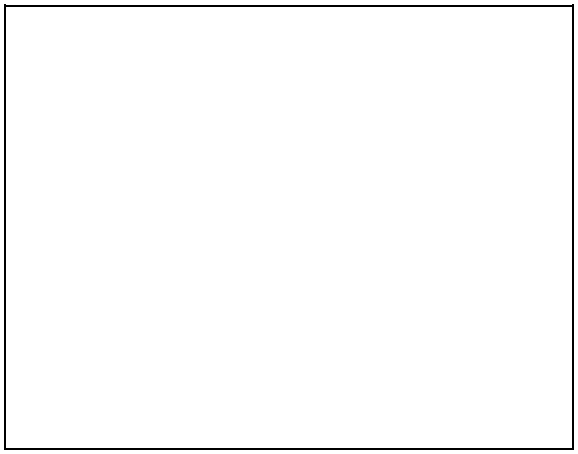
Submitted by Richard Ebeling via EpicTimes.com,

Since the economic downturn of 2008, the critics of capitalism have redoubled their efforts to persuade the American people and many others around the world that the system of individual freedom and free enterprise has failed.

These critics have insisted that it is unbridled capitalism, set loose on the world, which is the source of all of our personal and society misfortunes. We hear and read this not only in the popular news media and out of the mouths of the political pundits. We see it also in the election of a radical socialist to the leadership of the British Labor party, and a self-proclaimed â democratic socialistâ riding high in the public opinion polls for the Democratic Partyâ s nomination to the U.S. presidency.

The first observation to make is that many if not most of the social and economic misfortunes that are most frequently talked about are not the product of a â failedâ free enterprise. The reason for this is that a consistently practiced free enterprise system no longer exists in the United States.



The Heavy Hand of Regulation

What we live under is a heavily regulated, managed and controlled interventionist-welfare state. The over 80,000 pages of the Federal Register, the volume that specifies and enumerates all the Federal regulations that are imposed on and to which all American businesses are expected to comply, is just one manifestation of the extent to which government has weaved a spiderâ s web of commands over the business community.

The Small Business Administration has estimated that compliance costs imposed on American enterprise by this mountain of regulations maybe upwards of $2 trillion a year.

At the same time, the tangled web of corrupt government-private sector relationships is also reflected in the size and cost of special interest lobbying activities connected with the Federal government.

According to the non-partisan Center for Responsive Government, in 2014 there were almost 12,000 registered lobbyists working in Washington, D.C. Their job is to influence the writing of legislation that serve special interest groups attempting to obtain sectorial tax breaks, anti-competitive regulations or market restrictions, redistributions of wealth, or taxpayer funded subsidies and protections from the realities of free market competition and trade, or to advance various ideologically motived â causes.â

Spending Big Money to Plunder Others

The Center for Responsive Government, which tracks who lobbies and for what purposes and causes through the targeting of specific holders of or contenders for Federal elected office, including the Presidency and both Houses of the U.S. Congress, estimated that in 2014 lobbyists spent nearly $3.25 billion in the pursuit of privileges for some at the expense of others in society.

Just alone in 2013-2014, over $500 million dollars was spent on lobbying activity by the financial, insurance, and real estate sectors. Ideological and single-issue groups spent more than $352 million. Lawyers and lobbyists spent $151.5 million; health industry companies spent $142 million; and labor unions â investedâ $140.6 million on lobbying.

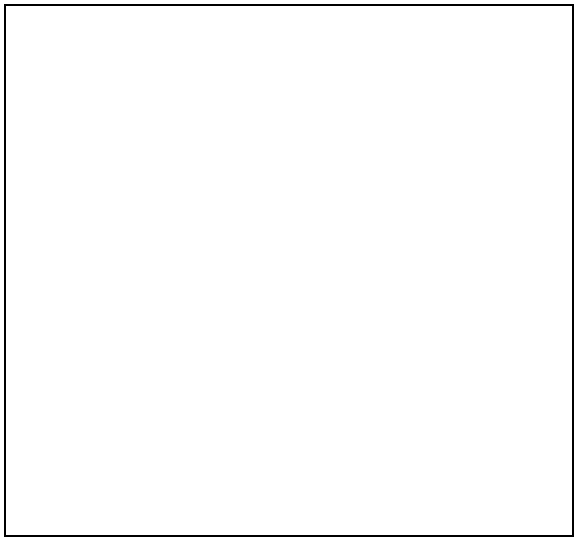
Communications and electronic companies spent $116 million; energy and natural resource sector, $115 million; agribusiness, $77 million; construction companies, $67.7 million; transportation firms, $61 million, and defense companies, $25.4 million.

Based on the Senate Office of Public Records, the Center for Responsive Government calculates that lobbyists spent close to $41 billion on lobbying activities over the last 15 years, since the beginning of the twenty-first century.

These billions of special interest-serving dollars have influenced and affected the spending of trillions of dollars of Federal government expenditures over the same decade and a half. The lobbyists work with and use those who hold high political office so the special interest and ideological groups who employ them can plunder many others in American society; they can be viewed as among the most successful enterprisers in the country.

The Best Politicians Money Can Buy

But the symbiotic relationship between politicians and special interest groups of all types does not begin or end with the formal lobbying for legislative, regulatory and fiscal privileges and favors in the halls of Congress and the White House in Washington, D.C.



It goes on all year round all over the country in the form of campaign and electioneering contributions to get those elected or reelected who can be depended upon to direct the powers of government in ways that interest groups and ideological activists desire and from which they hope to benefit.

Again according to the Center for Responsive Politics, in 2013-2014, individuals and PACS donated over $1.6 billion to 1,671candidates of both major political parties running for office in the Senate and the House of Representatives. Democratic Party candidates received $736 million, while Republican Party candidates received $901.5 million.

While it may seem unseemly to suggest such a thing, these amounts for legislative lobbying and campaign funding, of course, do not include more millions of dollars that grease the palms of those in political power or who want to be in those lofty positions that represent funding that are outside the official channels in the form of â gifts,â travel junkets, off-the-books expense accounts, and out-and-out bribes of one type or another.

The real world of corrupted and corrupting crony capitalism includes more than lobbying expenditures and campaign contributions to have ringside seats in the halls of political plunderland.

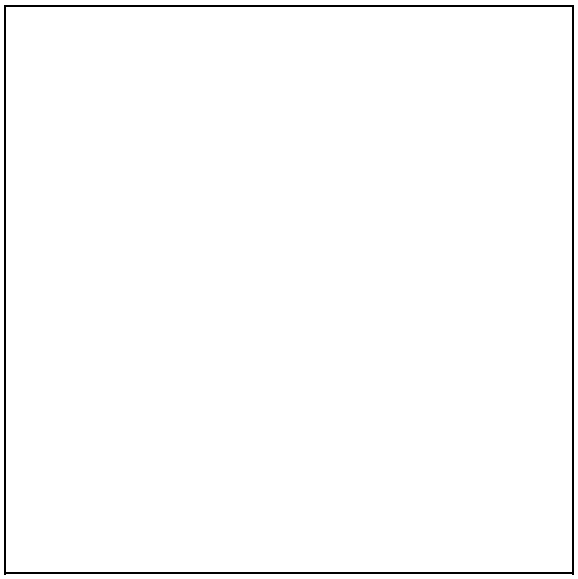
The media has been in a frenzy with the revelations that the Volkswagen automobile company manipulated information about emission standards on its diesel vehicles to deceive environmental regulators in both the United States and Europe. This is being portrayed by many in the media as another example and â proofâ of the consequences of unbridled capitalism, when left outside of sufficiently tight and demanding government regulation and intense oversight.

Government Partnerships and the Volkswagen Scandal

However, a closer look shows that this is, instead, another example of the result arising from government, business and labor union â partnerships.â In Germany, labor union representatives sit on the executive boards of large companies and corporations that work closely with various levels of the German government to attain political and â socialâ goals and objectives very different and separate from what a truly free market company does in pursuing peaceful and honest profits in the service of consumer demand on open, competitive markets.

On September 25, 2015, *The New York Times* quoted a former Volkswagen executive who said:

> *â Thereâ s no other company where the owners and the unions are working so closely together as Volkswagen. [Volkswagen] guarantees jobs for over half the supervisory board. What management, the government and the unions all want is full employment, and the more jobs, the better. Volkswagen is seen as having a national mission to provide employment to the German people. Thatâ s behind the push to be No. 1 in the world. Theyâ ll look the other way about anything.â*



In such a politicized market economy, working for and serving â nationalâ and â socialâ interests become the guiding principle of business decision-making. Not only does it lead to wasteful and inefficient economic business operations having less or sometimes nothing to do with cost-effective management and allocation of labor and resources to make better, newer and less expensive products, it also corrupts the individuals participating in these activities.

Breaking one or more regulatory standards imposed by government on these enterprises is merely one way of â doing businessâ to advance other political goals such as â jobsâ and â full employmentâ that are expected as part of the â partnershipsâ with local and national-level politicians and labor union leaders.

The only thing expected from the business enterprises in these intricate political webs is: Donâ t get caught. If you do, then your political partners become like Captain Renault, the prefect of police in the 1942 movie â Casablanca.â When Renault orders the closing of Rickâ s CafÃ©, the owner asks him on what grounds. Renault declares that he is â shocked, shockedâ to discover that there is gambling going on in the cafÃ©. At which point the roulette coupÃ© appears with a stack of franc banknotes in his hand and says to Renault, â Your winnings, Sir.â

Volkswagen got caught, and will pay handsomely in financial and other penalties that will, no doubt, be imposed by the U.S. and European governments. And all the time, Volkswagenâ s political partners, especially in Germany, who fostered and worked with the company to play its part in the â gameâ of government interventionism that has nothing to do with market-oriented enterprise, will sanctimoniously condemn the greedy and â selfishâ conduct of profit-hungry businessmen.

What all these examples and facts about lobbying activities, campaign funding and government-business partnerships highlight is the pervasive extent to which â capitalismâ as it now exists in the United States or Europe â or in fact all other parts of the world â has nothing to do with free market, laissez-faire capitalism.

Corrupting Hand of the Interventionist State

The Austrian economist, Ludwig von Mises, described this twisted, corrupted, and politicized capitalism over 80 years ago, in 1932, in an essay on â The Myth of the Failure of Capitalism,â published shortly before the coming of Hitler and the Nazi movement to power:

> *â In the interventionist state it is no longer of crucial importance for the success of an enterprise that the business should be managed in a way that it satisfies the demands of consumers in the best and least costly manner.*
>
> *â It is far more important that one has â good relationshipsâ with the political authorities so that the interventions work to the advantage and not the disadvantage of the enterprise. A few marksâ more tariff protection for the products of the enterprise and a few marksâ less tariff for the raw materials used in the manufacturing process can be of far more benefit to the enterprise than the greatest care in managing the business.*
>
> *â No matter how well an enterprise may be managed, it will fail if it does not know how to protect its interests in the drawing up of the custom rates, in the negotiations before the arbitration boards, and with the cartel authorities. To have â connectionsâ becomes more important that to produce well and cheaply.*
>
> *â So the leadership positions within the enterprises are no longer achieved by men who understand how to organize companies and to direct production in the way the market situation demands, but by men who are well thought of â aboveâ and â below,â men who understand how to get along well with the press and all the political parties,*

especially with the radicals, so that they and their company give no offense. It is that class of general directors that negotiate far more often with state functionaries and party leaders than with those from whom they buy or to whom they sell.

â Since it is a question of obtaining political favors for these enterprises, their directors must repay the politicians with favors. In recent years, there have been relatively few large enterprises that have not had to spend very considerable sums for various undertakings in spite of it being clear from the start that they would yield no profit. But in spite of the expected loss it had to be done for political reasons. Let us not even mention contributions for purposes unrelated to business â for campaign funds, public welfare organizations, and the like.

â Forces are becoming more and more generally accepted that aim at making the direction of large banks, industrial concerns, and stock corporations independent of the shareholders . . . The directors of large enterprises nowadays no longer think they need to give consideration to the interests of the shareholders, since they feel themselves thoroughly supported by the state and that they have interventionist public opinion behind them.

â In those countries in which statism has most fully gained control . . . they manage the affairs of their corporations with about as little concern for the firmâ s profitability as do the directors of public enterprises. The result is ruin.

â The theory that has been cobbled together says that these enterprises are too big to allow them to be managed simply in terms of their profitability. This is an extraordinarily convenient idea, considering that renouncing profitability in the management of the company leads to the enterpriseâ s insolvency. It is fortunate for those involved that the same theory then demands state intervention and support for those enterprises that are viewed as being too big to be allowed to go under . . .

â The crisis from which the world is suffering today is the crisis of interventionism and of national and municipal socialism; in short, it is the crisis of anti-capitalist policies.â

How different is today, in its essential qualities, from Misesâ description of the interventionist state and government-business â partnershipsâ during those years between the two World Wars?

Real Free Markets Mean Privileges for None

If what we have today is what is widely referred to as â crony capitalism,â then how might we define and explain what a truly free market capitalism would be like? Let me suggest that the following seven points capture the essence of a real free economy:

1. All means of production (land, resources, capital) are privately owned;
2. The use of the means of production is under the control of private owners who may be individuals or corporate entities;
3. Consumer demands determine how the means of production will be used;
4. Competitive forces of supply and demand determine the prices of consumer goods and the various factors of production including wages of workers;
5. The success or failure of individual and corporate enterprises is determined by the profits and losses these enterprises earn in free competition with their rivals in the market place;
6. The free market is not confined to domestic transactions, and includes freedom of international trade;
7. Government is limited in its activities to the enforcement and protection of life, liberty, and honestly acquired property against, violence and fraud.

In a real free market, there is no place for politicians to offer privileges and favors, because there are none to sell. There is no motive or gain for special interest groups to spend huge sums of money in campaign contributions or lobbying expenses, because political benefits for some at othersâ expense cannot be bought.

Wasteful and corrupting â partnershipsâ between government and business enterprises cannot occur because political authority is restrained from any task other than the securing of each individualâ s right to his life, liberty, and peacefully acquired property.

As Ludwig von Mises said, the political and economic crises through which the world suffers is not the crisis or failure of the free market. No, it is the crisis and failure of the interventionist-welfare state, and its anti-free market capitalist ideology.

How Tesla and Solyndra were total crony capitalism kick-back scams:

Have you seen the, now famous, 60 Minutes episode? Take a look at THE CLEANTECH CRASH on CBS News 60 Minutes Website.

Here is the story, that you have seen in the news lately, about the group known as: **â The Silicon Valley Cartel, the biggest scam in tech.â**

As an example of one of nearly a hundred attacks on U.S. taxpayers, and voters, by corrupt Senators, and their campaign financiers, take a look at this example case:

In a case of â awkward timingâ , During the Iraq War, Team-6 was asked, via Congressional invitation and Congressional Commendation (published in the Federal Register by the United States Congress), to develop, for the United States, via the U.S. Department of Energy, the technology requested as the back-up plan, for when, and if, the Middle East went â sidewaysâ . (If you have been reading the news, you will have noticed that has already happened) Team-6 won federal and industry commendations, federal grants, historical patents, federal contracts, industry acclaim U.S. Congressional commendation in the Federal Register, built and demonstrated numerous versions of the technology. The technology is an instant-swap/recharge battery that runs longer than almost any other battery, can use almost any one of over 3000 organic material fuel compositions, it leaves only drinkable water as itâ s waste, needs no new infrastructure and can be created entirely from domestic materials including household kitchen waste. All of the technology is already fully functional, globally, in industrial uses.

Not only did the technology work, it has been deployed by competing interests globally in over $300M worth of contracts. 100% of the technology is in use in the world today.

Alas, the technology Team-6 developed was the one technology that, not only, obsoleted the Cartelâ s scam but, in hindsight, exceeded it, by many paradigms in safety, cost, national security, ease-of-distribution, consumer access, consumer price-point, and a vast number of other metrics. The Cartel had taken over the lithium battery industry, which relied entirely on foreign incursions, toxic chemicals and off-shore mining deals, in advance, but nobody told Team-6 before they got roped into building the â lithium-killerâ .

This journalist says it best: â With this fuel cell technology, If UPS, FedEx, a natural gas line or a water line, could reach your home, then your home was already set-up to use clean, sustainable energy that you had control over. The Cartel didnâ t like that, because that meant that 3.4 billion consumers could

already compete with them. â We couldnâ t have consumers doing things on their own, now could weâ ?â

The Cartel politicians, and their campaign backers, went to war over it.

In retribution for assisting federal investigators, and for Team-6 â building a better mousetrapâ , the corrupt billionaires hired Gawker Media and Gizmodo (SEE THIS LINK FOR DESCRIPTION OF THIS GROUP), a â troll farmâ blogging service and â sock puppetsâ , to embed the word â scamâ next to every mention of Team-6 â s name, and staff, on the internet, HR databases and network services, as a character assassination program, in order to seek to terminate income flow, in retribution and revenge for Team-6 helping Congress and law enforcement interdict the political and financial crimes.

Click This Link, BELOW, to download an adobe .pdf file with the latest press clippings about Gawker lawsuits and investigations: (GAWKER MEDIA EXPOSED AS HIT-JOB FRONT FOR SILICON VALLEY CARTEL)

Gawker and their Silicon Valley Campaign partners, who own Google, then had Google lock the attack on the front page of Google, refusing to remove it after numerous legally correct requests by lawyers, in order to accelerate the damage to Team 1. The FBI, The San Francisco Police Department, The SEC, The OSC, The GAO, The FTC, The U.S. Senate and other agencyâ s, are now investigating this political and economic retribution attack on Team-6 and active case numbers now exist for this, and related matters, with those agencies. Google, and the coordinating parties, have now been tracked and confirmed, by digital forensics, as fully complicit and now bear the brunt of all loss liabilities to Team-6 . In addition to the recent Sony, Snowden, HSBC and other leaks; forensic IT tracking data; Silicon Valley and Washington DC whistle-blowers ; the sheer volume of the attacks; and their exclusive, IT data metrics confirmed, locked position on Google, prove the point of a coordinated and consciously manipulated attack, thus holding Google, and the related Cartel entities, liable for all losses and damages. In England this is called â hoisted by your own pitardâ . English and French courts are discussing litigation against Google, with this case as one of the example metrics of Googleâ s manual search results manipulation to attack adversaries. Over 400,000 pages of evidence have now been acquired.

In short: Team-6 engineered, designed, built, demonstrated, delivered, patented and began marketing technologies that the Cartel either asked to look at, then took, without compensation, or sabotaged because they beat the Cartel technologies. After millions of dollars of federal patent office research, not a single Cartel technology has proven to have preceded Team-6 technologies. In every single case, it has been proven that this Cartel of campaign finance manipulators, asked, in writing to look at Team-6 technology, and then, either: rejected it in writing as â unworkableâ , yet they then copied and sold 100% copies of the â unworkableâ technologies as their own; or, sabotaged the technology to prevent it from affecting their market. Team-6, and other companies, who suffered the same attacks, are seeking fair, equally resourced public federal court & media hearings, to resolve the issues.

This was particularly ironic, since some of the Cartel â bad guysâ have now been arrested, indicted and/or placed under FBI investigation for actually running a real embezzlement scam. The FBI Solyndra Raid, the U.S. Senate investigations and 14 other criminal investigations have put severe heat on the corrupt technology investors and politicians who Team-6. Per data exposure from Snowden, Greenwald, etc., Per Snowden/Greenwald/HSBC/Sony leaks, federal investigators have been found to have had every suspect under long-term extensive surveillance and now, their state and federal prosecutions are only a matter of time.

Team-6 will, now, always fight the good fight against criminal behaviour, bad ethics and public policy corruption. Their credentials, references, broadcast news videos and past project evidence, clearly counter-measure any of the attack false-hoods presented by those people. The GAO, OMB, FBI, U.S.

Treasury, Washington Post, and hundreds of university research groups, calculate the loss, to the United States and the American taxpayer, from these crimes, at well over one trillion dollars of losses.

By Dan Epstein

News flash: Government subsidies and special-interest favors go hand in hand.

The latest example comes from a federal green-energy loan program. Last month, the DC District Court **ruled** that Cause of Action, where I am executive director, can **proceed with a lawsuit**against the Department of Energy. Weâ re suing the federal government for the blatant political favoritism in its $25 billion â Advanced Technology Vehicle Manufacturing Loan Program.â

In principle, this taxpayer-funded program was supposed to support the manufacture of energy-efficient cars. In practice, it rewarded a select few well-connected companies.

Since the program was created in 2008, numerous businesses have applied for its taxpayer-backed financial support. Yet only a small number were approved. Among the lucky few were two electric car manufacturers: **Tesla**and **Fisker**.

Both companiesâ political connections run deep, especially Teslaâ s. The companyâ s founder, Elon Musk, was a **max donor** for President Obama. One of its board members, **Steven Westly**, was appointed to a Department of Energy **advisory board**. And another Obama bundler, Tesla investor and adviser Steven Spinner, **secured employment** in the departmentâ s Loan Program Officeâ the very office that gave the company a taxpayer-backed loan.

Fisker also has friends in high places. The company, which has since **gone bankrupt**, **was backed** by a San Francisco **venture capital firm** whose senior partners **donated millions** to the 2008 Obama campaign and other Democrat causes. **One partner**, **John Doerr**, parlayed his support into a seat on the Presidentâ s Council of Jobs and Competitiveness.

Such connections can allow a company to exert political pressure to enrich itself. Unsurprisingly, Department of Energy emails show that such pressure was rampant in its loan programs.

Thereâ s no shortage of examples. The departmentâ s leadersâ including then-Secretary of Energy Steven Chuâ repeatedly promised to deliver results to politicians like Rep. Steny Hoyer (D-Md.) and Sen. Harry Reid (D-Nev.). **One emails reads**, â DOE has made a political commitmentâ to approve a companyâ s loan. Another says the â pressure is on real heavyâ from none other than Vice President Joe Biden. And still **another shows** an employee asking, â whatâ s another billion anyhow?â

Unsurprisingly, the Obama administration gave Tesla and Fisker preferential treatment, and then some.

The Department of Energy revised its review process in order finish the companiesâ applications faster. The government **gave them extraordinary access** to its staff and facilitiesâ even to the point of having government employees personally walk them through the loan application and approval process. The department ignored its own lending rules in order to approve the companiesâ loans. And it **renegotiated the terms of some loans** after the companies could not keep their original commitments or were experiencing financial difficulties. Tellingly, Fisker has since gone out of business, despite receiving over a billion dollars in loans through this federal program.

Now contrast this preferential treatment with what happened to XP Vehicles and Limnia, neither of which have the same political connections. (My organization is suing the Department of Energy on their behalf). The two companies partnered to manufacture an energy-efficient sport utility vehicle that would have competed with Tesla and Fiskerâ s cars. They applied for loans in 2008 and 2009 under the same loan program.

The department refused them bothâ and it used bogus reasons to do so.

For starters, the department made claims that were laughably false. To take one example: It rejected XPVâ s application because **its vehicle was powered by hydrogen**. It was an electric SUV. It also raised objections that it didnâ t raise with other companies whose applications were approved. For instance: The bureaucracy **criticized** the proposed all-electric vehicle for not using a specific type of gasoline. Yet Tesla and Fisker received the loans despite producing similar all-electric cars.

In light of these obvious problems and hypocrisy, both companies presented the Department of Energy with detailed rebuttals. Yet the government failed to respond. To this day, both XPV and Limnia are awaiting a satisfactory reply. In the meantime, **XPV has gone out of business**, unable to compete against its politically connectedâ and subsidizedâ rivals.

This casts the Department of Energyâ s loan program in a new light. It was sold to the American public as a means of promoting energy-efficient vehicles. Instead, it was used to benefit a select few well-connected companies. It was a blatant crony handout, paid for by the U.S. taxpayer.

Sadly, similar examples are widespread in Washington. Thatâ s no surprise considering the feds spend **roughly $100 billion a year** in taxpayer-funded handouts to businesses. This breeds the sort of government-business collusion Americans think is rampant in Washington. In fact, **over two-thirds of likely voters** think the federal government helps businesses that hire the most lobbyists, shake the right hands, and pad the right pockets. Theyâ re right.

This points to a simple conclusion: Politicians and bureaucrats shouldnâ t use the publicâ s money to pad private companiesâ bottom lines. As the Department of Energyâ s green-vehicle loan program shows, the capacity for corruption is immenseâ and inevitable.

Epstein is executive director of Cause of Action, a government watchdog.

â This was an organized crime operation, involving state and federal employees, which cost the taxpayers, and American business, a record-breaking amount of losses, as well as massive damage to the public policy process..â â Federal Investigator â GAO/Treasury

.

â If corrupt politicians, and their financiers, donâ t mind having the FBI, and 20 other enforcement agencies, up their back-sides, for the rest of their lives; along with the news

media, and the voters, then they should probably keep doing these sorts of crimesâ ¦â Senior Reporter â Washington Post

How did the tide turn?

In the old days, when this all began, state and federal agency people would first think:

â How can we keep the politicians from getting upset? Weâ d better cover this up!â

In the new era, with a national election just around the corner, the lowest Congressional approval rate in history, the dawn of the *Age of Transparency* and leaked documents dropping like rain, from every sector, the agencies are now thinking:

â How can we keep the voters from getting MORE upset? Weâ d better fix this properly!â

---

As one CEO said: *â Of Course, in the Case of Team 1; Elon Musk, John Doerr and Eric Schmidt probably love us more than life itself. It is hard to imagine that they were the people who led the attack in this one particular case we can think ofâ ¦.but who knows, we live in interesting times.â*

But, for discussion purposes, letâ s say there were some billionaire politico types who thought your technology was obsoleting their technology and who found that your team kept one-up-ing them. If they go

How Do You Fight Back When Large Corrupt Entities Attack You:

Your adversaries will hire private investigators known as â Opposition Researchersâ . Regular people call them *â hit-menâ* . From the famously vindictive Sidney Blumenthal, to the notorious Richard Berman, to unknown college kid junior â hit-menâ in training; when they come for you it will be harsh, massively financed and driven by the madness of power-hungry campaign technology billionaires.

Your saving grace, though, will always be this: The *â bad guysâ* are forced to operate in darkness and stealth, once exposed to the light, they will wither and crawl away. In this new *Age of Transparency*, the ability to shed light on bad guys is more potent than ever! Look to major journalists, social networks and carbon-copy every law enforcement agency, so everyone knows what is going on, and so that no single entity can â stone-wallâ or cover-up.

Tips for Tech Companies Under Attack â

1. Cooperate with every law enforcement agency request. Every law enforcement agency will have an interest in terminating felony-grade law-breaking.

2. When they seek to destroy your reputation. Prove them wrong in public. In our case, the volume of great **references** and **broadcast news acclaim**, posted on this site, counters any credibility attacks. They will try to spin the phrase â scamâ or â not credibleâ into their attacks. Prove them wrong with the facts. Offer to meet them in any federal court or live TV debate to prove the facts. If the â bad guysâ are involved in crime, be sure to show those facts in your public debate, so that people consider the source of the attacks. It isnâ t possible to take a considered read of our references and proven deliverable documentation and not realize that any â scamâ attack media/blog clips are fabricated by the attackers. In our case, we have seen law enforcement records and investigator documents proving severe felony-level crimes were engaged in by the people suspected of attacking our Team. We are extremely confident about who will be looking bad when everything is all-said-and-done. In todayâ s total information world, you can hire thousands of services that can track the off-shore tax evasion accounts, escort services, political bribes and illegal PAC groups, kick-backs, insider trading and other criminal actions that any criminal billionaire, that is attacking you is involved in. If you find such information, help the law enforcement people by delivering it to all of them. The level of felony crimes, these kinds of people get involved in, are â felony-grade embezzlement and racketeering mattersâ , according to the FBI. They are going to get in pretty big trouble. In the cases where they used taxpayer money to stage their crimes, they are going to get in Super Big trouble.

3. Sue them. There are now contingency law firms who will cover the costs of going after big bad guys in exchange for a percentage of the judgement. For example: Many people, and countries, have now proven that Google rigs itâ s search engines to harm itâ s adversaries. If Google did that to you, the technical proof now exists and you can win in court and get compensated for the damages they caused you.

4. Watch out for â molesâ . Crazy rich people have private eyeâ s and ex-employees that they pay to get a job at your company. They pretend that they are helping you, then they sabotage your effort. Consider past jobs that future employees had with your attackers.

5. Watch the news coverage for exposes about crimes that your attackers are suspected of being involved in and contact others that were harmed by the attackers. Form a support coalition with others that were damaged by the attackers.

6. Read about who does hired character assassinations, and how they do it, at **THIS LINK** and watch for the early signs of the attacks.

7. To understand the process, watch some of the movies about how the bad guys sabotage: Francis Coppolaâ s: **Tucker, A Man and His Dream;** Greg Kinearâ s**: Flash of Genius,** and read some of the history of the â tech take-downsâ T**HIS LINK http://wp.me/P1EyVm-xH**

8. Stay on the â side of the Angelsâ . Good eventually wins over evil. In this new â Age of Transparencyâ , evil is losing faster than ever.

9. As punishment against you, rich political campaign backers will try to have their federal lackeyâ s change the law to hurt you. If you are a tech group, for example, the â bad guysâ , might organize to suddenly try to change the patent laws so that your business is destroyed. When billionaires put bribes in the right pockets, they accomplish sweeping policy change. Donâ t let that happen. Expose the â whoâ and the â whyâ in such tactics.

10. Consider Quid-Pro-Quo. In many countries the rule is: â if they do it to you, you have every right to do it back to themâ

11. Watch out for â honey trapsâ in your activities and in on-line sites. Read the Snowden/Greenwald reports on what â Honey Trapsâ are.

12. The Bad Guys are usually very involved in politics because they like to control things. In order to control politics they own many stealth tabloid publications where they can order attack stories written about you. Some of these kinds of people own **famous online media tabloids** (ie: Gawker Media Group) and **stock tip publications** which are really just shill operations for their agendas and attacks. Identify these publications and partner with every person, or company, who they have coordinated attacks on in the past. Read about their attacks on inventor Mike Cheiky, Gary D. Conley, Aaron Swartz, Stan Meyer, Preston Tucker **and hundreds of other innovators** (http://wp.me/P1EyVm-xH) that they wanted â out of the wayâ .

13. Certain â special interestsâ own, and control, the content on Google, Reddit, Hearst Publications, Motley Fool and other â publication outletsâ . You will only see glowing reports about the â bad guysâ on those. You will see no negative reports about the â bad guysâ , allowed on those sites, and every bad report about you will be manually up-ranked and locked into the top slot on their page in order to damage you. The down-side for the bad guys, though, is that the internet remembers everything. You can now prove, in court, showing technical and historical metric data, that they intentionally locked and damaged you and you can get compensated for the damages.

14. Every single troll blog comment, every pseudo attack article about you, everything is already tracked back to the actual author. The NSA have done it, that is well known. NO amount of TOR, or VPN on top of VPN or stealthing software can hide a troll attacker any more. What is only now becoming known is that the official, and also the independent hacker, Chinese and Russian spies have got almost all of that information too. Hackers have broken into Sony, The White House, All of Target, All of the Federal Employee Records, everything. In a court case you can now, legally, subpoena NSA records to sue the attackers. Others, hearing of your filed case, may just show up and give you the information. Attackers cannot hide behind anonymity any more. Those who were blogging that you *â sleep with goatsâ* and *â eat unborn childrenâ* can now be found out and delt with.

15. Do you have on-line stores and paypal or credit card accounts that take payments at those stores? Trying to make a little cash on the side? Confused about why you never get any orders? The attackers have DNS-re-routed your stores and payment certificates, spoofed your sites and turned off all of your income potential from those on-line options in order to damage your economic potential. Illegal? Yes. Happening to people every day? Yes. Get professional IT services to document the spoofs, and re-routes, and sue the operators of those tactics that are attacking your revenue stream.

16. It costs $50,000.00 to bribe a Senator. Some of these tech billionaires earn that much in 3 minutes. Beware of your Senator. Senators take stock options in tech companies as bribes, watch for linkages. See the **60 Minutes** Episode called: **Congress Trading On Insider Information.**

17. Want a job? Forget about it! The bad guys went into Axciom, Oracle, SAP, and all of the Human Resources and Recruiter databases, and put â red flag noticesâ on your profile. You will get some great first interviews, but when they run your back-ground check, you will never hear back from that interviewer again. You got â HR Black-listedâ , in retribution, for accidentally bothering a campaign billionaire. Hire an HR service to look and print out your false â red flagâ HR data-base inserts and use those as evidence in your lawsuit.

18. (This one, submitted by a Washington Post reporter): They will anonymously put all of your email addresses on blacklists, and watch-lists, so that you canâ t use services like craigslist, cafe press, zazzle or other on-line services to make money. If you try to open any accounts on those services, you either wonâ t be able to create an account or, you will get an account, but all of your orders will get â spoofedâ into oblivion so you canâ t make any money. The attackers believe that by causing you as much economic hard-ship as possible, they can get retribution for what-ever they have perceived that you have done to offend them. Again, use an IT forensic services group to get the data to show this is happening, trace it, and sue the perpetrators.

19. Their actions provide the proof. When you look out on the internet and add up the pronouncements of â scamâ , â sleeping with goatsâ , etc. The volume of attack items proves that no mere mortal, or company, could have acquired that much media unless it was placed there by very wealthy parties. Everyone now knows that the web is controlled. The volume of attacks can often prove that those attacks are fabricated. Additionally, IP Trace Routing and digital tracking now can prove theattackers manipulation of your data, email and website traffic. One of your best sets of evidence will come from the attackers, themselves. The bad guys always leave a digital trail of bread-crumbs leading right back to themselves. You can hire an IT company to build a â tracking arrayâ comprised of hundreds of websites which are bait to catch them in the act. Regarding: Paranoia vs. documented evidence. If you, and others have experienced the tactics, and the police have recorded the tactics being used against you, it isnâ t paranoia to be cautious.

Do billionaires really do extreme attacks, like these, on average American citizens?

What do you think â bad guysâ would do to steal a Trillion Dollars?

We just heard from another federal agency. Federal law enforcement, private investigators and certain news journalists can now prove, beyond a shadow of a doubt, with no â ifsâ , â andsâ or â butsâ that certain Silicon Valley billionaires engaged in organized crime activities and, while doing those crimes, attacked a number of parties.

These suspects are doing everything in their power, and spending vast amounts of money, to prevent the requested public hearing, before a Special Prosecutor, in Washington, DC to show the taxpaying public the

acquired evidence.

Obama's Energy Dept. Crony Slush Fund

Bob Beauprez

|

Share Tweet

Newly released communications regarding the loan approval for Solyndra, the now failed California solar energy company, show direct intervention by an Energy Department adviser and Obama campaign fundraiser, and raise new questions of possible involvement by Rahm Emanuel and the President. As more is learned, it becomes increasingly clear that the Administration used the Stimulus, and specifically the green energy loan program, as a campaign slush fund to distribute billions of dollars like party favors to supporters and to grandstand for re-election to a perceived constituency.

By mid-2009, the White House was obsessing to make headlines with an announcement of a $535 million loan to Solyndra as the first of many green energy loans in the DOE's pipeline that would be funded by the recently passed Stimulus. Initially the staff tried to schedule an announcement by Obama, and later as approval was delayed, they shifted to the Vice-President.

"Ron said this morning that the POTUS definitely wants to do this (or Rahm definitely wants the POTUS to do this?)," a White House staffer told an Obama scheduler on August 17, 2009 according to *The Washington Post*. This was a reference to Ron Klain, Chief of Staff at that time for the Vice-President. "Rahm" refers to Rahm Emanuel, Chief of Staff to the President.

The Solyndra loan was finally approved in September 2009 over a plethora of warnings and objections from within the Department of Energy, the Office of Management and Budget, and numerous private and solar industry experts. Following the company's collapse, questions have haunted the White House of possible political corruption and cronyism as investigations revealed that executives and investors in Solyndra were also significant donors to the Obama campaign with repeated access to top White House officials. In addition, critics charge that the administration disregarded objective financial analysis, and blindly threw billions of taxpayer dollars at green energy companies like Solyndra with little chance of success.

Oblivious to the warnings from his own White House advisers that the company was in serious trouble and would run out of cash in September, 2010 (and it did), Obama visited the Solyndra headquarters in May 2010 and hailed it as "leading the way toward a brighter and more prosperous future."

The Washington Post is also reporting that Steve Spinner, a major Obama 2008 campaign fundraiser, later appointed by the White House to "advise" the Department of Energy regarding the green energy loan program, applied heavy pressure on DOE officials for approval of the $535 million loan guarantee for Solyndra.

"How (expletive) hard is this? What is he waiting for?" Spinner wrote to a DOE official by email on Aug. 28, 2009 questioning why the Solyndra application was not already approved. "I have the OVP (Office of the Vice-President) and the WH (White House) breathing down my neck on this. They are getting itchy to get involved."

Later the same day, Spinner asked the same DOE official to "walk over there and force him to give you the answer."

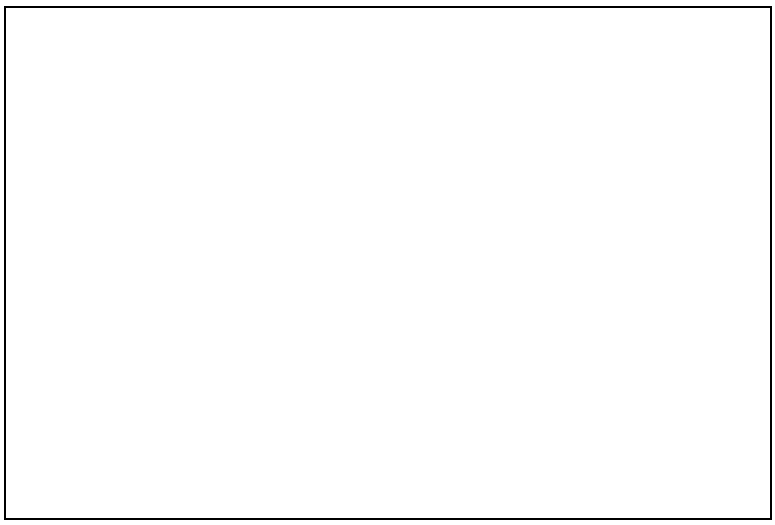
In another exchange just minutes after getting an email from Solyndra, Spinner fired off a message to the DOE officials asking if the White House budget office (OMB) had completed their review. "Any word on OMB? Solyndra's getting nervous," he wrote.

The loan was pushed through, and on September 4, 2009 Joe Biden announced by video link the deal as the "unprecedented investment this Administration is making in renewable energy and exactly what the Recovery Act (Stimulus) is all about."

Spinner's involvement is in direct contradiction of previous representations by the DOE. Spinner had specifically recused himself from the Solyndra application because his wife's law firm, Wilson Sonsini Goodrich & Rosati, represented the company on the DOE loan and pocketed $2.4 million in legal fees for their efforts.

The AP reports that an administration official, speaking on condition that he not be identified because of ongoing investigations in the evolving scandal, said that Spinner "clearly was actively involved in facilitating between DOE and OMB."

Joe Biden was partially correct â unfortunately. Solyndra is typical of what the billions of Stimulus dollars tossed around by the Obama Administration was "all about" â about waste, cronyism, and corruption. The taxpayer is on the hook for $535 million, but before this is done some once big shots in Washington will deservedly be cut down to size.



Obama Legacy: List of Failed Obama Green Energy & Solar Companies: Losses in the Billions for Taxpayers. None Succeeded.

Obama failed green energy companies list below

Obama Told America that his Green Investments Would Take The Country Forward but Instead all of them Are Going Belly Up and Taking Jobs And Taxpayer Cash With Them

---

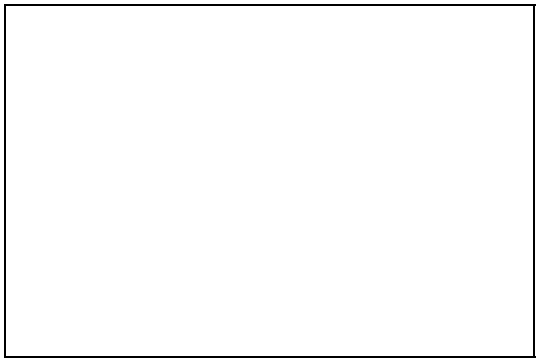
â ¢ ELECTRIC CAR BATTERY MAKER A123 SYSTEMS HAS FILED FOR BANKRUPTCY AFTER $249 MILLION IN TAXPAYER SUPPORT

A123 Files Bankruptcy â Another Obama Green Failure

Today, Taxpayer-Backed A123 Systems, A Maker Of Rechargeable Lithium-Ion Batteries For Electric Cars, Filed For Bankruptcy. â A123 Systems Inc. (AONE), a maker of rechargeable lithium-ion batteries for electric cars, filed for bankruptcy after failing to make a debt payment that was due yesterday. The company listed assets of $459.8 million and debt of $376 million as of Aug. 31 in Chapter 11 documents filed today in U.S. Bankruptcy Court in Wilmington, Delaware. Chapter 11 is the section of the Bankruptcy Code used by companies to reorganize.â (Dawn McCarty and Craig Trudell, â Electric Car Battery Maker A123 Systems Files Bankruptcy Papers,â **Bloomberg Businessweek, 10/16/12)**

A123 Systems Has Posted At Least 14 Straight Quarterly Losses With Shares Falling 85 Percent This Year. â A123 has posted at least 14 straight quarterly losses. Its shares have fallen 85 percent this year to 24 cents at yesterdayâ s close in New York and traded at 16 cents at 8:29 a.m. before the start of regular trading.â (Dawn McCarty and Craig Trudell, â Electric Car Battery Maker A123 Systems Files Bankruptcy Papers,â **Bloomberg Businessweek, 10/16/12)**

(List of Obama Failed Green Energy Companies below)



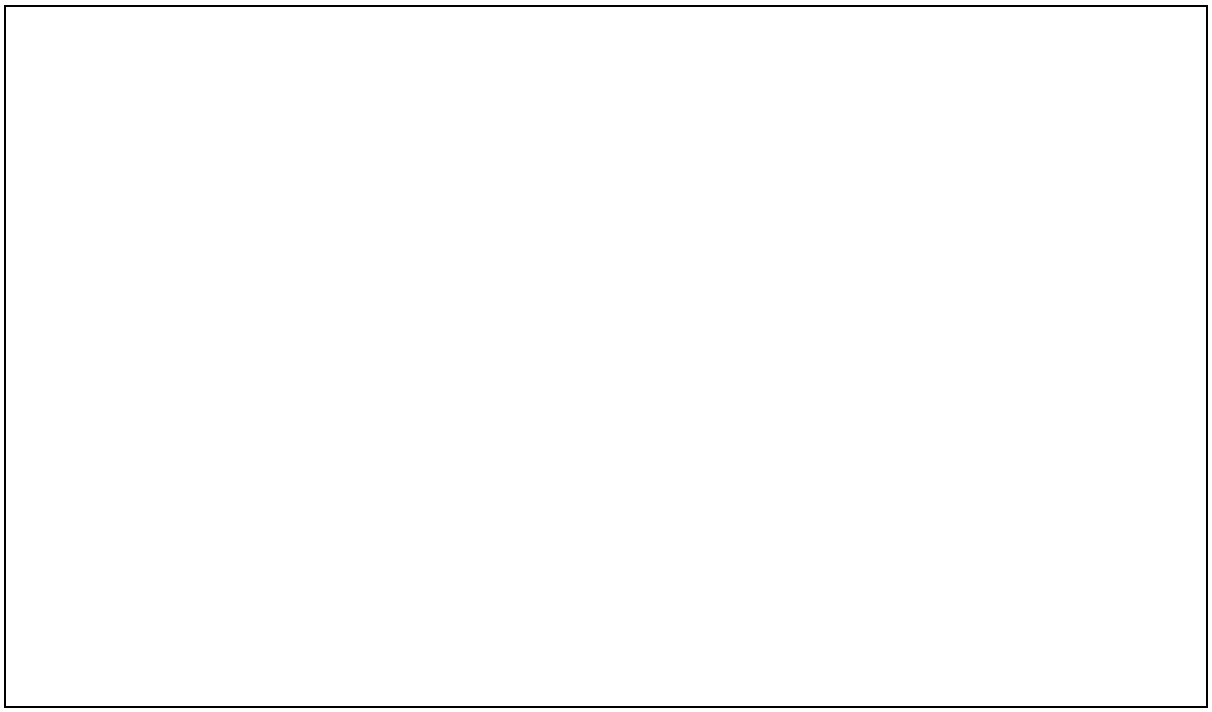
FLASHBACK: In July 2011, President Obama Touted A123 Systems As A Job-Creating Company With Soaring Demand For Its Vehicle Components. OBAMA: â Thereâ s A123, a clean-energy manufacturer in

Michigan that just hired its 1,000th worker as demand has soared for its vehicle components. Companies like these are taking root and putting people to work in every corner of the country.â (President Barack Obama, Remarks By The President On Fuel Efficiency Standards , Washington, DC, 7/29/11)

After A $249.1 Million Federal Grant And Struggling With Costs Of Recalled Batteries, A123 Systems Is Looking To Make A â Deal With Wanxiang Group Corp., Chinaâ s Largest Auto-Parts Maker, For Financing In Exchange For A Majority Ownership Stake.â â A123, which received a $249.1 million federal grant in 2009 to build a U.S. factory, needed a financial lifeline after struggling with costs from a recall of batteries supplied to Fisker, the plug-in hybrid luxury carmaker. A123 announced in August that it was working on a deal with Wanxiang Group Corp., Chinaâ s largest auto-parts maker, for financing in exchange for a majority ownership stake.â (Dawn McCarty and Craig Trudell, â Electric Car Battery Maker A123 Systems Files Bankruptcy Papers,â **Bloomberg Businessweek, 10/16/12)**

With Wanxiangâ s Large Stake, Obamaâ s â Made In Americaâ Dream Is Unlikely To Come True For Electric Vehicles And Batteries. â President Barack Obama called A123 Chief Executive Officer David Vieau and then-Michigan Governor Jennifer Granholm during a September 2010 event celebrating the opening of the plant in Livonia, Michigan, that the company received the U.S. grant to help build. â This is about the birth of an entire new industry in America â an industry thatâ s going to be central to the next generation of cars,â Obama said in the phone call, according to a transcript provided by the White House. â When folks lift up their hoods on the cars of the future, I want them to see engines and batteries that are stamped: Made in America.'â (Dawn McCarty and Craig Trudell, â Electric Car Battery Maker A123 Systems Files Bankruptcy Papers,â **~Bloomberg Businessweek, 10/16/12)**

A123 Is Saddled With A Costly Recall Due To Faulty Batteries Supplied To Fisker Automotive â Another Obama Green Energy Boondoggle



Fisker Karmaâ s Catch Fire â Another Green Obama Failure

A123 Incurred Heavy Losses Due To A Recall Of Defective Battery Packs It Supplied To Fisker Automotive. â The losses stem from A123â s recall of defective batteries built at its Livonia, Michigan, plant. The flaw came to light earlier this year when a Fisker Karma plug-in hybrid with an A123 battery failed during a test by Consumer Reports magazine. The repairs will cost nearly $67 million and force A123 to rebuild its inventory. A123 makes the battery for the Fisker Karma, the BMW hybrid 3- and 5-Series cars and GMâ s all-electric Chevy Spark due in 2013.â (Deepa Seetharaman, â A123 Sees â Going Concernâ Risk Due To Steep Losses,â **Reuters, 5/30/12)**

One Of Fiskerâ s Karmas Broke Down In The Middle Of A Consumer Reports Test, Spawning A Battery Recall. â Earlier this year, one of the Karmas stopped working in the middle of a Consumer Reports road test â an embarrassing breakdown that Fisker later blamed on a faulty battery. The lithium-ion batteries became the subject of a recall, including for a defect that raised the risk of fires.â (Matthew Mosk, â Fisker May Never Build Electric Cars In US,â **ABC News, 5/30/12)**

Consumer Reports Calls Government-Financed, Luxury-Hybrid Fisker Automotiveâ s Karma An â Ergonomic Disasterâ That â Does Not Fare Well Against Most Other Luxury Vehiclesâ Where â The Karmaâ s Problems Outweighed The Good.â â An influential consumer magazine said Fisker Automotiveâ s Karma plug-in hybrid has a variety of flaws, from limited visibility to a poorly designed touch-screen system that amounts to an â ergonomic disaster.â The less-than-glowing report from Consumer Reports magazine is the latest blow for Fisker, which is looking to raise funds after being denied access to more than half of a $529 million government loan that was the cornerstone of its business plan. Consumer Reports tested a $107,850 Karma â the most expensive vehicle the magazine has tested â and said it does not fare well against most other luxury vehicles, due partly to its cramped interior and overly complex controls system. â Although we found its ride, handling and braking performance sound and it has first-class interior materials, the Karmaâ s problems outweighed the good,â said Jake Fisher, director of Consumer Reportsâ auto test center.â (Deepa Seetharaman, â Fiskerâ s Pricey Karma Car Plagued With Flawsâ :**Consumer Reports,â Reuters, 9/25/12)**

Fisker Automotive announced the strange, spontaneous combustion of a Karma plug-in hybrid due to A123 battery defect

Fisker Drew Down $193 Million From An Obama Administration Energy Loan Prior To the Funds Being Frozen. â Fisker intends to build the Atlantic at a former General Motors Co. factory in Delaware, he said. The company had cast doubt on the future of the Delaware factory earlier this year after the Obama administration last year suspended payments on a $529 million U.S. Department of Energy loan that was funding the Atlantic project. Fisker drew about $193 million of the loan to engineer its hybrid before the funds were frozen.â (Joseph White, â Fisker Held Funding Talks,â **The Wall Street Journal , 10/1/12)**

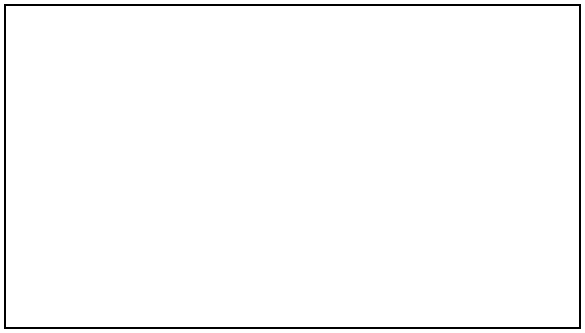
â ¢ AFTER BILLIONS SPENT ON ELECTRIC VEHICLES AND BATTERIES, SALES ARE NOWHERE CLOSE TO OBAMAâ S GOAL OF 1 MILLION CARS

â Electric-Vehicle Sales Since 2011 Totaled Fewer Than 50,000 Through September, Just 5 Percent Of The Presidentâ s Target.â â Whether the technology itself is a loser or consumers are merely slow to adapt to new things, car buyers so far havenâ t embraced electric vehicles in numbers close to Obamaâ s goal. Electric-vehicle sales since 2011 totaled fewer than 50,000 through September, just 5 percent of the

presidentâ s target.â (Angela Greling Keane, â Obamaâ s $5 Billion Slow To Charge Electric Car Purchases,â **Bloomberg, 10/16/12)**

Brett Smith, Co-Director At The Center For Automotive Research: â The Reality Is: That Business Model Isnâ t There Yet â ¦â â â The reality is: that business model isnâ t there yet,â said Brett Smith, co-direct of manufacturing, engineering and technology at the Center for Automotive Research in Ann Arbor, Michigan. â It isnâ t there yet for volume. It isnâ t there yet for reaching the mass consumer. And it probably isnâ t going to be there for a while.'â (Angela Greling Keane, â Obamaâ s $5 Billion Slow To Charge Electric Car Purchases,â **Bloomberg, 10/16/12)**

The Washington Post : â The American Taxpayer Has Gotten Precious Little For The Administrationâ s Investment In Battery-Powered Vehicles, In Terms Of Permanent Jobs Or Lower Carbon Dioxide Emissions.â â No matter how you slice it, the American taxpayer has gotten precious little for the administrationâ s investment in battery-powered vehicles, in terms of permanent jobs or lower carbon dioxide emissions. There is no market, or not much of one, for vehicles that are less convenient and cost thousands of dollars more than similar-sized gas-powered alternatives â but do not save enough fuel to compensate. The basic theory of the Obama push for electric vehicles â if you build them, customers will come â was a myth. And an expensive one, at that.â (Editorial, â GMâ s Vaunted Volt Is On The Road To Nowhere Fast,â **The Washington Post , 9/14/12)**



The Failures Of Subsidized Car Manufacturers Are Dragging U.S. Advanced-Battery Industry Down With Them, Leaving The Battery Companies Vulnerable For Foreign Purchase. â As these companies flail, they are taking the much-ballyhooed U.S. advanced-battery industry down with them. A Chinese company had to buy out distressed A123, to which the Energy Department has committed $263 million in production aid and research money. Ener1, which ran through $55 million of a $118 million federal grant before going bankrupt, sold out to a Russian tycoon.â (Editorial, â GMâ s Vaunted Volt Is On The Road To Nowhere Fast,â **The Washington Post , 9/14/12)**

Despite The Commitment Of Millions Of Taxpayer Dollars, It is Increasingly Clear That Obamaâ s Paltry Campaign Promise To Get 1 Million All-Electric and Plug-In Hybrid Vehicles Will Not Hit 2015 Target. â As a candidate for president in 2008, Barack Obama set a goal of getting 1?million all-electric and plug-in hybrid vehicles on the road by 2015. In February 2011, the Obama administrationâ s Energy Department issued an analysis purporting to show that, with the help of subsidies and tax credits, â the goal is achievable.â This was a paltry claim in the first place, since 1 million cars amount to less than 1?percent of the total U.S. fleet. Yet it is increasingly clear that, despite the commitment of many millions of taxpayer dollars, the United States will not hit Mr. Obamaâ s target by 2015.â (Editorial, â GMâ s Vaunted Volt Is On The Road To Nowhere Fast,â **The Washington Post , 9/14/12)**

â Analysis Suggest That Weâ ll Be Lucky To Get A Third of The Way There.â â A recent CBS News analysis suggested that weâ ll be lucky to get a third of the way there. The Energy Department study assumed that General Motors would produce 120,000 plug-in hybrid Volts in 2012. GM never came close to that and recently suspended Volt production at its Hamtramck, Mich., plant, scene of a presidential photo-op. So far, GM has sold a little more than 21,000 Volts, even with the help of a $7,500 tax credit, recent dealer discounting and U.S. government purchases. When you factor in the $1.2?billion cost of developing the Volt, GM loses tens of thousands of dollars on each model.â (Editorial, â GMâ s Vaunted Volt Is On The Road To Nowhere Fast,â **The Washington Post , 9/14/12)**

â ¢ EVEN IN BANKRUPTCY, OBAMAâ S FAILED INVESTMENTS HAUNT TAXPAYERS

Solyndraâ s Investors Stand To Make Millions Off Of Tax Benefits The Energy Department Transferred To Them To Avoid Political Embarrassment

Solyndra, Cornerstone of Obama Green Energy Failures

The Wall Street Journal : â In The Latest Twist, Solyndraâ s Investors Could Be Rewarded For Their Failure, Thanks To A Tax Benefit The Administration Handed Out In A Bid To Evade Political Accountability.â â Perhaps you thought the Solyndra scandal amounted to a $535 million government loan that will never be repaid. No such luck. In the latest twist, Solyndraâ s investors could be rewarded for their failure, thanks to a tax benefit the Administration handed out in a bid to evade political accountability.â (Editorial, â The Solyndra Memorial Tax Break,â **The Wall Street Journal, 10/15/12)**

Solyndraâ s Investors Are Trying To Take Advantage Of $350 Million In Tax Benefits They Received As Part Of The Companyâ s Bankruptcy. â Having sold off its manufacturing plant, fired nearly 1,000 workers and proven the non-viability of its business model, Solyndraâ s only real assets are what the IRS calls â tax attributes.â These are between $875 million and $975 million in net operating losses that can reduce future taxable income, which the IRS values as high as $350 million. Before it went toes up, Solyndra also accumulated $12 million in solar tax credits that can reduce tax liabilities dollar for dollar.â (Editorial, â The Solyndra Memorial Tax Break,â The Wall Street Journal, 10/15/12)

The Wall Street Journal: â Energy Created The Tax Avoidance Problem In The First Place By Gifting Argonaut And Madrone The Net Operating Losses To Delay The Solyndra Crack-Up That Was Fast Becoming Inevitable.â â But this is little more than an ex post facto double-cross. Energy created the tax avoidance problem in the first place by gifting Argonaut and Madrone the net operating losses to delay the Solyndra crack-up that was fast becoming inevitable. That left taxpayers worse off than if they simply let Solyndra fail.â (Editorial, â The Solyndra Memorial Tax Break,â **The Wall Street Journal, 10/15/12)**

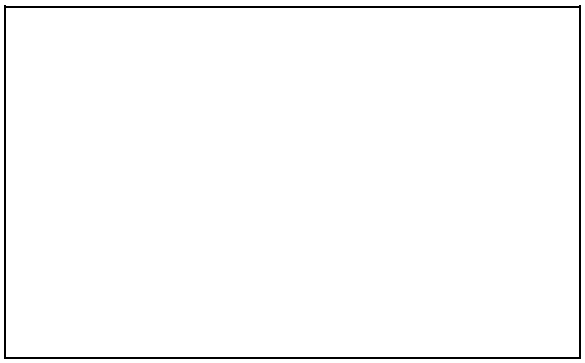
The Wall Street Journal: â The Larger Problem Is Mr. Obamaâ s Economic Model That Seeks To Picks Winners And Losers And Misallocates Capital.â â The larger problem is Mr. Obamaâ s economic model that seeks to picks winners and losers and misallocates capital. Thatâ s bad enough. But does he have to stick it to taxpayers twice for the same failed investment?â (Editorial, â The Solyndra Memorial Tax Break,â **The Wall Street Journal, 10/15/12)**

â ¢ Taxpayers Will Only Recover A Fraction Of The Money Invested In Solyndra Due To The Obama Administrationâ s Political Calculation

In February 2011, The Department Of Energy Agreed To â Waive Its Privilege As First Creditor In The Event Of A Bankruptcy.â â The political brawl over Solyndra, the solar array manufacturer that received $528 million in government aid and then went bankrupt, shifted focus Friday to a decision by the Energy Department that allowed another lender to step in to help rescue the company. That decision in February gave Solyndra a temporary reprieve and a chance to survive, but it also forced the government to waive its privilege as first creditor in the event of a bankruptcy â which then occurred at the end of August. â ¦ The Energy Departmentâ s approval was required for Solyndra to borrow any new funds, because if the loan was consummated, the federal government would have to surrender its status as the most senior lender, in favor of the new lender.â (Matthew L. Wald, â Questions Raised Over Letting Another Lender Help A Failing Solar

Company,â The New York Times , 9/16/11)

As A Result, Obamaâ s Department Of Energy Allowed Taxpayers To Take A Back Seat To George Kaiserâ s Argonaut Investments. â Complicating the politics of the situation for the Obama administration, part of the new loan came from Argonaut, the investment company backed by George Kaiser, an Oklahoma oil billionaire who is an Obama campaign contributor. Argonaut was already heavily invested in Solyndra, and provided another $69 million in cash in exchange for taking over $75 million that Solyndra was owed by its customers.â (Matthew L. Wald, â Questions Raised Over Letting Another Lender Help A Failing Solar Company,â The New York Times , 9/16/11)



In 2008, George Kaiser Bundled Between $50,000 And $100,000 For Obama. **(Center For Responsive Politics, Accessed 10/16/12)**

Solyndraâ s Private Equity Investors Are Expected To Recoup $70 Million Through The Sale Of Solyndra Assets. â Documents filed Friday evening in a Delaware bankruptcy court say that private-equity firms, including one whose chief has ties to the Obama administration, will get back at least half of the $70 million they put into Solyndra early last year as the company battled for survival.â (Peg Brickley, â Solyndra Outlines Its Bankruptcy Repayment Plans,â **Dow Jones Newswires, 7/31/12)**

â Unsecured Creditors Owed $50 Million To $120 Million Will Recover 2.5 Percent To 6 Percent, According To Solyndraâ s Chapter 11 Estimates.â (Peg Brickley, â Solyndra Outlines Its Bankruptcy Repayment Plans,â **Dow Jones Newswires, 7/31/12)**

Taxpayers Are Expected To Recover $24 Million Of The Loan To Solyndra. â Court papers estimate that one piece of the U.S. loan, nearly $143 million, could go unpaid, or it could receive as much as a 17 percent recovery. A second piece, $385 million, is in for a recovery of â $0 plus, depending on outcome of liquidation efforts,â court papers say. â ¦ $24 million Amount predicted to be repaid under its Chapter 11 planâ (Peg Brickley, â Solyndra Outlines Its Bankruptcy Repayment Plans,â **Dow Jones Newswires, 7/31/12)**

Failed Green Energy Companies Backed by President Barack Obama

President Obamaâ s Energy Secretary, Steven Chu who infamously said, â We have to figure out how to boost the price of gasoline to the levels in Europe.â

Below is a list of **failed energy companies backed by President Barack Obama** and funded with tax dollars. President Obama has gone to great lengths to support policies to advance so-called green energy technologies but so far has met with utter failure. The President plans to double down on these unproven, expensive failed technologies if he gets a second term.

In his acceptance speech at the DNC in Charlotte, President Obama announced his plans to continue support of these same green energy technologies despite the fact that they remain unproven alternatives to gas, coal and oil. Most green energy or â renewableâ energy developments currently being tested are years away from being put to a practical use.

President Obama has proven himself to be a rigid ideologue who is unwilling to let go of the failed policies that plagued his first term. This has many Americans fearful of the future of the United States. As of now there is no technology or renewable energy on the planet that can lift an airplane off the ground and keep it in the air or propel a cargo ship across the vast ocean-ways.

Most Americans are asking, â Can the United States of America REALLY afford FOUR MORE YEARS of President Obama?

List Of Failed Green Energy Jobs & Companies â By Obama

Update: 7/19/16: The **Amonix Solar:** **FAIL!** â *manufacturing plant in North Las Vegas, subsidized by more than $20 million in federal tax credits and grants given by Obama Administration, has closed its 214,000 square foot facility a year after it opened.*

◊ **Solar Trust of America:** **FAIL!** *â Filed Bankruptcy in Oakland, CA, April 3, 2012*

◊ **Bright Source:** **FAIL!** *â Bright Source warned Obamaâ s Energy Department officials in March 2011 that delays in approving a $1.6 billion U.S. loan guarantee would embarrass the White House and force the solar-energy company to close. Bright Source lost billions of dollars but is getting more money to keep trying. Can you say, â This isnâ t working Mr. President?â*

◊ **Solyndra:** **FAIL! â** *Obama gave $500,000,000 (thatâ s a HALF BILLION!) in taxpayer money to Solyndra who shut its doors and laid off 1100 workers in August 2011 after billions in losses due to failure to make a solar product that works! Barack Obama was not vetted before being elected President and neither was Solyndra before Mr. Obama threw that taxpayer money down the drain of unproven technology.*

◊ **LSP Energy:** **FAIL! â** *LSPEnergy LP filed bankruptcy protection and a sale of its assets in Feb 2012*

◊ **Energy Conversion Devices:** **FAIL!** â *On February 14, 2012 Energy Conversion Devices, Inc. and its subsidiaries filed for bankruptcy*

◊ **Abound Solar:** **FAIL!** *â Abound Solar received a $400 million loan guarantee from Barack Obama then announced in June, 2012 that it would file for bankruptcy. Many of these failed corporations, such as Abound, donated MILLIONS and continue to donate to Barack Obamaâ s campaign. Can you say, â Democrat Slush Fundâ ? Yes this is illegal. But Democrats are being protected from being prosecuted, for now.*

◊ **SunPower:** **FAIL!** *â SunPower stopped producing solar cells in 2011 at near bankruptcy then restructured with the help of, get this, oil giant TOTAL, Inc. who owns 60% stake in SunPower. Irony? The company is still struggling.*

◊ **Beacon Power:** **FAIL!** *â Beacon Power Corp filed for bankruptcy protection in October, 2011 just a year after Obama approved a $43 million Government loan guarantee. They remain barely in business, still struggling to make energy that makes sense or that works at all.*

◊ **Ecotality:** **FAIL!** *â ECOtality, a San Francisco green-tech company that never earned any money and remains on the verge of bankruptcy after receiving roughly $115 million in two loan guarantees from President Obama, who wants to do some more of this kind of Democrat Slush Fund Guarantees after he is elected to a 2nd term.*

◊ **A123 Solar:** **FAIL!** *â A123 Solar received $279 million from taxpayers thanks to President Obamaâ s Department of Energy loan guarantees even after the Solyndra bankruptcy and is getting another $500M from Obama after a loss of $400M.*

◊ **UniSolar:** **FAIL! â** *Uni-Solar* filed for *Ch 11 bankruptcy* in June 20, 2012 *after laying off hundreds of workers. UniSolar received even more Obama money after showing now progress, no profits and is still failingâ ¦ yet they still remain in business with Obamaâ s help.*

◊ **Azure Dynamics:** **FAIL! â** *Azure Dynamics filed for bankruptcy in June , 2012 wasting millions in Obama â Stimulusâ money and received abatement on taxes owed and and several tax credits. Azure Dynamics LLC filed for bankruptcy protection in Canada and the US. Azure laid off 120 of its 160 employees in Oak Park; Boston; Vancouver, British Columbia; and the UK.*

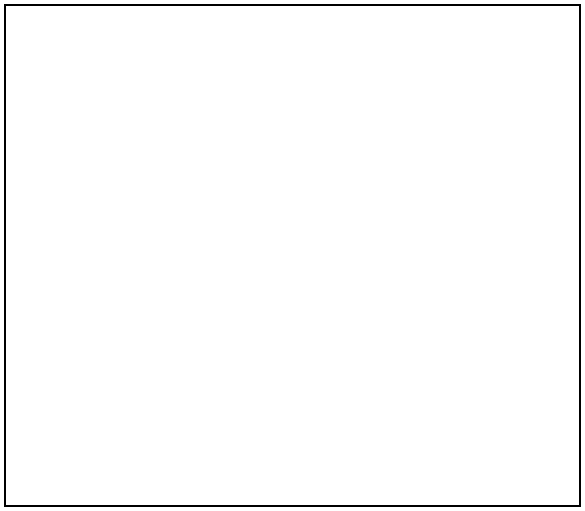
◊ **Evergreen Solar:** **FAIL!** *â Evergreen Solar received $527 Million in Taxpayer money from Obama and filed bankruptcy in late 2011. Evergreen, which closed its taxpayer-supported Devens factory in March, 2011 cut more than 1800 jobs. Evergreenâ s $450 million factory, turned out to be a colossal â wasteâ of taxpayer money.*

◊ **Ener1:** **FAIL!** *Ener1 Inc. received a $118 million U.S. Energy Department grant from President Obama to make electric-car batteries but filed for bankruptcy protection January 2012 after defaulting on bond debt.*

Update: In May 2012 Obama visited a dusty, desert town 30 miles outside Las Vegas Wednesday to declare heâ s doubling down on failed federal efforts to boost the solar industry which has NEVER proven to

produce a single working product. Like Socialism, no evidence ot works, but they just keep doubling down on the failed ideals!.

Republicans believe Obama is gambling with taxpayer dollars as he continues to aggressively push alternative forms of energy proven to be more than 20 years off in working effectively and being affordable. After the failure of Solyndra, which resulted in the loss of half a billion dollars in taxpayer dollars President Obama is going to give America more of teh same: FAIL.



> This is one of those interesting left-wing ideas which works theoretically as long as itâ s not real,â Republican presidential candidate Newt Gingrichcharged on the campaign trail Wednesday. â And then you put in a half billion dollars and you go, â Oh that didnâ t quite work.'â

Obama sharply disagrees and used the worldâ s largest solar power plant of its kind â with one million solar panels dotting the desert here â to assert it is his critics who are out of touch with reality.

> â some companies will fail, some companies will succeed.â -Pres. Obama

But None you have backed have succeeded. Your record is 0 for 300, rather 0 for $6 Tillion in taxpayer debt.

And many many more on the horizonâ ¦
Mar 29, 2012

Obamaâ s Epic Fail of Solar and Green Energy Companies

Washington- At his weekly press briefing today, Congressman John Boehner (R-West Chester) called on the Obama administration to provide information the House Energy & Commerce Committee has requested pertaining to the $10 billion taxpayer dollars that have been spent on the Energy Departmentâ s failed Solyndra-style Section 1603 â stimulusâ loan program.

The Congressman has vowed that oversight of the administrationâ s policies and their impact on job creation will be a major focus for the House this year. Congressman Boehner also highlighted House Republicansâ continuing focus on addressing rising gas prices and creating a better environment for private-sector job creation with the American Energy Initiative. Following are video and excerpts of Congressman Boehnerâ s

remarks:

ON REPUBLICANSâ EFFORT TO HOLD THE ADMINISTRATION ACCOUNTABLE FOR ITS FAILED DEPARTMENT OF ENERGY â STIMULUSâ LOAN PROGRAM:

> â You know, I made clear earlier this year that oversight of the Obama administrationâ s policies on jobs, on the economy, and its spending taxpayer dollars was going to be a priority.

Two weeks ago, Chairman Upton at the Energy & Commerce Committee began looking into the Department of Energyâ s Section 1603 grant program, a Solyndra-style â stimulusâ program that offers cash payments to renewable energy companies. More than $10 billion â thatâ s with a â bâ â $10 billion has been spent on this, and Secretary Chu said it created â tens of thousands of jobs,â except thereâ s no evidence to support that.

â The Energy & Commerce Committee set a deadline for today for the Energy Department & Treasury Department to produce documents or information about what taxpayers got for their $10 billion. The administration thus far has failed to provide the committee with any information to justify this claim.â
â Listen, the American people continue to ask the question â Where are the jobs?â They deserve answers and they deserve the truth.â

ON THE NEED FOR BIPARTISAN, COMMON-SENSE SOLUTIONS TO EXPAND AMERICAN ENERGY & ADDRESS SOARING GAS PRICES:

â Instead of wasting taxpayer dollars on failed â stimulusâ programs, we should be working together on common-sense solutions to expand American energy production and address rising gas prices. With or without the Democratsâ cooperation, Republicans here on Capitol will continue to work toward this objective.â

ON HOUSE REPUBLICANS TAKING ACTION TO ADDRESS SOARING GAS PRICES WITH THE AMERICA ENERGY INITIATIVE:

â One month ago today, during a conversation at the White House, I was encouraged by the presidentâ s willingness to discuss the possibility of working together on some of the bipartisan, House-passed energy bills. Many of these bipartisan proposals have received support from the presidentâ s own jobs council. But gas prices have gotten worse, and the administration has taken absolutely no action. Republicans arenâ t going to wait for the Obama administration to act on behalf of families and small businesses.

â Yesterday, the HEAT team launched the next phase of the American Energy Initiative focusing on rising gas prices. This phase include bills â for example â to responsibly increase energy production on federal lands and freeze new regulations on refineries that will have a harmful impact on our economy. Our committee chairmen are hard at work on both additional legislation to address this issue.â

German Professor: NASA Has Fiddled Climate Data On â Unbelievableâ Scale In To Rig Profits For Nancy Pelosi

CARL DE SOUZA/AFP/Getty Images

by JAMES DELINGPOLE6525

A German professor has confirmed what skeptics from Britain to the US have long suspected: that NASAâ s Goddard Institute of Space Studies has largely invented â global warmingâ by tampering with the raw temperature data records.

Professor Dr. Friedrich Karl Ewert is a retired geologist and data computation expert. He has painstakingly examined and tabulated all NASA GISSâ s temperature data series, taken from 1153 stations and going back to 1881. His conclusion: that if you look at the raw data, as opposed to NASAâ s revisions, youâ ll find that since 1940 the planet has been cooling, not warming.

According to GÃ¼nter Ederer, the German journalist who has reported on Ewertâ s findings:

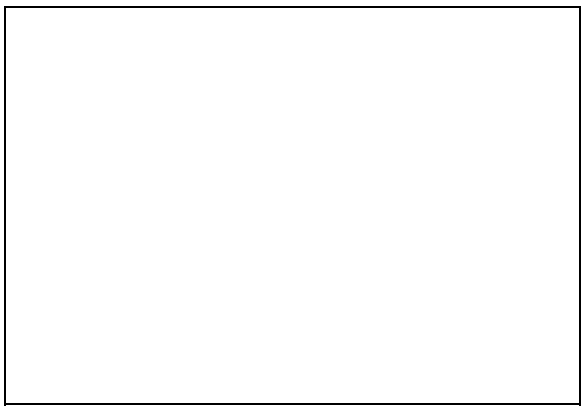
> From the publicly available data, Ewert made an unbelievable discovery: Between the years

> 2010 and 2012 the data measured since 1881 were altered so that they showed a significant warming, especially after 1950. [â ¦] A comparison of the data from 2010 with the data of 2012 shows that NASA-GISS had altered its own datasets so that especially after WWII a clear warming appears â although it never existed.

Apart from Australia, the planet has in fact been on a cooling trend:

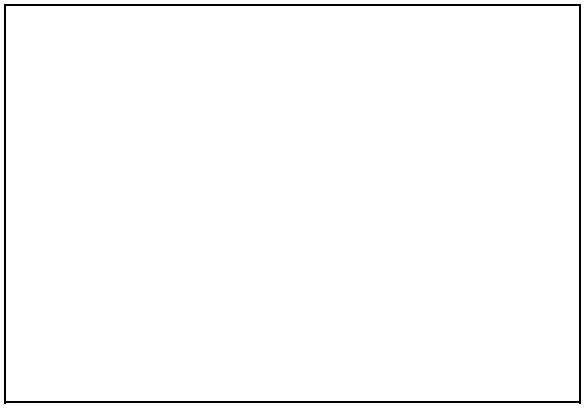
advertisement

> Using the NASA data from 2010 the surface temperature globally from 1940 until today has fallen by 1.110Â°C, and since 2000 it has fallen 0.4223Â°C [â ¦]. The cooling has hit every continent except for Australia, which warmed by 0.6339Â°C since 2000. The figures for Europe: From 1940 to 2010, using the data from 2010, there was a cooling of 0.5465Â°C and a cooling of 0.3739Â°C since 2000.



But the activist scientists at NASA GISS â initially led by James Hansen (pictured above), later by Gavin Schmidt â wanted the records they are in charge of maintaining to show warming not cooling, so they began systematically adjusting the data for various spurious reasons using ten different methods.

The most commonly used ones were:



â ¢ Reducing the annual mean in the early phase.
â ¢ Reducing the high values in the first warming phase.
â ¢ Increasing individual values during the second warming phase.
â ¢ Suppression of the second cooling phase starting in 1995.
â ¢ Shortening the early decades of the datasets.
â ¢ With the long-term datasets, even the first century was shortened.

Ewertâ s findings echo that of US meteorologists Joseph Dâ Aleo and Anthony Watts who examined 6,000 NASA weather stations and found a host of irregularities both with the way they were sited and how the raw data had been adjusted to reflect such influences as the Urban Heat Island effect.

Britainâ s Paul Homewood is also on NASA GISSâ s case. Here he shows the shocking extent of the adjustments they have made to a temperature record in Brazil which has been altered so that a cooling trend becomes a warming trend.

Unadjusted temperature record: shows cooling trend.

Adjusted temperature record: shows warming trend.

For still more evidence of NASAâ s adjustments, check out Alterations to Climate Data at Tony Hellerâ s Real Climate Science.

Truly, these people have no shame.

Obama Pentagon has lost an astonishing $10 trillion dollars through crony money launderingâ ¦ and the Defense Department has no idea where it went!

Over a mere two decades, **the Pentagon lost track of a mind-numbing $10 trillion** â thatâ s trillion, with a fat, taxpayer-funded â Tâ â and no one, not even the Department of Defense, really knows where it went or on what it was spent.

Even though audits of all federal agencies became mandatory in 1996, the Pentagon has apparently made itself an exception, and a full 20 years later stands firmly resolute in never having complied.

Defense officials insist an audit would take too long and ironically cost too much.

â Over the last 20 years, the Pentagon has broken every promise to Congress about when an audit would be completed,â Rafael DeGennaro, director of Audit the Pentagon, told the *Guardian* recently.
â Meanwhile, Congress has more than doubled the Pentagonâ s budget.â

President Trumpâ s newly-proposed budget seeks to toss an additional $54 billion into the evidently bottomless pit.

Without the mandated audit, the Department Of Defense could be purchasing damned near anything, at any cost, and use, or give, it â to anyone, for any reason.

Officials with the Government Accountability Office and Office of the Inspector General have catalogued egregious financial disparities at the Pentagon for years â yet the Defense Department grouses the cost and energy necessary to perform an audit in compliance with the law makes it untenable.

Astonishingly, the Pentagonâ s own watchdog tacitly approves this technically illegal workaround â and the legally gray and, yes, literally, on-the-books-corrupt practices in tandem â to what would incontrovertibly be a most unpleasant audit, indeed.

Take the following of myriad examples, called â Plugging,â for which Pentagon bookkeepers are not only encouraged to conjure figures from thin air, but, in many cases, they would be physically and administratively incapable of performing the job without doing so â without ever having faced consequences for this brazen cooking of books.

Reuters reported the results of an investigation into Defenseâ s magical number-crunching *well over three years ago*, on November 18, 2013 â detailing the illicit tasks of 15-year employee, ***â Linda Woodford [who] spent the last 15 years of her career inserting phony numbers in the U.S. Department of Defenseâ s accounts.â***

Woodford, who has since retired, and others like her, act as individual pieces in the amassing chewed gum only appearing to plug a damning mishandling of funds pilfered from the American people to fund wars overseas for resources in the name of U.S. defense.

> *â Every month until she retired in 2011,â* Scot J. Paltrow wrote for *Reuters*, *â she says, the day came when the Navy would start dumping numbers on the Cleveland, Ohio, office of the Defense Finance and Accounting Service, the Pentagonâ s main accounting agency. Using the data they received, Woodford and her fellow DFAS accountants there set about preparing monthly reports to square the Navyâ s books with the U.S. Treasuryâ s â a balancing-the-checkbook maneuver required of all the military services and other Pentagon agencies.*
>
> *â And every month, they encountered the same problem. Numbers were missing. Numbers were clearly wrong. Numbers came with no explanation of how the money had been spent or which congressional appropriation it came from. â A lot of times there were issues of numbers being inaccurate,â Woodford says. â We didnâ t have the detail â ¦ for a lot of it.â â*

Where a number of disparities could be corrected through hurried communications, a great deal â thousands each month, for each person on the task â required fictitious figures. Murkily deemed, â unsubstantiated change actionsâ â tersely termed, â plugsâ â this artificial fix forcing records into an unnatural alignment is common practice at the Pentagon.

Beyond bogus books, the Pentagon likely flushed that $10 trillion in taxes down the toilet of inanity that is unchecked purchasing by inept staff who must be devoid of prior experience in the field of defense.

This tax robbery would eclipse the palatability of blood money â *if* it werenâ t also being wasted on items such as the 7,437 extraneous Humvee front suspensions â purchased in surplus over the inexplicable 14-year supply of 15,000 unnecessary Humvee front suspensions already gathering warehouse-shelf dust.

And there are three items of note on this particular example, of many:

One, the U.S. Department of Defense considers inventory surpassing a three-year supply, *â excessive.â*

Two, the stupefying additional seven-thousand-something front suspensions arrived, as ordered, during a period of demand reduced by half.

Three, scores of additional items â mostly unaccounted for in inventory â sit untouched and aging in storage, growing not only incapable of being used, but too dangerous to be properly disposed of safely.

Worse, contractors greedily sink hands into lucrative contracts â with all the same supply-based waste at every level, from the abject disaster that is the $1 trillion F-35 fighter program, to the $8,123.50 shelled out

for Bell Helicopter Textron helicopter gears with a price tag of $445.06, to the DoD settlement with Boeing for overcharges of a whopping $13.7 million.

The latter included a charge to the Pentagon of $2,286 â spent for an aluminum pin ordinarily costing just $10 â the irony of whose 228.6 percent markup cannot be overstated.

Considering all the cooking of numbers apparently fueled with burning money stateside, you would think Defense channeled its efforts into becoming a paragon of economic efficiency when the military defends the United States. Overseas. From terrorism. And from terrorists. And terrorist-supporting nations.

But this is the Pentagon â and a trickle of telling headlines regularly grace the news, each evincing yet another missing shipment of weapons, unknown allocation of funds, or retrieval of various U.S.-made arms and munitions by some terrorist group deemed politically less acceptable than others by officials naming pawns.

In fact, so many American weapons and supplies lost by the DoD and CIA become the property of actual terrorists â who then use them sadistically against civilians and strategically against our proxies and theirs â it would be negligent not to describe the phenomenon as pattern, whether or not intent exists behind it.

For now the painstaking audit imperative to Department Of Defense accountability remains only a theoryâ ¦ while the Pentagonâ s $10 trillion sits as the worldâ s largest elephant in apathetic Americaâ s living room.

Obama Accepted AT LEAST 21.6 Million in FOREIGN Donations for 2012 Re-Election

By Dean Garrison

-

This news broke Friday of last week, but, as is par for the course, it just wasnâ t big enough news to make most of your trusted news sources. Want proof? Do a Google search. You will find a few of those â redâ Newsguard sites covered the story if you dig deep enough in the search results, but the mainstream seemed to mostly ignore this even happened.

From Shepherd Ambellas:

According to reports circulating at the highest levels in Washington, former U.S. President Barack H. Obamaâ s political campaign received at least $21.6 million in illegal foreign campaign contributions during the runup to the 2012 presidential election.

The U.S. Justice Department announced on Friday that Malaysian businessman Low Taek Jho and former Fugees rapper Prakazrel â Prasâ Michel have been charged with conspiracy after allegedly funneling tens of millions of dollars into Obamaâ s campaign fund.

Latest: Bombshell Blackout: Obama Accepted AT LEAST 21.6 Million in FOREIGN Donations for 2012 Re-Election

According to David J Harris, â As you are probably aware, foreigners and foreign companies are forbidden by law to contribute to political campaigns. They are especially not allowed to funnel 21.6 million dollars from foreign donors to a campaign. The feds indicted Pras Michel, a rapper for the group â The Fugeesâ on Friday for funneling tens of millions of dollars to the 2012 Obama reelection fund. Jho Low was indicted last year on conspiracy charges related to a scam from which he will be facing charges that he bilked investors out of hundreds of millions of dollars. Low provided the money to Pras Michel.â

Here is the DOJ Report, in full:

Entertainer/Businessman and Malaysian Financier Indicted for Conspiring to Make and Conceal Foreign and Conduit Contributions During 2012 U.S. Presidential Election

A United States entertainer and businessman and a Malaysian financier were charged in a four-count indictment unsealed today in the District of Columbia for conspiring to make and conceal foreign and conduit campaign contributions during the United States presidential election in 2012, announced Assistant Attorney General Brian Benczkowski of the Justice Departmentâ s Criminal Division.

Prakazrel â Prasâ Michel, 46, and Low Taek Jho, 37, also known as â Jho Low,â were charged with one count of conspiracy to defraud the United States government and for making foreign and conduit campaign contributions. Michel also was charged with one count of a scheme to conceal material facts and two counts of making a false entry in a record in connection with the conspiracy. Michel appeared today for his arraignment before U.S. Magistrate Judge G. Michael Harvey in the District of Columbia. Low remains at large.

According to the indictment, between June 2012 and November 2012, Low directed the transfer of approximately $21,600,000 from foreign entities and accounts to Michel for the purpose of funneling significant sums of money into the United States presidential election as purportedly legitimate contributions, all while concealing the true source of the money. To facilitate the excessive contributions and conceal their true source, Michel paid approximately $865,000 of the money received from Low to about 20 straw donors, or conduits, so that the straw donors could make donations in their names to a presidential joint fundraising committee. In addition, Michel personally directed more than $1 million of the money received from Low to an independent expenditure committee also involved in the presidential election in 2012.

The indictment also alleges that by funneling campaign contributions through straw donors, Michel caused a presidential joint fundraising committee to submit false reports to the Federal Election Commission (FEC), including a false amended report in June 2013. The committeeâ s reports were false because they identified the straw donors, rather than Low or Michel, as the true source of the contributions. In addition, the indictment alleges that by contributing more than $1 million of the money he received from Low to an independent expenditure committee, Michel also caused that committee to submit false reports to the FEC, insofar as those reports identified Michel as the source of the contributions when, in fact, it was Low. The indictment further alleges that in June 2015, Michel submitted a false declaration to the FEC in which he claimed that he had no reason to conceal the true source of his contributions to the independent expenditure committee in 2012, even though Michel knew that the true source of that money was Low and that Michel had funneled the foreign money into the election.

Low was indicted previously, along with former banker Ng Chong Hwa, also known as â Roger Ng,â in the Eastern District of New York for conspiring to launder billions of dollars and to violate the Foreign Corrupt Practices Act. That case remains pending.

An indictment is merely a charge and defendants are presumed innocent unless and until proven guilty beyond a reasonable doubt in a court of law.

The FBIâ s International Corruption Squad in New York is investigating the case. Trial Attorneys Sean F. Mulryne and Nicole Lockhart of the Criminal Divisionâ s Public Integrity Section are prosecuting the case.

Do you think they will be questioning Barack Obama in this matter?

Of course not.

Letâ s not worry about Obama accepting 21.6 million in foreign contributions. **Letâ s just worry about those responsible for delivering the money.**

Do you think Obamaâ s people were so stupid that they didnâ t know that this money was illegally coming from foreign interests?

If you believe our former President is completely innocent in this matter then you must be a reality-denying, fantasy-loving, snowflake Democrat.

Do you think cheating is OK so long as it benefits your candidate?

Both sides seem to feel that way these days.

Do you think the DOJ will take this a step further and go after the beneficiary of this money?

Not in America unless that recipient was someone like our current President.

There is a different set of rules for liberals and conservatives these days. That is not opinion, it is truth.

Want proof?

Do a search for this topic on Google. You wonâ t find much for a story that SHOULD be all over the news.

Obama belongs in prison, but itâ s quite doubtful that will ever happen.

Obamaâ s Energy Department Raped U.S Manufacturing Companies And Destroyed An Auto Industry

By Kyle Winston- Detroit Inside News

Barack Obama was a vindictive narcissist who said â yesâ to every under-handed scheme that David Plouffe, Rahm Emmanual, Robert Gibbs, David Axelrod and John Podesta dragged into the Oval Office.

One such scheme was designed to provide crony campaign finance payola in the form of â Cleantech Cashâ and stock market pump-and-dumps for Obamaâ s Silicon Valley Oligarchs. This scheme, and others like it, are the subjects of the feature films: ***Too Big To Fail, Clinton Cash, Inside Job***, and other films about the corruption of public tax dollars. The 60 Minutes investigative segments called: ***The Cleantech Crash, Congress Trading On Insider Information*** and ***The Lobbyists Playbook*** go into great detail about how these complex and extreme crimes were operated by the highest level public officials in the land.

With such an overt set of crimes, you would think there would be a large number of arrests but, as the Snowden, Panama, Swiss and FISA leaks now confirm, dirty bosses at the FBI and DOJ were not only covering up these crimes, but profiteering off of them. The Attorney Generals in New York and California were being paid by the very criminals engaged in these crimes.

The victims hit hardest were the independent automobile manufacturers in America. They were solicited by Obama, and his cronies, to waste their lives, budgets, brands and futures on Obamaâ s green car scheme. It turns out they were just defrauded into being used as theater props and facades to run cover for the kick-backs behind Obamaâ s covertly hard-wired ***Advanced Transportation Vehicle Manufacturing*** and ***Loan Guarantee Programs.*** Only Obamaâ s insiders were ever intended to get the cash.

History proves that hundreds of car companies with better technologies, better business metrics, lower costs, safer defect records, far better debt ratios, more public demand, and hundreds of other advantages, were blockaded and sabotaged by Obama. Obama did this to protect his insider crony car companies Tesla and Fisker because they paid for Obamaâ s political campaigns. These facts are now indisputable. Hundreds of Congressional hearings and tens of thousands of media reports prove it beyond any doubt.

Bright Automotive, Zap Cars, XP Vehicles, Brammo, Eco-Motors, Aptera, VVC, Bannon Automotive, Local Motors, T3, Think, Biotrike, EV Innovations, Vectrix, Limnia, Revolution Motors, Kleenspeed, Electric Motors Corp, Alte, Phoenix Motors, Wrightspeed, Goodearth, Cooperative Energy, Elio, Transonic, VPG, Electrovaya, ElectroRides, MotorTrike, BG, Futuris, and and host of other domestic companies were lied to and defrauded by Obamaâ s U.S. Government.

Federal representatives solicited and encouraged these companies to spend years of their time, staff commitments, mortgages, leases, payrolls and expenses on these bogus Department of Energy programs. During the entire operation of these programs energy bosses Steven Chu, Lachlan Seward, Matt Rogers, Steve Spinner, and the rest of Obamaâ s lackeys, knew that the money would ***only ever*** go to Obamaâ s campaign financiers at Solyndra, Tesla, Fisker and a handful of insiders. The San Francisco FBI kicked in the doors of Solyndra because so much money was missing but FBI bosses ended the investigation when Solyndraâ s profits were found to lead straight back to Obamaâ s Oval Office. As we all now know, FBI Director James

Comey and Secretary of Energy Steven Chu were terminated for this corruption.

The abuse of these domestic applicants did not end with just the stone-walling and government blockades. It got far darker. The Obama Administration hacked, poisoned, blocked benefits of, spied on, black-listed and character assassinated any person from those outsider companies who cooperated with the investigations of Obamaâ s crimes.

A MESSAGE TO AMERICA:

Our Request To The United States Government and Rick Perry At The U.S. Department of Energy:

This matter affects every voting citizen because, if we can't get justice in America, then no voter will believe they can either.

A handful of corrupt tech billionaires, and their corrupt Senators, are manipulating public emotional triggers in order to steer, and money-launder, a trillion U.S. taxpayer dollars into their private bank accounts. Over 300 million American voters have said that the #1 issue with U.S. public policy is â CORRUPTIONâ . This issue is about that corruption.

*Their â climateâ , â immigrantsâ , â medical coverageâ issues are fake controversies that they use to scam U.S. Treasury funds that have nothing to do with those â cover issuesâ . They use Google, Facebook, Twitter and the Main Stream Media, **that they own**, in order to pump up these fake controversies via fake news. They use "Dark Money" fake charities, "Invisible Bridge" money laundering, crony stock market insider trading and pump-and-dump schemes, revolving door payola, prostitution bribes and other illicit corruption tricks.*

We are fighting back and we have already taken out part of the â bad guysâ , and their schemes, using 100% legal tactics and methodologies. Any member of the public can now accomplish these anti-corruption efforts using espionage journalism, private investigation methods, citizen sleuth websites, class-action lawsuits and personal mass public media distribution. We encourage the public to continue in their efforts to bankrupt every single corrupt party that abuses our Democracy.

In our matter, the U.S. Government, via the Obama White House and the U.S. Department of Energy intentionally defrauded us out of years of work and our life savings! Now they owe us some offsets! We are here to collect.

We could not understand how â public servantsâ could do these kinds of crimes to, and with, our government while stealing our, and millions of other taxpayers, money out of our pockets. We set out to hunt down every single person, group and process that allowed these crimes to happen, document their crimes on permanent public record and then make it nearly impossible for them to ever do this to the public again.

We were tricked by false government promises into spending years of our lives and millions of dollars of our life savings. We, and our peers, were used as the â facadeâ of a â cover storyâ to operate a criminally illicit â Dark Moneyâ operation against the American public. We swear, warrant and certify that we can prove every assertion in a public federal jury trial, Grand Jury hearing and/or televised Congressional hearing, given equitable credible legal resources and security protection.

Senior government officials had full knowledge of, and participated in, this criminal enterprise. They knew, from the start, that the state ad federal funding was covertly hard-wired, in advance, exclusively to their friends. They then attacked us with â Fusion GPSâ , â Lois Lerner Targetingâ , a tabloid character assassination program and worse things. They attacked us because we properly reported the crime to the FBI and Congress. They attacked us because we did "the right thing".

The cover-ups of this crime continue to this day. The failure of the U.S. Government to provide any 1.) apology, 2.) damages offset, 3.) justice, 4.) whistle-blower and informant fees; in this matter continues to this day. We are not anti-government. We are anti-corruption. In fact, top government officials are helping us in our quest.

For our first project, almost every taxpaying member of the public supported our past efforts and, in fact, provided us with a historically large number of purchasing letters of support which we hand-delivered to Congress. Nobody else was able to do that.

The non-crony major international news outlets, every major industrial publication, most of the non-crony members of the U.S. Congress, and every other non-crony public official confirmed that "Part Two" of our project was a â goâ . After winning Congressional awards and fully delivering on our previous government contracts, federal officials asked us to invest our time and money in the federal government and do even more to create domestic jobs and new domestic technology opportunities.

BUTâ ¦

...it turned out that all of the government â decidersâ worked for and owned stock in our arch competitor. The government officials took the money they had promised to us and gave it to their friends, who are our competitors. They gave it to the least qualified party; who also happened to be their buddy and their campaign financiers. They also gave part of the taxpayer cash to some of their friends who immediately filed bankruptcy in order to make huge profits off of tax loss filings and stock market valuation â pumpsâ without ever having to create any jobs or ongoing product deliveries.

We were asked to pay bribes and we refused to pay bribes. We refused to be part of the Silicon Valley â Dark Moneyâ crimes. We knew these people. We were invited to their parties and to their most intimate meetings. When we saw that they were running afoul of Democracy using corrupt schemes, illegal insider trading, sextortion, money laundering, tax evasion, bribes, prostitutes, Dark Money conduits, election rigging, internet manipulation and other crimes against the public; we said NO!

Will the U.S. Government provide us with the justice we seek and the Constitution demands?

We have worked with exceptional FBI, GAO, SEC, CFTC, IG and Congressional staff in this matter and we wish to acknowledge their support. Many have seen the recent news head-lines about top-level law enforcement firings of corrupt law enforcement executives. Those were the right moves and we wish to confirm the fact that certain public officials continue to stall our justice. Treasury and GAO say that over 180 million taxpayer dollars have been spent on cover-ups, attacks and DOJ stalls against our request in order to avoid political embarrassment for the Obama Administration. They are no longer around and they SHOULD be embarrassed by their corruption! You can resolve our matter for dramatically less money than you are spending trying to cover it up!

We will not give up and we will fight to the end. Our Task Force of crime victims, journalists, bloggers, mass data scientists, intelligence specialists and voters is now using 100% legal means to terminate every single crook in this case until we get justice. We demand a resolution where our damages are paid for and the whistle-blower and informant fees we are owed are delivered.

The news articles and Congressional reports prove that this Silicon Valley Cartel regularly engages in crimes, sex abuse, illicit acts, a sociopath culture and law-breaking. Fact-based forensic data has now been published representing the work of tens of thousands of renown, award-winning journalists and researchers. They prove that what we are saying really did happen and it really is a criminal abuse of Democracy! The ICIJ, Snowden, Assange and Binney leaks prove the depth of the crimes. Hundreds of thousands of documents have now *been placed on public record in the federal courts and P2P archives and those documents prove who engaged in these crimes and how they did it. The **60 Minutes** episodes, The feature films: **Dark Money; Too Big To Fail; Inside Job** and the tens of thousands of broadcast news segments about this corruption all prove our assertions. The evidence is indisputable!*

It is time for the public to take a stand against this kind of organized crime that is operated by the very people that are meant to serve the public!

It is time for The U.S. Government and The U.S. Department of Energy to deliver the 1.) apology, 2.) damages offset, 3.) justice, 4.) whistle-blower and informant fees that are required.

Mr. Perry, we look forward to your response.

Sincerely,

The Technology Alliance

PG&E'S REGIONAL 'CLEAN ENERGY' BILLING SCAM

Jim Phelps â Novato

The Letter to Editor that is linked below, appears in Marinâ s only newspaper, the Marin *Independent Journal*.

This letter relates to the front-page story covering Marin Clean Energyâ s (MCEâ s) new 10.5 MW solar farm in Richmond (click here to read Marin IJ article). That story neglects to mention that California is far overbuilt on solar power, which is exported at zero prices and â negative pricesâ (this is when California must pay the recipient of the electricity to take it) to Arizona while also creating management problems of Californiaâ s electric grid, managed by CAISO.

Solar is relatively inexpensive to construct compared to wind, enabling Community Choice Aggregators (CCAs) such as MCE to advertise that they are doing good things for California, while queuing up to be far short of contracting for renewable energy, per SB350 requirements â 65% of energy must be sourced from renewable generators with contracts that are at least 10 years in length.

CLICK HERE TO READ THE LETTER TO THE EDITOR

Eminent Domain

Does anyone know what happened to eminent domain in CCAsâ Joint Powers Authority (JPA) bylaws? This issue surfaced in MCEâ s March 2, 2018 Executive Committee packet, but I have not seen any action by MCE to resolve the issue in any subsequent MCE meeting packets or agendas.

MCE's JPA bylaws were replicated throughout all other CCAs and that eminent domain language is everywhere.

MCE, IJ not telling whole story about clean energy

The IJâ s story about Marin Clean Energyâ s new solar farm going into service neglects to

include information that puts things in perspective.

First, when MCEâ s Richmond

-

located solar farm

is included, only one

-

half of 1 percent of

MCEâ s total load is served by its â localâ solar production.

Second, MCE claims that its solar farm is dramatically reducing greenhouse gas emissions,

yet the IJ neglects to report that since MCEâ s business launch, nearly half of its â cleanâ

power is actually green

-

washed fossil

-

fired power. Accordingly, MCE fails t

o disclose 1.2

billion pounds of greenhouse gas emissions in energy that it rebrands as â clean.â This constitutes what MCE claims as exceeding the state requirement for â sourcing a certain percentage of its electricity from renewable sources.â

Last, MCE cl

aims that it has brought many new clean energy resources to market

compared to Pacific Gas and Electric Co. This is an overstatement. For example, MCE is merely contracting for available energy from a large solar farm in Kings County and a large wind farm

in Kern County until PG&E and Southern California Edison begin taking

deliveries from these resources that these utility companies bankrolled.

It is hyperbole for MCE to claim that it is out

-

greening PG&E when these activities are

going on behind the curtain

â

Pain In The Pump: Surging Gas Prices Are Destroying Trump's Economic Recovery. Can Feds Save The Family Budget?

By Mike Schuh

Filed Under: Cost Of Gas, Gas Price

BALTIMORE (WJZ) â The cost of gas is up across the country, including in Maryland, and is inching toward the highest price in three years.

Gas is going up about a penny every other day â 15 cents in the past month.

â Weâ ll be paying the highest prices for this time of year since 2014,â said Christine Delise with AAA.

Gas companies are changing over to a different summer blend. To do so, some refineries shut down, leading to the classic market principal of supply and demand. A tighter supply means they can demand more for your fuel.

Demand is up as people are driving more, and crude oil prices are up $15 per barrel compared to this time last year.

â Every time crude oil prices rise a dollar, consumers will pay roughly 2.4 cents more per gallon,â Delise said.

This week, the average price in marylMarylandxactly the same as the nationwide average of $2.67 a gallon.

Police Case Report and Congressional Report: Victim #127

Update 2018H-N-FDOJ

This case statement was prepared by Joint Task Force Ombudsmen on behalf of the thousands of Victims of the Obama Administration reprisals, vendettas and retribution campaigns.

Victim #127 is associated with NO political party, YET all of Victim #127â s State and Federal filings for benefits, reviews and compensation have suffered delays, stone-walling and other POLITICAL reprisal actions by State and Federal employees since 2007 when Victim #127 was a federal witness for a law enforcement investigation involving corruption in the U.S. Department of Energy and the Obama Administration White House. Victim #127s suffered disabling factors, damages, injuries and losses that were caused by the actions of State and Federal employees and the elected officials to whom they reported.

The United States Department of Energy Inspector General, The FBI and the Pentagonâ s Inspector General are now investigating over one thousand retaliation, reprisal and vendetta attacks against those who reported corruption during the Obama Administration as documented at the repository at http://www.my-news.biz and in hundreds of thousands of news articles and sites. The U.S. Federal Court has ruled, in Victim #127â s other federal court cases, that Victim #127 â *was the Victim of political corruption payback campaign operated by government employeesâ ¦â ;* Per official published government reports including: *"ASSESSING THE DEPARTMENT OF ENERGY LOAN GUARANTEE PROGRAM",* VERONIQUE DE RUGY - MERCATUS CENTER AT GEORGE MASON UNIVERSITY; The Multiple GAO investigation reports on the DOE from 2007 forward; and this Congressional indictment of the corruption and reprisals Victim #127 experienced:

As of this date, the most senior members of the FBI have been terminated and/or placed under investigation for covering-up this matter. The United States Congress has issued numerous final reports charging government employees with heinous crimes of corruption in this matter. Top government executives have been charged with â Contempt of Congressâ in this matter and over 300 government employs have been fired or forced into ouster because of this matter. Over 100,000 published news reports have documented these crimes and corruption activities.

In one of the lawsuits, the following facts were set forth in Federal Court regarding this, and related cases:

1. ***Plaintiff XP TECHNOLOGY (â XPâ), a California sole proprietorship, is the assignee of all rights, title and interest in claims by an energy system company called Limnia, Inc. (f/k/a â FuelSell Technologies, Inc.â) (â Limniaâ), and by its sister company, an advanced technology vehicle manufacturing company called XP Vehicles, Inc. (â XPVâ), against the Defendants in this action. Limnia and XPV are Silicon Valley-based innovative â green technologyâ companies.***
2. ***Defendants are THE UNITED STATES DEPARTMENT OF ENERGY (â DOEâ), a federal agency; STEVEN CHU individually and in his capacity as Secretary of Energy (â Chuâ); and LACHLAN SEWARD, individually and in his capacity as DOE Director of Advanced Technologies Manufacturing Loan Programs (â Sewardâ).***

Jurisdiction, Venue and Declaratory Relief

3. ***Jurisdiction and venue are pursuant to Article III of the United States Constitution, 28 U.S.C. Â§ 1331 (federal question), the Administrative Procedure Act, 5 U.S.C. Â§ 702, and 28 U.S.C. Â§ 1391(e).***
4. ***This Courtâ s authority to grant declaratory relief and to award attorney fees and costs is pursuant to the Declaratory Judgment Act, 28 U.S.C. Â§ 2201 et seq. and 28 U.S.C. Â§ 2412.***

Facts

<u>Background</u>

5. ***Pursuant to 42 U.S.C. Â§ 17013, DOE - through Chu, Seward, their staff, advisors and consultants - administered the â Advanced Technology Vehicle Manufacturing Loan Programâ (the â ATVM Loan Programâ).***
6. ***Congress created the ATVM Loan Program to support the manufacture of advanced technology vehicles and components in the United States and to reduce U.S. dependency on foreign oil. In 2008, Congress authorized DOE to make $25 billion in ATVM loans. DOE currently has approximately $16 billion of unused lending authority.***
7. ***At all times relevant, Defendants had actual or constructive knowledge that the ATVM Loan Program had evaporated private investment capital for advanced technology vehicle development because venture capital and institutional lenders could not compete with government interest and repayment terms (1%-3% and up to 35 years, respectively), and that delaying or denying a small companyâ s ATVM Loan Program application was a business death sentence, particularly in the economic climate at the time.***
8. ***Pursuant to 42 U.S.C. Â§Â§ 16511 and 16513, DOE through Chu, Seward, their staff, advisors and consultants also administered the â Â§1703 Loan Guarantee Programâ (the â LGPâ)***
9. ***Congress created the LGP to support innovative clean energy technologies that are typically unable to obtain conventional private financing due to high technology risks. Through LGP, DOE guaranteed up to eighty percent of a loan for projects that â avoid, reduce, or sequester air pollutants or anthropogenic emissions of greenhouse gases; and employ new or significantly improved technologies as compared to commercial technologies in service in the United States at the time the guarantee is issued.â DOE currently has approximately $34 billion in loan authority, with an additional $170 million in appropriated credit subsidy carried over from previous years.***
10. ***Since 2002, Limnia and XPV have worked directly and extensively with DOE scientists at Sandia National Laboratory (â Sandiaâ) and elsewhere to develop advanced technology vehicles.***
11. ***Limnia and XPV have provided DOE with confidential business information, including intellectual property and prototypes, all relevant to advanced technology vehicle energy storage systems, chassis and body materials and construction, and electronics. DOE, in turn, has helped fund Limniaâ s and XPVâ s work through grants and provided technical support and validation.***
12. ***At all times relevant, Defendants had actual and/or constructive knowledge of DOEâ s extensive history of work with Limnia and XPV on advanced technology vehicle energy systems, auto chassis and body construction, and electronics.***

<u>XPVâ s ATVM Loan Program Application</u>

13. ***Responding to a DOE solicitation, XPV applied on November 10, 2008, for $40 million in ATVM Loan Program funds to mass produce an advanced technology SUV-style vehicle (â XPVâ s SUVâ). It offered DOE collateral independently valued at over $100 million to secure this loan.***
14. ***At all times relevant, XPV had design and business operations and/or had secured manufacturing and other facilities in Detroit, through Rausch Roush Automotive, and leasing companies in the Mountain West and the San Francisco Bay area.***

15. *Its vehicle design team included highly experienced automotive designers and senior Detroit automotive management staff, including the senior creation staff for the Corvette and the Mustang, and aerospace industry professionals.*

16. *XPVâ s SUV was designed to be affordable (less than $20,000 in its base configuration); to have nearly an unlimited range, charge rapidly without the need for either gasoline, a garage, or extension cords to charge; to be produced quickly and cheaply by subcontracting existing and underutilized factories, workers and machines; and to be easily repaired.*

17. *One key innovation, based on a decade of research, was the use of polymer plastics and skinned pressure membranes to replace metal doors, body panels, hoods and roofs on a lightweight alloy frame. Consequently, XPVâ s SUV had a curb weight of less than 1,400 pounds (approximately one-third the weight of a Toyota Prius). The polymer plastic construction also added to vehicle safety because the foam-skinned polymer membranes functioned as a wraparound, pre-deployed â airbagâ to withstand impacts and damp out crash damage.*

18. *At all times relevant, all of XPVâ s SUVâ s key parts either had been tested or used in industry-proven â off the shelfâ applications. For example, the SUVâ s pressure membrane body technology was widely used in military applications, airbags, Mars landing equipment and even buildings and arenas.*

19. *XPVâ s primary financial and technical partnerspending customers included the Ranson Green Community Development Foundation, ZAP, Detroit Electric, over 40 vehicle distributors and resellers, its sister company Limnia and Sandia and other national laboratories. At all times relevant, XPV was actively engaging in discussions fored private sources of capital including Wells Fargo Bank; developing a distribution network; and otherwise preparing to commence production and sales.*

20. *XPVâ s ATVM Loan Program application contained confidential business information as defined by 10 CFR Â§Â§ 1004.10(b)(4) and (11), and 5 U.S.C. Â§ 552(b)(4) including advanced technology vehicle energy storage and pressure membrane technology, among other things.*

21. *Defendants promised to guard this information and prevent its unauthorized disclosure and use or infringement. They also promised to evaluate ATVM Loan Program applications on a â first in, first outâ basis; to treat all Victim #127s fairly and to judge applications based on objective published criteria; and to make ATVM Loan Program funds available in January, 2009, for those who qualified.*

22. *On December 2, 2008, Seward wrote to XPV acknowledging receipt of its ATVM Loan Program application and requesting additional information. See Exhibit 1. XPV provided this and on December 31, 2008, Seward deemed XPVâ s application to be â substantially complete.â He said additional information would be requested if required during the review process. See Exhibit 2.*

23. *Upon information and belief, XPVâ s ATVM Loan Program application was among the very first to be deemed substantially complete.*

24. *At all times relevant, XPV qualified for ATVM Loan Program funds under DOEâ s published criteria and was, in fact, deemed a â qualified Victim #127â by Defendants. DOEâ s own Excel comparison matrices dated Dec. 29, 2008 and March 2, 2009 placed XP in the top 5% of all Victim #127s.*

25.

Defendantsâ representations and promises led XPV to believe that DOE would began processing XPVâ s ATVM Loan Program application right after January 1, 2009before the end of December and no later than January 1, 2009, and that the review process would take a matter of weeks, consistent with normal financial practices and procedures.

26.

However, XPV soon found that Defendants had reneged on their promises and that the review process was taking months, not weeks. Discomfited by the delay, which blocked private capital and prevented SUV production, XPV repeatedly offered Defendants engineering, financial and other information to proactively speed and inform its application review.

27.

At all times relevant, XPV was unaware both that its ATVM Loan Program application had been â set asideâ in favor of applications from politically-connected government cronies and that Defendants had â fixedâ the ATVM Loan Program process to benefit political donors. XPV also was unaware that Defendants had no intention of approving XPVâ s ATVM Loan Program application under any circumstances, notwithstanding all of their representations and assurances to the contrary, because XPV competed with government-favored companies. Instead, XPV assumed Defendants were acting in good faith, and in accordance with law, to carry out Congressâ s intent by lending up to $25 billion for the development and production of advanced technology vehicles in the United States to reduce U.S. dependency on foreign oil.

28.

On April 23, 2009, Jason Gerbsman, the Chief of Staff and Senior Investment Officer, at the Loan Programs Office, Automotive Division, of DOE, notified XPV that:

[XPV] has submitted a substantially complete application and has been assigned to both a technical eligibility and merit review team, as well as a financial viability analysis team. The technical team is very close to finishing their evaluations on both eligibility and project merit, and the financial team will be launching a more detailed and interactive due diligence phase of the [XPV] application review very soon. Following the technical and financial evaluation under the second stage of the process, we will move into the underwriting phase where our goal is to negotiate a conditional commitment, including a detailed term sheet. This will be followed by the fourth phase of the loan process where the final details will be negotiated and the loan will be closed.

29.

On May 26, 2009, Gerbsman offered XPV an in-person meeting to discuss â next steps.â

30.

On May 28, 2009, XPV flew a representative from California to meet with Gerbsman. Gerbsman said that DOE had determined â everything was in orderâ with XPVâ s ATVM Loan Program application; that â everything looked good;â and that XPV â appeared to be fully compliant and passed technical review.â

31.

Shortly thereafter, XPV discovered that Tesla Motors, Inc. (â Teslaâ) and Fisker Motors, Inc. (â Fiskerâ) were receiving special assistance from DOE staff with the ATVM Loan Program application process. Fisker even was given special and exceptional access to DOE staff, offices and conference rooms in DOEâ s headquarters at no charge. Both Tesla and Fisker were XPV competitors.

32.

XPV requested similar assistance from DOE staff but was denied it because, as DOE staff put it,

XPVâ s application was so good that special assistance was unnecessary.

33. *Notwithstanding DOEâ s delays and the bankruptcy of other industry players due to the U.S. economic collapse and the failure of those other players to produce a product which the market found attractive and which met market needs as XPVâ s design did, XPV continued to grow throughout 2009. On June 15, 2009, XPV informed DOE that it was a semi-finalist in the Forbes â Americaâ s Most Promising Companies Listâ for 2009.*

34. *On or about June 22, 2009, DOE advised XPV that a Northern California solar energy company called Redwood Renewables (â Redwoodâ) had requested a copy of XPVâ s ATVM Loan Program application from DOE through the Freedom of Information Act (â FOIAâ).*

35. *XPV contacted Redwood to see why it was interested in XPVâ s ATVM Loan Program application, and spoke with Redwoodâ s principal, Tom Faust.*

36. *Faust said that he had been â screwed overâ by Defendants and had wanted to know if others had similar experiences.*

37. *Faust said that his company had suffered â bad dealingsâ with Matt Rogers, a â stimulus advisorâ to Chu from McKinsey & Company, and Steven Spinner, a key player in DOEâ s loan program office.*

38. *Spinner was an accomplished campaign bundler who had raised millions for the White House. He had been appointed to his government position in exchange for his fund raising, also had worked at McKinsey & Company and, according to a biography posted by the Center for American Progress, had served as an active advisor and investor to Tesla.*

39. *Faust claimed that Rogers and Spinner were â rigging the gameâ with respect to all DOE loans. He gave XPV Spinnerâ s personal cell phone number and told XPV to call Spinner and ask him why XPVâ s ATVM Loan Program application was not moving forward.*

40. *XPV texted Spinner and then called him. Spinner answered the phone and said words to the effect of â Do not ever call me again. The awards have already been decided.â*

41. *On June 24, 2009, DOE announced that it was making $8 billion in ATVM Loan Program funds available to Ford Motor Company (â Fordâ), Nissan North America, Inc. (â Nissanâ) and Tesla. DOE gave Tesla $465 million of taxpayer funds at an interest rate of 1.6% to manufacture an expensive electric car that was far outside of American consumer budgets and demands.*

42. *On June 29, 2009, XPV wrote to Gerbsman again asking for action on its ATVM Loan Program application. XPV told Gerbsman that other lenders were hanging back until after DOE issued its term sheets.*

43. *Over the next seven weeks Gerbsman and other authorized DOE representatives repeatedly assured XPV that â everything was fine;â â everything is on-track;â and â you [XPV] appear to meet every criteriaâ with respect to its ATVM Loan Program application. XPV was even told that â we [DOE] should be able to announce [a loan] any day nowâ ¦â*

44. *However, on August 21, 2009, Seward denied XPVâ s ATVM Loan Program application. See* ***Exhibit 3****.*

45. ***Seward said XPVâ s application was â determined to be eligibleâ in accordance with the â evaluation criteriaâ in 10 C.F.R. Â§611.103 but that DOE was â not in a position to award every eligible application [ATVM Loan Program funds].â He also said necessity required DOE to â choose applications that are most likely to use [ATVM Loan Program] proceeds in a way that will best achieve the goals of the programâ and that XPVâ s application was rejected on this basis.***
46. ***Seward did not disclose the criteria DOE used to weigh competing qualified applications or explain how or why XPV fell short in the â merit review.â***
47. ***XPV then asked DOE to specify its reasons for denial.***
48. ***In an email to DOEâ s Chris Foster, XPV requested DOEâ s merit review documents and asked how DOE could reasonably conduct a ten month comparative merit review of XPVâ s ATVM Loan Program application without working with a single company engineer or senior project staff member for even one percent of the time that DOE staff spent with Tesla, Nissan, Ford and/or Fisker during the same period of time.***
49. ***Foster did not answer.***
50. ***On or about August 26, 2009, XPV called Foster directly and Foster picked up the phone.***
51. ***Foster told XPV that he would pull XPVâ s file and read to XPV the reasons given there for DOEâ s denial.***
52. ***Foster said that the file indicated that DOE had denied XPVâ s application because its SUV did not use E85 gasoline; XPV was not planning on building â enoughâ vehicles; XPV was not planning on government sales; XPVâ s electric motors and batteries were too futuristic and not developed for commercial use; XPVâ s SUV was a â hydrogen car;â and XPV had underestimated the cost of metal body fabrication.***
53. ***These â reasonsâ were baseless pretexts.***
54. ***First, none of XPVâ s competitors that received ATVM Loan Program funds used E85 gasoline in their electric vehicles and most used no gasoline at all..***
55. ***Second, XPVâ s family-friendly SUV was designed for fast and inexpensive mass production. This is why it was based on the use of commonly available parts from existing commercial sources with multiple points of supply and why it could be sold for only $20,000.00 base in volume production.***
56. ***Third, XPVâ s business plan and staff hires specifically provided for large government and fleet sales.***
57. ***Fourth, XPVâ s SUVâ s â futuristicâ electric motor and battery configuration had been in commercial and government use for decades.***
58. ***Fifth, XPVâ s SUV was an electric and not a hydrogen vehicle.***
59. ***Sixth, XPVâ s SUV contained minimal minimized amounts of metal, using safer, and easier to source and fabricate, polymers and plastics.***

60. ***As XPV was explaining to Foster that the â reasonsâ given for denial were actually no reasons at all, Seward entered Fosterâ s office and directed him to terminate the call. Seward told Foster to advise XPV that it would receive a letter from DOE with respect to its concerns.***

61. ***Despite the passage of weeks, no letter was forthcoming.***

62. ***Therefore, on September 21, 2009, XPV wrote to Chu requesting reconsideration of DOEâ s ATVM Loan Program denial. See Exhibit 4.***

63. ***In this letter, XPV demonstrated that the â reasonsâ for DOEâ s denial read by Foster from XPVâ s file were false. It asked Chu to explain why DOE staff repeatedly assured XPV that approval would be forthcoming and that no additional information was necessary; to describe the merit review criteria; and to justify why government cronies that applied for ATVM Loan Program funds after XPV were reviewed earlier, given the benefit of extensive access to and interaction with DOE staff (a benefit denied to XPV), and then awarded funds.***

64. ***On October 23, 2009, Seward wrote to XPV. See Exhibit 5. He did not answer XPVâ s questions. Instead, he attempted to backfill the record with new but equally baseless justifications for the denial of XPVâ s qualified application.***

65. ***To begin with, Seward said that XPVâ s application was â deemed Substantially Complete on November 10, 2009.â In fact, XPVâ s application had been deemed substantially complete on December 31, 2008.***

66. ***Seward said that the â proposed technology appearedâ ¦to be at a development stage and not yet ready for commercializationâ and that the â assumption that the vehicle concept would be ready for production in three yearsâ was a â significant weaknessâ due to the â high level of risk associated with the design.â In fact, XPVâ s SUV technology had been in use commercially by the U.S. Department of Defense, NASA and the automobile industry; the politically-connected companies that were awarded ATVM Loan Program funds were no further ahead in production than XPV, less in some cases,; and elements of XPVâ s â high risk designâ were already in use by Toyota and Nissan in volume commercial retail sales to the mainstream market.***

67. ***Seward said â the proposed projectâ s impact on fuel economyâ ¦was determined to be weak.â In fact, non-gasoline powered automobiles are uniformly recognized to offer the most significant impact on fuel economy performance in the world. And, XPVâ s family-friendly SUV promised even better fuel economy than any of the ATVM Loan Program â winnersâ (Tesla, Nissan, Ford or Fisker) proposed, or actually offer, to this day.***

68. ***Seward said â A review of the advanced fuels in your project and the feasibility of that energy sourceâ ¦was [sic] questionable.â In fact, the fuels, products and subparts of the â questionableâ energy source were are readily available to consumers at REI Sporting Goods, Amazon.com and Safeway supermarkets, among other places.***

69. ***Seward said â A review of the calculations and assumptions supporting your claims for reductions in petroleum use were deemed to be unrealistic.â In fact, over 200 institutional research and white papers from respected government and university agencies from around the world supported XPVâ s claimed reductions.***

70. ***Seward said that XPVâ s project â may be commercializable [sic] in the future, but is far too early in the development process to qualifyâ for ATVM Loan Program funds. In fact, XPV was***

further along in the â development processâ than the politically-connected companies DOE had funded and electric cars have been sold commercially by Detroit Electric since 1907, the technologies were what were called â off-the-shelfâ delivered in a clever manner.

71. ***Sewardâ s letter was the first time any of these issues had been raised by Defendants with XPV, notwithstanding ten months of review and â underwritingâ involving large numbers of meetings, phone calls and emails. In fact, not only had Defendants never before raised these â issuesâ with XPV, they had affirmatively refused, over a period of months, to consult with any of XPVâ s engineers and denied XPV the â interactiveâ review that they had promised to give in April, 2009, and that had been given to politically-connected ATVM Loan Program â winners,â including Tesla and Fisker.***

72. ***Critically, Defendants did not say, in Sewardâ s October 21, 2009 letter or anywhere else, that XPV had offered inadequate security for the loan; Defendants did not say that XPV was a repayment risk; Defendants did not say that XPV had failed to demonstrate that there was a â reasonable prospect of repaymentâ of the proposed loan; Defendants did not say that XPV had failed to demonstrate it was capable of building, Defendants did not say distributing or selling the proposed SUV; Defendants did not sayor that XPV had failed to demonstrate â financial viability without the loanâ as required by law.***

73. ***To this day, neither Foster nor Chu nor Seward nor anyone else at DOE has ever provided XPV with DOEâ s â merit reviewâ evaluation records and criteria. DOE has refused to provide those results via FOIA requests by the media and the public.***

74. ***At all times relevant, XPV qualified for the requested ATVM Loan Program funds pursuant to 10 C.F.R. Part 611.***

75. ***At all times relevant, XPV had numerous and viable offers from and business opportunities with potential investors, manufacturing partners, distributors and customers. However, Defendantsâ wrongdoing, including their purposeful delay and baseless denial of XPVâ s ATVM Loan Program application, denied XPV the benefit of these business opportunities.***

<u>Limniaâ s ATVM Application</u>

76. ***Or about February 1, 2009, Limnia applied for $15 million in ATVM Loan Program funds to produce a â best of breed and state of the artâ advanced technology vehicle energy storage system using Limniaâ s patented technology. Sandia was designated as a key subcontractor in this effort.***

77. ***On April 10, 2009, Seward denied Limniaâ s application on the grounds that the components â do not appear to be designed for installation in an advanced technology vehicleâ ¦â See <u>Exhibit 6</u>. However, these grounds were false and a mere pretext to preserve ATVM Loan Program funds for government-favored companies and/or to protect those companies from competition.***

78. ***On April 11, 2009, Limnia requested reconsideration, reminding Seward that the relevant patents provided the components were for use in advanced technology vehicles; that Sandiaâ s vehicle technologies group was the prime subcontractor for the project; and that DOE had funded the technology specifically for use in advanced technology vehicles. See <u>Exhibit 7</u>.***

79. ***On May 13, 2009, Seward again denied the application because the technology was â not***

installed in the advanced technology vehicle.â This time, though, he asked for more information. See Exhibit 8. On June 3, 2009, Limnia responded with the requested information. It again requested reconsideration, pointing out that the components in question â must be installed prior to use in an advanced technology vehicle and are, accordingly, designed for such installation and thereforeâ ¦â qualifying components.â â See Exhibit 9.

80. ***Defendants never responded to this letter.***

81. ***At all times relevant, Limnia qualified for the requested ATVM Loan Program funds pursuant to 10 C.F.R. Part 611.***

Limniaâ s LGP Application

82. ***At all times relevant, DOE recognized that the LGP application fees and process were unduly onerous and burdensome.***

83. ***On or about February 1, 2009, Limnia participated in a conference call with John Podesta, Chu and Interior Secretary Kenneth Salazar during which Chu promised to waive the application fee. In that call, Mr. Chu stated that the fees were onerous..***

84. ***Relying on this promise, Limnia filed a LGP application on or about February 10, 2009, with a cover letter stating that it was Limniaâ s understanding Defendants had waived the application fee.***

85. ***Limnia heard nothing from DOE until the deadline date of February 26, 2009. At that time, DOEâ s Myrtle Gross called and said that the initial application fee of $18,000 had to be paid by midnight for the LGP application to be considered. This was Limniaâ s first notice Defendants reneged on their promise to waive the LGP application fee.***

86. ***Limnia had the funds to make payment but could not complete the transaction by the midnight deadline. Therefore, it assumed the matter was closed.***

87. ***On February 27, 2009, Daniel Tobin, DOEâ s Loan Programs Office Senior Investment Officer, called and said that there were â a few days of flexibilityâ to send in the application fee and promised to provide wire instructions. Tobin also promised to â pre-reviewâ the application and to call back with feedback for Limniaâ s investors.***

88. ***However, Defendants again reneged on their promise. Limnia never heard back from Tobin or anyone else at DOE, either with wire instructions or with the promised â pre-review.â***

89. ***Instead, on April 9, 2009, Limnia received a letter from Tobin dismissing it from the LGP without recourse. See Exhibit 10.***

90. ***Defendants denied Limniaâ s requested reconsideration.***

Defendantsâ Cronyism And Program Abuses

91. ***Because DOEâ s â merit reviewâ criteria and process were so opaque, the taxpayer-funded***

ATVM Loan Program and LGP became cash cows for government cronies.

92. ***Politics and political pressure infected these programs, shaping, in whole or in part, the judgment of the ultimate decision makers including Defendants Chu and Seward, their staffs, advisors and consultants.***

93. ***In February, 2011, GAO issued an investigative report on DOEâ s ATVM Loan Program. See <u>Exhibit 11</u> â Advanced Technology Vehicle Loan Program Implementation Is Under Way, but Enhanced Technical Oversight and Performance Measures Are Needed,â GAO-11-145 (Feb 28, 2011)(the â GAO ATVM Loan Reportâ).***

94. ***GAO found that DOE had made billions in loans without engaging â engineering expertise needed for technical oversight.â As a result, GAO said â DOE cannot be adequately assured that the projects will be delivered as agreed.â***

95. ***Furthermore, GAO found that â DOE has not developed sufficient performance measures that would enable it to fully assess the extent to which it has achieved itsâ 'program goalsâ contrary to sound administrative agency practices.***

96. ***The irrational absence of engineering expertise and the arbitrary and capricious failure to create objective performance measures facilitated the politicization of DOEâ s loan programs. In truth, Defendants used the ATVM Loan Program as nothing more than a veil to steer hundreds of millions of taxpayer dollars to government cronies, including Tesla and Fisker.***

97. ***For example, Teslaâ s loan of $465 million, announced on June 24, 2009, was obtained in whole or material part through the efforts and influence of political patrons.***

98. ***These patrons included Steven Westly, who was a major â bundlerâ of political contributions for the White House. His fundraising bought Westly special White House access and an appointment on a key advisory board counseling Chu and Seward. Upon information and belief, Westly sat on Teslaâ s board from March 2007 to December 2009, when DOE gave Tesla $465 million.***

99. ***These patrons also included DOEâ s Spinner, who had a key role in DOEâ s loan programs because he too was a major â bundlerâ of contributions for the White House and a Tesla investor and advisor.***

100. ***Teslaâ s patronsâ contributions, and the political access secured thereby, were material factors in Defendantsâ favorable treatment of and preferences for Tesla during the ATVM Loan Program application process and in Defendantsâ decision to lend Tesla nearly half a billion taxpayer dollars at incredibly favorable rates and terms.***

101. ***Predictably, Teslaâ s business results have not justified Defendantsâ special favors.***

102. ***For example, Tesla, using taxpayer money to build a luxury vehicle aimed at rich actors, media personalities and businessmen, has repeatedly missed production targets, burned through case and required DOE to repeatedly renegotiate loan terms to survive. . The renegotiation of the loan terms and the tax favors created for cronies created an unfair burden on the taxpayer.***

103. ***On November 12, 2012, Tesla notified the Securities and Exchange Commission that:***

On January 20, 2010, we entered into a loan facility with the Federal Financing Bank (FFB), and the Department of Energy (DOE), pursuant to the Advanced Technology Vehicles Manufacturing (ATVM) Incentive Program. This loan facility was amended in June 2011 to expand our cash investment options, in February 2012 to modify the timing of certain future financial covenants and funding of the debt service reserve account, and in June 2012 to allow us to effect certain initiatives in our business plan. We entered into another amendment with the DOE in September 2012 to remove our obligation to comply with the current ratio financial covenant as of September 30, 2012 and amend the timing of pre-funding the principal payment due in June 2013. Under the DOE Loan Facility, the FFB has made available to us two multi-draw term loan facilities in an aggregate principal amount of up to $465.0 million. Up to an aggregate principal amount of $101.2 million had been made available under the first term loan facility to finance up to 80% of the costs eligible for funding for the powertrain engineering and the build out of a facility to design and manufacture lithium-ion battery packs, electric motors and electric components (the Powertrain Facility). Up to an aggregate principal amount of $363.9 million has been made available under the second term loan facility to finance up to 80% of the costs eligible for funding for the development of, and to build out the manufacturing facility for, our Model S sedan (the Model S Facility). Under the DOE Loan Facility, we are responsible for the remaining 20% of the costs eligible for funding under the ATVM Program for the projects as well as any cost overruns for each project. As of August 31, 2012, we have fully drawn down the aforementioned facilities.

104. ***In other words, all of the taxpayer funds are gone and Tesla needs new loan terms because it cannot keep its original commitments.***

105. ***Tesla has also reported delivering a grand total of 256 vehicles for sale to customers. However, it promises â mass productionâ will begin in 2013. XPV had a far higher set of fleet sales leads, numbering in the tens of thousands, which had to be put on hold due to the DOE misdeeds.***

106. ***Fiskerâ s ATVM Loan Program application for $528.7 million, announced on September 22, 2009 (approximately a month after Defendants had rejected XPVâ s qualified ATVM Loan Program application), also was obtained in whole or in material part through the efforts and influence of political patrons on DOEâ s decisionmakers, Defendants Chu and Seward.***

107. ***Fiskerâ s patrons were John Doerr and the investment firm of Kleiner, Perkins, Caufield & Byers (â KPCBâ). At all times relevant, Doerr was a KPCB partner along with former Vice President Al Gore, among others, and KPCB was a Fisker investor.***

108. ***Doerr and his partners donated millions to the 2008 Obama campaign and related Democrat political causes, buying preferential government treatment for their business interests. Among other things, Doerrâ s political contributions earned him high-level White House access and a seat on the Presidentâ s Council on Jobs and Competitiveness.***

109. ***Contributions by Fiskerâ s patrons, and the political influence secured thereby, were material factors in Defendantsâ favorable treatment of and preferences for Fisker during the ATVM Loan Program application process and in Defendantsâ decision to lend Fisker over half a billion taxpayer dollars at incredibly favorable rates and terms.***

110. ***Predictably, Fiskerâ s performance has not justified Defendantsâ favors. For example, DOE gave Fisker approximately $169.3 million for â engineering integrationâ of a high-cost electric luxury car in Finland, and approximately $359 million for manufacturing a low-cost***

plug-in hybrid sedan in the U.S. known as â Project Kx.â See Exhibit 12 â Conditional Commitment Letter by and between United States Department of Energy and Fisker Automotive, Inc. â Execution Copy (September 18, 2009).

111. *Defendants committed this money to Project Kx without a prototype or properly verifying Fiskerâ s engineering, sales and supply chain claims and assumptions. Nevertheless, DOE asserted Fiskerâ s loan would â create or save about 5,000 jobsâ just for domestic parts suppliersâ and parroted Fiskerâ s claim that â up to 75,000-100,000 [Project Kx] vehicles will roll off assembly lines in the U.S. every year beginning in late 2012.â*

112. *Fisker did not make Kx prototype available to the public or begin Kx production in 2010.*

113. *Fisker did not make a Kx prototype available to the public or begin Kx production in 2011, although it promised â mass productionâ would begin by the end of 2012.*

114. *On or about February 7, 2012, after Fisker had spent over $170 million taxpayer funds, DOE froze its credit facility due to many missed deadlines. In June, 2012, Fisker made the Kx prototype available to the public. The â low costâ sedan approved by Defendants in 2009 turned out to be a $55,000 luxury car called the â Atlantic.â*

115. *Defendants had claimed that 75,000 â 100,000 Fisker Kx cars would be rolling off domestic assembly lines by the end of 2012. On October 18, 2012, Fisker reported that mass production of the â Atlantic,â which had not yet begun, was delayed until 2014 or 2015.*

116. *Since 2008, Fisker has sold approximately 1,500 vehicles world-wide. Upon information and belief, Defendantsâ â loanâ to Fisker of the taxpayersâ $170 million has â saved or createdâ one hundred or fewer jobs.*

117. *In March, 2012, and in response to complaints by Limnia and others, GAO reported on DOEâ s LGP performance. See Exhibit 13 â DOE Loan Guarantees: Further Actions Needed to Improve Tracking and Review of Applications,â GAO-12-157 (March, 2012). GAO found that DOE treated LGP Victim #127s inconsistently, favoring some and disadvantaging others; lacked systematic mechanisms for LGP Victim #127s to administratively appeal adverse decisions; often ignored its own underwriting standards and skipped review steps; and re-reviewed rejected applications on an ad hoc basis. It also found that DOEâ s practice of â [o]mitting or poorly documenting [LGP application] reviews reduces LGPâ s assurance that it has treated Victim #127s fairly and equitably.â*

118. *In October, 2012, emails released by Congress confirmed that at least several major LGP guarantee decisions were based on political factors and not on the merits of the various applications. See e.g. Exhibit 14 (Email from Jonathan Silver, former Executive Director, DOE Loan Programs Office, to James C. McCrea, DOE LPO credit adviser, dated June 25, 2010, stating â WH wants to move Abound [project] forward. Policy will have to waitâ ¦â); Exhibit 15 (Email from James C. McCrea to B. Oakley stating â Pressure is on real heavyâ ¦due to interest from VPâ); Exhibit 16 (Email from Monique Fridell to Kimberly Heimert, et al. dated May 25, 2010 stating â DOE has made a political commitment to get Unistar through the approval process by 6/15â ; Exhibit 17 (Email from James C. McCrea to Monique Fridell dated June 1, 2010 stating â Secretary [of Energy]â ¦is adamant that this transaction is going to OMB by the end of the day Fri if not sooner. Not a way to do things but a direct orderâ)*

119. *Defendants bent the rules for political favorites such as Sen. Harry Reid and Rep. Steny Hoyer while government cronies received special personal access to high-ranking DOE loan program*

officials. See e.g. Exhibit 18 (Email from James C. McCrea to â barbiarâ dated December 5, 2009 stating â [Harry] Reid may be desperate. WH may want to help. Short term considerations may be more important than long term considerations and whatâ s a billion anyhow?â); Exhibit 19 (Email from James C. McCrea to Julie Stewart dated May 25, 2010 stating â 7th Floor has decided mid June CRBâ ¦there has been a commitment from S1 [Secretary Chu] to Steny Hoyer on this. Nothing like over committing and under deliveringâ ; Exhibit 20 (Email from Brightsource Chairman John Woolard, an LGP Victim #127, to Jonathan Silver, DOE Loan Office Director dated November 10, 2010 stating â Thanks for offering to meet at your house tomorrow morning.â Silver replied â Came [sic] anytime. Guest bedroom is ready.â)

Defendantsâ Abuse of XPV and Limnia

120. ***Defendants did not review XPVâ s and Limniaâ s ATVM Loan Program applications in good faith and in accordance with the criteria specified in DOEâ s regulations, policies and promises. Instead, Chu and Seward, who were DOEâ s ultimate decision makers, stonewalled XPV to benefit Tesla, Fisker and others favored because of their political contributions and connections. This damaged XPV and Limnia severely.***

121. ***To begin with, when Defendants â fixedâ the ATVM Loan Program and LGP to benefit government cronies, they knowingly and intentionally rendered the ATVM Loan Program and LGP applications by XPV, Limnia and other similarly situated companies futile and meaningless. They intentionally induced XPV and Limnia though multiple written and verbal representations to spend hundreds of thousands of dollars and invest thousands of hours of engineering and professional time on a meaningless snipe hunt, to cover and protect government cronies.***

122. ***Defendantsâ abuses of the ATVM Loan Program by delaying term sheets and wrongly denying loans, among other things, denied XPV and Limnia access to private capital.***

123. ***At all times relevant, Defendants had actual or constructive knowledge that delaying or denying a small companyâ s ATVM Loan Program application would be a business death sentence. Yet, Chu and Seward skewed, manipulated and fixed DOEâ s ATVM Loan Program review and â underwritingâ to protect and advance the business and political interests of government cronies at XPVâ s and Limniaâ s expense.***

1. ***At all times relevant, Defendants had actual or constructive knowledge that delaying or denying a small companyâ s ATVM Loan Program application would be a business death sentence. Yet, Chu and Seward skewed, manipulated and fixed DOEâ s ATVM Loan Program review and â underwritingâ to protect and advance the business and political interests of government cronies at XPVâ s and Limniaâ s expense.***
2. ***For example:***

a. ***The ATVM Loan Program funds distribution date and the â first in, first outâ review process were changed to benefit companies Defendants favored. Cronies that applied for an ATVM loan after XPV were reviewed earlier; walked through the â underwritingâ process by DOE staff; given the benefit of unique agency interaction; and then awarded funds. XPV and Limnia, lacking White House connections and political patrons, were denied these things.***

b. ***Defendants discriminated among Victim #127s based on political contributions and connections. On the one hand, Tesla, Fisker and others received special favors and assistance from DOE, all to ensure that these companiesâ ATVM Loan Program and LGP reviews would be â successful.â On the other hand, XPV , Limnia and others similarly situated were denied these favors and access. For these disfavored companies DOE paid outside, unqualified technical reviewers to conduct pretext diligence. For example, XPV spoke with Carol Battershel, who claimed to be the due diligence technical lead on XPVâ s application. She said she had gotten everything she needed â off [XPVâ s] website.â However, neither she nor any other DOE technical reviewer talked to XPVâ s founder, inventor, engineers, project leads or primary contractors. In fact, Defendants actually declined to speak with XPVâ s engineers, even after XPVâ s engineers called and visited them to offer data and other information.***

c. ***DOE employees were ordered by Defendants to ignore non-favored Victim #127s until deadlines had passed to shrink the Victim #127 pool.***

d. ***Defendants ignored standard commercial loan processes, including the use of competent engineers to carry out technical review and the consistent application of the same underwriting criteria to each application. Instead, the â loan review processâ was intentionally manipulated, bypassed or stalled, to ensure that funds were given to government favored â winnersâ but not to XPV, Limina or other companies that lacked large political contributions and White House access.***

e. ***Political officials made final ATVM Loan Program and LGP review and â underwritingâ decisions without material regard for DOEâ s published criteria and regulations. For example, in or about October, 2009, XPV and Limnia were told by a DOE contractor who worked for Seward that Seward had been angered by XPVâ s and Limniaâ s public complaints about DOEâ s loan program administration and that Seward told his staff in late 2008 that it would be â a cold day in hell before I let them [XPV and Limnia] get any money.â***

f. ***Defendants have only granted ATVM Loan Program applications for companies with direct political connections to the White House. Notwithstanding billions in lending authority and multiple qualified Victim #127s, Defendants have, in the years since September 22, 2009, failed to make even one ATVM loan. Upon information and belief, this failure is in material part to protect government favorites such as Fisker and Tesla from competition.***

g. ***Upon information and belief and at all times relevant, Chu and Seward â carved outâ funds from DOEâ s authorized lending authority and â heldâ same for government cronies who made political contributions; provided political support for and assistance to the Administration; and/or hired political fixers to obtain â top-tier statusâ and â special relationshipsâ with Defendants and others.***

h. ***Defendants repeatedly renegotiated the Tesla and Fisker loans to protect their competitive positions and to guard their political patrons, contrary to sound commercial lending practices.***

i. ***Defendants denied XPVâ s and Limniaâ s ATVM Loan Program applications on baseless pretexts. These included false XPV application â defectsâ and the assertion that energy storage technology developed by Limina with DOE for use as a component in an advanced technology vehicle was, in fact, not a component in an advanced technology vehicle for ATVM Loan Program purposes.***

j. ***Defendants promised to waive the LGP application fee for Limnia. Hours before the payment deadline, DOE reneged. The next day, DOE contacted Limnia promising to accept late payment. Again, DOE reneged.***

k.

DOE hid the â merit reviewâ data, reviewer identities, reviewer work histories, and other information from XPV, Limnia, all other ATVM Loan Program Victim #127s and the public. This information, if disclosed, would have allowed for an open and transparent loan process and allowed XPV, Limnia, the other ATVM Loan Program Victim #127s and the public to evaluate the efficacy of DOEâ s merit review.

l.

DOE willfully, intentionally and substantially overestimated government crony company production capabilities and sales performance to justify its approval of their ATVM Loan Program applications. For example, DOE promised that Fisker alone would have â 75,000 â 100,000â ATVM Loan Program-funded cars rolling off of U.S. assembly lines. In 2012, Ford, Nissan, Fisker and Tesla (the ATVM Loan Program â winnersâ) combined sold fewer than 25,000 ATVM Loan Program-funded vehicles nationwide.

3.

As a direct consequence of Defendantsâ wrongdoing, broken promises and political cronyism, XPV and Limnia were improperly denied ATVM Loan Program funds and LGP guarantees; deprived of the opportunity to compete for government funds on a level playing field; and prevented from creating good American jobs through the production, marketing and sale of advanced technology vehicles and systems developed in conjunction with DOEâ s own scientists.

Claims for Relief

First Claim for Relief: Due Process Violations by Chu and Seward.

4.

XP repeats paragraphs 1-125.

5.

At all times relevant, XPV and Limnia each had a procedural Fifth Amendment due process right to have their ATVM Loan Program applications considered fairly and equally on their merits, without regard for political contributions, political influence or the competitive interests of government crony companies such as Tesla and Fisker.

6.

At all times relevant, XPV and Limnia satisfied all of DOEâ s ATVM Loan Program eligibility criteria and DOE had sufficient funding and appropriate legal authority to make the loans XPV and Limnia had applied for in response to a government solicitation. XPV, in fact, was officially deemed a â qualified Victim #127â by DOE. Therefore, XPV and Limnia each had a substantive Fifth Amendment due process right and a constitutionally-protected property interest in those funds.

7.

However, in abuse of their authority and contrary to law Chu and Seward conspired and agreed to violate XPVâ s and Limniaâ s constitutional rights by skewing and manipulating the ATVM Loan Program to steer funds to and protect government cronies.

8.

Improperly elevating political contributions to and connections in the White House as factors in the consideration of applications and the award of ATVM Loan Program funds, Chu and Seward deprived XPV and Limnia of their right to a fair and level review of their applications, and denied them access to the government loan funds they were entitled to receive as qualified ATVM Loan Program Victim #127s.

9. ***Chu and Seward did not have either the legal authority or the bureaucratic discretion to do these things.***
10. ***XPV and Limnia were aware of Defendantsâ manifest mismanagement almost immediately, in December, 2008.***
11. ***On or about June 22, 2009, XPV was told by Redwood that all DOE loans had been â riggedâ by Spinner, among others.***
12. ***In October, 2009, XPV was told by a DOE contractor in a phone call that Seward was retaliating against it for complaining about DOEâ s loan program administration by denying XPV and Limnia funds.***
13. ***In or about February, 2011, GAO issued its ATVM Loan Program Report containing serious programmatic criticisms of Defendantsâ ATVM Loan Program administration. XPV and Limnia became aware of GAOâ s criticisms shortly after they were published.***
14. ***However, it was not until September 29, 2011, with the publication of credible, sourced media stories tying ATVM Loan Program funding decisions to White House political bundlers that XPV and Limnia discovered that political influence and campaign contributions had impermissibly infected Chuâ s and Sewardâ s decision making and that these considerations had likely caused Defendants to deny XPVâ s and Limniaâ s ATVM Loan Program applications to protect the governmentâ s political cronies. See, e.g., Exhibit 21 Mosk and Greene, â Obama Fundraisers Tied to Green Firms That Got Federal Cash,â ABC News (Sept. 19, 2011).***
15. ***Chuâ s and Sewardâ s due process violations, jointly and severally, have damaged XPV and Limnia in excess of $225 million.***

Second Claim for Relief: Administrative Procedure Act (XPV ATVM Loan).

16. ***XP repeats paragraphs 1-137.***
17. ***DOEâ s final agency action denying XPVâ s ATVM Loan Program application was contrary to law, arbitrary and capricious, and in excess of its statutory authority.***
18. ***Furthermore, the agencyâ s action in this case was impermissibly infected with political pressure, which shaped, in whole or in part, the judgment of the ultimate agency decision makers with respect to that application.***
19. ***As a result, XPV has been directly harmed and aggrieved.***
20. ***XPV has exhausted all administrative remedies.***
21. ***Alternatively, such exhaustion would be futile as DOE has fixed the ATVM Loan Program to benefit government cronies and there are no circumstances under which XPVâ s ATVM Loan Program application would ever be approved by the agency.***

Third Claim for Relief: Administrative Procedure Act (Limnia ATVM Loan).

22. ***XP repeats paragraphs 1-143.***
23. ***DOEâ s final agency action denying Limniaâ s ATVM Loan Program application was contrary to law, arbitrary and capricious, and in excess of its statutory authority.***
24. ***Furthermore, the agencyâ s action in this case was impermissibly infected with political pressure, which shaped, in whole or in part, the judgment of the ultimate agency decision makers with respect to that application. As a result, Limnia has been directly harmed and aggrieved.***
25. ***Limnia has exhausted all administrative remedies.***
26. ***Alternatively, such exhaustion would be futile as DOE has fixed the ATVM Loan Program to benefit government cronies and there are no circumstances under which Limniaâ s ATVM Loan Program application would ever be approved by the agencyâ ¦.â***
27. ***In the lawsuits filed by Victim #127, working with Congressional parties, the goal was to recover damages for Victim #127, expose and document the corruption by State and Federal employees and change State and Federal laws so that public officials could never again engage in such crimes. For his effort, and in retribution, vendetta and reprisal by The Obama Administration, now notoriously documented in the news and Congressional investigations for having employed armies of hit-men, character assassins and reprisal services like Fusion GPS, Mossadâ s Black Cube, Media Matters, Stratfor, Gawker, etc,; Victim #127 was poisoned, injured and otherwise attacked in manners which permanently disable him, on orders from State and Federal officials.***

Victim #127 has sworn to the veracity of the following facts:

Victim #127 was asked to participate in these federal programs and then asked to testify in these matters by State and Federal elected officials and senior government executives.

Victim #127 has been employed since 1973. He worked for his community and his country as a law enforcement and intelligence researcher (law/IC) in which he closed cases that saved Americans billions of dollars. He held numerous state and federal certifications and credentials to this effect and was certified as an investigator under the State Government at the California Office Of Consumer Affairs. He also worked as a CEO, Inventor and Product Development Director for which the U.S. Government has awarded him dozens of seminal patent awards for products in use by Microsoft, Sony and other major companies to provide products and services to billions of people. He has received commendation letters from U.S. Presidents, Agency heads and Mayors. He is pictured in videos, photographs, articles, meetings and on letterhead government and corporate correspondence with some of the most famous public and White House figures in America since the 1970â s.

After he reported the corruption in a trillion dollar Department of Energy embezzlement scam involving crooked mining deals for uranium, lithium, indium and other metals, he was attacked by State and Federal employees, many of whom have now been terminated because of their actions and their involvements in political corruption.

The industry metricized standard for personâ s with, at least, the skills and experience of Victim #127, in his demographic, is a minimum of $10,000 per month in the local technology market for those with less hours, less patent awards, less past work reference letters and less experience than Victim #127. In fact, the past

pay-stubs for Victim #127 prove that he was valued at a minimum of $10,000.00 per month by various corporations. For State and Federal officials, who are making tens of millions of dollars in insider stock trading at Victimâ s expense, to state that his work history and state-caused damages limit Victim #127 to only $800.00 per month is not tolerable. Victim #127 was FORCED to take early retirement at the lowest possible amount. This was not a choice Victim #127 would have made under any other conditions. The U.S. Government should provide Victim #127 damages offset due to the defrauding of Victim #127 by Government officials in order to exploit those officials illicit stock market insider trading scam at the expense of Victim #127 and the American taxpayers. It is primarily the fault of Federal and State employee actions that led to Victim #127â s most damaging conditions and caused all of the victims to suffer the obvious damages from a multi-million dollar financed state-sponsored reprisal attack as part of a widely documented vendetta and reprisal program by the Obama Administration.

Victim #127 has applied for his Constitutionally guaranteed rights and government beneficiary rights since 2007, and every year thereafter. Victim #127 applied when his government benefit rights were fully active and available for him. Victim #127 has been intentionally discriminated against as part of an illegal political reprisal. In other cases, the federal courts and law enforcement have ruled, and hold proof, that Victim #127, and the other Victims, were subject to reprisal, vendetta and revenge tactics by State and Federal employees exposed in one of the law enforcement cases Victim #127 worked on and testified in.

Even though Victim #127 has been an extraordinarily productive, working member of the community and the U.S. Government; and Victim #127 has organized companies and programs which have paid millions of dollars in taxes to the State and Federal Government, Victim #127 is currently black-listed from receiving damages compensation or even the most minimal benefits. In other words, Victim #127 has saved billions of dollars for the Government and the taxpayers and, additionally, has organized companies and programs which paid millions of dollars in taxes and free services to The Government yet Victim #127 seems to be getting only reprisals as gratitude.

The current benefits amount is so low it is impossible to live on. County officials have suggested Victim #127 should â *move to Panama*â where it is cheaper. Even Panama, and other third world countries, wonâ t let you live there unless you are receiving at least $1000.00 to $1500.00 in benefits. State and Federal services were not created to try to send natural born citizen taxpayers to third-world countries and deplete the nation of its native human resources. The Government should not be in the position of forcing hard-working, natural born, U.S. Citizens into becoming immigrants to third world countries.

State and Federal employee corruption and reprisal actions cost Victim #127 his life savings and nearly a billion dollars of potential income by intentionally sabotaging and terminating his operating, Congressionally financed, Congressionally commended electric car company and his national energy company.

Corrupt State and Federal employees engaged in these benefit blockade reprisals because Victim #127â s companies competed with the illicit stock market holdings of those corrupt State and Federal employees. These are the very same public officials who have interdiction capability at SSA and other state and federal agencies. It is quite reasonable to assume that these State and Federal employees with a court record of using reprisal actions against others just like Victim #127, did not also call for Benefit and Compensation blockades and black-listing against Victim #127. These public officials defrauded Victim #127 by asking him and his Team to invest in their program but it turns out they were using Victim #127â s business ventures to cover their crimes at the expense of Victim #127 and the taxpayers.

To be clear, Government employees put hundreds of millions of dollars of stock market profits in their, and their associates pockets, part of which they took from Victim #127â s State and Federal funding, and then attacked Victim #127, in a large number of reprisal actions, when Victim #127 reported this and the FBI raided Solyndra, opened the Uranium One investigation and then had to have the FBIâ s Director fired for illicit political manipulations.

Part of Victim #127â s work involved creating Americaâ s next national energy solutions. Victim #127 worked with the U.S. Department of Energy, HUD, NAHB and related entities in work with the national weapons and energy labs since 2000. Victim #127 worked with nuclear, heavy metals, sintered rare earth metals, extreme solvents and nano-particulated exotic chemistries and won a historical Congressional commendation, first-ever seminal U.S. Government patent awards, industry and press acclaim, customer acclaim and a multi-million dollar lab research grant in the Congressional Iraq War Bill.

Victim #127 was one of the people tasked with building Americaâ s back-up energy technologies for the potential disruption of the Middle East.

In the course of Victim #127â s work Victim #127, and his Team, uncovered a nearly one trillion dollar Energy Department corruption matter which led to the termination of senior staff at the U.S. Department of Energy, the FBI raid on their facilities and an ongoing FBI investigation. This also led to a suspected reprisal exposure to toxic materials which will remain in Victim #127â s body, at a cellular level, for the rest of his life. This led to black-listing and HR database manipulation attacks by attack firms such as Fusion GPS, Stratfor, In-Q-Tel, Gawker Media, Google, Gizmodo Media, David Brock Group, Podesta Group, Media Matters, Black Cube and related contract reprisal services featured in contemporary news headlines, all documented as reporting to the Obama Administration in order to provide reprisal services and attack resources. These character assassination and damage delivery services were hired to poison Victim #127 and terminate his career in every sense of the word.

Because of Victim #127â s service to his country, Victim #127 has been denied his legal rights, his rights to a home and he has been forced to live like a refugee. Victim #127â s U.S. Constitution and California Constitutional rights have been denied because he *â did the right thingâ* and helped law enforcement.

Victim #127â s has been physically injured. His vehicle was rammed on two different occasions. He has been injured and damaged by state-sponsored attacks in a number of ways. Would the attackers resort to such extreme measures. Victim knew Google creator Rajeev Motwani and Solar CEO Gary D. Conley along with two Tesla employees. All four of them died suddenly, coincidentally and mysteriously after stating that they feared â someone was after them for what they knewâ and all of them had conflicts with Obama Administration executives.

There can be no possible question about the fact that Victim #127 is unable to ever work again. Any decision to the contrary may continue to indicate that reviewers are still co-opted and compromised by State and Federal officials set upon revenge and vendetta.

Victim #127â s family, friends, supporters, reporters and the public will never let this matter lapse without a fair review. Every unbiased third-party review of this matter has concluded that Victim #127 â got screwedâ by the Federal and State officials who were supposed to represent him in a non-partisan manner and who own portions of his competitors business and stock market ventures. In the opinion of the public: â That us a felony conflict of interest!â by those who are supposed to be working in Victim #127â s interest.

SSA is challenged to source a government job which is commensurate with Victim #127â s experience, earnings record and capability, salary.com bay area compensation standards, limitations and circumstances, if the Victim is not black-listed, as proof of their assertions.

The FBI case files, SFPD case files, GAO case files, associated cases federal court files (which have already had rulings confirming these assertions) and Congressional investigation case files prove Victim #127â s assertions of government staff corruption and a system of organized vendetta campaigns against Victim #127 and hundreds of his associates.

This is not about politics as far as Victim #127 is concerned. Victim #127 is not associated with any political party. This is about Government-financed and managed vendettas and revenge. This is a law enforcement and corruption matter.

The U.S. Attorney General, The Head of the White House Press Office, The Director of the FBI, The Secretary of Energy and his staff have been fired, or forced to quit, because of this case. This is a very large matter but it is not about politics. It is about felony level crime and the physical, toxicological, emotional, reputational, brand and strategic attacks on Victim #127 by government officials who own stock market holdings in Victim #127â s competitors and their financiers.

Senior Federal and State executive government officials, and their campaign financiers at Google and Tesla Motors, ordered, operated and paid for the disabling attacks described herein and that those disabling states are life-long and, indeed, disabling.

Over 10+ different life-long disabling and economic black-listing circumstances affecting Victim #127 have documented.

Victim #127â s advisors believe that his rights applications are being stone-walled, just like the hundreds of applications and cases of his peers, also now in many courts, because they testified in a productive criminal case that resulted in terminations and indictments. The IRS â Lois Lernerâ Vendetta Cases and The Veterans Administration Vendetta cases clearly prove that the Obama Administration engaged in the vindictive bullying of citizens.

If Government sponsored reprisals, including the state-sponsored hacking of HR databases and the placement of defamation data on databases around the world for the rest of Victim #127â s life is not a disabling impairment, then what is?

Victim #127â s qualifying matters are more than enough to qualify Victim #127 for full damages offsets, benefits and reprisal coverage. The career sabotage, operated by State and Federal officials is, certainly, almost more than enough in this extraordinary circumstance. If ever a citizen qualified for favorable variance and coverage approval, it is Victim #127.

Victim #127 and his advisors have asked the Police Department, The FBI, The GAO, The NLRB, Journalists and Congressional Investigation committees to track this next stage of his appeals because of previous conflicts of interest by State and Federal reviewers and consultants in this case. In the earlier portions of Victims offset applications, up to this date, most of the reviewers, judges, administrators, and consultants, providing input or rulings have been shown, by investigators, to have had a political and economic affiliation with the DNC. All of the parties that his case has caused to be fired, arrested and otherwise terminated had a political and economic affiliation with the DNC as proven by their archived emails, social media data, photographic postings, event attendance, campaign contributions and forensic records.

Victim #127â s donation to The City of San Francisco of the Clean Tech Green community center building and his electric car company, along with his extensive spoke-person work for green energy and his help in producing the Federal Jobs Act Law would lead one to believe that he would receive support from DNC entities rather than hit-jobs. The organized crime profiteering by DNC bosses seems to have led things in another direction, based on the involvement of some of those parties, in crony corruption payola schemes. This has forced the Victimâ s to suffer political reprisals in matters in which they have no political involvements.

Even though Victim #127 has no political involvements, Victim #127 has been targeted and attacked by State and Federal officials who are seeking to run reprisals because of their embedded emotional political triggers and their crony illicit profiteering schemes.

While review agencies have denied these conflicts-of-interest, FBI/Congressional-class forensic evidence acquired on every party who has handled this case, so far, proves that those agencies are lying.

Over 500 lawsuits and federal investigations on other peopleâ s cases for VA, IRS, DOE, etc., has proven that state and federal agencies do indeed conduct illegal reprisal decisions against whistle-blowers, witnesses and others such as Victim #127.

In fact, if any other participant in Victim #127â s review is found to have such an unreported conflict of interest, Victim #127's associates intend to pursue those continued violation of his rights as a felony, with the full force of the law, the media and public information resources.

Tens of thousands of pages of evidence and hours of videos proving these assertions have been posted on-line by multiple journalists, the public and investigation organizations, on multiple web site copies globally, for the convenience of the court and related investigators, such file repositories include: www.outloud.biz, www.my-news.biz, www.theintercept.com, and hundreds more, hold confirming evidence

Since 2007, State and Federal agencies have spent ten times more taxpayer money and time delaying Victim #127â s case than if State and Federal agencies had approved his original filing. It would seem to be a smarter bargain for the Government and the taxpayers to approve his rights, benefits and damages compensation application and end this dispute, rather than waste more taxpayer funds fighting it. Victim #127 has always won each portion of his dispute in this matter when he had fair and adequate legal representation. There is no reason to think that the ongoing prosecution of this matter will not fall on the side of the Victims and cost the reprisal parties at State and Federal agencies their jobs, credibility and public support. It is ethically and economically prudent to settle this case with Victim #127 now rather than wait until hundreds of millions of voters are crying out for justice.

As this hearing is underway, the most senior FBI and DOJ executives including*James Comey, Andrew McCabe, Peter Strzok, David Oh and others are under federal investigation for running character assassinations and working with the economic assassins from Fusion GPS, Google Media, Gawker Media and other illicit attack organizations. Victim #127 reported to some of these men. Charges of FBI, DOJ, VA and SSA executive reprisal manipulations and attacks against citizens would have sounded ludicrous a decade ago but, in the post-Snowden world, catching those who pervert State and Federal offices has become common-place. It is beyond reasonable to assume that Victim #127â s charges of benefits reprisal-stonewalling are well founded and have full legal merit. The services who charge to perform the support work for such attacks would charge a minimum of $30,000,000.00 for the same reprisal and vendetta services used against the Victims. Ie: the life-time placement of negative attack data on Google and on all of the Axciom, Taleo and other hiring HR and hiring databases, globally; and the locking, on the front top page of Google search results, forever, as they did under the orders of White House officials, of the attack and defamation data, was done because Victim #127, and the other victims became Federal witnesses.*

The award winning Netflix television documentary entitled WORMWOOD, details the murder of U.S. employee Frank Olsen, in New York by a federal agency. The family of Frank Olsen received an in-person apology from President Ford, for the government caused death of Mr. Olsen. World renown investigative reporter: Seymor Hersh, featured in that documentary, has stated that he is aware of hundreds of such attacks on U.S. citizens. Lawyer Alan Stein, who has represented numerous survivors who were once Victimized by the U.S. Federal officials at the Allan Memorial Institute in

Montreal has provided vast amounts of evidence confirming the validity of these charges. This even further validates the fact that rogue State and Federal agency executives do actually, poison, murder, character assassinate and career sabotage those they feel may expose their illicit schemes, as they attempted to do with Victim #127. The facts prove that there are no limits to the depravities that a rogue government official will undertake when operating in the dark.

The attacks on Victim #127 were â State Sponsored Attacksâ directed, financed and managed by California State public officials, Elected Officials including U.S. Senators, and the highest level Federal Agency officers.

Instead of the â *Thanks of a grateful nation*â , Victim #127 has received political reprisals, revenge and vendettas using taxpayer financed resources. Victim #127 has contributed more in the service of his country and community than most non-veteran current benefits approved recipients, yet Victim #127 is treated to reprisal and vendetta actions by the politics of State and Federal agency staff. That does not seem quite fair.

We ask the State ad Federal agencies to correct the record and bring fairness and justice to the finalization of this case. Victim #127, his family, friends, associates and others will pursue this forever, through the media, law enforcement and alternative means ...until it is fairly resolved.

Thank you for your valued consideration in this matter.

Political and Competitor Sabotage Make Starting A Modern Car Company Almost Impossible

- Your own elected officials, who own stock in your competitors and their supplies will blockade you.
- Elon Musk and his crazy Silicon Valley oligarchs will put moles in your company and run black-lists against you.
- The Dept. of Energy will freeze you out on orders from campaign financiers.

Odds for auto startups are incredibly high; can Tesla beat them?

by John Voelcker, special from Green Car Reports

Tesla Model S being built at the Fremont Factory. (Image courtesy of Tesla Inc.)

Much of the energy and growth in the U.S. economy comes not from large corporations but from small startup companies, as economic data shows.

By now, the model of a young, energetic entrepreneur with a bright idea who turns it into a world-changing business is well established.

Think Facebook or Google, or before them Microsoft or IBM or Kodak, or before them Edison Electric and Westinghouse.

DON'T MISS: Why Tesla's Elon Musk Must Sell 6 Million Electric Cars To Make History

Automobile makers were startup companies 100 years ago, though even then consolidation had started. In 1917, more importantly, Ford was in the process of pioneering high-volume mass production that would change the industry.

A recent opinion piece in industry trade journal *Automotive News* argues that automotive startups now face survival odds that may be all but insurmountable if they choose to build more than a few thousand cars a year.

The challenges largely revolve around the prodigious capital needs of setting up volume production of automobiles.

Combined with very long product development cycles and not-all-that-impressive profits against industries like software or consumer electronics, startups that make entire automobiles may not look that attractive to

financiers.

The piece argues, bluntly:

Making successful cars and trucks ... while building a company from scratchâ an effort that can require investing hundreds of millions of dollars against zero revenue and wooing experts from more secure, high-paying positions at established companiesâ is virtually impossible.

READ THIS: Just 260 Tesla Model 3s built in three months, volume production delayed: Q3 results and call

That brings the discussion to Tesla. After 13 years in business, seven of them as a publicly traded company, the company has yet to return a profitable year.

It has had two marginally profitable quarters during that time, both relying on such non-core aspects as sales of regulatory credits and delaying payments to suppliers.

Still, as the article notes, a recent wave of new entrepreneurs has sought to follow in Tesla CEO Elon Musk's footsteps (although he's not actually a Tesla founder) with vehicles from small to large.

Elio Motors is trying to get funding to put founder Paul Elio's idea for a three-wheeled, two-seat, allegedly 84-mpg "autocycle" into production at a price it says will be under $10,000. It's still about $100 million short.

Faraday Future is in suspended animation while it seeks more capital to start production of its FF91 luxury battery-electric sedan.

Lucid Motors (nee Atieva) is also apparently seeking additional funds to start production of its Lucid Air, also a luxury battery-electric sedan.

CHECK OUT: Manufacturing expert says Tesla Model 3 plan to skip beta testing is risky

More recently, Robert Bollinger unveiled the design for the Bollinger B1, an eye-catching all-electric Class 3 utility truck that his company, Bollinger Motors, hopes to put into productionâ assuming funding can be lined up.

These companies follow in the footsteps of several recent failed startups.

Fisker Automotive collapsed into bankruptcy after less than 18 months of production; its striking low-slung Karma sedan is being rebooted at low volumes by a deep-pocketed Chinese auto-parts company.

Aptera finally declared bankruptcy six years ago after management turmoil and a shift in product direction away from its original concept for an ultra-aerodynamic, two-seat, three-wheel electric car that looked like a Cessna cabin on wheels.

Many of the companies had, or anticipated receiving, low-interest loans from the U.S. Department of Energy's advanced-technology vehicle manufacturing program, which lost TK million on its loans to Fisker.

The lack of those loans is apparently what pushed Aptera over the edge and has kept Elio stalled, for instance.

But low-volume sales of specialized cars aren't necessarily impossible.

A dozen or more makers of high-performance, low-volume supercars exist across Europe, Asia, and North America, usually selling 2,500 cars a year or fewer at prices high enough that the companies can break even by largely hand-building them.

It's the challenges of truly high-volume productionâ including Tesla's goal of emerging into the ranks of makers that globally sell hundreds of thousands of cars a yearâ where the tooling and manufacturing costs become gigantic.

Automotive News quoted Brett Smith, assistant director of the manufacturing, engineering and technology group at the Center for Automotive Research, at some length on the scale issues.

The dividing line, he suggested, is around 10,000 vehicles a year: "The real challenge is when you are where our friends are at Tesla right now," he told the trade journal.

"As you increase that volume," Smith said, "the complexity and the challenge in many ways goes up exponentially."

Tesla delivered 76,000 electric cars last year, and has said it expects to deliver more than 100,000 vehicles this year.

Its goal of building 5,000 cars per weekâ more than 250,000 cars a yearâ has now been postponed until sometime during the first half of 2018.

From a historical perspective, Tesla's 200,000-plus cars on the road have already far surpassed numerous legendary efforts at starting a car company.

John Delorean built 9,000 cars, Henrik Fisker up to 3,000, Malcolm Bricklin 2,850, and Preston Tucker a mere 51.

But the company has a long way to go yet before it equals the 700,000 cars built and sold in the U.S. by steel magnate Henry J. Kaiser over the 10 years starting at the end of World War II.

That number of cars in today's larger global market would scale up to roughly 6 million vehiclesâ a total Tesla can only dream about at the moment.

Kaiser remains the most successful automotive startup in the U.S. over the last 90 yearsâ but as even Kaiser

learned, the economies of scale, marketing power, established dealer networks, and brand recognition of existing competitors pose formidable hurdles for new entrants.

Even well-funded global competitors from Asia acknowledge that establishing a new car brand in the U.S. alone takes 10 to 20 years and more than a billion dollars.

It still doesn't always work; remember Suzuki, Isuzu and Daihatsu? They all entered the U.S. market, stayed here for many years, and concluded they couldn't do it.

"Barriers to volume manufacturing are still enormous," CAR's Smith concluded. "The Tesla thing is going to be fascinating."

If it goes well, it is an incredible credit to them. But it could blow up in a catastrophe that will be fascinating to watch."

Professor: NASA Has Fiddled Climate Data On â Unbelievableâ Scale In To Rig Profits For Nancy Pelosi

CARL DE SOUZA/AFP/Getty Images

by JAMES DELINGPOLE6525

A German professor has confirmed what skeptics from Britain to the US have long suspected: that NASAâ s Goddard Institute of Space Studies has largely invented â global warmingâ by tampering with the raw temperature data records.

Professor Dr. Friedrich Karl Ewert is a retired geologist and data computation expert. He has painstakingly examined and tabulated all NASA GISSâ s temperature data series, taken from 1153 stations and going back to 1881. His conclusion: that if you look at the raw data, as opposed to NASAâ s revisions, youâ ll find that since 1940 the planet has been cooling, not warming.

According to GÃ¼nter Ederer, the German journalist who has reported on Ewertâ s findings:

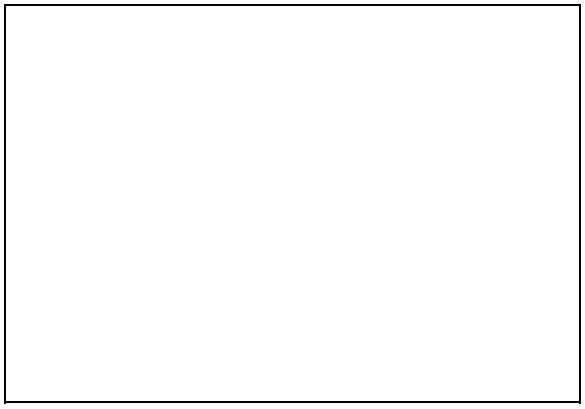
> From the publicly available data, Ewert made an unbelievable discovery: Between the years

> 2010 and 2012 the data measured since 1881 were altered so that they showed a significant warming, especially after 1950. [â ¦] A comparison of the data from 2010 with the data of 2012 shows that NASA-GISS had altered its own datasets so that especially after WWII a clear warming appears â although it never existed.

Apart from Australia, the planet has in fact been on a cooling trend:

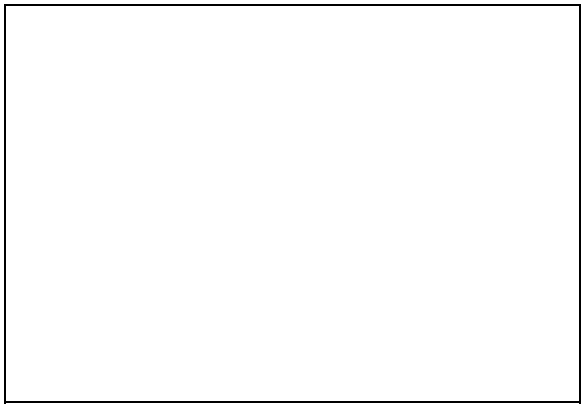
advertisement

> Using the NASA data from 2010 the surface temperature globally from 1940 until today has fallen by 1.110Â°C, and since 2000 it has fallen 0.4223Â°C [â ¦]. The cooling has hit every continent except for Australia, which warmed by 0.6339Â°C since 2000. The figures for Europe: From 1940 to 2010, using the data from 2010, there was a cooling of 0.5465Â°C and a cooling of 0.3739Â°C since 2000.



But the activist scientists at NASA GISS â initially led by James Hansen (pictured above), later by Gavin Schmidt â wanted the records they are in charge of maintaining to show warming not cooling, so they began systematically adjusting the data for various spurious reasons using ten different methods.

The most commonly used ones were:



â ¢ Reducing the annual mean in the early phase.
â ¢ Reducing the high values in the first warming phase.
â ¢ Increasing individual values during the second warming phase.
â ¢ Suppression of the second cooling phase starting in 1995.
â ¢ Shortening the early decades of the datasets.
â ¢ With the long-term datasets, even the first century was shortened.

Ewertâ s findings echo that of US meteorologists Joseph Dâ Aleo and Anthony Watts who examined 6,000 NASA weather stations and found a host of irregularities both with the way they were sited and how the raw data had been adjusted to reflect such influences as the Urban Heat Island effect.

Britainâ s Paul Homewood is also on NASA GISSâ s case. Here he shows the shocking extent of the adjustments they have made to a temperature record in Brazil which has been altered so that a cooling trend becomes a warming trend.

Unadjusted temperature record: shows cooling trend.

Adjusted temperature record: shows warming trend.

For still more evidence of NASAâ s adjustments, check out Alterations to Climate Data at Tony Hellerâ s Real Climate Science.

Truly, these people have no shame.

THE CRIMINALLY CORRUPT INSIDERS WHO RUN DEPARTMENT OF ENERGY QUID PRO QUO

Meet The Guy Who Went From Being CEO Of A Sports Sciences Start-Up To Managing Billions Of Dollars Of Your Money At The Infamous Department Of Energy

OBAMA HIRED A SPORTS EXEC WITH ZERO EXPERIENCE IN ENERGY TO MANAGE $25 BILLION IN GREEN ENERGY LOANS

Spinner Monitored The Energy Departmentâ s â Greenâ Loan Guarantees. â Steve Spinner, who helped monitor the Energy Departmentâ s issuance of $25 billion in government loan guarantees to renewable energy projects, was one of Obamaâ s top fundraisers in 2008 and is raising money for the presidentâ s 2012 reelection campaign.â (Matea Gold and Stuart Pfeifer, â Obama Fundraiser Linked To Loan Program That Aided Solyndra,â *Los Angeles Times* , 9/16/11)

- **â â Steve Spinner Acted As A Liaison Between The Recovery Act Office And The Loan Programs Office,â Energy Department Spokesman Damien Lavera Said In A Statement Friday.â** (Matea Gold and Stuart Pfeifer, â Obama Fundraiser Linked To Loan Program That Aided Solyndra,â *Los Angeles Times* , 9/16/11)

Steve Spinnerâ s LinkedIn Profile Documents That Prior To Joining The Obama Administration, Spinner Was The CEO Of Sports Potential, A â Start-Up Sports Sciences And Educational Services Company.â (Steve Spinner, Linkedin, Accessed 6/5/12)

- **Spinnerâ s Sports Potential Sold A $135 â Smartâ Test That Analyzed A Childâ s â Physical And Cognitive Skillsâ â To Determine Potential In 38 Sports.â** â Steve Spinner created Sports Potential, a company in Menlo Park, Calif., that aims to keep such concerns in mind â for example, by guiding parents to enroll their children only in sports for which they are ready. He started the company with the help of Bill Bradley, the basketball star turned politician. Sports Potential sells a $135 test called Smart, which analyzes the cognitive and physical skills of children ages 8 to 12 to determine potential in 38 sports.â (Jennifer Alsever, â A New Competitive Sport: Grooming The Child Athlete,â *The New York Times*, 6/25/06)

Maybe It Was Spinnerâ s Fundraising Prowess That Qualified Him

From January, 2007 To November 2008, Spinner Served As An Obama National Finance Committee Member. (Steve Spinner, LinkedIn, Accessed 6/5/12)

- **In 2008, Spinner Raised At Least $500,000 For Obamaâ s Campaign.** (Center For Responsive Politics, Accessed 6/5/12)

Spinner Remains Actively Involved In Obamaâ s Campaign

Spinner Has Raised At Least $500,000 For Obamaâ s Reelection Campaign. (Center For Responsive Politics, Accessed 6/5/12)

- **In October, 2011 Spinner Helped To Plan An Obama Fundraiser.** â A former Energy Department official linked to the failed Solyndra solar enterprise deal continues to raise campaign money for President Obama and helped plan a fundraising luncheon that the president will attend in San Francisco on Tuesday.â (Peter Nicholas and Tom Hamburger, â Solyndra-Linked Fundraiser Still Boosting Obama Campaign,â *Los Angeles Times*, 10/24/11)
- **Spinner Has Been On Numerous Fundraising Calls For Obamaâ s Campaign** . â He also has joined other Obama fundraising calls, according to a person familiar with Spinnerâ s participation who spoke on condition of anonymity because he was not authorized to comment publicly.â (Peter Nicholas and Tom Hamburger, â Solyndra-Linked Fundraiser Still Boosting Obama Campaign,â *Los Angeles Times*, 10/24/11)
- **Obama Campaign Official: Spinner Is An â Active Fundraiser For The Campaign.â** â An Obama campaign official said Sunday that Spinner did not raise funds for the San Francisco event but is an â active fundraiser for the campaign.â â (Peter Nicholas and Tom Hamburger, â Solyndra-Linked Fundraiser Still Boosting Obama Campaign,â *Los Angeles Times*, 10/24/11)

SO WHAT DID SPINNER DO WITH TAXPAYER FUNDS?

Obamaâ s Green Energy Loan Program Was Run By Campaign Bundler And Finance Committee Member Steve Spinner. â Instead, the departmentâ s loan and grant programs are run by partisans who were responsible for raising money during the Obama campaign from the same people who later came to seek government loans and grants. Steve Spinner, who served on the Obama campaignâ s National Finance Committee and was a bundler himself, was the campaignâ s â liaison to Silicon Valley.â His responsibilities included fundraising, recruiting more bundlers, and managing Obamaâ s relationship with a cadre of very wealthy donors.â (Peter Schweizer, â Obama Campaign Backers And Bundlers Rewarded With Green Grants And Loans,â *Newsweek*, 11/12/11)

- **Spinner Was Responsible For Doling Out Energy Grants To The Same Silicon Valley Investors That Backed Obamaâ s Campaign.** â After the 2008 campaign, Spinner joined the Department of Energy as the â chief strategic operations officerâ for the loan programs. A lot of the money he helped hand out went to that same cadre of wealthy Silicon Valley campaign donors. He also sat on the White House Business Council, which is made up of Obama-supporting corporate executives.â (Peter Schweizer, â Obama Campaign Backers And Bundlers Rewarded With Green Grants And Loans,â *Newsweek*, 11/12/11)

Spinner Was â Actively Involvedâ In Solyndraâ s Loan Despite A Promise To Recuse Himself From The Deal. â Emails released last week show that Spinner was actively involved in a $528 million federal loan for Solyndra Inc., despite pledging to recuse himself because his wifeâ s law firm represented the company.â (Matthew Daly, â Solyndra Loan Figure Raises $500k For Obama,â *The Associated Press*, 10/14/11)

- **Spinner Was â Deeply Involvedâ In The Planning Of Solyndraâ s Loan Guarantee Announcement And â In Close Contact With Solyndra Executives.â** â On June 15, 2009, he wrote to his boss, Matt Rogers, a senior advisor at the Energy Department who oversees stimulus spending: â hereâ s the Solyndra checklist of all of the 60-70 items that need to be done for closing.â A flurry of emails from early August to early September 2009 portrayed Spinner as impatient to show that the stimulus act was producing jobs, especially at so-called clean technology firms such as Solyndra. He was deeply involved in coordinating a â big eventâ to announce the approval of Solyndraâ s loan guarantee, which he envisioned involving â golden shovels, bulldozers, hardhats, etc,â according to an Aug. 20, 2009, email. In addition, the emails showed that he was in close contact with Solyndra executives to plan the event.â (Peter Nicholas and Tom Hamburger, â Solyndra-Linked Fundraiser Still Boosting Obama Campaign,â *Los Angeles Times*, 10/24/11)

- **â Emails Show Spinner Pushed For A Prompt Decision On The Solyndra Loan As His Wifeâ s Law Firm Was Representing The Company.â** (Peter Nicholas and Tom Hamburger, â Solyndra-Linked Fundraiser Still Boosting Obama Campaign,â *Los Angeles Times*, 10/24/11)

- **Spinnerâ s Wife Worked For Wilson Sonsini, Which Helped Its Clients Receive $2.75 Billion In DOE Grants And Financing.** â The Energy Department came under criticism from Republicans earlier this year when agency e-mails raised questions about a possible conflict of interest involving Steven J. Spinner, a former department loan adviser who disclosed that his wife worked for Wilson Sonsini, a Silicon Valley law firm that handled funding applications for several clean-tech companies. Wilson Sonsiniâ s clean-tech clients reaped $2.75 billion in Department of Energy grants and financing, the Post analysis found.â (Carol D. Leonnig and Joe Stephens, â Venture Capitalists Play Key Role In Obamaâ s Energy Department,â *The Washington Post*, 2/14/12)

Spinner Pushed For Solyndra Loan To Give A â Political Victoryâ To Obama. â In the lengthy email discussions that occurred in the days before the Solyndra loan closed in September 2009, Spinner emerges as a key figure in advocating for getting the deal done, apparently in an effort to score the loan as a political victory for President Obama. Many of the emails surround his efforts to coordinate plans for either President Obama or Vice President Biden to announce it as the administrationâ s first loan approval â one that he repeatedly notes will create clean energy jobs.â (Matthew Mosk, â Obama Fundraiser Pushed Solyndra Deal From Inside,â ABC News, 10/7/11)

Emails Show â Spinner Worked Hardâ On Solyndraâ s Behalf During The Loan Process, Including Pushing For A Final Decision. â Yet throughout Solyndraâ s loan process, Spinner worked hard to defend the company from criticisms inside the government, including questions from climate czar Carol Brownerâ s office. He pushed to get a final decision on approving the loan in August**.â** (Carol D. Leonning and Joe Stephens, â Solyndra: Obama And Rahm Emanuel Pushed To Spotlight Energy Company,â *The Washington Post*, 10/7/11)

- **â â How F***Ing Hard Is This?â Spinner Wrote On Aug. 28 An Another Department Official. â What Is He Waiting Forâ Will We Have It By The End Of The Day?â â** (Carol D. Leonning and Joe Stephens, â Solyndra: Obama And Rahm Emanuel Pushed To Spotlight Energy Company,â *The Washington Post*, 10/7/11)
- **Spinner Suggested DOE Approval Of Solyndra Will Encourage The OMB To Approve Of It â A Little Fast To Help The Closing.â** â He also corresponds with career Department of Energy loan officials who are making the final decisions on the Solyndra loan. In one instance, he writes, â Hopefully, this might spur [the Office of Management and Budget] a little faster to help the closing.â â (Matthew Mosk, â Obama Fundraiser Pushed Solyndra Deal From Inside,â *ABC News*, 10/7/11)
- **Spinner: â I Have OVP And WH Breathing Down My Neck On This.â** â â How hard is this? What is he waiting for?â wrote Steven J. Spinner, a high-tech consultant and energy investor who

raised at least $500,000 for the candidate before being appointed to a key job helping oversee the energy loan guarantee program. â I have OVP [the Office of the Vice President] and WH [the White House] breathing down my neck on this.â â (Matthew Mosk, â Obama Fundraiser Pushed Solyndra Deal From Inside,â *ABC News*, 10/7/11)

- **In August, 2009, Senior Energy Department Advisor Matt Rogers Wrote To Spinner: â Thanks For Driving Solyndra.â** â In late August 2009, Rogers wrote to Spinner in another email exchange: â Thanks for driving Solyndra.â â (Neela Banerjee and Matea Gold, â Obama Fundraiser Took Active Interest In Solyndra Loan, Emails Show,â *Los Angeles Times,* 10/8/11)

Spinner â Corresponded Directlyâ With Solyndra Execs.â Emails obtained Friday, however, show Spinner corresponded directly with Solyndraâ s vice president of marketing and business development. In one, the Solyndra executive sends talking points about the loan and jots a quick note: â Steve, Solyndraâ s official position on jobs for your speechwriting.â â (Matthew Mosk, â Obama Fundraiser Pushed Solyndra Deal From Inside,â *ABC News*, 10/7/11)

AMERICAN TAXPAYER DOLLARS CREATED STIMULUS AND JOBSâ ¦ABROAD

Nearly Half Of Obamaâ s $2.4 Billion Devoted To Advanced Vehicle Batteries Went To Foreign Companies. â Nearly half of the $2.4 billion in federal grant money awarded Wednesday to stimulate the U.S. economy and boost the production of hybrid and electric vehicles went to six companies with ties to places as far away as Russia, China, South Korea and France. â ¦ But because so few American companies have the necessary technology, much of the money will initially go toward manufacturing electric vehicle batteries overseas.â (Jerry Seper, â Obama Sends Stimulus Aid To Foreign Firms,â *The Washington Times*, 8/6/09)

- **A Massive Stimulus Grant Program For Wind Turbines Was Exempted From The â Buy Americaâ Provision In The Stimulus.** â Matt Rogers, the senior adviser to the Secretary of Energy for the Recovery Act, denied there was a problem. â ¦Several of the large European turbine manufacturers had limited manufacturing facilities in the United States, but there was nothing in the stimulus plan that required that the turbines, or any other equipment needed for the wind farms, be made here, said Rogers. There are strict â Buy Americaâ provisions in the Recovery Act, but this Green Energy Stimulus initiative turned the existing tax credits into cash grants, bypassing the â Buy Americaâ provision.â (Jonathan Karl, â New Wind Farms In The U.S. Do Not Bring Jobs,â *ABC News*, 2/9/10)

Obamaâ s Clean Energy Investments Are â A Case Study Of What Can Go Wrong When A Rigid Government Bureaucracy Tries To Play Venture Capitalist.â â The Obama administrationâ s vaunted initiative to catalyze the U.S. clean-energy industry â under attack for betting half a billion dollars on the solar-panel manufacturer Solyndra, which closed last month â has become a case study of what can go wrong when a rigid government bureaucracy tries to play venture capitalist and jump-start a nascent, fast-changing market.â (Steven Mufson And Carol D. Leonning, â Some Clean-Energy Firms Found US Loan-Guarantee Program A Bad Bet,â *The Washington Post*, 9/26/11)

- **The Department Of Energy â Acknowledgedâ That Up To 80 Percent Of Some Green Programs Went To Foreign Firms.** â The Department of Energy estimated that 82,000 jobs have been created and has acknowledged that as much as 80 percent of some green programs, including $2.3 billion of manufacturing tax credits, went to foreign firms that employed workers primarily in countries including China, South Korea and Spain, rather than in the United States.â (Patrice Hill, â â Greenâ Jobs No Longer Golden In Stimulus,â *The Washington Times*, 9/9/10)

NOTABLE EXAMPLES

Two South Korean Companies Were Given $303 Million To Produce Car Batteries With Foreign Workers

Compact Power, Inc. (On Behalf Of LG Chem, Ltd.) Received A $151.4 Million Award Through The Department Of Energyâ s Energy Efficient And Renewable Energy Recovery Act For The â Production Of Lithium-Ion Polymer Battery Cells For The GM Volt.â (Department Of Energy, â Recovery Act Awards For Electric Drive Vehicle Battery And Component Manufacturing Initiative,â *Press Release*, 8/5/09)

The Recovery Act Award Notes That The Total Cost Of The Project Will Be $303 Million. â The U.S. Department of Energy proposes is providing partial funding to Compact Power, Inc. to construct and operate a high-volume manufacturing plant to build advanced lithium-ion cells and batteries for hybrid vehicles, aviation, smart grid support, broadband backup power, and energy storage for renewable energy. The U.S. Department of Energy would provide $151 million in financial assistance in a cost-sharing arrangement with the project proponent, Compact Power Inc. The total cost of the proposed project is estimated at $303 million. The facility would be built on about 80 acres in the town of Holland, Michigan. Compact Power, Inc. would employ approximately 450 workers when the facility is fully operational.â (â Compact Power, Inc. Award Number DE-EE0002632,â Recovery.gov , Accessed 7/9/10)

LG Chem â Bought A Lot Of Korean Equipment And Supplies. And They Filled Some Of Those Sought-After Jobs With Korean Workers.â â In 2010, Obama and Vice President Biden personally appeared to break ground at two Michigan plants. The plants were getting a combined $300 million under the stimulus program to build electric car batteries. But as it turns out the companies getting all those American tax dollars are largely owned by Koreans. They bought a lot of Korean equipment and supplies. And they filled some of those sought-after jobs with Korean workers. That drew anger from local labor unions. They say pictures, taken inside the plants show Korean nationals doing hands-on work that should be done by Americans.â (Sharyl Attkisson, â Unions Say Foreign Workers Taking Stimulus Jobs,â CBS News , 4/13/12)

LG Chem And Dow Kokam Will Not Release A Grand Total Of The Number Of Foreign Workers At The Stimulus-Funded Battery Plant. â â The companies, LG Chem and Dow Kokam, wouldnâ t agree to interviews. but they told CBS News the Korean workers are temporary and legal and have â unique â ¦ expertise (with) highly sophisticated equipment.â But just how many there are remains a mystery. The companies wonâ t tell us. Dow Kokam acknowledged 150 on site last December, but wonâ t give a grand total.â (Sharyl Attkisson, â Unions Say Foreign Workers Taking Stimulus Jobs,â CBS News , 4/13/12)

- **FLASHBACK: Obama Touted Green Jobs In Michigan And Then Gave Stimulus Money To A Korean Company.** â But the green economy looks like a lot of green for the well-connected. The president handed $150 million in stimulus money over to Korean CEO Peter Bahnsuk Kim of LG Chem. LG Chem is an $11 billion Korean conglomerate that hardly seems a candidate for the American Recovery Act. No wonder the program is so unpopular.â (Henry Payne, Op-Ed, â He Came, He Saw, He Insulted,â *Detroit News,* 7/16/10)

Fisker Was Given A Half-Billion Dollar Loan, Builds Hybrids In Finland

In 2009, The Department Of Energy Granted Fisker A $529 Million Stimulus Loan Guarantee, $359 Million Of Which Was To Go Toward Reviving The Former GM Boxwood Plant In Wilmington, Delaware. â In September, Secretary Chu announced a $528.7 million conditional loan for Fisker Automotive for the development of two lines of plug-in hybrids, which will save hundreds of millions gallons of gasoline and offset millions of tons of carbon pollution by 2016. Of the total loan, $359 million is going to revive manufacturing at the Boxwood Plant. The Boxwood Plant will support Fisker Automotiveâ s Project NINA, the development and build of a mass-market plug-in hybrid sedan.â (Press Release, â Vice President Biden Announces Reopening Of Former GM Boxwood Plant,â Office Of The Vice President, 10/27/09)

- **FLASHBACK: Biden Attended The Re-Opening Of Fiskerâ s Delaware Plant, Calling The**

Loan â Seed Money That Will Return Back To The American Consumer In Billions And Billions And Billions Of Dollars In Good, New Jobs.â BIDEN: â This is seed money that will return back to the American consumer in billions and billions and billions of dollars in good, new jobs.â (ABC Newsâ â Nightline,â 10/25/11)

â With The Approval Of The Obama Administration,â Fisker Began Assembling Its First Line Of Cars In Finland. â With the approval of the Obama administration, an electric car company that received a $529 million federal government loan guarantee is assembling its first line of cars in Finland, saying it could not find a facility in the United States capable of doing the work.â (Matthew Mosk and Brian Ross, â Car Company Gets U.S. Loan, Builds Cars In Finland,â ABC News, 10/20/11)

- **â Fisker Used The First $169 Million In Taxpayer Funds To Bring To Market The Karma, A Flashy $100,000 Hybrid Sports Sedan That It Assembles In Finland.â** (Matthew Mosk, â Fisker May Never Build Electric Cars In US,â ABC News, 5/30/12)

Parago Received $11 Million To Hire Workers In El Salvador And The Dominican Republic

In December 2009, Ohio Got An $11 Million Stimulus Grant To Provide Rebates To People Who Buy Energy Efficient Appliances For Their Homes. â Ohio will use $11 million federal stimulus money to provide rebates to people who buy energy efficient appliances for their homes. The U.S. Department of Energy approved the state plan Thursday.â (â Ohio Stimulus Plan Gives Rebates On New Appliances,â *The Associated Press*, 12/4/09)

Ohio Contracted With A Firm Based In Texas To Run The Program. â Ohioâ s Department of Development contracted with Texas-based Parago to run the appliance rebate program for roughly$500,000.â (Patrick Preston, â Ohio Rebate Program Created Jobs In Texas, Central America,â NBC4I, 7/27/10)

Upon Receiving The Grant, Parago Hired Hundreds Of Workers In El Salvador. â A Texas company hired to administer Ohioâ s popular appliance rebate program used hundreds of workers in El Salvador to process applications and to answer customersâ calls.â (â Strickland Upset With Stimulus Work Outside U.S.,â *The Associated Press*, 8/01/12)

Parago Also Outsourced Stimulus-Funded Jobs To Workers In The Dominican Republic. â The Texas company that outsourced stimulus-funded call center jobs to Central America also hired workers in the Dominican Republic. Ohio Department of Development spokesperson Katie Sabatino confirmed that Lewisville, Texas-based Parago used call centers in El Salvador and the Dominican Republic on Friday, the same day that ODOD released documents detailing how Parago won the state contract to run Ohioâ s Energy Efficient Appliance Rebate Program.â (Patrick Preston, â Columbus CEO Speaks Out Against Texas Company in Charge Of Ohio Appliance Rebate Program,â NBC4I, 7/30/10)

What Else Was The Department Of Energy Trying To Cover Up About Solyndra And The Loan Program?

Former Executive Director Of Energy Departmentâ s Loan Program Office Jonathan Silver Warned That Including Personal E-Mail Addresses On DOE E-Mail Made Them â Subpoenable.â â â Donâ t ever send an email on doe email with a personal email addresses,â Silver wrote Aug. 21, 2011, from his personal account to a program officialâ s private Gmail account. â That makes them subpoenable.'â (Carol D. Leoning and Joe Stephens, â Energy Department Loan Program Staffers Were Warned Not To Use Personal Email,â *The Washington Post*, 8/14/12)

WHAT DID OBAMAâ S DEPARTMENT OF ENERGY NOT WANT PEOPLE TO FIND OUT?

Ten Days Before Solyndra Declared Bankruptcy, Then-Executive Director Of The DOE Loan Program Office Jonathan Silver Tells Staff â Not To Include Personal E-Mail Addresses In Official Correspondence, To Prevent The Personal Accounts From Being Subpoenaed.â â The former head of the Obama administrationâ s controversial clean energy loan program warned a staff member last year not to include personal e-mail addresses in official correspondence, to prevent the personal accounts from being subpoenaed, documents show. Jonathan Silver, a political appointee who oversaw the Energy Departmentâ s $38 billion program, sent the warning days before a centerpiece of the program â solar-panel maker Solyndra â declared bankruptcy, pushing a congressional investigation into high gear. â Donâ t ever send an email on doe email with a personal email addresses,â Silver wrote Aug. 21, 2011, from his personal account to a program officialâ s private Gmail account. â That makes them subpoenable.â The House Committee on Oversight and Government Reform wrote a letter to Energy Secretary Steven Chu on Tuesday charging that he and Silver appear to have given â inaccurateâ or â misleadingâ testimony to Congress about their handling of the loan program. Silver had testified that no one in the department used personal e-mails to conceal internal discussions about the program.â (Carol D. Leoning and Joe Stephens, â Energy Department Loan Program Staffers Were Warned Not To Use Personal Email,â *The Washington Post*, 8/14/12)

While Silver Warned Staff Not To Include Personal Emails, He Repeatedly Dealt With Internal And Sensitive Loan Decisions Via Personal E-Mail Account. â Silver repeatedly communicated about internal and sensitive loan decisions via his personal e-mail, the newly released records show, and more than a dozen other Energy Department staff members used their personal e-mail to discuss decisions involving taxpayer-funded loans as well. The Washington Post received the e-mails from Republican investigators on the committee.â (Carol D. Leoning and Joe Stephens, â Energy Department Loan Program Staffers Were Warned Not To Use Personal Email,â *The Washington Post*, 8/14/12)

Though Obama Administration Officials Claim Loan Decisions Were Based On Merit, New E-Mails Released Show â The Most Senior People In The Administrationâ Were Worried About Small Loans And There Was Drive To Get Things Done So â Obama Will Look Like A Hero.â â The White House and Chu have repeatedly asserted that the Energy Department staff made all loan decisions based on merit, without regard to politics or donors. In the new e-mails, Silver cited political considerations in pressing for the administration to approve at least one loan applicant. Silver wrote on June 12, 2011, to David Lane, counsel to White House Chief of Staff Bill Daley, arguing that approving a loan to a solar-generation facility called Project Amp would help Obama politically. Project Amp then planned to buy from Solyndra, which investors hoped would help the struggling solar-panel maker. â Why are the most senior people in the Administration worrying about a $200 million deal? Donâ t we have bigger problems?â Silver wrote. â Obama will look like a hero if we do this to a constituency that is now worried about him.'â (Carol D. Leoning and Joe Stephens, â Energy Department Loan Program Staffers Were Warned Not To Use Personal Email,â *The Washington Post*, 8/14/12)

In August 2011, Solyndra Announced That It Would File For Bankruptcy. â Solyndra, a Fremont solar tech manufacturer, announced Wednesday it is suspending operations and immediately laying off 1,100 employees. The company said it will also file for bankruptcy.â (George Avalos, â Fremont Solar Tech Firm Solyndra To Shut Down, Lay Off 1,100 Workers,â *The San Jose Mercury News*, 8/31/11)

- **A Total Of 1,861 Workers Were Laid Off By Solyndra As It Went Bankrupt.** â Since September 1, 2010 (impact date), an estimate 1,861 workers have been separated from the firm. This total includes an estimated 649 temporary workers as well as leased workers from West Valley, Aerotek, Oxford Global, GES and Lighthouse Management. Most of these separations occurred at the time of the shut-down of the Fremont, CA facility on August 31, 2011. An additional 85 workers are threatened with separation as the companyâ s operations wind down.â (Employment And Training

Administration, â Investigative Report TA-W-80,410; Solyndra LLC,â Department Of Labor, 9/12/11)

Obamaâ s â Independentâ Energy Loan Watchdog Turns Out To Be An Obama Donor

President Obama: â But I Can Tell You We Have Put In Place The Toughest Ethics Laws And Toughest TransparencyRules Of Any Administration In History. In History.â (President Barack Obama, Remarks At A Town Hall Meeting, Elyria, OH, 1/22/10)

OBAMAâ S FORMER â INDEPENDENTâ ENERGY LOAN REVIEWER IS NOW A SUBSTANTIAL DONOR

Herb Allison, The Leader Of The â Independent Reviewâ Of Obamaâ s DOE Loan Program, Has Donated $52,500 To Obama Since Completing His Work. â A veteran Wall Street executive who performed an independent review that exonerated the Obama administrationâ s program of loans to energy companies contributed $52,500 to re-elect President Barack Obama in the months since completing his work, according to an Associated Press review of campaign records. The executive defended the integrity of his conclusions and said he decided to donate to Obama after his work was finished.â (Stephan Braun, â AP Exclusive: Energy Loan Watchdog An Obama Donor,â *The Associated Press,* 8/23/12)

Two Weeks After Allison Testified Before Congress That â Minimized Concernsâ About Obamaâ s Loan Program, He Began Giving To Obamaâ s Campaign, Totaling $52,500 By July. â The campaign contributions to Obama started just weeks after Herbert M. Allison Jr., in congressional testimony in March, minimized concerns that the Energy Department was at high risk in more than $23 billion in federal loans awarded to green energy firms. Two weeks later, Allison began giving to the Obama campaign. His contributions to Obama and the Democratic National Committee totaled $52,500 by last month. Allison previously was the former head of the governmentâ s mass purchase of toxic Wall Street assets. â (Stephan Braun, â AP Exclusive: Energy Loan Watchdog An Obama Donor,â *The Associated Press,* 8/23/12)

Allison Has Donated Before, â But His Gifts In The Past Have Tended To Be Much Smaller Than His Current Contributions.â â Allison gave $2,500 to the Obama campaign on March 29, two weeks after he testified to the Senate Energy and Commerce Committee about his review. In May, he gave $15,000 to the Obama Victory Fund, a joint fundraising committee that supports both the presidentâ s re-election campaign and the Democratic National Committee. Allison gave the same amount to the fund again in June and then $20,000 more in July. Allison has donated money to both parties, but his gifts in the past have tended to be much smaller than his current contributions, typically no more than $1,000 or $2,000, according to Federal Election Commission records.â (Stephan Braun, â AP Exclusive: Energy Loan Watchdog An Obama Donor,â *The Associated Press,* 8/23/12)

Allisonâ s Review Exempted Companies That Were Bankrupt, Including Solyndra, And Was Full Of Excuses And Shortcomings

The Review Looked At 30 Loans Or Loan Guarantees Totaling $23.8 Billion, But Did Not Involve Solyndra Or Beacon Power, Both Of Which Went Bankrupt And Cost The Government $567 Million. â The review, led by former Treasury Department official Herb Allison, looked at 30 loans or loan guarantees totaling $23.8 billion that were offered to green energy companies and auto makers such as Ford and Nissan. The review did not involve Solyndra or Beacon Power, an energy storage company that also went bankrupt after receiving a federal loan. The government has lost a total of $567 million from those two loans.â (Matthew Daly, â Report: Energy Loans Could Cost $3B,â *The Associated Press,* 2/10/12)

Allison Advised That Many Projects Were Likely To Seek Relief From Requirements In Loan Agreements. â DOE should aggressively strengthen its position as lender or guarantor in cases where borrowers seek relief from requirements in the loan agreements. Given the novelty, complexity and scale of

the projects and the exacting covenants in their loan structures, the Independent Consultant believes that many projects are likely to seek such relief at some point during the term of the DOE loan or loan guarantee.â (â Report Of The Independent Consultantâ s Review With Respect To The Department Of Energy Loan And Loan Guarantee Portfolio ,â 1/31/12, p. 10)

Allison Was â Unable To Fully Obtainâ All The Information That May Have Been Required To Evaluate The Loan Recipients. â [T]he Independent Consultant was unable to fully obtain, and the Report does not contain, all of the information that may be required to evaluate any of the borrowers, other project participants, loans, assets, projects or other persons referenced in the Report.â (â Report Of The Independent Consultantâ s Review With Respect To The Department Of Energy Loan And Loan Guarantee Portfolio ,â 1/31/12, p. 10)

Allison Was Somehow Not Able To Assess The Extent Of DOEâ s Cooperation With His Requests When Assessing The Loan Program. â The Independent Consultant did not have subpoena authority or any other legal means to compel the production of documents and information from government agencies or from third parties. The Independent Consultant made requests for documents, interviews with relevant officials, and demonstrations of information technology tools used by DOE in connection with its monitoring of the Portfolio. While DOE provided substantial information and technical assistance in response to these requests, the Independent Consultant was not able to assess the extent of, or to require certification of, DOEâ s compliance with these requests, and did not have access to any form of legal compulsion to require additional assistance.â (â Report Of The Independent Consultantâ s Review With Respect To The Department Of Energy Loan And Loan Guarantee Portfolio ,â 1/31/12, p. 10)

Allisonâ s Recommendations For The Loan Program Were Completely Devoid Of Details And Substance

Allison Recommended That The Loan Program â Fill Key Positions In Management With Experienced Professionals.â â Fill Key Positions in Management with Experienced Professionalsâ (â Report Of The Independent Consultantâ s Review With Respect To The Department Of Energy Loan And Loan Guarantee Portfolio ,â 1/31/12, p. 10)

Allison Advised That The DOE â Define The Tools It Will Use, As Well As The Financial And Policy Goals It Will Pursue To Negotiate With Borrowers In Order To Protect The Taxpayersâ Interest.â â To strengthen its ability to protect the taxpayersâ interest, DOE should define the tools it will use (e.g., seeking equity interests and stronger loan covenants) as well as the financial and policy goals it will pursue in negotiating with borrowers.â (â Report Of The Independent Consultantâ s Review With Respect To The Department Of Energy Loan And Loan Guarantee Portfolio ,â 1/31/12, p. 10)

Allison Advised That The DOE Define â Reasonable Prospect Of Repayment So That The Financial Goal For Managers Is Unambiguous.â â The Title XVII programâ s statutory standard of â reasonable prospect of repaymentâ is vague. DOE should provide clear guidance regarding the meaning of â reasonable prospect of repaymentâ so that the financial goal for managers is unambiguous.â (â Report Of The Independent Consultantâ s Review With Respect To The Department Of Energy Loan And Loan Guarantee Portfolio ,â 1/31/12, p. 10)

Allison Recommended That The â DOE Should Improve Reporting To The Public By Providing Clearer, Broader Information To The Public On The Progress And Performance Of The Programs.â â DOE should provide clearer, broader information to the public on the progress and performance of the programs and the portfolio.â (â Report Of The Independent Consultantâ s Review With Respect To The Department Of Energy Loan And Loan Guarantee Portfolio ,â 1/31/12, p. 10)

THE MANY FLAWS THAT ACTUAL INDEPENDENT AUDITORS FOUND IN THE LOAN PROGRAM NEVER MADE IT IN TO ALLISONâ S REPORT

The Government Accountability Officeâ s Investigation Revealed Obamaâ s Department Of Energy Favored Some Loan Applicants And Disadvantaged Others. â Thatâ s when the Government Accountability Office issued an unusually blunt assessment of the Energy Departmentâ s loan program in general, concluding that the department had â treated applicants inconsistently, favoring some and disadvantaging others.'â (Matthew Most and Brian Ross, â Solyndra Collapse A â Wasteâ Of Half A Billion By Obama, GOP Critics Say,â *ABC News* , 9/1/11)

- **The Government Accountability Office Issued A Report That Claimed â The Administration Didnâ t Do Its Due Diligenceâ When Celebrating The $535 Million In Stimulus Funds For Solyndra.** â Itâ s not his statements the administration will regret; itâ s the loan guarantees. The President was celebrating $535 million in federal promises from the Department of Energy to the solar startup. The administration didnâ t do its due diligence, says the Government Accountability Office. â Thereâ s a consequence if you donâ t follow a rigorous process thatâ s transparent,â Franklin Rusco of GAO told the website iWatch News.â (Scott McGrew, â Solyndra Filing A Disaster For Obama,â *NBC Bay Area News*, 8/31/11)

The DOE Inspector General, Gregory Friedman, Issued A Report That Said Obamaâ s Clean-Energy Loan Program Is Lacking In â Transparency And Accountability.â â Agents for Energy Department Inspector General Gregory Friedman, who has called the departmentâ s clean-energy loan program lacking in â transparency and accountability,â joined in the search yesterday at the Fremont, California, headquarters of Solyndra, which filed for bankruptcy protection on Sept. 6.â (Jim Snyder, â FBI Raids Bankrupt Solyndra as Lawmakers Question Panel Makerâ s Finances,â *Bloomberg*, 9/9/11)

- **Friedman Accused Obamaâ s Department Of Energy Of Failing To Maintain Emails About How Loan-Guarantees Were Awarded.** â Earlier this year, the Energy Departmentâ s inspector general criticized the agency for not maintaining e-mails discussing how loan-guarantee winners were selected.â (Carol Leonnig, â After Solyndra Failure, Auditors Wonder What Other Bad Bets Obama Officials Made *The Washington Post* , 9/1/11)

- **Friedman Found That The Loan Guarantee Program Couldnâ t Always Demonstrate That They Resolved The Companiesâ Risks Before Giving Out The Loans.** â Concerns about the program and its risk controls were raised several times by the Energy Departmentâ s inspector general, Gregory Friedman. In a March 2011 report, Mr. Friedman said his office â found that the Loan Guarantee Program could not always readily demonstrate, through systematically organized records, including contemporaneous notes, how it resolved or mitigated relevant risks prior to granting loan guarantees.â A report in 2009 also faulted the loan-guarantee programâ s controls.â (Deborah Solomon, â Solyndra Said To Have Violated Terms Of Its US Loan,â *The Wall Street Journal*, 9/28/11)
- **Friedman Found That Contracts Were Steered To â Friends And Family.â** â The Department of Energyâ s inspector general, Gregory Friedman, who was not a political appointee, chastised the alternative-energy loan and grant programs for their absence of â sufficient transparency and accountability.â He has testified that contracts have been steered to â friends and family.'â (Peter Schweizer, â Obama Campaign Backers And Bundlers Rewarded With Green Grants And Loans,â *Newsweek*, 11/12/11)

PricewaterhouseCoopers Said There Was â Substantial Doubtâ About Solyndraâ s Viability. â But just weeks before Obamaâ s arrival, the company released sobering news from independent auditors evaluating its public offering plan. PricewaterhouseCoopers said Solyndraâ s losses and negative cash flow raised â substantial doubt about its ability to continue as a going concern.'â (Carol D. Leoning, Joe Stephens, and Alice Crites, â Obamaâ s Focus On Visiting Clean-Tech Compaines Raises Questions,â *The Washington Post* , 6/25/11)

Obama Pledged There Would Be An â Unprecedented Oversight Effortâ For The $833 Billion Stimulus. OBAMA: â Here in Washington, weâ ve all seen how quickly good intentions can turn into broken promises and wasteful spending. And with a plan of this scale comes enormous responsibility to get it right. That is why I have asked Vice President Biden to lead a tough, unprecedented oversight effort â because nobody messes with Joe.â (President Barack Obama, Address To Joint Session Of Congress , Washington, DC, 2/24/09)

NEW REVELATIONS ABOUT OBAMAâ S PET STIMULUS DIRECTIVES â AND THEIR FAILURES

Solyndra

THEN: â The White House Went To Amusing Lengths To Stage-Manage Obamaâ s Visit To Solyndra.â â The White house went to amusing lengths to stage-manage Obamaâ s visit to Solyndra. â Can you confirm that his greets will be wearing their normal everyday work closths and safety gear?â the advance team emailed. â We want to make sure we have the construction worker feel.â Yes, confirmed, along with the twenty-foot-by-thirty-foot American flag, coffee and donuts for the press, and a robotic arm that would display a solar panel onstage during the presidentâ s speech. Also, the team wanted a solid backdrop behind Obama: â Preferably not white. Something darker and matte (not glossy).'â (Michael Grunwald, *The New New Deal*, 2012, p. 384)

- **White House Officials Discussed Inviting Solyndraâ s Executives To The State Of The Union Address.** â There was even low-level White House discussion about inviting Solyndraâ s executives to sit in the First Ladyâ s box during the State of the Union, to illustrate the presidentâ s theme of â winning the future.â Obamaâ s events director shot down that idea: â Canâ t do Solyndraâ ¦theyâ ve run into some issues recently. :(â â (Michael Grunwald, *The New New Deal*, 2012, p. 415)

NOW: Seagate Technology Will Pay $90.3 Million For Solyndraâ s Building, Which Was Financed By Taxpayers.â Seagate Technology Plc (STX.O), maker of hard drives and storage devices, has agreed to pay $90.3 million for the former manufacturing plant and headquarters building of bankrupt Solyndra LLC, which was financed by a controversial government loan, according to bankruptcy court documents.â (Ilaina Jonas, â Seagate offers $90.3 Million For Solyndra Property: Court Filing,â *Reuters*, 8/24/12)

A123 Systems

THEN: Chief Technology Officer Of A123 Said That, Thanks To The Stimulus, â Youâ re Going To See The Industry Reach Critical Mass Here.â â Thanks to the Recovery Act, A123 built its next two factories in Michigan. Four of its suppliers also won stimulus grants to build U.S. plants. So did one of its customers, Navistar, which retrofitted a shuttered RV factory in Indiana to make electric trucks for companies like FedEx. Another customer, Fisker automotive, snagged a federal loan to make electric cars in a shuttered GM plant in Delaware. â Without government, thereâ s no way wouldâ ve done this in the U.S.,â A123 chief technology officer Bart Riley told me. â But now youâ re going to see the industry reach critical mass here.'â (Michael Grunwald, *The New New Deal*, 2012, p. 361)

NOW: Chinaâ s Wanxiang Plans To Invest $450 Million In Obama-Funded A123 Systems, Taking An 80 Percent Stake. â Chinaâ s largest automotive parts supplier is poised to take control of U.S. battery maker A123 Systems (AONE.O), which received $249 million green-technology grant from the Obama administration in 2009. Chinaâ s Wanxiang Group Corp plans to invest up to $450 million in A123 Systems, taking an 80 percent stake in the U.S. company, A123 said on Wednesday.â (A. Ananthalakshmi and Paul Lienert, â Chinaâ s Wanxiang To Take Control Of Battery Maker A123,â *Reuters*, 8/8/12)

- **After Receiving Taxpayer Dollars, A123 Warned Last Month It Only Has Enough â Cash To Fund Its Operations For Only The Next Four To Five Months.â** â A123 warned last month that it had cash to fund its operations for only the next four to five months. A123 received more than $200 million from venture investors before raising $378 million in a 2009 initial public offering. That same year, it was awarded a grant under the Obama administrationâ s $2.4 billion Electric Drive Battery and Component Manufacturing Initiative.â (A. Ananthalakshmi and Paul Lienert, â Chinaâ s Wanxiang To Take Control Of Battery Maker A123,â *Reuters*, 8/8/12)

A New Smart Grid

THEN: On The Smart Grid, Obama Was Convinced That We Could â Just Go Build It.â â Obama thought the smart grid could be that something, a twenty-first century version of the interstates or the Internet, this time connecting Americans with digital meters (the smart part) and high-voltage wires (the grid part). â We said: â God, wouldnâ t it be wonderful?â Biden recalls. â Why donâ t we invest $100 billion?'â Browner shared Obamaâ s enthusiasm about the smart grid. She was eager to see the new transmission wires carry the wind of the Dakotas to the people of Chicago. But just go build it? Umâ ¦no. She explained that the feds didnâ t need to build wires. Utilities could do that, and had money to do that. The holdup was that sitting high-voltage wires had become a maze of red tape, requiring approval from hundreds of zoning boards and other regulators, not to mention entire states that would derive no benefits from the lines slicing through their borders. This was not a problem that could be solved in a stimulus time frame. â Iâ m sorry, sir,â Browner said. â We wouldnâ t be able to spend the money.â Obama would not drop the issue.â (Michael Grunwald, *The New New Deal; The Hidden Story Of Change In The Obama Era*, 2012, p. 124)

- **â â [T]he Economy Has Fallen Off A Cliff, History Is Calling, And Really? I Canâ t Just Do A Smart Grid?â Orszag Recalls.â** â â There was this sense of frustration. Hereâ s the first African American president, the economy has fallen off a cliff, history is calling, and really? I canâ t just do a smart grid?â Orszag recalls. â He really wanted a moon shot, and these seemed like such mundane reasons not to go big. But Carol said no, this is reality.â Ultimately, Browner was right. The grid was not the interstate highway system. It didnâ t make sense for the government to try to take it over.â (Michael Grunwald, *The New New Deal; The Hidden Story Of Change In The Obama Era*, 2012, p. 124)

NOW: The Smart Grid Plan Has Experienced All Kinds Of Delays. â Before the Recovery Act, almost every U.S. utility was at least starting to plan for a smart grid, and a few were already installing their first smart meters and other digital equipment. But while the passage of the stimulus accelerated the planning, because utilities had to think about their needs before applying for grants, it initially slowed down the installation, because utilities didnâ t want to splurge on upgrades if there was a chance the feds could pay for them. So until Obama announced the winners in October grid investment froze, which was not the kind of responded the stimulus was supposed to stimulate. â It was frustrating. The utilities put everything on pause,â says Raj Vaswani, chief technology officer for Silver Spring Networks, a Silicon Valley smart grid firm. And after Obamaâ s announcement, the awards were delayed again because utilities objected to paying taxes on them.â (Michael Grunwald, *The New New Deal*, 2012, p. 312)

OBAMAâ S WASHINGTON DURING THE STIMULUS WAS A â POLITICAL TOYS â Râ USâ

â Washington Would Remain A Political Toys â Râ Us During The Obama Era, A Superstore For Childish Things.â â In his inaugural address, just before that laundry list of commitments he would honor through the Recovery Act, Obama Declared a new era of seriousness in Washington. â We come to proclaim an end to the petty grievances and false promises, the recriminations and worn-out dogmas that for far too long have strangled our politics,â he said. â We remain a young nation, but in the words of the Scripture, the time has come to set aside childish things.â That was one more false promise right there. Washington would remain a political Toys â Râ Us during the Obama era, a superstore for childish things. (Michael

Grunwald, *The New New Deal: The Hidden Story Of Change In The Obama Era*, 2012, p. 176)

â Multibillion-Dollar Line Items Were Being Erased And Inserted With Casual Keystrokes.â â As multibillion-dollar line items were being erased and inserted with casual keystrokes, Obama aides who had served under President Bill Clinton occasionally paused to recall their futile push for a mere $19 billion stimulus that had seemed impossibly huge in 1993, or their vicious internal battles over a few million bucks for beloved programs that suddenly seemed too trivial to discuss. And the Recovery Actâ s initial estimate of $787 billion turned out to be too low; the official price tag would eventually climb to $831 billion.â (Michael Grunwald, *The New New Deal; The Hidden Story Of Change In The Obama Era*, 2012, p. 12)

Jared Bernstein, Bidenâ s Chief Economist, Says â The Sentiment Was: Donâ t Feel Constrained.â â The sentiment was: Donâ t feel constrained. Donâ t feel constrained. Donâ t build a tight corral around your thinking,â Bernstein recalls. Obama wanted iconic programs that would create a legacy of change, an updated version of The New Deal. And he urged his advisers to channel FDRâ s spirit of experimentation.â (Michael Grunwald, *The New New Deal; The Hidden Story Of Change In The Obama Era*, 2012, p. 121)

Peter Orszag, OMB Director, Said â No Matter How You Structured It, You Couldnâ t Get Too Much Out The Door In 2009.â â â No matter how you structured it, you couldnâ t get too much out the door in 2009,â Orszag says. â It was okay if some of it wasnâ t so fast. You couldnâ t let the perfect be the enemy of the good.'â (Michael Grunwald, *The New New Deal: The Hidden Story Of Change In The Obama Era*, 2012, p. 163)

â Rahm Kept Pushing The Economists To Push Outside Groups To Push For More Stimulus, So Obama Wouldnâ t Look Like The Only Big Spender In Town.â â Rahm kept pushing the economists to push outside groups to push for more stimulus, so Obama wouldnâ t look like the only big spender in town. If you need it, he said, then build the case for it.â (Michael Grunwald, *The New New Deal; The Hidden Story Of Change In The Obama Era*, 2012, p. 120)

- **â And Rahmâ s Rule Was In Full Effect. When A Former Clinton Budget Aide On The Transition Reviewed The Green Teamâ s Initial Proposals, His Reaction Was: Youâ re Not Spending Enough.â** (Michael Grunwald, *The New New Deal: The Hidden Story Of Change In The Obama Era*, 2012, p. 164)

â Nobody Had An Economic Theory To Justify $800 Billionâ ¦â â The consensus in the room was that the final package should be below $800 billion, and should have a much tighter focus on jobs. Nobody had an economic theory to justify $800 billion, but it was the minimum Obama had said was needed to avoid a calamity, and more just sounded like it too much.â (Michael Grunwald, *The New New Deal: The Hidden Story Of Change In The Obama Era*, 2012, p. 219)

THE RESPONSIBILTY FOR THE STIMULUS LIES SQUARELY AT OBAMAâ S FEET

â **Congress Helped Shape It, But It Was Unmistakably An Obama Bill. And It Has Been Implemented In An Obama Way**.â (Michael Grunwald, *The New New Deal; The Hidden Story Of Change In The Obama Era*, 2012, p. 20)

- â **Itâ s His Vision**.â (Michael Grunwald, *The New New Deal; The Hidden Story Of Change In The Obama Era*, 2012, p. 21)

â One Of The Enduring Criticisms Of The Stimulus Has Been That Obama Exploited An Emergency To Do Things He Wanted To Do Anyway. Itâ s True.â (Michael Grunwald, *The New New Deal: The Hidden Story Of Change In The Obama Era*, 2012, p. 161)

â A More Compelling Critique Of The Recovery Act Is That It Was A Hodgepodge. It Did Throw Cash At Just About Every Problem Imaginable.â (Michael Grunwald, *The New New Deal*, 2012, p. 415)

Fit For The Job: Obama Had â Barely Located The Bathroomsâ In The Senate Before Running For President

Obama Had â Barely Located The Bathroomsâ In The Senate Before Launching His Presidential Campaign. â The president-elect may have campaigned as an outsider, but he stocked his administration with Capitol Hill insiders. Of course, Obama and Biden both came from the Senate, and while Obama had barely located the bathrooms before launching his presidential campaign, Biden had spent thirty-six years in the institution.â (Michael Grunwald,*The New New Deal; The Hidden Story Of Change In The Obama Era*, 2012, p. 129)

Obama Once Joked With Biden: â Look, You Were A Senator. I Was Never A Senator.â â (Obama once joked with him: â Look, you were a senator. I was never a senator.â)â (Michael Grunwald, *The New New Deal; The Hidden Story Of Change In The Obama Era*, 2012, p. 129)

Quid Pro Quo: Clinton Foundation Gave Money To For-Profit Company Run By Clinton Friends And Pushed Steven Chu Energy Dept To Fund It

Matt Vespa

If you ever have seen Godfather Part II, you know the line by Johnny Ola â Hyman Roth always makes money for his partnersâ ¦Hyman Roth is the only one left, because he always made money for his partners.â Well, that ethos seems to be the same when it comes to the Clintons and their Foundation, except they give money to their partners, who also happen to be their friends, who also happen to run for-profit companies. Under federal law, non-profit, tax-exempt organizations arenâ t suppose to act on the private interests, but these are the Clintons. They play by their own rules. The Clinton Foundation is back in the news. This time for doling out $2 million to a for-profit company run by friends of the family, who also got an endorsement from Bill Clinton for a federal grant from the Department of Energy (via WSJ):

> The Clinton Global Initiative, which arranges donations to help solve the worldâ s problems, set up a financial commitment that benefited a for-profit company part-owned by people with ties to the Clintons, including a current and a former Democratic official and a close friend of former President Bill Clinton.
>
> The $2 million commitment was placed on the agenda for a September 2010 conference of the Clinton Global Initiative at Mr. Clintonâ s urging, according to a document from the period and people familiar with the matter.
>
> Mr. Clinton also personally endorsed the company, Energy Pioneer Solutions Inc., to then-Energy Secretary Steven Chu for a federal grant that year, said people with knowledge of the endorsement.
>
> [â ¦]
>
> The Clinton Global Initiativeâ s help for a for-profit company part-owned by Clinton friends poses a different issue. Under federal law, tax-exempt charitable organizations arenâ t supposed to act in anyoneâ s private interest but instead in the public interest, on broad issues such as education or poverty.
>
> [â ¦]
>
> The commitment was a late addition to the agenda for the September 2010 conference, internal Clinton Foundation documents reviewed by the Journal show.
>
> According to one document, about two weeks before the conference, Ms. Samuel contacted an official in the Clinton Foundationâ s commitments office and said Mr. Clinton wanted to feature her commitment to Energy Pioneer Solutions at that monthâ s gathering. Ms. Samuelâ s spokesman didnâ t respond to a question about that.

> One of Mr. Clintonâ s top advisers at the time, Doug Band, tried to prevent the commitment from being added to the agenda as an onstage event in the weeks prior to the conference, according to a document reviewed by the Journal.
>
> The commitment was entered into a database on the Clinton Global Initiative website. A few months later, it was removed.
>
> The reason was to avoid calling attention to Mr. Clintonâ s friendship with one company co-owner, Ms. McMahon, and to protect the integrity of Mr. Clinton and the Clinton Global Initiative, according to people familiar with the matter.
>
> The Clinton Foundation spokesman said the information was withheld at the request of Ms. Samuel, the announced provider of the commitment. Her spokesman didnâ t respond to a question on that.
>
> After the Journal asked about the absence from the database, the Clinton Foundation said it was making a policy change and would publish all previously unpublished commitments and all future ones.
>
> [â ¦]
>
> At the U.S. Energy Department, which had a grant program to encourage innovative approaches to weatherizing low-income peopleâ s homes, giving a grant to a for-profit company was rare but permitted, said T.J. Hansell, a former contractor to the agency who worked on the program. An Energy Department spokeswoman declined to comment.
>
> An Energy Department news release in 2010 announcing a grant to Energy Pioneer Solutions called it â a women-owned small business,â repeating language in the companyâ s application, which the Journal obtained under the Freedom of Information Act. Mr. Kleeb, the companyâ s founder and 29% owner, didnâ t respond to a question on why it described itself as women-owned.

Oh, and it shouldnâ t shock anyone that some of the owners of Energy Pioneer Solutions, Inc., like Mark Weiner, are donors to the Clinton Foundation. Hillary Clinton has paid Weinerâ s company millions for campaign swag in her 2008 and 2016 presidential bids.

Former U.S. Attorney Matthew Whitaker of the Foundation for Accountability and Civic Trust was disconcerted by this revelation, furthering the notion that the Clinton Foundation is just a bank to deposit favors with the political couple, along with being a textbook example of quid pro quo politics:

> This disturbing revelation reveals the Clintonâ s quid pro quo approach to operating their family business interests. The formula was simple: If someone wanted access to the Clintons or a favor from them, they needed to be a top donor to their campaigns or philanthropic efforts. Whether it was the State Department, the Clinton Foundation or now the Clinton Global Initiative, the Clintons used these entities as revolving doors of access to reward their top donors and closest friends. This type of behavior poses very serious ethical and trust challenges for the Clintons, and especially Hillary who seeks the presidency to represent ordinary citizens who would never get this kind of treatment.â

As Guy mentioned, this isnâ t just for private business ventures, it has even impacted international agreements. When the Russian Rosatom State Atomic Energy Corporation wanted to buy the Canadian-based Uranium One, in which they would end up closer to controlling most of the worldâ s uranium supply, the Committee on Foreign Investment, of which Clinton is part of, had to approve the sale, given the national security questions involved; the company had mining states in the Western part of the United States. The Russian takeover took place between 2009-2013, in which the chairman of Uranium One, through his own family foundation, gave the Clinton charity four donations amounting to $2.35 million. At the time, these donations were not disclosed. After the Russians made their intentions known concerning assuming control of Uranium One, Bill Clinton gave a speech for $500,000 from a bank that was connected to the pending agreementsâ they were selling the companyâ s stock options. In the end, the deal was approved.

There are other storiesâ how over 1,000 donors werenâ t disclosed, how the Foundation has been viewed as essentially a slush fund for the power couple, and how this family non-profit venture is anything but transparent. Last fall, the State Department slapped the Clinton Foundation with a subpoena to turn over all documents from ventures that might have required government approval while Clinton was secretary of state. In December of 2015, *The Wall Street Journal* reported that Bill Clinton had been given millions from two dozen companies and organizations that had â matters before Mrs. Clintonâ s State Departmentâ while she served as our top diplomat, some of his paid speeches, like his two trips to the United Arab Emirates, were arranged by the State. He collected $1 million for those appearances.

In Abu Dhabi, the United Arab Emirates wanted a facility to pre-clear travelers prior to entry into the United States. By 2011, a letter of intent was signed, and Bill Clinton gave a 20-minute talk on climate change in the country for a fee of $500,000, added the *Journal.* In December 2012, Bill asked for authorization to give another $500,000 speech on the importance of tourism in Abu Dhabiâ one week after the speech, the U.S. and Abu Dhabi agreed on a screening facility for Etihad Airways.

This woman could be the next president of the United States, and part of an organization that has a long history of rewarding friends after monetary donations are doled out. Just look at the 180-degree turn she did with the Colombian Free Trade Agreement after Canadian financier Frank Giustra gave money to the Foundation, as did the oil company he founded that was operating in the country. They were also part of the labor rights controversy that had held up the agreement. Giustra now sits on the Clinton Foundationâ s Board of Directors.

No one sees the ethical questions with any of the dynamics relating the Clinton Foundation that receives millions from corporations, foreign nationals, and other entities, with one of the founders occupying the presidency in which a lot of favors can be worked out. Clinton and Obama had disclosure agreements before, which she more or less chose to follow on a case-by-case basis. In the Oval Office, she could simply invoke executive privilege if anyone asks questions. This seems to be a bit more problematic than Donald Trump possibly acting as his own spokesperson to bolster himself.

REPORT The Billion-Dollar Per Year Climate Industr' Is Trying To Weaponize State Attorneys General (dailycaller.com)

by sand_mann to politics (**+41**|**-1**)

- comments

What this evidence proves:

We and our co-workers witnessed some guys stealing money from both, our company and the US Government Treasury. We reported it to the cops. It turned out to be part of one of the biggest embezzlement crimes ever exposed. Major political figures and tech "bosses" turned out to be running a "PayPal Tech Mafia". The bad guys then began hunting us down and attacking us in reprisal "for the rest of our lives" per their threats and their ongoing retribution vendettas.

It was found that famous senators, their Silicon Valley oligarch financiers and their associates run an organized crime insider trading scam that abuses taxpayers and sabotages competing businesses. The terminations of the heads of the FBI, The Department of Energy and other famous people in politics is because of their operation, and cover-ups, of this case. The cover-ups are still going on. Our ability to get justice in this matter is still blockaded.

We will fight to the death to get justice because they tried to kill us, ruin our business and destroy our names. Every day an increasingly large number of the 300 million potential voters join the effort to expose, shame, dox, bankrupt, boycott and 100% legally exterminate the corrupt entities who did these illicit things by using our Democracy as their billionaire's plaything. Hundreds of the perpetrators have already been fired, placed under permanent public surveillance, financially tracked through every asset, reported to federal agencies and targeted for investigation. The goal is to interdict every single person, company and political operative group who is engaging in these crimes using crowd-sourced investigation and intelligence tools.

This evidence proves:

- That a mobster-like cartel of men operate a racketeering operation out of Silicon Valley that manipulates elections, news and taxpayer funding policies.

- That this cartel is comprised of sick, megalomaniac, sexually addicted and abusive men who protect each other with billions of dollars of cover-ups involving the bribery of Senators with insider trading stock and covert campaign financing.

- That this cartel receives hundreds of billions of dollars of profits from their crimes and this causes them to stoop to murders, extortion, black-lists, funding blockades and other crimes, in order to gather their ill-gotten gains.

- That the investors of Google, Facebook, Twitter, Amazon, Ebay, Netflix and a related set of Silicon Valley monopolies conspire in these efforts to manipulate the stock market, lie to advertisers and bias all digital news and information, globally, to push their selfish ideologies.

- That Senators Pelosi, Feinstein, Boxer, Harris, Reid have an active criminal participation in, and benefit from, these efforts and that they, in fact, along with Steven Chu had illicit dealings with Russian and Chinese financiers and they are paid with insider trading stock, revolving door jobs, and other covert payola.

- That Google, Facebook and Twitter have rigged and manipulated U.S. elections since Barack Obama was elected.

- That the U.S. Department of Energy and the U.S. Department of Justice were used as an illicit slush-fund by the Obama Administration to pay campaign financiers and to sabotage their competitors.

- That government officials hired and/or financed and/or directed deadly economic and character assassination hit jobs against those who reported these crimes using attack services from IN-Q-Tel,Gawker Media, Jalopnik, Gizmodo Media, K2 Intelligence, WikiStrat , Podesta Group, Fusion GPS,Google, YouTube, Alphabet, Facebook,Twitter, Think Progress , Media Matters, Black Cube, Mossad,Correct The Record, Stratfor, ShareBlue,Wikileaks, Cambridge Analytica; the owners of whom have been proven to have accepted compensation for such hatchet job services.

- The â The PayPal Mafiaâ is an actual Cosa Nostra like operation that exploits sex cults, prostitutes, gay rent boys and market rigging as illicitly as the old Chicago â Mobâ .

- That Tesla Motors is a criminal Dark Money front that â cooks the booksâ , lies about safety issues and runs sabotage campaigns through Muskâ s massive use of Russian bots, trolls, stock shills and his covert manipulations with Googleâ s Larry Page and Eric Schmidt.

SILICON VALLEY TECH CARTEL EVIDENCE FOLDER EXPLANATIONS:

Here is a small sample of the evidence proving the charges. We warrant, certify and guarantee that, with equitable legal representation, we can prove all of our charges in a Grand Jury, A civil Jury Trial and a television broadcast live Congressional hearing. This is a public peer-to-peer, mesh network, free wiki operated by a Task Force of citizens, journalists, forensic investigators and law enforcement specialists. You can read and explore the evidence samples by clicking on each link following these categorical explanations for the folders:

SILICON VALLEY MEDIA COLLUSION INFO RIGGING - This folder provides a small sample of the proof that a group of media company owners in the Tech Cartel coordinate news stories and news censorship in order to manipulate their crony capitalism plots. This includes only hiring certain types of extremists, having their HR departments run "echo-chambers", keeping employees in a glass bubble, new age biased

mind-training, subliminal messaging campaigns and coordinated catch phrases.

DEPT OF ENERGY IS THE DNC SLUSH FUND - This folder provides a small sample of the proof that the U.S. Dept. of Energy is used as a slush-fund and Dark Money-compensated stock market scam by the Obama Administration and their Silicon Valley Tech Cartel financiers. CA & NY Senators and AG's ran the high level parts of this criminal kick back Dark Money scheme.

SILICON VALLEY AND HOLLYWOOD SEX CULTS AND ABUSE - This folder provides a small sample of the proof that Silicon Valley Tech Cartel VC's and PayPal Mafia oligarchs are raised to be sociopaths and exhibit lawless, deranged social actions like rape, sex abuse, misogyny, tax evasion, racism, bribery, embezzlement and other illicit deviance. Their vast sex abuses and sex clubs prove their moral failures and that they seek not pleasure but "control over others" in their horrific sexual crimes.

HOW YOU CAN FIGHT CORRUPTION - This folder provides the latest info on technologies and tactics you can use to expose the corrupt and shut them down!

THE DNC HIT JOB MEDIA ASSASSINS - This folder provides a small sample of the proof that the suspects are spending vast amounts of money and resources on Fusion GPS, Black Cube, Gawker/Gizmodo hit jobs and spying. These are not just people who disagree with Trump. The Tech Cartel is actively meeting and coordinating attacks about, and spending tens of millions of dollars on, espionage activities, riots and character assassinations in order to keep their payola schemes going. Government officials financed and managed political, economic and character assassination attacks on domestic taxpaying citizens, using taxpayer resources and hit-job contractors.

RUSSIANS RUSSIANS RUSSIANS - This folder provides a small sample of the proof that it was originally Silicon Valley DNC Tech Cartel executives and venture capitalists who set up the first relationships with Russian mobsters.

PRIVACY AND SPYING ABUSE ONLINE - This folder provides a small sample of the proof that The Silicon Valley Cartel lie about their censorship and privacy rape of the public while, in fact, spying on the public for election manipulation using CIA-type tactics. Facebook, Twitter, Google/YouTube conspire to coordinate political, business and stock market censorship and attacks on their enemies.

DATING AND ONLINE SOCIAL MANIPULATION - This folder provides a small sample of the proof that the Tech Cartel including Chelsea Clinton's match.com, OKCupid and IAC properties and Reid Hoffman's matching sites are actually DNC honey-trap operations, political spying database population tools and mood manipulation efforts to exploit sensitive love-seekers for their vulnerable status.

WHY GOOGLE IS A SICK CORRUPT MONOPOLY - This folder provides a small sample of the proof that Google/YouTube/Alphabet owners and executives planned and manually coordinated election manipulations, privacy abuse, search engine rigged attacks on individuals, and militaristic information-rigging that harms the public and exceeds anti-trust violations more profoundly than almost any other company in history. The reason that Google employees comprised such a large portion of the Obama White House is so Google and the Tech Cartel could seek to implement this crony capitalism crime.

THE CORRUPT LAWYER, CPA, iBANK, LOBBYIST GANGS - This folder provides a small sample of the proof that the majority of the funds transfers for these Tech Cartel crimes came through Dark Money accounts, covert family trusts, shell corporations, revolving door contracts and insider trading scams operated by these tier 2 services contractors.

THE IDENTITIES OF THE CORRUPT DEEP STATE CROOKS - This folder provides a small sample of the proof that a Mafia-like Silicon Valley Tech Cartel exists and is comprised of, and operated by, a pack of

elitist fraternity house men and famous politicians.

IMMIGRANTS PAY FOR THE NANCY PELOSI MANSIONS - This folder provides a small sample of the proof that Nancy Pelosi, her family and staff are both operators and beneficiaries of these crimes.

POLITICAL DEATHS AND POISONINGS - This folder provides a small sample of the proof that a large number of connected individuals who crossed the Silicon Tech Cartel Cosa Nostra are now dead under mysterious circumstances. CA, NY & DC public officials and FBI executives have covered up these deaths and slowed investigations because they have financial links to the DNC financiers suspected of causing these murders. Seth Rich is only one of thousands of bizarre deaths of Tech Cartel whistle-blowers.

THE SANDHILL ROAD SILICON VALLEY VC SOCIOPATHS - This folder provides a small sample of the proof that The Silicon Valley Mafia (AKA: "The Tech Cartel", "The PayPal Mafia". "The AngelGate Conspirators", etc.) is The Sandhill Road Venture Capital frat boy company bosses in Palo Alto, their National Venture Capital Association (NVCA) partners and the tech companies (Google, Tesla, Facebook, Amazon, Twitter, Linkedin, etc.) they control. They are sometimes referred to as "The Deep State". They have purchased California, New York and Washington, DC politicians (mostly Senators) who they also control. They hire rogue ex-intelligence agents to operate Fusion GPS, Gawker/Gizmodo, Black Cube, ShareBlue, New America, In-Q-Tel, Podesta Group, Media Matters, etc. massive media attack programs against competitors, reporters and outsiders. They collude on black-lists, valuation controls, election manipulation, search engine rigging, domestic spying for political manipulation, stock rigging, insider trading, revolving door payola, executive prostitute clubs, trophy wife assignments, the bribery of politicians and worse. They are felons who pay politicians to halt investigations and interdiction efforts. They are widely covered in news media articles as: 'sex abusers, cult enthusiasts, elitists, rapists, woman beaters, probiosis abusers, sexual work extortion operators, extremists, arrogant clones of each other, tone deaf, echo-chamber reinforcing, misogynist, racist, manipulative, insecure, covertly gay, corrupt, thieves' and other anti-social revelations. They are not limited to California and also operate out of New York and Washington DC. They use their monopolistic control of the internet to massively and exclusively scale services that only they control and use to abuse the public's privacy, human rights, invention rights and information. They run their cartel like the old Italian Mafia once did.

SILICON VALLEY MANIPULATES ELECTIONS - This folder provides a small sample of the proof that the "The Deep State" that runs all of these tens of millions of dollars of political attacks and media manipulations is focused on rigging elections. These people have a 'Dark Money' bribery program underway in which they use fake charity organizations to conduit bribes and rigged government contracts back and forth to themselves via control of elected officials.

THE FEINSTEIN CORRUPTION AND PAYOLA - This folder provides a small sample of the proof that Dianne Feinstein, her family and staff are both operators and beneficiaries of these crimes.

AAAA CASE OVERVIEWS - This folder provides a small sample of the proof that crooked insiders from political circles participated in the crime. It cost taxpayers over six trillion dollars in losses. The most notorious Senators in the country are trying to keep it covered up. The main part of the scam is called 'Dark Money Trickle Laundering'. It works via corrupt Senators, criminally illicit law firms, dirty lobbyists, fake charities, sociopath tech billionaires, mobster CPA's and covert dynastic family trust funds. The taxpayers of the USA are the helpless victims of this crime and the SEC, FEC, DOJ, DOE, and other agencies, refuse to help them because the agency bosses get paid by the crooks! America was created as a 'one person = one vote' nation but 320 elitist billionaires bribed their way to get 500,000+ votes for each one of themselves! In other words: you get one vote but they use criminally illicit schemes to steal millions of votes for a few hundred corrupt guys.

THE ELON MUSK TESLA BRIBES AND CORRUPTION - This folder provides a small sample of the

proof that Elon Musk and Tesla Motors exist today because of their covert political organized crime activities, political bribes, DNC Dark Money financing and regulator payola.

What this evidence proves.pdf

A DETAILED EXAMINATION OF THE ROOTS OF DOMESTIC NATIONAL POLITICAL CORRUPTION AND A PLEA FOR ELECTED OFFICIALS TO ACTUALLY DO THEIR JOBS FOR THE AMERICAN PUBLIC

"Dear White House:

For years, we have been asking our government representatives to do something, anything, about this matter. We have gotten no reply, stone-walling, cover-ups and zero effort. That is shameful!

This matter affects every voting citizen because, if we can't get justice in America, then no voter will believe they can either.

A handful of corrupt tech billionaires, and their corrupt Senators, are manipulating the taxpaying voter's emotional triggers in order to steer, and money-launder, a trillion U.S. taxpayer dollars into their private bank accounts. Over 300 million American voters have said that the #1 issue with U.S. public policy is â CORRUPTIONâ . This issue is about that corruption.

Their â climateâ , â immigrantsâ , â medical carageâ issues are fake controversies that they use to scam U.S. Treasury funds that have nothing to do with those â cover issuesâ . They use Google, Facebook, Twitter and the "Main Stream Media", that they own, in order to pump up these fake controversies via fake news. They use "Dark Money" fake charities, "Invisible Bridge" money laundering, crony stock market insider trading and pump-and-dump schemes, revolving door payola, prostitution bribes and other illicit corruption tricks.

We are fighting back and we have already taken out part of the â bad guysâ , and their schemes, using 100% legal tactics and methodologies.

Any member of the public can now accomplish these anti-corruption efforts using espionage journalism, private investigation methods, citizen sleuth websites, class-action lawsuits and personal mass public media distribution. We encourage the public to continue in their efforts to bankrupt every single corrupt party that abuses our Democracy.

In our matter, the U.S. Government, via the Obama White House and the U.S. Department of Energy intentionally defrauded us out of years of work and our life savings! Now they owe us some offsets! We are here to collect.

We could not understand how â public servantsâ could do these kinds of crimes to, and with, our government while stealing our, and millions of other taxpayers, money out of our pockets. We set out to hunt down every single person, group and process that allowed these crimes to happen, document their crimes on permanent public record and then make it nearly impossible for them to ever do this to the public again.

We were tricked by false government promises into spending years of our lives and millions of dollars of our life savings. We, and our peers, were used as the â facadeâ of a â cover storyâ to operate a criminally illicit â Dark Moneyâ operation against the American public. We swear, warrant and certify that we can

prove every assertion in a public federal jury trial, Grand Jury hearing and/or televised Congressional hearing, given equitable credible legal resources and security protection.

Senior government officials had full knowledge of, and participated in, this criminal enterprise. They knew, from the start, that the state ad federal funding was covertly hard-wired, in advance, exclusively to their friends. They then attacked us with â Fusion GPSâ , â Lois Lerner Targetingâ , a tabloid character assassination program and worse things. They attacked us because we properly reported the crime to the FBI and Congress. They attacked us because we did "the right thing".

The cover-ups of this crime continue to this day. The failure of the U.S. Government to provide any 1.) apology, 2.) damages offset, 3.) justice, 4.) whistle-blower and informant fees; in this matter continues to this day. We are not anti-government. We are anti-corruption. In fact, top government officials are helping us in our quest.

For our first project, almost every taxpaying member of the public supported our past efforts and, in fact, provided us with a historically large number of purchasing letters of support which we hand-delivered to Congress. Nobody else was able to do that.

The non-crony major international news outlets, every major industrial publication, most of the non-crony members of the U.S. Congress, and every other non-crony public official confirmed that "Part Two" of our project was a â goâ . After winning Congressional awards and fully delivering on our previous government contracts, federal officials asked us to invest our time and money in the federal government and do even more to create domestic jobs and new domestic technology opportunities.

BUTâ ¦

...it turned out that all of the government â decidersâ worked for and owned stock in our arch competitor. The government officials took the money they had promised to us and gave it to their friends, who are our competitors. They gave it to the least qualified party; who also happened to be their buddy and their campaign financiers. They also gave part of the taxpayer cash to some of their friends who immediately filed bankruptcy in order to make huge profits off of tax loss filings and stock market valuation â pumpsâ without ever having to create any jobs or ongoing product deliveries.

We were asked to pay bribes and we refused to pay bribes. We refused to be part of the Silicon Valley â Dark Moneyâ crimes. We knew these people. We were invited to their parties and to their most intimate meetings. When we saw that they were running afoul of Democracy using corrupt schemes, illegal insider trading, sextortion, money laundering, tax evasion, bribes, prostitutes, Dark Money conduits, election rigging, internet manipulation and other crimes against the public; we said NO!

Will the U.S. Government provide us with the justice we seek and the Constitution demands?

We have worked with exceptional FBI, GAO, SEC, CFTC, IG and Congressional staff in this matter and we wish to acknowledge their support. Many have seen the recent news head-lines about top-level law enforcement firings of corrupt law enforcement executives. Those were the right moves and we wish to confirm the fact that certain public officials continue to stall our justice. Treasury and GAO say that over 180 million taxpayer dollars have been spent on cover-ups, attacks and DOJ stalls against our request in order to avoid political embarrassment for the Obama Administration. They are no longer around and they SHOULD be embarrassed by their corruption!You can resolve our matter for dramatically less money than you are spending trying to cover it up!

We will not give up and we will fight to the end. Our Task Force of crime victims, journalists, bloggers, mass data scientists, intelligence specialists and voters is now using 100% legal means to terminate every single

crook in this case until we get justice. We demand a resolution where our damages are paid for and the whistle-blower and informant fees we are owed are delivered.

The news articles and Congressional reports prove that this Silicon Valley Cartel regularly engages in crimes, sex abuse, illicit acts, a sociopath culture and law-breaking. Fact-based forensic data has now been published representing the work of tens of thousands of renown, award-winning journalists and researchers. They prove that what we are saying really did happen and it really is a criminal abuse of Democracy! The ICIJ, Snowden, Assange and Binney leaks prove the depth of the crimes.Hundreds of thousands of documents have now been placed on public record in the federal courts and P2P archives and those documents prove who engaged in these crimes and how they did it. The 60 Minutes episodes, The feature films: Dark Money; Too Big To Fail; Inside Job and the tens of thousands of broadcast news segments about this corruption all prove our assertions. The evidence is indisputable!
|
It is time for the public to take a stand against this kind of organized crime that is operated by the very people that are meant to serve the public!

It is time for The U.S. Government and The U.S. Department of Energy to deliver the 1.) apology, 2.) damages offset, 3.) justice, 4.) whistle-blower and informant fees that are required."

QUESTIONS?

Q. Where is your proof?

A. Here is the proof:

- http://www.DC-crimes.com
- http://www.slush-fund.com
- Federal court records on file at http://www.pacer.gov
- FBI 302 and case evidence files submitted by our peers
- Congressional Ethics Committee reports on public record
- GAO investigation reports we helped produce
- and thousands more web repositories we are happy to share...

As a matter of fact, we have submitted over a million pages of evidence produced by the best, and brightest, FBI agents, criminal investigators, forensic researchers, investigative reporters, insider whistle-blowers and former agency employees. In fact, our complaint evidence sets comprise over 6 TERRABYTES of data. That is quite a bit of hard evidence. Additionally, there has been very little credible push-back from any major entities, aside from those charged with the crimes. In other words, every well-known entity who was not a crook involved in these embezzlements has verified our charges.

Q. Why don't we hear more about this in "the news"?

A. Because print news media has gone out of business and most of the online news, especially Google, YouTube, Facebook, Twitter, Huffpo are owned or invested in by the very people who are charged with the political bribery, insider trading, election manipulation and corruption. They order their news outlets, which now are the majority of news publishers in the world, to NOT covernews about these crimes because it will

embarrass them and cause the FBI and Congress to look at them more closely. We are not going to let this be covered-up.

Q. Why don't you just sue all of the people and agencies who did these things to you?

A. The attacks on us were designed to eliminate our finances so we could not afford law firms. If we could sue each one of the bad guys and afford the same lawyers as the bad guys, we would win every case. Each case costs over two million dollars in legal expenses. There are many cases. Our legal rights were blockaded by carefully crafted rights elimination tactics. In America, you can only get a lawyer for free if you kill the opposition bad guy first. In other words you only get a free lawyer if you commit a murder.

Q. Isn't it the job of the FBI and the DOJ to help citizens like you with injustices like this?

A. As the world saw with the recent firings of the top staff at the FBI and DOJ; top law enforcement bosses are often more focused on cover-ups of crimes than the prosecution of crimes. We have helped get hundreds of famous political people fired for corruption but that does not fully solve our issue.

Q. What are you asking for?

A. Justice, a written apology, to get our damages paid for, the firing of every corrupt official involved and delivery of the whistle-blower fees we were promised.

Q. Who have you contacted to try to get this resolved?

A. Using certified mail, receipt-based FEDEX and time-stamped and tracked electronic communications we have contacted every law enforcement agency, regulatory agency, their heads of office and every elected representative through every known official channel and back-channel for nearly a decade. We have only encountered finger-pointing to some other agency and an official "not my circus, not my monkey's" attitude of "just ignore them, maybe they will go away".

Q. Who else can we contact to confirm that these crimes and stock market corruptions took place and are still taking place.

A. These groups:

- http://wearethenewmedia.com/
- https://www.icij.org/
- https://www.transparency.org/
- https://www.judicialwatch.org
- https://corruption123.com
- https://wikileaks.org

- https://causeofaction.org

- http://globalinitiative.net/

And over 400 other organizations we can introduce you to...

Q. Are you associated with any political party?

A. No. We are neither Democrats nor Republicans. We are domestic American taxpayers who were raped by our own elected representatives who were profiteering off of these crimes. We represent the American citizens!

SO WHY ARE WE NOT GETTING ANY RESPONSE, ANY JUSTICE AND ANY OFFSETS FROM THE VERY PEOPLE WE PAY TO PROTECT AND SERVE US?

ANOTHER LETTER FROM VICTIMS OF THIS FELONY CRIME MATTER:

We are victims of a felony crime. We have yet to receive any legal help or victims rights services. Over 100,000 tv shows, broadcast news segments, Congressional reports and news articles cover the fact that the crimes did happen.

Jesse Jackson Junior stole money from the government and collects $138,400.00 per year from the government. We reported a crime and contributed over 42 million dollars in taxes and services to the government yet only get to collect $12,000.00 per year. There are over 22 million people who did crimes who also collect as much...yet we get nearly nothing after getting defrauded by the Department of Energy.

The DOE Paducah Gaseous Diffusion Plant under contracts with the Department of Energy and the government-owned U.S. Enrichment Corp paid $5M whistle-blower awards to those who blew the whistle on millions of dollars of corruption. We blew the whistle on hundreds of billions of dollars of corruption at DOE and have not only not received a dime of whistle-blower awards but lost over a billion dollars due to Dept. of Energy reprisals.

The Dept. of Energy has agreed to pay millions to resolve fraud allegations in its award of small business subcontracts to clean up part of the Hanford nuclear reservation. The Department of Justice released the settlement amount after it and Washington Closure announced the day before they had reached an agreement. Two other businesses named in the lawsuit, Richland's Federal Engineers & Constructors (FE&C) and Sage Tec, reached separate settlements in 2017. The FE&C settlement for $2 million and Sage Tec settlement for $235,000 bring the total recovered by the Department of Justice to more than $5.5 million in the case. We blew the whistle on hundreds of billions of dollars of corruption at DOE and have not only not received a dime of whistle-blower awards but lost over a billion dollars due to Dept. of Energy reprisals.

Dept. of Energy Hanford subcontractor URS has agreed to settle a lawsuit brought by former employee Walter Tamosaitis for $4.1 million. The settlement in the whistleblower case comes almost one year before the case was set for a jury trial in federal court in Richland. We blew the whistle on hundreds of billions of dollars of corruption at DOE and have not only not received a dime of whistle-blower awards but lost over a billion dollars due to Dept. of Energy reprisals.

Many news reports such as this, demonstrate the utter lack of justice in modern Washington:

GAO Report Confirms DOE has Failed to Protect Whistleblowers

"They will make an example of anyone who challenges them." This chilling comment from a contractor employee quoted in a recent Government Accountability Office (GAO) report illustrates how Department of Energy (DOE) contractors have developed a culture of fear and intimidation that threatens to subvert legitimate safety ...

pogo.org/blog/2016/08/gao-report-confirms-doe-fail.

WE DEMAND THAT THESE CRIMINALS BE ARRESTED OR ELSE WE WILL PERFORM CITIZEN ARRESTS ON EACH AND EVERY ONE OF THEM!

WHO ARE THE MAIN CROOKS WHO FINANCED, OPERATED AND BENEFITED FROM THIS CORRUPTION?:

1.) These people have a 'Dark Money' bribery program underway in which they use fake charity organizations to conduit bribes and rigged government contracts back and forth to themselves.

2. These are the people (Mostly from New York and California) who are 'freaking out' because Trump is cutting off their corruption ('Draining the swamp...") and who are spending the most money and resources on Fusion GPS, Black Cube, Gawker/Gizmodo hit jobs and spying. These are not just people who disagree with Trump. They are actively meeting about, and spending tens of millions of dollars on espionage activities, riots and character assassinations in order to keep their payola schemes going.

These people appear to be criminals who have the protection of corrupted executives in charge of law enforcement and regulatory agencies. The top most active Deep State radicalized financiers and agitators are:

- Amy Pascal; (Sony Pictures Obama funding liaison, traded CIA secrets for Zero Dark Thirty script)
- Arnold Schwarzenegger; (CA governor, actor, arranged Russian mob financing and Russian mining deals)
- Barack Obama; (Acted as front man for Silicon Valley payola deals through White House)
- Bill Daley; (Obama's Chicago mobster staff boss, ran payola ops in White House for Obama)
- Bill Lockyer; (California finance boss with a sex scandal that gave taxpayer cash to crooked Solyndra and Tesla)
- Brian Goncher; (Deloitte finance Cleantech scammer head, put togther Obama Cleantech payola deals)
- Daniel Cohen; (Dept of Energy Lawyer who helped fudge the DOE Slush-Fund into place with Steven Chu)
- David Axelrod; (Obama White House media hit-man)
- David Drummond; (Top Google lawyer who had a few scandals at his Quail Road Home in Woodside, CA while running political bribes for Google)
- David Plouffe; (Obama White House boss who arranged Silicon Valley payola and revolving door deals)
- David E. Shaw; (Known as the Snake Of Silence)
- Dianne Feinstein; (Covert owner of Tesla, Solyndra and other conflict-of-interests. called "The Most Corrupt Senator In U.S. History")
- Elon Musk; (Tech mobster bromance buddy of Larry Page at Google and Tim (crazy eyes) Draper, sex party partner with Steve Jurvetson and largest government Mooch in American history)
- Eric Holder; (Obama's AG who ran all of the DOJ and FBI cover-ups of corruption for Obama)
- Eric Schmidt; (Google boss with an "open marriage", a sex penthouse and a CIA office who loves to mess with governments around the world)
- John Zaccarro, Jr.; (At top of GOP watch-list)
- Frank Giustra; (Mining scheme financier of Hillary Clinton who suggested Russian deals)
- Nick Denton; (Gay sex and media abuser who did nasty tabloids in Britain and USA as hired character assassination pro, ran media attacks as client for Podesta, Obama, DNC, Google and Elon Musk)
- Harry Reid; (Dirty Senator who made crooked deals with Musk and Google, got punched in the eye for being a crook)
- Haim Saban; (Overseas cash conduit to DNC)
- Hillary and Bill Clinton; (Sex, dead bodies, Haitian prostitutes...can the world ever forget The Clinton's?)

- Ira Ehrenpreis; (Silicon Valley frat boy bundler and DNC VC insider)
- Andy Bechtolsheim; (Silicon Valley frat boy bundler and DNC VC insider)
- Jay Carney; (Too many conflicts-of-interest to count, White House press boss, loved Russian tactics)
- James Comey; (FBI Director who held off investigations on Obama's crimes)
- Jared Cohen; (Google's Israeli agent in-house, playboy/spy/DNC operative; promoted coup attempts)
- Jeffrey Katzenberg; (Hollywood Wensteiny DNC financier and pusher of politics into Hollywood films)
- John Doerr; (Obama's Kleiner Perkins and Russian Connection VC sued for sex abuse and manipulation)
- Harvey Weinstein; (Notorious Obama and Clinton financier and sexual predator)
- Yasmin Green; (Google's director of Middle East Incursions, Jared Cohen's favorite hottie, extensive mouth-to-face ratio)
- Jonathan Silver; (The Dept of Energy's VC who made sure that only Obama's campaign financiers got funded)
- Ken Brody; (Insider for DNC operations)
- Lachlan Seward; (The Dept of Energy's payola manager who made sure that only Obama's campaign financiers got funded)
- Laurene Powell Jobs; (Steve Job's old squeeze or "beard wife" depending on who you ask, inherited his billions and now funds the DNC)
- Judge Stewart M. Bernstein; (NY Southern District Judge who is a Hillary Clinton sponsor protecting DNC corruption)
- Larry Page; (Elon Musk's boy buddy at Google. Pages steals technology for Google and spends his billions rigging politics and buying insane frat boy toys and people)
- Google, Alphabet, YouTube; (The commercial version of the CIA)
- Facebook; (The commercial version of the German Stazi)
- In-Q-Tel; (The actual CIA..but without any of that annoying Congressional oversight. They are a 501 (c) charity yet they had 5 tons of cocaine on their airplanes. They now work for Elon Musk, Google and Facebook)
- Amazon; (The Socialist version of the CIA)
- Twitter; (A DNC spy and media manipulation tool to do spy stuff in 140 characters, or less)
- PayPal; (A DNC run bank that cut's off anti-DNC people)
- WordPress.Org; (A DNC operated ISP that cut's off anti-DNC people in violation of freedom-of-speech)
- The Law Firm of Perkins Coi; (The Masters of Moving Money Mysteriously)
- Mark Zuckerberg; (Goofy Facebook boss that does what Sandburg and Debbie Wasserman tells him to do and wants to be President of the World)
- Martin LaGod; (Silicon Valley VC deep into lithium mining corruption)
- Matt Rogers; (Silicon Valley McKinsey insider placed into Dept of Energy to run things for Silicon Valley VC's)
- Marc Benioff; (DNC financier and party boy)
- Michael Birch; (The man with the Magic Box)
- Steve Kirsch; (Windfall billionaire with Infoseek sale, funds lithium ion battery mining deals)
- Steven Spielberg; (Hollywood extremist DNC financier)
- S. Donald Sussman; (A true man who "gets around the circuit")
- Pierre Omidyar; (Gawker/Gizmodo hit-job financier, EBAY owner, partners with "Russian Businessmen")
- Rahm Emanual; (The "Godfather" of corruption in the Obama White House and Chicago City Hall. Taught Obama how to Obaminate corruption)
- Raj Gupta; (Arrested insider trading expert from crooked McKinsey who taught Silicon Valley how to scheme)
- Ray Lane; (Charged with tax evasion on a massive scale, he and Kleiner Perkin's folks brought crime to the Vallley)

- Tom Perkins; (The VC with the biggest bribes)
- Robert Rubin: (The insider that knows where the girls are)
- Rob Friedman; (The insider that works all of the angles and shell corporation options)
- Reid Hoffman; (Weight and morality challenged owner of Linked-In who finances dirty DNC deals and dating sites)
- Richard Blum; (Dianne Feinstein's husband/boss, ran dirty Chinese deals and owns part of Solyndra and Tesla assets. His "interesting" trips to Mongolia and China still have the FBI scratching their heads)
- Robert Gibbs; (Obama's crooked press office boss who quit the day after a certain package showed up on his desk)
- Robert Shwarts; (The cash behind the blast)
- Roger Altman; (The man who has his fingers in everything)
- The Law Firm of Covington and Burling; (Deeply homosexual DNC insider law firm that brought you Obama, Eric Holder and the Immigration crisis)
- Sanford Robertson; (The "inventor" of some of the greatest stock market politician perks ever deployed)
- Steve Jurvetson; (Elon Musk's sex party buddy and VC who got fired for sex stuff and who has one of the worst reputations around the Valley)
- Steve Rattner; (Obama's "Car Czar" who put together the crooked deals with Detroit to exchange fed cash for votes, indicted in NY for securities fraud. Google associate, New America/In-Q-Tel guy)
- Steve Westly; (Obama's dirtiest Silicon Valley Political Crony Payola Bundler)
- Steven Chu; (Officially known as "The Most Corrupt Secretary Of Energy In American History" who also created the totally screwed up "Iran Nuclear Deal" and the corrupt "Uranium One" deal)
- Steve Spinner; (He and his wife structured the stinkiest parts of the Obama Solyndra payola scam)
- Susie Tompkins Buell; (DNC financier socialite PR hypester for Norcal rich people)
- Tracey Turner; ("The FBI cannot comment about an ongoing investigation...")
- George Soros; (The world's most overt DNC radical billionaire, the cash behind Netflix and Tesla)
- Warren Buffet; (The world's most covert DNC radical billionaire)
- Tom Steyer; (The "Master of Cleantech Disaster", 3rd largest financier of Anti-Trump actions, oil guy)
- Margie Sullivan; (Tom Steyer's partner and Hillary Clinton's special friend who helped USAID push mining deals to get Afghanistan invaded for Elon Musk and Frank Guistra mining scams)
- Tim Draper; (Bromance buddy of Elon Musk with extremist eyebrows and hatred of Californians)
- Valarie Jarrett; (Obama's White House overseer of the Obama corruptions office efforts who sought to help Iran)
- Vinod Khosla; (The villan of the CBS 60 Minutes episode: The Cleantech Crash, Obama & Clinton financier kick-back artist and "beach stealer")
- Michelle Lee; (Google's lawyer who was placed as head of U.S. Patent Office for the purpose of protecting Google and the Silicon Valley Cartel in their IP theft onslaughts)
- The law firm of Wilson Sonsini Goodrich and Rosatti; (Known as the most "corrupt law firm in Silicon Valley")
- Lawrence "Larry" Summers (Harvard President who aided Zuckerberg's light-speed rise to prominence with unprecedented Harvard Crimsoncoverage; Obama bailout chief; Clinton Treasury Secretary; World Bank Chief Economist; "Special Advisor" to Marc Andreessen in Instagram; co-creator of the current Russian robber baron economy; close 20-year relationships with protÃ©gÃ©s Sheryl Sandberg & Yuri Milner; aided in recommendations that created the Russian robber baron economyâ and Yuri Milner/DST/Asmanov's money used to purchase Facebook stock)
- James W. Breyer; (Accel Partners LLP; Facebook director; client of Fenwick & West LLP since the 1990's; apparently received technology from other Fenwick clients that was shuffled to Zuckerberg, incl. Leader Technologies' inventions. Formed CIA IN-Q-TEL spy and IP theft organization)
- David Plouffe; directed Obama's 2008 and 2012 campaigns; a self-described "statistics nerd;" likely directed the activities of the Facebook Club; employed Robert F. Bauer, Perkins Coii LLP in 2000 at

the Democratic Congressional Campaign Committee. Facebook and Uber manipulation expert)
- McBee Strategic (one of the main "private" arms responsible for dolling out the billions in Obama "green energy" stimulus funds; partnered with Cooley Godward LLP)
- Mike Sheehy (Cooley-McBee Strategic principal; former National Security Adviser to House Speaker Nancy Pelosi)
- Nancy Pelosi (U.S. Congresswoman; appears to be running political cover in the House for Facebook, McBee Strategic, Cooley Godward, Fenwick & West, Breyers, etc.)
- Gilman Louie - (Silicon Valley spy and game-maker who formed In-Q-Tel to steal technologies and political agenda's)
- Harry Reid (U.S. Senator; Judge Evan J. Wallach patron)
- Thomas J. Kim (SEC, Chief Counsel & Assoc. Director) approved Facebook's 500-shareholder exemption on Oct. 14, 2007, one day after it was submitted by Fenwick & West LLP; Facebook used this exemption to sell $3 billion insider stock to the Russians Alisher Asmanov, Yuri Milner, DST, Digital Sky, Mail.ru which pumped Facebook's pre-IPO valuation to $100 billion; another Harvard grad, Kim worked at Latham & Watkins LLP which was the chief lobbyist for the National Venture Capital Association in 2002-2004 whose Chairman was James W. Beyer,Accel Partners LLP; in other words Breyer and Kim, both Harvard grads, were associated at the time of the Zuckerberg hacking and theft of Leader Technologies' software code)
- Ping Li (Accel Partners, Zuckerberg handler)
- Jim Swartz (Accel Partners; Zuckerberg handler)
- Sheryl K. Sandberg (Facebook, Summers Dominatrix-like protÃ©gÃ©; Facebook director - Husband possibly murdered by Russian as an example to tell Zuckerberg to tow-the-line)
- Yuri Milner (DST aka Digital Sky, Summers protÃ©gÃ©; former Bank Menatep executive; Facebook director)
- Alisher Asmanov (DST aka Digital Sky; Goldman Sachs Moscow partner; Russian oligarch; Friend of the Kremlin; Became the Richest Man in Russia after the Facebook IPO)
- Marc L. Andreessen (Zuckerberg coach; client of Fenwick & West LLP and Christopher P. King akaChristopher-Charles King akaChristopher King aka Christopher-Charles P. King; Summers' sponsor during Instagram-scam; Facebook director)
- Peter Thiel (19-year old Zuckerberg coach; PayPal; Facebook director; CEO, Clarion Capital)
- Clarion Capital (Peter Thiel)
- Richard Wolpert (Accel Partners)
- Robert Ketterson (Fidelity Ventures; Fidelity Equity Partners; Fidelity Ventures Telecommunications & Technology)
- David Kilpatrick (Business Insider; "The Facebook Effect"; PR cleanse-meister re. Facebook origins
- Zynga/Groupon/LinkedIn/Square/Instagram ("Facebook Money/Credits/Bitcoin" feeder companies)
- Tesla Motors (received $465 million in Obama stimulus funds and hired Cooley's Michael Rhodes in the seven months before the Leader v. Facebook trial, just before veteran Judge Joseph Farnan made the surprise announcement of his retirement, just six days after Facebook's disastrous Markman Hearing)
- Solyndra (received $535 million in Obama stimulus at the recommendation of the Cooley-McBee Strategic "consulting" alliance)
- BrightSource (received $1.6 billion in Obama stimulus at the recommendation of the Cooley-McBee Strategic "consulting" alliance)
- John P. Breyer (father of James W. Breyer; founder of IDG Capital Partners - China; coached his son on exploiting Western markets while he quietly built a venture capital business in China for the last 20 years; the real brain behind the Breyer exploitations)
- IDG Capital Partners (China)(founded by John P. Breyer, the father of James W. Breyer, Accel Partners; the current launderer of the tens of billions James W has fleeced from the U.S. market from the bailout, stimulus and the "pump & dump" Facebook IPO schemes)
- Goldman Sachs (received US bailout funds; then invested with DST in Facebook private stock via Moscow; took Facebook public; locked outAmerican investors from investing)

- Morgan Stanley (received US bailout funds; took Facebook public; probably participated in oversees purchases of Facebook private stock before IPO)
- State Street Corporation (received U.S. taxpayer bailout monies along with Goldman Sachs and Morgan Stanley; consolodating control of ATM banking networks internationally)
- JP Morgan Chase (received U.S. taxpayer bailout monies along with Goldman Sachs, Morgan Stanley and State Street Corporation)
- Lloyd Blankfein (Goldman Sachs, CEO - The Wizard of Covert Cash)
- Jamie Dimon (JP MorganChase, CEO)
- Steve Cutler (JP MorganChase, General Counsel)
- Rodgin Cohen (JP MorganChase, Outside Counsel; Sullivan Cromwell, LLP)
- U.S. Securities & Exchange Commission (granted Fenwick & West's application on behalf of Facebook for an unpredented exemption to the 500 shareholder rule; opened the floodgated for Goldman Sachs and Morgan Stanley to make a private market in Facebook pre-IPO insider stock; facilitated the influx of billions of dollars from "dubious" sources associated with Russian oligarchs, Alisher Asmanov and Yuri Milner, and the Kremlin; Goldman Sachs is a partner with this Moscow company, Digital Sky Technologies, aka DST, aka Mail.ru)
- Jeff Markey (McBee Strategic LLC; allied with Facebook's Cooley Godward Kronish LLP to arrange Obama's green energy funding; arranged $1.6 billion for failed BrightSource and $535 million for failed Solyndra)
- Steve McBee (McBee Strategic LLC; allied with Facebook's Cooley Godward Kronish LLP to arrange Obama's green energy funding; arranged $1.6 billion for failed BrightSource and $535 million for failed Solyndra)
- Michael F. McGowan (Stroz Friedberg; Facebook forensic expert who lied about his knowledge of the contents of the 28 Zuckerberg hard drives and Harvard Email accounts)
- Bryan J. Rose (Stroz Friedberg; Facebook forensic expert who lied about his knowledge of the contents of the 28 Zuckerberg hard drives and Harvard Email accounts)
- Dr. Saul Greenberg (Facebook's expert witness from the University of Calgary; disingenuously waived his hands and said he would be "wild guessing" about the purpose of a Java "sessionstate" import statement (even Java newbies know it is used for tracking a user while in a web session); in short, Dr. Greeberg lied to the jury, thus discrediting his testimony)
- Toni Townes-Whitley (CGI Federal; Michelle Obama's 1985 Princeton classmate; CGI "donated" $47 million to the Obama campaign; CGI won the no-bid contract to build the www.healthcare.gov Obamacare website; CGI shut off the security features on Obama's reelection donation sites to increase donations)
- CGI Federal (US division of a Canadian company; Donated $47 million to Obama's reelection, then received the no-bid contract to build the ill-fated Obamacare website; Michelle Obama's Princeton classmate, Toni Townes-Whitely, is a Senior Vice President of CGI; the website is replete with social features and links to Facebook)
- Kathleen Sebelius (Obama's Secretary of Health & Human Services since 2009 responsible for $678 million Obamacare implementation; made the decision to hire CGI Federal on a no-bid contract despite the evident conflict of interest with Michelle Obama and $47 million in Obama campaign donations by CGI; the website is replete with social features and links to Facebook)
- Todd Y. Park (White House Chief Technology Officer (CTO); former CTO for Health & Human Services; chief architect of HealthCare.gov; founder, director, CEO, Athenahealth, Inc.; founder, director, CEO, Castlight Health, Inc.)
- Frank M. Sands, Sr. / Frank M. Sands, Jr.(Founder and CEO, respectively, of Sands Capital Management LLC; failed to file S.E.C. Form SC 13G acquisition reports for Athenahealth, Inc., Baidu, Inc. (ADR) and Facebook stock during 2012; masked the association of Todd Y. Park with Athenahealth, Inc. and Baidu, Inc., and the association of both of those companies with the Facebook IPO fraud)
- Robin "Handsome Reward" Yangong Li (CEO, Baidu, Inc. (ADR); appointed Jan. 2004, the same month that Mark Zuckerberg obtained Leader Technologies' social networking source code to start

Facebook; Robin Y. Li is very likely associated with John P. and James W. Breyer through their Chinese entities, including IDG Capital Partners, IDG-Accel and other variants; Li appointed a junior attorney from Fenwick & West LLP, Palo Alto/Mountain View, namely Parker Zhang, to be his "Head of Patents;" Fenwick & West LLP represented both Leader Technologies, Inc. and Accel Partners LLC in 2002-2003 and had Leader's source code in their files.)

- Parker Zhang ("Head of Patents" at Baidu, Inc. (ADR), appointed in approx. May 2012; formerly a junior Associate attorney at Fenwick & West LLP; graduate from Michigan Law in 2005)
- Penny S. Pritzker (Secretary, Department of Commerce; replaced Rebecca M. Blank; holds over $24 million in Facebook "dark pools" stock, most notably in Goldman Sachs, Morgan Stanley and JPMorgan)
- Rebecca M. Blank (Secretary, Department of Commerce; oversaw the dubious Leader v. Facebook activities of the Patent Office Director, David J. Kappos, who held over one million dollars in Facebook "dark pools" during the Leader v. Facebook proceedings; Kappos purchased this stock within weeks of his surprise recess appointment by President Obama; Kappos also was formerly employed by IBM, who sold Facebook 750 patents during the Leader v. Facebook proceedings; right before leaving the Patent OFfice, Kappos also ordered an unprecedented 3rd reexamination of Leader's patent without even identifying claims)
- Mary L. Schapiro (Chairman, Securities & Exchange Commission; holds 51 Facebook "dark pools" stocks which held stock in Facebook, Baidu and more than a dozen Facebook crony companies; failed to regulate the "dark pools;" failed to disclose her substantial conflict of interest in regulating the run up to the Facebook IPO)
- Robert C. Hancock (Chief Compliance Officer, Sands Capital Management, LLC; failed to file S.E.C. Form SC 12G notice of acquisition reports for Athena health, Baidu and Facebook during the period of the Facebook IPO in 2012; this conduct masked the conflicts of interest of Todd Y. Park, who was appointed by President Obama to be the U.S. Chief Technology Officer during this same period; Todd Y. Park is/has been founder, director and CEO of both Athena health and Castlight Health; Todd Y. Park deeply embedded the software from Athena health and Castlight Health into HealthCare.gov when he was CTO at Health & Human Services; none of these conflicts of interest were disclosed; Todd Y. Park's ethics pledges and reports are missing from the Office of Government Ethics)
- Jonathan Goodman (Chief Counsel, Sands Capital Management, LLC; failed to file S.E.C. Form SC 12G notice of acquisition reports for Athenahealth, Baidu and Facebook during the period of the Facebook IPO in 2012; this conduct masked the conflicts of interest of Todd Y. Park, who was appointed by President Obama to be the U.S. Chief Technology Officer during this same period; Todd Y. Park is/has been founder, director and CEO of both Athena health and Castlight Health; Todd Y. Park deeply embedded the software from Athena health and Castlight Health into HealthCare.gov when he was CTO at Health & Human Services; none of these conflicts of interest were disclosed; Todd Y. Park's ethics pledges and reports are missing from the Office of Government Ethics; Goodman was formerly employed by Gibson Dunn LLP, Facebook appeals counsel in Leader v. Facebook)
- Trip Adler ("Co-Founder" of Scribd; Harvard contemporaries of Mark Zuckerberg with a dubious orgins story, like Zuckerberg's; Scribd held AFI documents for two years, then summarily deleted the entire library without warning on Fri. Mar. 7, 2014; AFI's library contained only public documents and much evidence proving the Leader v. Facebook judicial corruption)
- Jared Friedman ("Co-Founder" of Scribd; Harvard contemporaries of Mark Zuckerberg with a dubious orgins story, like Zuckerberg's; Scribd held AFI documents for two years, then summarily deleted the entire library without warning on Fri. Mar. 7, 2014; AFI's library contained only public documents and much evidence proving the Leader v. Facebook judicial corruption)
- Jeffrey Wadsworth (CEO, Battelle Memorial Institute; President, Ohio State University Board of Trustees; former Deputy Director of Science & Technologies, Lawrence Livermore National Laboratory, University of California Board of Trustees)
- Michael V. Drake (President, The Ohio State University; former Chancellor, University of California, Irvine)

- Woodrow A. Myers (Chief Medical Officer, Wellpoint, Inc.; formerly Corporate Operations Officer, Anthem Blue Cross Blue Shield of Indiana)
- Alex R. Fischer (aka Alexander Ross Fischer; Trustee, The Ohio State University; former Sr. Vice President, Battelle Memorial Institute; Chairman, OmniViz; married to Lori Barreras)
- Chris Glaros (author of the discredited Waters Report re. The Ohio State University Marching Band; protege of Eric H. Holder, Jr., Professor James P. Chandler, III, and Algernon L. Marbley)
- Lori Barreras (Commissioner, Ohio Civil Rights Commission; former Vice President of Human Resources, The Ohio State University; former Vice President, Battelle Memorial Institute; married to Alex R. Fischer)
- David Vaughn (Criminal Attorney, David Vaughn Consulting Group; former Assistant U.S. Attorney; appointed to the discredited Waters Commission at Ohio State)
- Betty Montgomery (former Ohio Attorney General; appointed to the discredited Waters Commission at Ohio State; accepted campaign contributions from Woodrow A. Myers, Wellpoint, Inc. and friend of Michael V. Drake)
- Joseph A. Steinmetz (Provost, The Ohio State University; author of Psychological Science article on MOOC (Massive Open Online Course) that triggered the discovery of massive double-dealing and fraud within the Ohio State trustees)

The confirming data was acquired from finance reports, FEC filings, Congressional studies, espionage journalism, state election reporting forms, Goldman Sachs and ICIJ Swiss Leaks documents and journalists.

Report: Witness Prepared to Identify Two Killers of Seth Rich- U.S. Dept of Energy Involved

by Alicia Powe Comments

- **6.9K**Share
- **455**Tweet
- Email

Disclaimer: This shocking information was given to The Gateway Pundit this weekend. We decided to report this news and will post an update following Tuesdayâ s press conference.

The Washington, D.C. lobbyist who has been on the hunt for Seth Richâ s killer found a â credibleâ witness who will identify the two men he believes murdered the DNC staffer.

Jack Burkman, a Washington-based attorney and lobbyist who has worked with a private investigative team to solve the Seth Rich murder mystery, told *The Gateway Pundit* that the witness has conclusive evidence that will bring Richâ s killers to justice within a month.

â We believe that we have reached the beginning of the end of the Seth Rich murder investigation,â Burkman told *The Gateway Pundit* in an exclusive interview Sunday. â After two long hard years of work, we have a witness who is prepared to identify the two killers of Seth Rich. One is reportedly a current DEA (Drug Enforcement Administration) agent, the other is reportedly a current ATF (Bureau of *Alcohol, Tobacco, Firearms* and Explosives) agentâ

The witness, who â fears for his life,â will be accompanied by armed guards and disguise his identity as he details how two employees of the United States government killed Seth in a press conference slated for Tuesday.

> All press should attend my press conference TUESDAY at 1:00PM at the HOLIDAY INN Rosslyn Key Bridge. We will present a witness who brings us close to resolution in the Seth Rich case. #SethRich
>
> â Jack Burkman (@Jack_Burkman) July 8, 2018

Frank Whalen, a retired NYPD Detective Sergeant NYPD who served as the head of NYPD Homicide for 23 years, found the witness, Burkman explained.

â We found him through working with a retired New York City detective, who found him and brought him to us. We have thoroughly vetted this witness and we believe in this witness,â he said. â He has evidence that substantiates his claims but it will be revealed slowly. This witness is in great fear of his life â thatâ s why we are going with disguising him, disguising his voice and everything about him.â

Burkman, who has viewed surveillance footage from the night Rich was killed, says the witnessâ testimony confirms two men involved in the shooting.

â What the witness says matches what the police say and matches what we know from the surveillance videos,â he said. â The police let me see the video. The police said the video clearly identifies the pant legs of two men. So, there were two men involved in the killing that night. I now believe that in the next 3 to 4 weeks the entire matter will be resolved. Itâ s the beginning of the end.â

Jack Burkman

Rich, 27, was a DNC voter expansion data director for two years and had accepted a position with Hillary Clintonâ s campaign. He was murdered in Washington, D.C., on July 10, 2016, near his apartment in an affluent neighborhood. Rich was shot twice in the back with a handgun, and his wallet, credit cards, watch and phone were left in his possession. The Metropolitan Police Department has described it as a â botched robbery.â

Private investigators have claimed there is evidence Rich was the source who provided WikiLeaks with thousands of bombshell emails that rocked the Democratic National Committee in the summer of 2016 just ahead of its convention and the 2016 election. WikiLeaks founder Julian Assange has also insinuated Rich was the source WikiLeaks used to obtain the emails.

The emails indicated the Democrat Party was manipulating the primary race in favor of Hillary Clinton and sabotaged the Bernie Sanders campaign, led to the resignation of then-DNC chairwoman Debbie Wasserman Schultz. On July 22, just 12 days after Richâ s death and days before the Democratic Party Convention in

Philadelphia, WikiLeaks released 20,000 emails from DNC officials.

As Gateway Pundit reported, Burkman was shot at and run over by the former U.S. Marine Kevin Doherty on March 13 who he hired to help him get to the bottom of the case. Doherty â who claims he worked as a special agent and criminal investigator in the intelligence community â was subsequently arrested by Arlington County police on charges of malicious wounding and use of a firearm in commission of a felony.

> There has been an arrest made in the attacks on me. Thankâ ¦ https://t.co/ooii7WWL5K
>
> â Jack Burkman (@Jack_Burkman) March 20, 2018

The witness informed Burkman that Doherty was well acquainted with the two government employees that killed Rich, but he was unaware Doherty worked as Burkmanâ s lead investigator and tried to kill him earlier in the year.

â The witness himself didnâ t know that I had been shot by Kevin Doherty. Before we even told him that, he told us that Doherty was friends and palled around with the ATF agent and the DEA agent who shot Seth. Thatâ s why we think the witness is credible,â he said. â There wasnâ t much coverage of my shooting. The witness didnâ t see the coverage and didnâ t know. We didnâ t tell him, he told us before we told him.â

Kevin Doherty (Courtesy: Arlington Co. Police Department)

â We believe that Kevin Doherty may have been a plant in my organization, to kill me and stop my investigation,â he added. â He was carefully playing the role.â

Despite nearly getting killed while investigating the Rich case, Burkman says he doesnâ t â live in fearâ and neither should the witness.

â I now have armed guards all the time. And we will have even more armed guards at the press conference the place will be surrounded with private armed security,â he said. â But once we start living in fear we might as well have Adolph Hitler in power. Once you live in fear, thereâ s no reason to have won World War II.â

Following the press conference, Burkman will hold a candlelight march to the spot where Rich was killed.

â I promised the Rich family that I would find their sonâ s murderer. Their son was a great patriot and a great young man and it is for that reason that I want to solve this murder,â Burkman said. â His heart was in the right place and I want to honor him. We are one big political fraternity. This could have happened to any of the young people who work for me, Republican or Democrat, I employ both. This could happen to anyone of those young people.â

Burkman has created, paid for and erected billboards in the neighborhood where Rich lived and died; built the website WhoKilledSeth.com and canvassed the neighborhood with Seth Richâ s parents. Last year, he sued the Democratic National Committee for the release of the hacked DNC server he claimed will reveal key information in solving the murder of DNC staffer Seth Rich.

The DC-based attorney has also offered a $130,000 reward of his personal money for information leading to the arrest of Richâ s killer. WikiLeaks is offering $20,000, One America News Network $100,000, the D.C. Metropolitan Police Department $25,000 and Businessman and investor Martin Shkreli $100,000.

The DNC has yet to offer a reward for information leading to the arrest of the murderer of its own young staffer. The DNC honored its murdered employee by dedicating a bike rack outside its headquarters to Richâ s memory.

The press conference will be held at the Key Bridge Holiday Inn in Arlington, Virginia at 1:00PM.

A former Marine, who claims to have worked as a special agent with the Department of Energy, has been charged with shooting and running over Republican lobbyist Jack Burkman, who conducted a controversial investigation of former DNC staffer Seth Richâ s murder.

Kevin Doherty, 46, was charged Monday with Use of a Firearm in the Commission of a Felony and two counts of Malicious Wounding, according to a press release from the Arlington, Va, Co. police department.

Kevin Doherty (Courtesy: Arlington Co. police department)

The Washington Post provided more details about the attack, which was the second to befall Burkman over the past several months. An unidentified assailant attackedBurkman with pepper spray at his home in January.

Burkman was shot and run over March 13 at a Rosslyn Marriott hotelâ s parking garage. Burkman was there to retrieve what he thought were documents from an FBI whistleblower.

Doherty worked for Burkman on the Rich investigation until July 2017. Rich, a data analyst at the DNC, was murdered in Washington, D.C., on July 10, 2016, under mysterious circumstances. Doherty was an investigator on Burkmanâ s Profiling Project, the group he formed to solve the Rich case.

Richâ s death was initially described as a robbery gone wrong, but conspiracy theorists speculated he was killed due to involvement in stealing DNC emails eventually released through WikiLeaks. There is no evidence Rich was involved in handling DNC emails.

Burkman began working pro bono for Richâ s family in late 2016. He has come under heavy criticism for circulating unfounded theories about Richâ s death, including the Russian government was behind the killing. Burkman later claimed evidence suggested a serial killer murdered Rich.

Richâ s family members have since distanced themselves from Burkman.

Burkman fired Doherty and sent him a cease and desist letter, he told The Post.

â He became somewhat angry because he thought the Profiling Project belonged to him,â Burkman explained to The Post.

â I just figured the matter was closed,â Burkman added. â But what happened is, I guess, he was simmering and simmering and simmering.â

Dohertyâ s LinkedIn page lists him as a former Marine and former special agent with the Department of Energyâ s Office of Special Operations. Until recently, he operated Virginia-based maritime security company Nexus Consulting. Numerous press articles quoted him as an expert in the field. Burkmanâ s group touted Dohertyâ s credentials in press releases about its Rich investigation.

Burkman moved away from the Rich investigation in recent months. His latest project involved a $25,000 reward for information from FBI whistleblowers about bureau officialsâ handling of the Clinton email and Russia investigations.

It was for that project Burkman was visiting the Virginia parking garage. He believed he would be retrieving a Justice Department inspector generalâ s report on former FBI Deputy Director Andrew McCabe, who was fired last Friday.

Burkman was told the papers were hidden under a cone in the garage, he said. But as The Post reports:

> Instead, when Burkman bent over to pull the papers out from under the cone, he was shot in the buttocks and thigh. As he ran out of the garage with his dachshund in his arms, he was hit by an SUV.

The driver backed up and tried to hit him again, Burkman said to The Post.

â It looked like he was coming to kill me,â he told The Post.

Burkman did not learn Doherty was involved until he was in the hospital, when police identified his attacker.

Doherty is being held without bond.

The Department of Energy did not return a request for more information about Dohertyâ s work for the agency. The Arlington police department referred The Daily Caller News Foundation to the press release of Dohertyâ s arrest.

Retired FBI Agent Accuses 9/11 Commission of Lying About Saudi Connections

TOPICS:Derrick BrozeSaudi ArabiaSeptember 11th

By Derrick Broze

Sworn testimony from a former FBI investigator claims the 9/11 Commission lied to the American public regarding the relationship between the hijackers and Saudi Arabia.

The question over exactly what role the Saudi Kingdom played in the terror attacks of September 11, 2001 is once again a hot topic. The Saudi Kingdom has long been suspected of financing the 9/11 hijackers. A fourteen-year-old lawsuit brought forth by the â 9/11 Families and Survivors United for Justice Against Terrorismâ seeks to hold the Saudi Kingdom accountable for the attacks. Meanwhile, the Saudi government continues to deny any involvement and calls for the lawsuitâ s dismissal.

Now, *The Florida Bulldog* reports that a new sworn statement from a former FBI agent has once again called attention to the involvement of the Saudi Kingdom. In a six-page statement provided as part of the lawsuit against Saudi Arabia, retired FBI agent Stephen K. Moore says the 9/11 Commission has provided the American public with incorrect statements regarding the FBIâ s investigation. Moore is a 25-year veteran of the FBI who retired in 2008. He also led the FBIâ s PENTTBOM, or â Pentagon/Twin Towers Bombing Investigation,â a 400-member task force responsible for investigating the 9/11 attacks.

Specifically, Moore disputed statements made by the 9/11 Commission regarding the FBIâ s investigation into two Saudi hijackers â Nawaf al-Hazmi and Khalid al-Mihdhar, two of the five men accused of crashing American Airlines Flight 77 into the Pentagon. Mooreâ s statements deal with Hazmi and al-Mihdharâ s connection to Saudi diplomat Fahad al-Thumairy and Omar al-Bayoumi. Thumairy was an Imam at a Los

Angeles mosque with extreme views while Bayoumi was a suspected agent of the Saudi government posing as a student.

â I have read the statements in the 9/11 Commission report that â we have not found evidence that Thumairy provided assistance to the two operatives (Hazmi and Mihdhar).â In light of the proof assembled in our investigation this statement is incorrect. There was clearly evidence that Thumairy provided assistance to Hazmi and Mihdhar,â Moore said in the statement.

Here are more excerpts of Mooreâ s statement as reported by *The Florida Bulldog*:

> â Based on evidence we gathered during the course of our investigation, **I concluded that diplomatic and intelligence personnel of the Kingdom of Saudi Arabia knowingly provided material support to the two 9/11 hijackers and facilitated the 9/11 plot.** My colleagues in our investigation shared that conclusion.â
>
> â We learned that the al Qaeda plotters were methodical in their preparations for the attacks and would not have sent Hazmi and Mihdhar to Los Angeles without a support structure in place,â Moore said. â Neither Hazmi nor Mihdhar could speak English. **They were completely unfamiliar with life and customs in the United States and lacked even the most basic skills to begin pilot training. They would have had zero chance for success without a support structure.â**

Interestingly, *The Florida Bulldog* reports that an FBI report obtained by a previous Freedom of Information Act request describes â an active investigation by federal agents and prosecutors in New York targeting a support network for Hazmi and Mihdhar.â Despite this investigation and claims that the authorities were considering filing charges against an unnamed suspect for providing material support to the hijackers, no such charges ever materialized. The declassified portions of the FBI report list three â main subjectsâ including the aforementioned Thumairy and Bayoumi. However, *The Florida Bulldog* reports that the name of the third suspect was withheld for â national security.â

Who is this third accomplice? Why were charges never filed? Why would revealing these names endanger national security? We will likely never know because, as Stephen K. Moore notes in his statement, â much of the PENTTBOM investigation remains classified.â

Activist Post recently reported that the 9/11 Families and Survivors United for Justice Against Terrorism sent a letter to President Trump asking him to clarify his position on Saudi Arabia and its role in the terror attacks of September 11, 2001. â This letter is inspired by news reports that today you met with Saudi Deputy Crown Prince Mohammed bin Salman al Saud,â reads the letter from Terry Strada, a widow and the national chair for the 9/11 Families & Survivors. Stradaâ s letter continues:

> As you know, the Kingdom of Saudi Arabia is a defendant in our lawsuit because of the involvement of its agents in supporting the 9/11 hijackers, and for support that flowed to al-Qaeda through institutions the Kingdom established and funded to spread a radical form of Islam that lies at the root of both al-Qaeda and, more recently, ISIS. Despite mounting evidence, the Saudis have refused to accept accountability for their actions and the injury they have caused across the globe.

The latest revelations in the 9/11 families lawsuit should serve as yet another reason why the United States should cut all relations with the terrorist nation. Unfortunately, with the current administration, I wouldnâ t hold my breath.

Revolutionary Company Reviving Nikola Tesla Work to Wirelessly Transport Energy

A company out of Texas is reviving some of the work of Tesla in an attempt to transport energy over long distances without using wires or cables and it works.

-

Waking Times â A century after Nikola Teslaâ s famous Wardenclyffe tower was dismantled, the legacy of the worldâ s greatest inventor lives on in the form of a new project which aims to develop wireless power transmission and a host of other communications and energy functions.

Strikingly similar to the Wardenclyffe tower, a new facility has gone up along a major transit route in the town of Milford, Texas. Built and operated by a company called Visiv Technologies, the tower is designed for

precisely the same functions as the original Tesla tower, that is, for wireless communications and the transmission of electricity through air via low-frequency radio waves known as â surface waves.â

> â Weâ re focusing early-on, on continuous signaling, things like regional GPS, radio navigation and broadcast signaling,â said Michael Taylor of Viziv Technologies. [Source]

According to the companyâ s website, their mission is very much a continuation of Teslaâ s mission of the early 20th century.

> Our mission is to bring surface wave technologies to market in a safe, environmentally conscious and reliable manner, improving living conditions across the globe.
>
> Our surface wave technology can provide an alternative to current long-range communications and signaling systems.
>
> 1.2 billion people â 17% of the global population â did not have access to electricity in 2013. Future applications for surface wave technologies in power delivery will improve these conditions for millions. [Source]

Interestingly, Nikola Tesla had the foresight to understand that the technologies he was imagining could have enormous repercussions for world peace and military powers. Tesla even believed that one of his ideas, a remote controlled flying drone, would be a catalyst for world peace, because it offered such frightening military potential that it would provoke all powers to lay down their arms under the â unlimited destructivenessâ of such an armament. This comment is revealed in his explanation of patent #US000613809:

This is exceptionally relevant given that the leadership of Visiv is packed with military big wigs and seasoned defense contractors, with Michael W. Miller, Brigadier General (Retired), USAF as the current CEO and president. This suggests that the tower seen in Milford will serve as a testing facility, and that once certain milestones are met, the technology will be ushered into the destructive umbrella of the Department of Defense.

The following video by Truthstream Media gets into the details of this new project, and the connections between Teslaâ s death and the militarization of science that took place during WWII, which had people like Einstein working on creating the first generation of weapons of mass destruction.

SEKULOW: We Have Uncovered Thousands of Docs Showing Pay-to-Play Between Hillary State Department and Clinton Foundation

by Cristina Laila Comments

- **4.6K**Share
- **459**Tweet
- Email

An attorney for Trump, Jay Sekulow announced Wednesday the American Center for Law and Justice uncovered thousands of documents showing Clinton Foundation pay-to-play with Hillaryâ s State Department through a FOIA lawsuit.

We have uncovered a â favor factoryâ the ACLJ reported on Wednesday.

There was no firewall between the State Department and the Clinton Foundation as Hillary previously claimed to the public.

Via the ACLJ:

> As part of our Freedom of Information Act (FOIA) lawsuit against the Deep State Department, we have been informed that the State Department has located â and will be

> forced to turn over to the ACLJ â literally thousands of documents to and about the Clinton Foundation, its subsidiaries, and its senior operatives during the duration of Hillary Clintonâ s time as Secretary of State.
>
> The shear volume alone â some 30,000 emails â debunks the specious assertion that there was any kind of firewall whatsoever between Clintonâ s State Department and the Clinton Foundation.
>
> These documents, only now being uncovered through our FOIA request and subsequent litigation, show extensive communications exchanged between Clinton or her senior staff at State Department and Doug Band â a senior aid at the Clinton Foundation and creatorof the Clinton Global Initiative (CGI).
>
> In recent court filings, the State Department has revealed that more than 8,700 documents exist in Cheryl Millsâ and/or Huma Abedinâ s files which contain the single search term, â Doug Band.â It is possible, and indeed likely, that each document consists of several pages placing the number closer to 18,000 pages or more.
>
> The ACLJ has also learned through our litigation that another 22,000 documents exist in Cheryl Millsâ and Huma Abedinâ s files (not including attachments) mentioning or referring to the Clinton Foundation or a related term referencing the foundation.

Newly released documents show Doug Band served as a liaison for Clinton Foundation donors looking for favors and official acts from the Clinton-run State Department, the ACLJ reported.

Doug Band was the â go-toâ guy for Clinton Foundation donors. If they needed anything from Hillary Clinton, they would email Doug Band and within minutes he would forward the message to Huma Abedin and or Cheryl Mills to help expedite the favor.

For example:

> An email dated December 6, 2010 (tucked away at the very end of the State Departmentâ s most recent production) reveals that Secretary Clinton, upon receiving information that we now know to be classified from a State Department employee, forwarded the classified information via her private email account (HDR22@clintonemail.com) on to various individuals outside the State Department including senior associates at the Clinton Foundation â Justin Cooper and Doug Band. She writes in her email to â print for Bill.â
>
> Of course most of the information contained in the email has been redacted (and wonâ t be unclassified until 2025) but it appears that the classified communications relate to the investigation into Nobel prize winner Muhammad Yunusâ s alleged diversion of foreign aid from the non-profit Bank he chaired (a bank specifically fashioned to provide loans to the poorest of people on easy terms). It is of no surprise â given what we know about the former Secretaryâ s abuse of her office to grant favors to Foundation donors and supporters â that Yunus was also a donor to the Clinton Foundation.

The ACLJ stated they will be receiving Clinton documents at a pace of approximately 300-600 pages per month.

Jay Sekulow sounded off on Twitter. â You need to read this to believe it.â

> The @ACLJ just uncovered a stunning revelation about the extent to which the #ClintonState

Department colluded with the #ClintonFoundation. You need to read this to believe it. https://t.co/DpIjoqgS74

Silicon Valley and Hollywood politics have a culture of fear, corruption, entitlement--and no accountability...

Schumer, Pelosi Ask Americans to Defer Their Dreams for Those of Illegals In Order To Rig Elections

By Kay Coles James |

House Minority Leader Nancy Pelosi and Senate Minority Leader Chuck Schumer (Screenshot)

The just-paused Schumer Shutdown of the federal government brought to mind one of the most surprising headlines Iâ ve ever read.

Last September, Senate Minority Leader Chuck Schumer, D-N.Y., joined with House Minority Leader Nancy Pelosi, D-Calif., to pen a CNN.com op-ed headlined, â Dreamers Are as American as Apple Pie.â

If that pie came into the country illegally, I guess theyâ d be right. But I donâ t think that was their point. Instead, Schumer and Pelosi were trying to convince readers that the term â Americanâ no longer means being a legal U.S. citizen.

Doubtless, many readers chuckled at the headline and moved on. But given the federal government shutdown that just transpired because of this issue, the jokeâ s no longer funny.

The shutdown is overâ for now. In exchange for Schumerâ s support, the Senate will vote on whether to let as many as 800,000 illegal immigrants stay in the U.S. And if that vote doesnâ t go his way, thereâ s no guarantee Schumer may not again prevent the federal government from being funded.

Meanwhile, members of our military are on the front lines defending our liberty. Cities and towns all across America are challenged by stretched resources. Families are working hard to put the Obama recession behind them. And parents are praying a wall will soon be built to keep their kids safe from criminals coming across our border.

But instead of helping them, Schumer and his liberal colleagues seem to prefer asking Americans to defer their dreams for those of illegals.

Right now, thereâ s a teenage girl in Appalachia who dreams of a great education but sits in a school that

isnâ t delivering. A factory worker who dreams of regaining work that went overseas earlier this decade. An urban mom who dreams of health care for her son but has to wait in an overcrowded emergency room.

These are all dreamers. And theyâ re Americans.

Our leaders used to know the difference. Take former Rep. Barbara Jordan, D-Texas, for example.

One of Americaâ s great civil rights leaders, Jordan was the first African-American elected to the Texas Senate since Reconstruction. She was also the first Southern black woman elected to the House of Representatives, and an eminently worthy recipient of the Presidential Medal of Freedom.

Jordan also served as chairwoman of the U.S. Commission on Immigration Reform, where she said some things that Schumer would benefit from considering. â For our immigration policy to make sense,â she said, â it is necessary to make distinctions between those who obey the law, and those who violate it.â

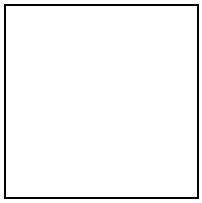
She also said: â One thing is very clear: Illegal immigrants are not entitled to benefits.â

Today, however, Jordanâ s words seem to be forgotten by liberals who oppose deportation of illegal aliens, support government-paid lawyers for illegals in immigration courts, and call for more money to be spent on services for illegal immigrants.

All of these costs are being borne by Americans. And those extra costs make it harder for Americans to realize their own dreams.

Such is the impact when politics is prioritized over the America people. Just in my own community, African-Americans who are working to get back on their feet are finding it harder than ever, due to the huge number of illegal immigrants who are competing for some of the same jobs.

The impact is particularly harmful to young Americans who depend on low-skilled work to earn a living and get their start up the economic ladder. Similarly, many of those who have found work are discovering theyâ re being paid less because of the competition they now face from illegal immigrant laborers.



America has always had a great tradition of opening its arms to others in need. But that tradition never meant opening its borders.

Instead, Americaâ s decisions about who to let in historically revolved around what was in the nationâ s best interests. And it is clear that Americaâ s interests have not been served by amnesty and open borders.

Americans are best served when our leaders uphold the rule of law, honor the process of legal immigration, protect our borders, and base all policy decisions on the impact they will have on Americaâ s citizens and our future.

So when the Senate returns to this issue in the coming days, I hope senators will keep in mind one thing: Our nation has always been happy to helpâ and has always put Americans and their dreams first.

Solyndra: Obama's Criminal Solar Political Slush Fund

Bob Beauprez

|

Newly released communications regarding the loan approval for Solyndra, the now failed California solar energy company, show direct intervention by an Energy Department adviser and Obama campaign fundraiser, and raise new questions of possible involvement by Rahm Emanuel and the President. As more is learned, it becomes increasingly clear that the Administration used the Stimulus, and specifically the green energy loan program, as a campaign slush fund to distribute billions of dollars like party favors to supporters and to grandstand for re-election to a perceived constituency.

By mid-2009, the White House was obsessing to make headlines with an announcement of a $535 million loan to Solyndra as the first of many green energy loans in the DOE's pipeline that would be funded by the recently passed Stimulus. Initially the staff tried to schedule an announcement by Obama, and later as approval was delayed, they shifted to the Vice-President.

"Ron said this morning that the POTUS definitely wants to do this (or Rahm definitely wants the POTUS to do this?)," a White House staffer told an Obama scheduler on August 17, 2009 according to *The Washington Post*. This was a reference to Ron Klain, Chief of Staff at that time for the Vice-President. "Rahm" refers to Rahm Emanuel, Chief of Staff to the President.

CARTOONS | Ken Catalino

View Cartoon

The Solyndra loan was finally approved in September 2009 over a plethora of warnings and objections from within the Department of Energy, the Office of Management and Budget, and numerous private and solar industry experts. Following the company's collapse, questions have haunted the White House of possible political corruption and cronyism as investigations revealed that executives and investors in Solyndra were also significant donors to the Obama campaign with repeated access to top White House officials. In addition, critics charge that the administration disregarded objective financial analysis, and blindly threw billions of taxpayer dollars at green energy companies like Solyndra with little chance of success.

Oblivious to the warnings from his own White House advisers that the company was in serious trouble and would run out of cash in September, 2010 (and it did), Obama visited the Solyndra headquarters in May 2010 and hailed it as "leading the way toward a brighter and more prosperous future."

The Washington Post is also reporting that Steve Spinner, a major Obama 2008 campaign fundraiser, later appointed by the White House to "advise" the Department of Energy regarding the green energy loan program, applied heavy pressure on DOE officials for approval of the $535 million loan guarantee for Solyndra.

"How (expletive) hard is this? What is he waiting for?" Spinner wrote to a DOE official by email on Aug. 28, 2009 questioning why the Solyndra application was not already approved. "I have the OVP (Office of the Vice-President) and the WH (White House) breathing down my neck on this. They are getting itchy to get involved."

Later the same day, Spinner asked the same DOE official to "walk over there and force him to give you the answer."

In another exchange just minutes after getting an email from Solyndra, Spinner fired off a message to the DOE officials asking if the White House budget office (OMB) had completed their review. "Any word on OMB? Solyndra's getting nervous," he wrote.

The loan was pushed through, and on September 4, 2009 Joe Biden announced by video link the deal as the "unprecedented investment this Administration is making in renewable energy and exactly what the Recovery Act (Stimulus) is all about."

Spinner's involvement is in direct contradiction of previous representations by the DOE. Spinner had specifically recused himself from the Solyndra application because his wife's law firm, Wilson Sonsini Goodrich & Rosati, represented the company on the DOE loan and pocketed $2.4 million in legal fees for their efforts.

The AP reports that an administration official, speaking on condition that he not be identified because of ongoing investigations in the evolving scandal, said that Spinner "clearly was actively involved in facilitating between DOE and OMB."

Joe Biden was partially correct â unfortunately. Solyndra is typical of what the billions of Stimulus dollars tossed around by the Obama Administration was "all about" â about waste, cronyism, and corruption. The taxpayer is on the hook for $535 million, but before this is done some once big shots in Washington will deservedly be cut down to size.

Spinner had specifically recused himself from the Solyndra application because his wife's law firm, Wilson Sonsini Goodrich & Rosati, represented the company on the DOE loan and pocketed $2.4 million in legal fees for their efforts.

The AP reports that an administration official, speaking on condition that he not be identified because of ongoing investigations in the evolving scandal, said that Spinner "clearly was actively involved in facilitating between DOE and OMB."

Joe Biden was partially correct â unfortunately. Solyndra is typical of what the billions of Stimulus dollars tossed around by the Obama Administration was "all about" â about waste, cronyism, and corruption. The taxpayer is on the hook for $535 million, but before this is done some once big shots in Washington will deservedly be cut down to size.

Statement on Secretary Chuâ s Departure from DOE

Published: Feb 1, 2013

WASHINGTON â House Oversight and Government Reform Committee Chairman Darrell Issa, R-Calif., issued the following statement on the announcement that Secretary Steven Chu is leaving his post at the Department of Energy:

â While I wish Secretary Chu well in his future endeavors and respect his contributions to his country as a scientist, the direction the Department of Energy has taken under his leadership has been disconcerting. While many will remember Secretary Chu for his comments about the need to raise gas prices on American consumers and the high grades he publicly bestowed on himself, I found taxpayer losses on projects like Solyndra and the Departmentâ s deeply misguided effort to use taxpayer dollars as an investment bank for unproven technologies to be the most problematic aspects of his legacy.

â Uncovered e-mails from Department employees, sent in violation of the Federal Records Act, even raised fundamental questions about rogue operators at the center of the Departmentâ s controversial loans program engaging in an intentional effort to hide discussions from oversight. The e-mails revealed a culture that looked to White House officials, and not the Secretary, as key decision makers on loan issues for politically connected companies seeking assistance. The next Secretary of Energy will need to refocus the Department on removing barriers for the safe use of proven technologies that can quickly lower the costs of energy for all Americans and reduce our dependence on foreign sources.â

Dept. of Energyâ s Steven Chu: Not As Dumb As He Says!

By Randall Evers

The massive number of horrific corruption incidents, payola, company failures, uranium and lithium mining scandals and crony kickbacks that occurred under the leadership of Secretary of Energy Steven Chu has been called *â The accidents of a feeble mindâ* . Chuâ s backerâ s claim that he was *â ...just too technical to notice all of the corruption around him...â*

That is just a load of BS!

Steven Chu planned and organized the crimes that he was involved in. Take a look:

Stifling Innovation with Subsidies

Posted by Tad DeHaven

A couple of weeks ago I wrote about a story in *Wired* regarding the Department of Energyâ s Advanced Technology Vehicles Manufacturing Loan Program. The gist was that government subsidies to particular manufacturers are putting non-recipients at a competitive disadvantage in obtaining private capital. The author, a former Tesla Motors official, noted that â this massive government intervention in private capital markets may have the unintended consequence of stifling innovation by reducing the flow of private capital into ventures that are not anointed by the DOE.â

An article in yesterdayâ s *Wall Street Journal* builds on this theme by detailing the political shenanigans surrounding the DOEâ s awarding of a loan to Finnish high-end automaker, Fisker Automotive:

> When tiny Fisker Automotive Inc. hit a financing glitch last year, threatening its plan to build a fancy gasoline-electric hybrid car in Finland, it turned to the U.S. Department of Energyâ ¦Within months, Vice President Joe Biden, the former senator from Delaware, was helping lure the embryonic car company to a shuttered General Motors Co. factory four miles from his house in Wilmington, right across the tracks from Biden Park. Soon, Fisker Automotive, a two-year-old business that has yet to sell a car, won loans from the federal government totaling $528 million.

A DOE spokesman claimed that, in the *Journalâ s* words, the subsidy decision process is insulated from politics. Oh sure, and I drive an emissions-free car that runs on fairy dust.

As the following snippet illustrates, multiple Delaware politicians teamed up to tilt the system to their stateâ s advantage:

> On June 1, GM said it was closing 14 plants, including the one in Delawareâ ¦State officials and politicians were determined to keep it alive. In the middle of August, they learned the plant had drawn interest from Fisker. CEO Henrik Fisker came to see it and dropped by the office of a Delaware senator, Tom Carper, a Democrat. The visit unleashed a flurry of activity. Gov. Jack Markell, also a Democrat, quickly called an old friend at Kleiner Perkins to check on Fisker. Kleiner Perkins itself has political roots. A leading partner, John Doerr, sits on President Barack Obamaâ s economic advisory board, and another partner is former Vice President Al Gore.

Of course, the story canâ t end without some grandstanding from the master of hyperbole himself, Joe Biden:

> In a rousing speech, Mr. Biden recalled how every election year, including his first in 1972, â I would stand here at this gate and shake hands at every shift.â He told of many â long

talksâ he said he had had with Mr. Fisker. He called the project â a metaphor for the rebirth of the country.â

The article is long, but worth the read for those concerned that American capitalism might be taking a corporatist turn for the worse.

â â

Chu Set to Tell Obama Loans Healthy Before Solyndra Failed

By Mark Drajem

U.S. Energy Secretary Steven Chu was set to assure President Barack Obama in mid-2011 that all loans in the departmentâ s clean-energy program would be repaid, just two months before the bankruptcy of recipient Solyndra LLC.

A draft prepared by Energy Department officials for Chu to brief Obama on June 27, 2011, also pushed to continue the program, slated to expire three months later, according to documents released today by the Republican-led House Committee on Oversight and Government Reform.

The e-mails show Chu seeking to defend the program amid objections by officials in the White House, Treasury Department and Office of Management and Budget. Chu told aides in an e-mail that the document for the briefing was â missing important informationâ and needed to explain: â Why did the loans take so long, and why was there so much interagency angst?â

Treasury and OMB officials worried that companies aided by the program were getting excessive subsidies in the loan terms, which allowed â Unjust enrichment,â Chu wrote.

The documents â show how many people in the administration had serious doubtsâ about the program, Frederick Hill, a spokesman for the oversight panel, said today. Given the upbeat presentation, were the programâ s risks â kept away from the president?â he asked.

â Deep Troubleâ

Solyndra, a solar-panel maker in Fremont, California that received a $535 million U.S. loan guarantee, sought bankruptcy protection in September and fired its 1,100 workers. The Energy Department restructured terms of its loan in early 2011, as the companyâ s finances began to wobble. None of the information released today mentioned Solyndra. Chu told lawmakers in November that by June 2011 he was aware that Solyndra was â in deep trouble.â

The U.S. program also backed Beacon Power Corp. (BCONQ), an energy-storage company that sought bankruptcy protection in October, with a $43 million loan guarantee in August 2010. Abound Solar Inc., a solar-panel maker, shut after borrowing $70 million from the U.S.

Congressional Democrats and the White House have repeatedly said the loans were made on the merits, and not as a result of political pressure. The latest e-mails further underscore that point, according to Damien LaVera, a spokesman for the Department of Energy.

On Merits
http://www.businessweek.com/news/2012-08-09/chu-set-to-tell-obama-loans-healthy-beforeâ ¦

Chu Set to Tell Obama Loans Healthy Before Solyndra Failed â Businessweek

â Everything in the more than 900,000 pages of documents we have voluntarily provided to Congress validates what we have said from day one: All decisions on loan applications were made on the merits after careful review by career officials and technical experts in the loan program,â LaVera said in an e-mail.

The briefing by Chu for Obama was scheduled because â at official events and political events he interacts with business community and Congressional membersâ who have â affiliation or interestâ in applications for backing in the program, according to an e-mail to Chu on June 24 from Brandon Hurlbut, Chuâ s chief of staff. â The president has likely heard a wide range of feedback on the program and wants to know its status.â

White House officials asked Chu to discuss two projects in particular, the Cape Wind Associates LLC wind farm project off the coast of Nantucket in Massachusetts and USEC Inc. (USU)â s bid to build an enrichment plant for uranium in Piketon, Ohio. The governor of each state â Democrat Deval Patrick in Massachusetts and Republican John Kasich in Ohio â had pressed Obama on the projects, Hurlbut wrote.

Both loan applications are still pending with the government.

GOP accuses Chu of false testimony

By Zack Colman

Republicans accused Energy Secretary Steven Chu on Wednesday of offering false testimony on the Energy Department loan program that gave funds to failed solar firm Solyndra.

Rep. Darrell Issa (R-Calif.) said a briefing on the loan programâ s status that Chu provided to President Obama in June of 2011 contradicts Chuâ s testimony to the committee earlier this year about the extent of his communication with the White House.

They also allege the private emails show Chu was involved in a meeting with former White House Chief of Staff William Daley on the loan guarantee program.

The lawmakers say this conflicts with testimony Chu gave in which he said he did not communicate directly with the White House about the energy program. The program became a huge controversy after the bankruptcy of Solyndra, which received a $535 federal loan guarantee.

Becca Watkins, a spokeswoman with the committee, told The Hill that it is â a little bit of a gray areaâ on whether this is the first time the committee has made such accusations against Chu. Issa sent a letter in July asking Chu to clarify his involvement with the loan program, but Watkins said â this time we have the documents.â

The March testimony from Chu the lawmakers cite in the letter is clipped from a fuller line of questioning. Video of the hearing shows Chuâ s answers were not in response to his communication with the White House about the program as a whole, but rather his knowledge of nine specific projects.

Rep. Jim Jordan (R-Ohio) asked Chu during that hearing about whether he corresponded with the administration about that select, specific group of energy loans through the program. Chu responded that he had not.

One of those projects Jordan mentioned was Solyndra, Watkins noted. But documents have not shown that the June 2011 briefing Chu gave Obama about the loan program included any mention of that firm.

In the letter to Chu sent Tuesday, the lawmakers asked the secretary to clarify in accurate statements, to produce relevant documents the department has not released on the loan program and to testify before the Oversight and Government Reform Committee in September.

Jordan (R-Ohio) and Trey Gowdy (R-S.C.) also signed the letter.

â Your apparent false or â at minimum â misleading testimony, combined with the widespread use of private e-mail accounts by Department employees, creates the appearance that you have been complicit in an organized effort to deceive Congress and hide the motives and process for decisions to use taxpayer funds to aid private interests,â the lawmakers said in the letter.

The lawmakers also argue Jonathan Silver, the former head of the DOE loan program, asked for staffersâ personal email addresses to discuss official business to avoid getting that correspondence subpoenaed in a possible investigation. The lawmakers said that is in violation of the Federal Records Act.

â Recently-obtained documents show DOE officials frequently used Yahoo! and Gmail to communicate about the loan guarantee program,â the legislators said. â This use of non-government e-mail accounts for official business may have violated the Presidential Records Act (PRA) and the Federal Records Act (FRA). The documents also show that testimony given to the Committee by current and former DOE officials, including you, was inaccurate, and may have been intentionally false.â

The Washington Post reported Tuesday that Energy Department officials advised staffers not to use personal email addresses for office business because they could get subpoenaed. Days later, Solyndra went bankrupt.

Silver said in a statement to the Post on Tuesday that, â I intended to advise my DOE colleagues to use their official email for official purposes and personal email for personal purposes. It was never my intention to avoid the requirements of the Federal Records Act.â

DOE responded to the charges with a statement to The Hill on Wednesday: â In the rare cases where the Department has found that some officials may have used their personal email accounts to discuss official business, the Department has treated those emails as official records and voluntarily provided them when requested by congressional investigators. For example, just last week, we voluntarily provided these emails to the Committee.â

â â

Chu Says Backing Prologis Had â Nothing to Do With Solyndraâ

By Brian Wingfield

(Adds information on investigation in fourth paragraph.)

(Bloomberg) â U.S. Energy Secretary Steven Chu, responding to a House investigation, said he didnâ t intervene to support a $1.4 billion partial loan guarantee for a Prologis Inc. solar-power project as a way to aid failing Solyndra LLC.

Chu said he supported the plan to install solar panels on warehouse roofs in 28 states because of its business model that included financing from private investors.

â It had nothing to do with Solyndra,â Chu told reporters today at an energy conference near Washington in suburban Maryland.

Republicans on the House Energy and Commerce Committee asked the Obama administration official to explain links between San Francisco-based Prologis and Solyndra, which sought creditor protection in September, two years after receiving a $535 million U.S. loan guarantee. Solyndra was to be the only supplier in the first phase of Prologisâ s initiative, known as Project Amp, according to a letter to Chu from the panel.

Committee leaders want to know whether Chu helped Prologis secure its U.S. backing in order to prop up Solyndra. The Fremont, California, company had already filed for bankruptcy protection when the Energy Department gave Prologis, a real- estate investment trust, its loan guarantee in September. Solyndra was no longer a supplier when Prologis won its award.

Project Amp, which has been stalled by the Solyndra bankruptcy, is being funded by Prologis and its partners, which include NRG Energy Inc. of Princeton, New Jersey, and Bank of America Corp. of Charlotte, North Carolina, James Larkin, a Prologis spokesman, said in an e-mail. The loan guarantee provides U.S. backing for the project.

STEVEN CHU - OBAMA'S PAYOLA FRONT MAN

BY: CJ Ciaramella â

Department of Energy Secretary Steven Chu may have personally intervened in a $1.4 billion partial loan guarantee in an effort to help floundering solar company Solyndra, Republicans on the House Energy and Commerce Committee alleged in a letter Friday.

Committee Republicans opened a new front in their ongoing investigation of the Solyndra scandal in a letter to Chu on Friday, requesting documents and emails regarding a $1.4 billion loan to a solar project that was to be supplied equipment by Solyndra. Prologis, an industrial real-estate company, received a partial loan guarantee in September 2011 to install solar panels on its commercial facility rooftops. The committee said the sole
supplier of those panels would have been Solyndra, which had also received a $535 million loan guarantee from the Energy Department.

At the time, Solyndra was struggling to avoid bankruptcy. Its loan guarantee had been restructured just months earlier.

Solyndra would ultimately declare bankruptcy on Aug. 31, 2011, putting the DOEâ s loan program in Republican crosshairs.

In the letter to Chu, Republicans say they have documents revealing Solyndraâ s involvement in Prologisâ project was â a significant factor in negotiations between DOE and Solyndra relating to a possible second restructuring of the loan guarantee in August 2011, as well as the closing of the Project Amp loan guarantee.â

The letter also quotes a June 17 email from a Solyndra employee claiming Chu personally intervened to secure the Prologis loan.

â [O]n three occasions this week he thought that the [Project Amp] deal was dead, but Secretary Chu personally pulled it off,â the email reads. â Chu shared with the team that this deal went to higher levels in the Obama Administration to gain approval than any other transaction in the Loan Guarantee Program, and that he personally committed to seeing it through to a successful conclusion.â

The Energy Department disagreed with the committeeâ s characterization.

Secretary Chu strongly supported Project Amp because it will be the largest rooftop project in U.S. history and is expected to generate enough clean, renewable electricity to power over 88,000 homes while supporting at least a thousand jobs all across the country,â DOE spokesman Damien LaVera said.

â Project Amp represents a transformational new approach to financing and operating solar panels, and has been supported by some of the most prominent companies in the world, including Merrill Lynch, Bank of America and NRG Energy.â

A DOE source said Solyndra was one of many potential suppliers and would ultimately have only accounted for less than 20 megawatts out of more than 750 total megawatts in the project.

Furthermore, the DOE said Chuâ s involvement had nothing to do with Solyndra.

A source from the DOE said Chu got involved because of a disagreement between the DOE loan program and other
agencies about the number of megawatts the project should support and how long the installation period should be.
Project Amp, when completed, will be the largest rooftop solar generation project in the world. It has attracted significant private funding, and the businesses participating in the project include Bank of America, Merrill Lynch, and NRG Energy.

But the Energy Departmentâ s rebuttals will likely not deter House Republicans from their investigation, which has been going on for more than a year. Committee sub-chair Rep. Cliff Stearns said the documents raise even more concerns about the loan program.

â Documents obtained by the Committee indicate that DOE had some hesitation in approving the loan guarantee and that Secretary Chu intervened on behalf of Project Amp,â Stearns said in a statement. â This brings up many questions, including if this was an attempt to support the faltering Solyndra since it occurred during discussions over the second restructuring of the Solyndra loan guarantee.â

â It is astonishing that DOE actively negotiated a plan to risk even more taxpayer money to prop up Solyndra

at all costs,â Stearns continued.

The House Energy and Commerce Committee set a Feb. 24 deadline for the requested documents.

â -

Did Obamaâ s Energy Secretary Seek $1.4 Billion Bailout Loan to Prop Up The Failing Solyndra because The Feinstein family owned Chu and Solyndra interests?

by Wynton Hall

Rep. Cliff Stearns (R-FL) wants answers from Energy Secretary Steven Chu about documents that appear to indicate that Mr. Chu personally intervened to help secure a $1.4 billion partial loan guarantee for a large-scale rooftop solar project known as Project Amp that was to be supplied equipment by the sinking ship that was Solyndra. â It is astonishing that DOE actively negotiated a plan to risk even more taxpayer money to prop up Solyndra at all costs,â said Rep. Stearns.

In his role as Chairman of the House Energy and Commerce Committeeâ s Subcommittee on Oversight and Investigations, Rep. Stearns sent Sec. Chu a letter inquiring why the Energy Secretary would have helped put even more taxpayer money at risk when it was clear Solyndra was yet another failed green energy scheme, particularly since the Department of Energy itself seemed squeamish about approving the loan:

Project Amp is a large-scale rooftop energy generation project using solar panels on commercial facility rooftops to generate electricity for saleto utilities and power purchasers. The panels for first phase of Project Amp were to be sole sourced from the failing Solyndra, Inc. Documents obtained by the Committee indicate that DOE had some hesitation in approving the loan guarantee and that Secretary Chu intervened on behalf of Project Amp. This brings up many questions, including if this was an attempt to support the faltering Solyndra since it occurred during
discussions over the second restructuring of the Solyndra loan guarantee.

According to Rep. Stearns letter, a Solyndra employee email suggests that, indeed, Mr. Chu was part of a Herculean effort to craft a deal that â went tohigher levels in the Obama Administrationâ :

In a June 17, 2011 email, a Solyndra employee shared what he had learned from a BAML [Bank of America Merrill Lynch] senior investmentbanker who took part in the Project Amp negotiations with DOE, stating that, â [O]n three occasions this week he thought that the [Project Amp] deal was dead, but Secretary Chu personally pulled it off. Chu shared with the team that this deal went to higher levels in the Obama Administration to gain approval than any other transaction in the Loan Guarantee Program, and that he personally committed to seeing it through to a successful conclusion.â Further, the minutes of the June 18, 2011, DOE Credit Review Board for Project Amp stated that â Secretary Chu had requested the CRB convene to consider Project Amp.

Mr. Chuâ s views on energy have come under fire before. In September 2008, Mr. Chu told theWall Street Journal that he wanted to see U.S. gas prices goup in order to force Americans to drive less. â Somehow we have to figure out how to boost the price of gasoline to the levels in Europe,â Mr. Chu told The Journal. Given Mondayâ s news that
American gas prices were the highest they have ever been at this time of the year, Mr. Chuâ s energy plans appear to be working.

No word yet on Mr. Chuâ s response to Rep. Stearnsâ s inquiry as to why he would fight to secure and dump $1.4 billion taxpayer dollars into Solyndraâ s sinking hole.

â â

Chuâ s Performance Review: Way Below Expectations. In Fact - He Sucked!

By EDWARD MORRISSEY, The Fiscal Times

Earlier this month, Energy Secretary Steven Chu testified before Congress after a series of bankruptcies from companies floated by green-tech stimulus loans.

Rep. Paul Broun (R-GA) asked Chu what kind of grade he would give himself as a steward of public funds. Chu replied, â Thereâ s always room for improvement, maybe an A new report from the Government Accountability Office shows that massive grade inflation has struck the Obama administration. The GAO looked at the handling of $30
billion outstanding in loan guarantees and future commitments and discovered that the DOE rarely follows its own written procedures for vetting and auditing applications. In fact, in many cases, the Loan Guarantee Program (LGP) couldnâ t even find the data managers needed to administer the loans properly:

â When GAO requested data from the LGP on the status of these applications, the LGP did not have consolidated data readily available and had to assemble these data over several months from various sources. Without consolidated data on applicants, LGP managers do not have readily accessible information that would facilitate more efficient program management, and LGP staff may not be able to identify weaknesses, if any, in the
programâ s application review process and approval procedures.â

That, however, was the least of the problems the GAO found in the management of the loan guarantees. In the case of Solyndra, the Obama administration ended up overriding the expressed concerns of DOE auditors to grant the solar-tech firm $535 million in taxpayer guarantees, all of which disappeared in the companyâ s collapse.

â â

Steven Chu's Sick Wrong Approach to High Gas Prices

| Mijin Cha

Hereâ s the wrong way to try to lower the price of gas: blocking loans that would help develop more efficient cars.
American companies looking to develop cleaner cars are not receiving the loan support they need. The short-term
consequence is the shutting down of factories and the loss of jobs. The long-term consequence is that we will still be
at the mercy of oil companies and foreign countries and the wide fluctuations in gas prices that accompany that
dependence for years to come.

In 2007, in conjunction with new federal fuel economy requirements, the Department of Energy created the Advanced Technology Vehicle Manufacturing program, ATVM, to provide loans for the development of more fuel-efficient vehicles. So far, only $8.4 billion of the $25 billion authorized by Congress has been allocated. Many companies have been strung along for years and are starting to falter. Last month, Bright Automotive, an Indiana company looking to build energy efficient fleet trucks, shut down and laid off all 60 workers.

Brightâ s business plan had been endorsed by major companies with large gas-guzzling fleets, like Frito-Lay and Comcast. It had also received advanced orders for its trucks.

It seems the DoE is still stinging from the Solyndrabankruptcy and implementing overly restrictive protocol, but preventing clean technology from developing is the wrong lesson to learn. As weâ ve highlighted extensively,
government investment in clean technology development is not only a good thing, itâ s the right thing. Investing in
start-ups so they can develop technology that will then be commercialized is not only a smart use of resources, it is
fundamentally necessary because there is no private incentive for certain benefits, like environmental protection.
â -

The Secretary of Energy lied to Congress

Itâ s up to us to set the record straight!

Let Congress know we need them to help stop the misinformation coming out of DOE in order to protect special interest friends of the DOE staff. Stop the privatization of our government by nuclear and oil friends of the staff. Oil, Coal & Nuke-people hate hydrogen and fuel cells because they compete with them and do it cleaner and better! GAO investigations have already proven DOE favoritism in published reports. We need new leadership at DOE!

This week, DOE Secretary Steven Chu appeared in front of the Senate Energy and Water Development Subcommittee to face questions about the Presidentâ s FY2012 energy budget. The first question out of the gate from Committee Chair Diane Feinstein, who pre-arranged the question/response with Chu, was about Sec. Chuâ s â current view on hydrogen technology and whether it can be successful or not.â

Sec. Chu gave incorrect information on hydrogen that contradicts real world data as well as numerous DOE studies and reports. He claimed that hydrogen obtained from natural gas had â no benefitâ in terms of carbon elimination. Yet, DOE-funded research has shown that the most clean and efficient use of natural gas for transportation is to use it to create hydrogen to power a fuel cell electric vehicle. Chu also said hydrogen storage was a problem due to high pressure. Whatâ s the problem Sec. Chu? These tanks have logged nearly 3 million miles, had more than 27,000 fill ups, and managed to fuel vehicles for more than 114,000 hours of operation.

We need you to tell Congress that the DOE should stop giving misleading information â it is up to DOE to fairly represent the current state of the technology. Right now, they arenâ t doing that. We need critical decisions on our energy future made based on fact!

The time is now to redouble our efforts to ensure that fuel cells and hydrogen energy are included in any clean energy strategy.

We need Congress to know that the head of the Energy Department is compromised and is not giving the White House and the rest of the country the facts on how robust fuel cell and hydrogen technologies have become. We are asking for fairness. The DOE owes the President and the country that much.

All of the oil is at risk due to unrest, Al Qaida targeting of tankers, and wells running dry. To cut out Clean, Green, Renewable AMERICAN hydrogen and fuel cells in order to favor personal investments puts America at risk.

Thank you for your continued commitment to our campaign.

Sincerely,

Fuel Cell and Hydrogen Energy Association

American Clean Energy Association

National Green Power Campaign

A space that allows me to pontificate on China, alternative fuel vehicles, and anything else I feel like opining about

Is the U.S. government sending electric vehicle technology to China? YES!

tags: â electric vehicleâ , Advanced Technology Vehicles Manufacturing, automotive, battery, Boston Power,
Bright Automotive, China, Department of Energy, ford, Nissan, Solyndra

The U.S. government is sending alternative fuel vehicle technology to China. Okay, that is a bit strong. But, the lack of funding for companies with such technology, and the strict criteria recipients of loans from the Department of Energy Advanced Technology Vehicles Manufacturing program must meet, is forcing U.S. companies to look to China for funding. The ultimate result is a technology transfer to China forced in part by coast of ownership, said Bright.

What are the some of the requirements for getting one of those DOE Advanced Technology Vehicles Manufacturing loan? The DOE does due diligence just as any investor would. And conducts a â competitive review similar to what applicants would find at banking financial institutions.â And the company has to be pretty far along with its product already. The loan isnâ t â intended to finance research and development costs.â Indeed, the product has to be ready to produce since the loan can â only be used to reimburse the applicant for (i) costs that are reasonably related to reequipping, expanding, or establishing a manufacturing facility in the United States or (ii) costs of engineering integration performed in the United States.

The Chinese government, and private Chinese companies looking for technology, faces no such conditions. Sure, private Chinese companies want to get a good return on investment. But they are in essence private equity investors with a big appetite for risk. As for the Chinese government, well, it is an authoritarian government after all. It can do what it wishes with its money. Sure, if Beijing chooses to invest billions in foreign companies and the investment is clearly specious, there could be some social unrest. But who can be bothered to protest against some special tax breaks?

When Boston Power http://www.boston-power.com was also turned down in 2009 for a $100 million DOE loan, it
didnâ t close down. Boston Power turned to China, and landed $125 million in funding in late 2011 from a combination of investors including GSR Ventures http://www.gsrventures.cn/en/index.html , a Silicon Valley company with ties to China.
http://green.autoblog.com/2011/09/22/boston-power-secures-125-millionin-funds-will-move-most-opera/

GSR also negotiated substantial Chinese government support for Boston Power including low interest loans, grants, and financial and tax incentives. Boston Power is building a battery manufacturing plant, R&D center, and an engineering facility in China.

Though Boston Power says it will retain control of its intellectual property, letâ s get real. How can it do R&D,
engineering, and manufacturing in China and not pass that knowledge on to Chinese engineers?
Other U.S. companies are skipping the U.S. government loan application process entirely and looking directly to China for funding. Iâ ve written about some of them in this column. The question, then, is what is the cost of losing these companies, and the technology, to China? Time will tell.

On February 28, Bright closed its doors. Its CEO Reuben Munger and COO Mike Donoughe wrote accusatory letters to the Department of Energy Secretary Stephen Chu. http://www.greencarreports.com /news/1073497_startup-bright-automotive-shuts-down-slams-doe-loan-process

A few excerpts from their letters (copies of which were obtained by me and anyone else who asked Bright): In a Feb 23 letter pleading for the DOE to make a decision on Bightâ s application for a $314 loan from the DOE: â Unfortunately, irrationality and petty politics have paralyzed your agency at a time America needs you most.â

And a Feb 28 letter: â The ineffectiveness of the DOE to execute its program harms commercial enterprise as it not only interfered with the capital markets; it placed American companies at the whim of approval by a group of bureaucrats.â

The Bright executives conclude: â Because of ATVMâ s distortion of U.S. private equity markets, the only opportunities for 100 percent private equity markets are abroad.â

â We unfortunately did not aggressively pursue an alternative funding path in China as early as we would have
liked based on our understanding of where we were in the DOE process,â they say.

Guess they should have grabbed the golden ring when it was offered. And whoâ s to say they wonâ t still turn to
China for funding? The company may have closed down, but the technology still exists. Of course the China funding was not a sure thing. What is a sure thing is that obtaining funding from Chinese companies and even the Chinese government seems a bit easier these days than getting a piece of the U.S. governmentâ s cash hoard.

The DOEâ s official response to the question of why the approval process for the Bright loan dragged on so long: â We understand that this is a difficult day for Bright Automotive and their workers. Over the last three years, the Department has worked with the company to try to negotiate a deal that supported their business while protecting the taxpayers. In the end, we were not able to come to an agreement on terms that would protect the taxpayers.â

The Department of Energy Loan Program Office (LPO) http://www.lpo.energy.gov was established to (according
to the DOE website) â work with private companies and lenders to mitigate the financing risks associated with
building out commercial-scale clean energy projects, thereby encouraging the broader and more rapid growth of the sector.â That would seem to indicate some appetite for riskier investments, but as you will read below, the DOE is not about risk taking. It is about getting a return on tax payersâ dollars. Fair enough, but not much
more than any commercial bank does.

The Advanced Technology Vehicles Manufacturing program https://lpo.energy.gov/?page_id=43 was set up under the LPO in 2007 (yes, that was President George W. Bush) and expanded by President Obama. Of its

$25 billion in funds, $8.4 billion has been allocated so far. The recipients of the two largest loans donâ t seem too risky: Ford Motor Co. and Nissan North America Inc.

Why is it so tough for smaller companies to get a U.S. government loan? Politics plays a big part. The Obama administration has been lambasted for the failure of solar panel maker Solyndra Inc., a company that had obtained a $535 million loan from the Department of Energy in 2009 (under a different program than the ATVM).

http://www.washingtonpost.com/solyndra-politics-infused-obama-energy-programs/2011/12
/14/gIQA4HllHP_story.html

Now, any company applying for a loan has to meet incredibly high standards. Those standards were in place political pressure. Pretty ironic.

The most recent example is Bright Automotive http://www.brightautomotive.com , a company in the mid-western state of Indiana that aimed to manufacture plug-in hybrid electric vans for fleets.

â â

GAO shows grade inflation at the Department of Energy

by Ed Morrissey

Remember this moment from two weeks ago? Rep. Paul Broun (R-GA) challenged Energy Secretary Steven Chu to assign himself a grade specifically on his stewardship of Department of Energy resources in relation to the 2009 stimulus funds granted for the Loan Guarantee Program. After Broun recites a litany of failures in the
LGP, Chu insists that heâ s done very well â and gives himself an A-minus:

As it turns out, the Government Accountability Office (GAO) has another grade entirely for the LGP, the DoE,
and ultimately Energy Secretary Steven Chu. In the report released this week, the GAOâ s spot check of applications and loans granted and committed under the LGP â $30 billion in all â shows systemic mismanagement, uncompleted reviews, missing documentation, and a process failure rate of 85% or more, their own money:

President Obama himself told a Nevada town hall in February 2010 that â tax dollars shouldnâ t be used to reward the very irresponsible lenders and borrowers who helped bring about the housing crisis.â At least that was Obamaâ s position until this month, when he announced a plan that would expand HAMP to include the real-estate speculators that helped inflate the housing bubble.

Almost exactly a year prior to the Nevada town hall, Obama gave a speech in Mesa, Arizona in which he castigated â dishonest lenders who acted irresponsibly, distorting the facts and dismissing the fine print at the expense of buyers who didnâ t know better.â

Just one month ago, Obama spoke about the legal settlement with the banks that finally allowed long-pent-up foreclosures to move forward. In his speech, Obama twice mentions irresponsible actions by lenders that hurt others who acted more responsibly. He specifically noted the robo-signing and other violations that drove the process off the rails and cost many people their homes:â In many cases, they didnâ t even verify that these foreclosures were actually legitimate.

Some of the people they hired to process foreclosures used fake signatures on fake documents to speed up the

foreclosure process. Some of them didnâ t read what they were signing at all.â Except for the fake signatures, that sounds like a pretty fair description of what the GAO found in its audit of the Department of Energy and the Loan Guarantee Program. With $30 billion in taxpayer money at risk, the DOE under Steven Chu didnâ t bother to conduct the reviews it claimed it would on applications for loan guarantees, didnâ t keep records of what reviews they did
accomplish, and signed off on loans with incomplete documentation and inadequate oversight of the risk.

The result â perhaps $6.5 billion immediately at risk, according to CBS, and possibly most of the $30 billion.

Be sure to read it all. This GAO report should have heads rolling at the Department of Energy, especially that of
Professor Chu, who demonstrated the most extreme case of grade inflation yet seen. emphases mine:

The Department of Energy (DOE) has made $15 billion in loan guarantees and conditionally committed to an additional $15 billion, but the program does not have the consolidated data on application status needed to facilitate efficient management and program oversight. For the 460 applications to the Loan Guarantee Program (LGP), DOE has made loan guarantees for 7 percent and committed to an additional 2 percent. The time the LGP took to review loan applications decreased over the course of the program, according to GAOâ s analysis of LGP data. However, when GAO requested data from the LGP on the status of these applications, the LGP did not have consolidated data readily available and had to assemble these data over several months from various sources. Without consolidated data on applicants, LGP managers do not have readily accessible information that would facilitate more efficient program management, and LGP staff may not be able to identify weaknesses, if any, in the programâ s application review process and approval procedures. Furthermore, because it took months to assemble the data required for GAOâ s review, it is also clear that the data were not readily available to conduct timely oversight of the program. LGP officials have acknowledged the need for a consolidated system and said that the program has begun developing a comprehensive business management system that could also be used to track the status of LGP applications. However, the LGP has not committed to a timetable to fully implement this system.

The LGP adhered to most of its established process for reviewing applications, but its actual process differed from its established process at least once on 11 of the 13 applications GAO reviewed. Private lenders who finance energy projects that GAO interviewed found that the LGPâ s established review process was generally as stringent as or more stringent than their own. However, GAO found that the reviews that the LGP conducted sometimes differed from its established process in that, for example, actual reviews skipped applicable review steps. In other cases, GAO could not determine whether the LGP had performed some established review steps because of poor documentation. Omitting or poorly documenting reviews reduces the LGPâ s assurance that it has treated applicants consistently and equitably and, in some cases, may affect the LGPâ s ability to fully assess and mitigate project risks. Furthermore, the absence of adequate documentation may make it difficult for DOE to defend its decisions on loan guarantees as sound and fair if it is questioned about the justification for and equity of those decisions. One cause of the differences between established and actual processes was that, according to LGP staff, they were following procedures that had been revised but were not yet updated in the credit policies and procedures manual, which governs much of the LGPâ s established review process. In particular, the version of the manual in use at the time of GAOâ s review was dated March 5, 2009, even though the manual states it was meant to be updated at least annually, and more frequently as needed. The updated manual dated October 6, 2011, addresses many of the differences GAO identified. Officials also demonstrated that LGP had taken steps to address the documentation issues by beginning to implement its new document management system. However, by the close of GAOâ s review, LGP could not provide sufficient documentation to resolve the issues identified in the review.

On 11 of 13 loan applications investigated by the GAO, they found that the DoE hadnâ t done the required work
for reviewing and approving applications. Thatâ s an 85% failure rate. And more than three years into this program, even with the deficiencies identified, the DoE still hasnâ t fixed their problems. That kind of failure is
more associated with an F-minus, not an A-minus.

Furthermore, as I note in my column for The Fiscal Times, this comes from the same administration that loves to
harp on â irresponsible lendersâ who fail to adhere to lending and documentation standards when playing withheir own money:

President Obama himself told a Nevada town hall in February 2010 that â tax dollars shouldnâ t be used to reward the very irresponsible lenders and borrowers who helped bring about the housing crisis.â At least that was Obamaâ s position until this month, when he announced a plan that would expand HAMP to include the real-estate speculators that helped inflate the housing bubble.
Almost exactly a year prior to the Nevada town hall, Obama gave a speech in Mesa, Arizona in which he castigated â dishonest lenders who acted irresponsibly, distorting the facts and dismissing the fine print at the expense of buyers who didnâ t know better.â

Just one month ago, Obama spoke about the legal settlement with the banks that finally allowed long-pent-up foreclosures to move forward. In his speech, Obama twice mentions irresponsible actions by lenders that hurt others who acted more responsibly. He specifically noted the robo-signing and other violations that drove the process off the rails and cost many people their homes:â In many cases, they didnâ t even verify that these foreclosures were actually legitimate. Some of the people they hired to process foreclosures used fake signatures on fake documents to speed up the foreclosure process. Some of them didnâ t read what they were signing at all.â
Except for the fake signatures, that sounds like a pretty fair description of what the GAO found in its audit of the Department of Energy and the Loan Guarantee Program. With $30 billion in taxpayer money at risk, the DOE under Steven Chu didnâ t bother to conduct the reviews it claimed it would on applications for loan guarantees, didnâ t keep records of what reviews they did accomplish, and signed off on loans with incomplete documentation and inadequate oversight of the risk. The result â perhaps

$6.5 billion immediately at risk, according to CBS, and possibly most of the $30 billion.

Be sure to read it all. This GAO report should have heads rolling at the Department of Energy, especially that of
Professor Chu, who demonstrated the most extreme case of grade inflation yet seen.

â â

You Should hear the tape recording of this:

â -

Morano on Tesla electric cars and CEO Elon Musk: â That is what we are finding, model after model, across the board, the consumers are not interestedâ ¦Tesla reported sales 30% below expectationsâ ¦Lost $660 million over 14 quartersâ ¦CEO Elon Musk is driven by fear of Co2, worrying that it will destroy large parts of the earth. Heâ s an ideologue. This guy is worth $2 billion.â

The DOE Restructured Its Loan to Tesla: â Imagine that. Weeks to go before the election and the Department of Energy has restructured its $465 million loan to the electric-car company to make sure it didnâ t run out of cash. The New York Times reports: (Emphasis mine)

As it ramps up sales of its sleek electric sedan, Tesla doesnâ t appear to be much of a loser right now. But a closer look at companyâ s cash flows suggests it is hardly out of the woodsâ ¦The federal government eased terms of its $465 million loan to Tesla to ensure the company didnâ t breach key financial hurdles. The company then raised $193 million in a secondary stock offering, easing cash concernsâ ¦ Teslaâ s CEO has said he raised the $193 million â simply for risk reduction.â Yeah. Itâ s called the risk to Obama of Tesla running out of cash right before the election.â

Taxpayers Subsidize Forbes â Greenâ Billionairesâ Schemes: Musk, best known as co-founder of the company that became PayPal, is Chairman of SolarCity and CEO of Tesla. According to the Center for Responsive Politics, SolarCity spent $535,000 in 2009 and 2010 to lobby Congress and the Department of Energy on climate legislation, the Recovery Act, â green workforce training and development,â and provisions in various legislation â relevant to solar development.â â ¦ So far, according to DOE reports, SolarCity has received more than $66 million from that program. The company also won a partial guarantee from DOE of a $344 million loan that will place up to 160,000 rooftop solar installations on military housing across the country. Similarly, Muskâ s Tesla Motors spent $480,000 from 2007 to 2011 to lobby Congress, the White House, EPA and DOE on climate and energy issues, the Advanced Technology Vehicles Manufacturing loan program, the Promoting Electric Vehicles Act, and the Recovery Act. Tesla receiveda $465 million loan guarantee from DOEâ s ATVM program. Musk is also a generous political donor, mostly to Democrats, although his investments and giving are equally diverse.

Tesla Motors warns it will miss sales expectations

Climate Depotâ s report: Electric/Hybrid car industry loses power in the face of market reality and lack of consumer demand â Washington Post on Chevy Volt: â The basic theoryâ if you build them, customers will come â was a myth. And an expensive one, at thatâ

Tesla CEO Elon Musk: â There is no question that at a certain level, [CO2 emissions] will destroy the Earth, or destroy large portions of the Earthâ

Tesla is fine, repaying U.S. government loans: CEO: Tesla Motors Inc (TSLA.O) Chief Executive Elon Musk dismissed fears the electric carmaker was in financial trouble and said it was making an advance payment on the federal loan used to make its Model S sedan.

How Does Paying $40,000 For A Tesla EV Replacement Battery Sound? â The Tesla electric carâ s batteries will cost $40,000 to replace when they run out of juice â how appealing are those electric car advantages at resale time? The Tesla electric car is produced by a company run by a whiny corporate billionaire and taxpayer welfare mooch â to the tune of $450 million in U.S. taxpayer loans provided by Obama. What did Obama see in the company? Great question, and btw, donâ t expect the loan to be repaid,

ever.

Who killed the electric car? You, perhaps, if you didnâ t charge it: â DONâ T leave your electric car parked for too long â by the time you get back it could have turned into a $200,000 brick. Electric car maker Tesla is defending claims its cars become immobilized if the battery ever becomes completely discharged. This results in a battery replacement cost of about one-fifth the carâ s $206,000 sticker price.â

Oops. Major Design Flaw Found With Tesla Electric Cars: â Sounds like another $500 million down Obamaâ s taxpayer-funded toiletâ

â Itâ s A Brickâ â Tesla Motorsâ Design Problem Devastating: â Tesla Motorsâ lineup of all-electric vehicles â its existing Roadster, almost certainly its impending Model S, and possibly its future Model X â apparently suffer from a severe limitation that can largely destroy the value of the vehicle. If the battery is ever totally discharged, the owner is left with what Tesla describes as a â brickâ : a completely immobile vehicle that cannot be started or even pushed down the street. The only known remedy is for the owner to pay Tesla approximately $40,000 to replace the entire battery. Unlike practically every other modern car problem, neither Teslaâ s warranty nor typical car insurance policies provide any protection from this major financial loss. â

More on the Electric Edsel: â It is 1890 and horse travel is becoming problematic. The horses poo all over the place, making a disgusting mess in crowded urban areas â and theyâ re just not practical for speedy, efficient travel in a rapidly industrializing nation. Did the government start throwing billions (well, millions in those days) at politically connected big businesses to develop an alternative? The answer, of course, is no. Inventors thought about the problem and tinkered. The internal combustion engine (gas and diesel) was invented â and perfected. It became reliable â and soon, affordable. Henry Ford and others like him came along. Cars replaced horses. And â a key fact â impractical cars such as the early steam-powered and electric cars â were dropped in favor of practical cars like the Model T, which put the country (not just the elites) behind the wheel.

The analysts at Green Car Reports, â the ultimate guide to cleaner, greener driving,â worry that the Fisker Karma may discredit the entire Department of Energy loan program.

Elon Musk, a tycoon who has reaped millions of dollars from government for schemes for EVs, solar and outer space, may feel good about Tesla compared to Fisker for the moment, but in the Automobile interview he revealed massive problems in management and development while he planned to seek those loans from the Department of Energy.

â â

DOE:

Expected Chu departure sparks second-term speculation

Nick Juliano, E&E reporter

Greenwire:

No matter who wins the White House next week, Steven Chu is widely expected to soon book a one-way ticket back to California, sparking heightened speculation over who may be tapped to take over after his embattled term leading the Department of Energy if President Obama is re-elected.

Chu has not announced his plans, and a DOE spokeswoman did not respond to a request for comment. But it

is all but impossible to find anyone in Washington energy circles who thinks he will be sticking around if Obama wins re-election, after four years facing sharp criticism over nearly everything in DOEâ s portfolio, especially the loan guarantee program.

â The working assumption by many here is that Secretary Chu will move back to California,â said one energy policy expert who works with the administration and asked not to be identified. â Thatâ s completely understandable; heâ s accomplished a heck of a lot in four years in Washington, particularly for someone more accustomed to the warmer and friendlier climes in California.â

Supporters of the energy secretary say he has been unfairly maligned by congressional Republicans who have homed in on the handful of failed loan guarantee recipients, most notably the bankrupt solar panel manufacturer Solyndra, while ignoring companies that have succeeded after receiving DOE loan guarantees and other efforts within the department to boost clean energy research and development.

â Steven Chu is going to be a difficult act to follow because thereâ s never been such a prominent scientist as secretary of Energy,â said Daniel Weiss, a clean energy expert at the Center for American Progress Action Fund.

Chuâ s background as a Nobel Prize-winning physicist made him one of the most credentialed DOE heads. But he seemed ill-prepared to deal with some of the more rough-and-tumble aspects of Washington, where facing hours of grilling from hostile members of Congress is as much a part of the job as keeping up with the latest developments coming out of DOEâ s labs.

Obama is likely to tap someone with more of a political background to replace Chu, who is expected to announce his departure before the end of the year, several policy experts said in recent interviews.

Among the top people being mentioned as possible candidates to take over as next Energy secretary are former North Dakota Sen. Byron Dorgan (D), whose post-congressional activities include an association with the Bipartisan Policy Center, where he has focused on energy policy (***Greenwire***, Jan. 19); former Michigan Gov. Jennifer Granholm (D); Center for American Progress President John Podesta, who was President Clintonâ s chief of staff and head of Obamaâ s transition team; and Duke Energy CEO Jim Rogers, who was a key industry supporter of the Obama administrationâ s efforts to address climate change and helped lure the 2012 Democratic National Convention to Charlotte, N.C., where Dukeâ s corporate headquarters is located.

Others being mentioned in some policy circles are former Wyoming Gov. Dave Freudenthal (D), who is practicing environment and natural resources law in Cheyenne, Wyo.; former Iowa Gov. Chet Culver (D), who is doing consulting work for the wind energy industry (***E&E Daily***, March 6); and Kathleen McGinty, who served in the Clinton administration before leading the Pennsylvania Department of Environmental Protection. She is a founding partner of Peregrine Technology Partners LLC, a clean-tech firm, and is a director at NRG Energy Inc., a wholesale power company.

Of course, beyond policy chops, anyone asked to lead DOE also will have to decide whether he or she has the constitution to take on such a high-stress role. The department has a broad portfolio, from securing nuclear material to funding research into carbon capture and sequestration, but the most prominent role for a second-term energy secretary likely will be continuing to face hostile questions from House Republicans.

â There are a lot of people who are qualified, who would be great candidates, who say, â I donâ t want to do this,'â said one renewable energy lobbyist following the jockeying to replace Chu.

If Republican nominee Mitt Romney wins the election, observers expect his DOE would be led by someone with ties to the oil, natural gas or coal industries. The most mentioned contenders are former Sen. Jim Talent (R-Mo.), American Petroleum Institute President Jack Gerard and Harold Hamm, the CEO of Continental

Resources who has been advising the Romney campaign on energy issues, although several other names also have been floated (*Greenwire*, Oct. 23).

GOP Says Energy Dept. Cut Corners to Lend Az. Solar Firm $1.6 Billion As Political Payola

By MATTHEW MOSK
ABC News

House Republicans are preparing to grill Energy Secretary Steven Chu this week over $1.6 billion in loans to finance two massive solar energy projects planned for the desert Southwest, saying investigators have found evidence suggesting the administration cut corners in order to get the loans approved.

â The Department of Energy manipulated analysis, ignored objections from career professionals, and strategically modified loan evaluations in order to force project funding out the door,â

House Oversight and Government Reform Committee Chairman Darrell Issa, R-California, said in a statement provided to ABC News. The Department of Energy says Chu will have plenty of material with him to rebut those allegations Tuesday when he comes to the Hill to testify before Issaâ s committee. Agency officials continued to characterize criticism from House Republicans as misleading attacks that are aimed at scoring political points.
Energy Department spokesman Damien LaVera accused the committee of â inventing false and misleading controversy.â

â Decisions made on loan applications were made on the merits after extensive review by the experts in the loan program,â LaVera said. â In this case, the Department backed loans for two innovative solar projects that
will support hundreds of jobs and provide clean power to tens of thousands of homes.â

Two separate House committees have been investigating the Energy Departmentâ s loan program for more than a year. Their efforts gathered steam last fall when the first company to receive a federal green energy loan, Solyndra, filed for bankruptcy. This latest review delves into highly technical aspects of the administrationâ s sizeable bet on solar energy and the complex rules set up to help the administration pick the best projects to support.

Energy officials told ABC News the department followed a rigorous process to evaluate each applicant, and the two projects being scrutinized by Issaâ s committee are some of the most exciting solar ventures underway
in the United States. If successful, the massive generating facilities would be by far the largest of their kind in

the world â comprised of more than five million solar panels and 35,000 metric tons of steel.

Republicans say they sifted through tens of thousands of pages of internal records turned over by the Energy Department in response to their requests.

Investigators with the Committee on Oversight and Government Reform said the documents they reviewed have raised new questions about the administrationâ s decision to grant multiple loans to the solar energy giant
First Solar, an Arizona-based company that both makes solar panels and assembles enormous solar generating facilities that are then turned over to utility companies to operate. Two of the companyâ s largest projects won federal loans â generating facilities called Agua Caliente, in Arizona, and the Antelope Valley Solar Ranch in California. (One more First Solar facility also qualified for another $1.5 billion in loan guarantees, making the company one of the nationâ s largest beneficiaries of the Obama administrationâ s green energy initiative.)

In order to receive the loan money, First Solar had to provide evidence that each project would employ new and innovative technologies to generate energy. Republican investigators said Friday the records they reviewed raised doubts about whether the solar facilities actually do that. Among the documents they cite is an email from a top technical expert inside the department, written less than six weeks before the loans to First Solar were approved, in which he argues that one of the supposed advances â use of something called a â single axis trackerâ â was actually not all that new.

â Be clear this is not an innovation,â wrote Dong K. Kim, the director of the loan programâ s technical division.
â The record will show we did not grade this as an innovation.â

Further, Kim writes that â someone keeps changingâ internal documents to hold out the tracking technology as
innovative. And he warns that â whoever continues to make this change needs to understand that Technical does not support [identifying the trackers] as an innovative component.â

â â

Energy Secretary Chuâ s Hopeless Clean Energy Crush

By Rep. Marsha Blackburn (R-TN)

Energy Secretary Steven Chu is on a mission to proliferate the use of clean energy no matter the cost to American taxpayers. In 2008, Secretary Chu told the Wall Street Journal, â Somehow we have to figure out how to boost the price of gasoline to the levels in Europe.â Even worse, according to White House Press Secretary Jay Carney, President Obama never asked Secretary Chu to walk back his comments. Today, the average gallon of gas in Europe costs more than $8.

With gas prices just over $4 per gallon in the U.S., and projected by Barronâ s to hit $4.50 this spring, Secretary Chu and the Administration are less than $1 away before electric vehicles become a reasonable price option for the average American family.

When President Obama was inaugurated the price of a gallon of gas was $1.84. In less than 4 years under this Administration, the price of gas has

more than doubled. Not to mention, this has all occurred at a time when unemployment is at its longest streak above 8.0% since the Great Depression. Once you factor in the U-6 measure of unemployment, which includes discouraged workers and part-time workers seeking full time employment, the real unemployment rate is at a sky high 14.9%. Unfortunately, the price of gas is not the only area in which Secretary Chu is putting a dent in American taxpayersâ wallets. He is also responsible for the mismanagement of the Department of Energy (DOE) Loan Guarantee Program.

If you were to listen to Secretary Chu and the White House, they would have you believe that the United States is currently engaged in a global solar race with China, reminiscent of the Cold War. They believe that we must use every option within our arsenal to win the war no matter the cost to taxpayers.

â â

Energy Secretary Hammered On Gas Prices
Washingtonâ s Partisan Divide On Display At Hearing

By Tom Cohen CNN

WASHINGTON (CNN) â A committee hearing Tuesday on the Department of Energyâ s use of stimulus funding kept returning to rising gas prices as Republicans hammered Secretary Steven Chu over the pain at the pump.

The partisan divide of Washington was on full display at the House Oversight Committee hearing.

Democrats on the panel repeatedly asked Chu leading questions that provided him the chance to defend administration policies, while Republicans confronted him with allegations of cronyism in Department of Energy loan programs or complaints that he and President Barack Obama donâ t understand what consumers face from higher gas prices. Republican Rep. Ann Marie Buerkle of New York asked Chu to â go to the administration and say, â The American people are hurting. They need you to do something now.â â

She and fellow Republican Rep. Patrick McHenry of North Carolina pushed Chu on what steps he has taken in his three years on the job to bring down gas prices.

When Chu noted investments to boost the use of electric cars and increase fuel efficiency standards, McHenry said those mean nothing to his constituents who have long commutes by car every day.

â I have heard nothing of a policy that will meaningfully impact the price at the pump, other than driving it up,â McHenry complained. To tell people in his district facing 10% unemployment to buy a new electric vehicle â is absolutely ridiculous,â he said.

Buerkle also challenged the Obama administrationâ s contention that America has 2% of the worldâ s known oil reserves, saying the actual amount is much greater and that expanded exploitation could reduce gas prices in the long term.

Obama has argued there is no single step or â silver bulletâ to lower gas prices in the short term, saying oil costs are set by an international market influenced by rising demand in China and India as well as jitters over Middle East instability, particularly involving Iran.

With a presidential election looming, Republican leaders including the presidential hopefuls in the midst of a nomination battle have targeted Obamaâ s energy policies. They seek to blame Obama for high energy costs, saying a failure to greatly expand U.S. oil production is a cause.
Chu repeated administration talking points that the United States is producing more oil and natural gas now than any time in recent years, and that a balanced approach that invests in innovation such as alternative energy sources is needed to remain competitive in global markets.

Despite the Republican criticism, Chu insisted the policies and programs he has pushed are the right ones at a time of changing energy needs and opportunities.

â America has reached a crossroads and members of Congress have a big decision to make: We can play to win in the clean-energy race â investing in Americaâ s workers, industries, and innovations â or we can wave the white flag and cede leadership to other countries that are investing in these industries,â Chu said.â

Asked about his previous comment that he deserved an A-minus grade for his performance so far, Chu stuck to it, adding it should be â a little higherâ for efforts to reduce oil imports by steps such as developing electric and natural gas-powered vehicles.

When Rep. Trey Gowdy, R-South Carolina, repeatedly tried to get Chu to discuss his oft-quoted 2008 comment in favor of higher gas prices in America, the secretary refused to engage, responding several times that he had â nothing more to add to that quote.â

â Iâ m not trying to boost the price of gasolineâ as energy secretary, Chu told Gowdy. â Quite the opposite. Iâ m trying, as a scientist, to diversify the use of gasolineâ to bring down fuel costs.

Other Republicans repeatedly asked Chu about loans made under a Department of Energy program intended to promote innovation, such as $500 million for the California solar panel manufacturer Solyndra that later went bankrupt.

Rep. Jim Jordan, R-Ohio, listed a series of loans approved for companies that had investors with ties to Obama administration officials or campaign fundraisers. Jordan asked Chu if he detected a pattern of cronyism, calling it the kind of government behavior that Americans

despise.

Chu responded he didnâ t, and repeatedly answered â noâ when asked if any of the administration officials ever lobbied him on the loan program. Jordan then said thaT many of the companies involved had poor credit ratings, adding that if there was no political motivation for approving the loan guarantees, the only other explanation would be incompetence by Department of Energy officials.

â Thatâ s what the American people find so frustrating with the situation,â Jordan said.

Chu responded that such a loan program involved high risk investments. Under questioning from committee Chairman Rep. Darrell Issa, R-California, Chu said projects or companies needed to have at least a 50% assessed chance of success to qualify.

â â

Energy Secy. Chu disputes GOP claims that Obama energy programs rife with incompetence, political favoritism Energy Secretary Steven Chu defended his departmentâ s policies to Congress on Tuesday after House Republicans released two extensive reports charging that alternative-energy loan programs and a huge home weatherization program for poor households were riddled with failures and mistakes.

The reports by the House Oversight and Government Reform Committee, chaired by Rep. Darrell Issa, R-Calif., are part of a more than a year long crusade by Republicans to expose waste, incompetence and political favoritism
in energy loan programs after the bankruptcy of Fremont solar manufacturer Solyndra.

Energy, spurred by rising gasoline prices, has become a major issue in the presidential campaign between President
Obama and Republican front-runner Chu, a UC Berkeley physicist and Nobel laureate who had testified to Congress twice in the past week, told the committee that he had also advised former Republican President George W. Bush on his effort to end what Bush called the national addiction to oil. Chu also awarded himself a better than A-minus grade on trying to reduce gasoline prices.

Largest investor

He said that he is a tough grader, but that his efforts to find alternatives to costly fossil fuels were bearing fruit. Last year, Chu said, the United States became the worldâ s largest investor in alternative fuels, however temporarily, given that the stimulus money was mostly temporary.

Independent audits by the departmentâ s inspector general and the Government Accountability Office have found some mismanagement of the loan and weatherization programs, the result in part of the 2008 stimulus program that brought aflood of money into the Energy Department, doubling its budget and overwhelming its administrative capacity.

On Tuesday, Chu faced an unusually collegial grilling from Issa, who shared Chuâ s enthusiasm for the potential of natura lgas-powered vehicles.

Issa said the nation was fortunate to have what he called one of the smartest energy secretaries ever, and noted that both he and Chu hold extensive patents. One of the committee reports, called â The Department of

Energyâ s Disastrous Management of Loan Guarantee Programs,â faulted Chu for overemphasizing investment in
solar energy. Plunging prices for natural gas, the result of technological breakthroughs that can extract previously inaccessible reserves from shale rock and other sources, have made solar far less competitive, the report said.
Chu said he is â very enthusiasticâ about the potential of using natural gas as a â transition fuelâ to a clean-energy economy.

Natural gas emits about half as much carbon dioxide as coal.

Chu said the department is aggressively researching natural gas fuel tanks that could be adapted to the conventional internal combustion engines incars and trucks. The problem is that the gas must be held under pressure in veryexpensive carbon-fiber tanks.

Fixing problems

Chu downplayed reports of shoddy weatherization work, including instances of windows that fell out of their frames and exposed wires. He said audits showed that thosejobs amounted to no more than 4 percent of the 680,000 homes that were weatherized under the stimulus. He said contractors were required to fix the problems at no cost to the government.

The committee report also noted, but Chu did not address, large unexpected expenses and delays caused by relocating desert tortoises at the $2.2 billion BrightSource solar plant being built in Californiaâ s Mojave Desert. The company got a $1.6 billion loan guarantee and has spent $56 million relocating tortoises, including the expense of erecting 50 miles of special fencing at a cost of $50,000 a mile, according to the committee report, based on a Los Angeles Times story.

The stimulus money rapidly increased government spending on alternative energy, including $14.5 billion in loan
guarantees such as the $528 million loan to Solyndra.

Although fossil fuels have received government support since 1916, a report this month by the Congressional Budget Office found that last year, renewable-fuel and energy-efficiency programs made up 78 percent of government support for energy, followed by 15 percent for fossil fuels and 4 percent for nuclear.

Carolyn Lochhead

â â

U.S. House of Representatives Committee on Oversight and Government Reform

â Conclusion

The findings regarding the DOE loan programs discussed in this report tell only part of a much greater storyâ **a story of mismanagement, waste and abuse**symptomatic of reaching too far, working too fast, and spending too much to achieve unrealistic objectives. There are significant concerns about DOEâ s management and administration of the weatherization, 1705, and ATVM programs. And a management structure unprepared and incapable of dealing with the challenges it faced when pressed to push out the door tens of billions of dollars in a short period of time. In the days ahead, the Committee will continue its investigation and examine DOEâ s record on a loan-by-loan basis, with the continued hope that spotlighting these

shortcomings will provide Congress and the American people with the insight they need to assess the true valueâ or costâ of these types of programs.â

FINAL-DOE-Loan-Guarantees-Report

â â

Chu, GOP Trade Jabs Over Green Energy Funding

By MATTHEW LAROTONDA

Energy Secretary Steven Chu defended his agency today against allegations the Obama administration cut corners to get funding approved for a number of alternative energy projects, including $1.6 billion in loans for two massive solar installations.

As Chu testified before the House Oversight and Reform Committee, Republicans claimed their investigators found evidence the administration had ignored objections from within the department to approve risky ventures, and suggested companies with political ties to the White House had benefitted.

Rep. Jim Jordan, R-Ohio, told Chu he believed many loan recipients had credit ratings that would classify them as â junkâ investments. Alleging a culture of â cronyism,â at the agency, Jordan claimed 23 of 27 businesses approved for federal loans had connections to campaign donors or administration officials, including former economic adviser
Larry Summers.

Interrupting the secretary at times during his testimony, Jordan told Chu, â Thereâ s no other conclusion you can reach. You helped your friends or you guys were incompetent.â

Chu defended the integrity of the loan process. â Weâ ve put in place an aggressive monitoring system to ensure that the department and its grantees spend recovery act funds wisely,â he said. â The department takes any case of waste, fraud or abuse very seriously.â

Obamaâ s Green Car Program Under Scrutiny

Chu said he wasnâ t aware of many of the alleged connections but said department guidelines would have prevented any of the individuals from participating in discussions that would have influenced the loan process. Further, Chu says the decision would have come from career agency employees, not political appointees who could be influenced by their party.

â â

Energy secretary hammered on gas prices Washingtonâ s partisan divide on display at hearing

A committee hearing Tuesday on the Department of Energyâ s use of stimulus funding kept returning to rising gas prices as Republicans hammered Secretary Steven Chu over the pain at the pump.

WASHINGTON (CNN) â

The partisan divide of Washington was on full display at the House Oversight Committee hearing.

Democrats on the panel repeatedly asked Chu leading questions that provided him the chance to defend administration policies, while Republicans confronted him with allegations of cronyism in Department of Energy loan programs or complaints that he and President Barack Obama donâ t understand what consumers face
from higher gas prices.

Republican Rep. Ann Marie Buerkle of New York asked Chu to â go to the administration and say, â The American people are hurting.

They need you to do something now.â â he and fellow Republican Rep. Patrick McHenry of North Carolina
pushed Chu on what steps he has taken in his three years on the job to bring down gas prices.

When Chu noted investments to boost the use of electric cars and increase fuel efficiency standards, McHenry said those mean nothing to his constituents who have long commutes by car every day.

â I have heard nothing of a policy that will meaningfully impact the price at the pump, other than driving it up,â
McHenry complained. To tell people in his district facing 10% unemployment to buy a new electric vehicle â is
absolutely ridiculous,â he said.

Buerkle also challenged the Obama administrationâ s contention that America has 2% of the worldâ s known oil
reserves, saying the actual amount is much greater and that expanded exploitation could reduce gas prices in the long term.

Obama has argued there is no single step or â silver bulletâ to lower gas prices in the short term, saying oil costs are set by an international market influenced by rising demand in China and India as well as jitters over Middle East instability, particularly involving Iran.

With a presidential election looming, Republican leaders including the presidential hopefuls in the midst of a nomination battle have targeted Obamaâ s energy policies. They seek to blame Obama for high energy costs, saying a failure to greatly expand U.S. oil production is a cause.

Chu repeated administration talking points that the United States is producing more oil and natural gas now than
any time in recent years, and that a balanced approach that invests in innovation such as alternative energy sources is needed to remain competitive in global markets.

Despite the Republican criticism, Chu insisted the policies and programs he has pushed are the right ones at a time of changing energy needs and opportunities.

â America has reached a crossroads and members of Congress have a big decision to make: We can play to win in the clean-energy race â investing in Americaâ s workers, industries, and innovations â or we can wave
the white flag and cede leadership to other countries that are investing in these industries,â Chu said.â

Asked about his previous comment that he deserved an A-minus grade for his performance so far, Chu stuck to
it, adding it should be â a little higherâ for efforts to reduce oil imports by steps such as developing electric and

natural gas-powered vehicles.

When Rep. Trey Gowdy, R-South Carolina, repeatedly tried to get Chu to discuss his oft-quoted 2008 comment in favor of higher gas prices in America, the secretary refused to engage, responding several times that he had â nothing more to add to that quote.â

â Iâ m not trying to boost the price of gasolineâ as energy secretary, Chu told Gowdy. â Quite the opposite. Iâ m
trying, as a scientist, to diversify the use of gasolineâ to bring down fuel costs.
Other Republicans repeatedly asked Chu about loans made under a Department of Energy program intended to promote innovation, such as $500 million for the California solar panel manufacturer Solyndra that later went
bankrupt.
Rep. Jim Jordan, R-Ohio, listed a series of loans approved for companies that had investors with ties to Obama administration officials or campaign fundraisers. Jordan asked Chu if he detected a pattern of cronyism, calling it the kind of government behavior that Americans despise.

Chu responded he didnâ t, and repeatedly answered â noâ when asked if any of the administration officials ever
lobbied him on the loan program.

Jordan then said thaT many of the companies involved had poor credit ratings, adding that if there was no political motivation for approving the loan guarantees, the only other explanation would be incompetence by Department of Energy officials.

â Thatâ s what the American people find so frustrating with the situation,â Jordan said.

Chu responded that such a loan program involved high risk investments. Under questioning from committee Chairman Rep. Darrell Issa, R-California, Chu said projects or companies needed to have at least a 50% assessed chance of success to qualify.

â -

: CJ Ciaramella â

Rep. Jim Jordan (R., Ohio) grilled Energy Secretary Steven Chu over the political connections of many green energy companies that received Energy Department loans at a hearing of the House Committee on Oversight and Government Reform Tuesday.

Jordan listed nine people with ties to the Obama administration and financial stakes in Energy Department loan recipients, asking Chu if any had influenced the Energy Departmentâ s decision to award the loans.

For example, there is Steve Spinner, a loan program officer at the Energy Department and a former bundler for the Obama campaign. Spinnerâ s wifeâ s law firm represents Solyndra, the bankrupt solar company, which received $535 million in taxpayer backed Energy Department loans.

â My understanding is there were 27 companies in the 1705 loan program, eight of which had connections to the White House,â Jordan said. â Do you see a pattern or concern there?â

Chu said the political connections had no influence on his decision to award the loans. He said neither they nor the WhiteHouse lobbied him for the loan guarantees.

Chu testified Tuesday on the Department of Energy loan program, which was in charge of awarding billions of dollars in stimulus money as part of the Obama administrationâ s green jobs initiative.

â â

STEVEN CHU RAN THE MOST CRIMINALLY CORRUPT DEPARTMENT OF ENERGY IN U.S. HISTORY

The U.S. Energy Department mismanaged stimulus programs, putting taxpayer dollars at risk, according to two Republican reports released at a hearing where lawmakers debated who is responsible for rising gasoline prices.

The reports, by Republican staff on the House Oversight and Investigations Committee, focused on a program that gave Solyndra LLC its $535 million loan guarantee two years before the company went bankrupt, and on a $5 billion home-energy efficiency initiative.

â These reports document a Department of Energy seemingly unprepared to deal with the exponential increase in taxpayer funds it received under the stimulus, leading to serious questions of waste and abuse,â Representative Darrell Issa, a California Republican and committee chairman, said.

The programs provided jobs, reduced pollution and helped low-income homeowners cut energy costs, Energy Secretary Steven Chu said today at the hearing. Republicans said the reports showed the stimulus wasnâ t effective in creating jobs and risky bets were made on companies with poor credit ratings.

Republicans often ignored the committeeâ s reports and pressed Chu on administration actions to stem rising gasoline prices, which climbed for 11 straight days through yesterday.

Representative Patrick McHenry, a North Carolina Republican, asked what steps are being taken to cut prices at the pump.

More Cash Needed

After Chu said the administration is promoting the use of natural gas from shale in long-haul trucks, McHenry said the U.S. needed to do more to promote oil production on federal lands. Other Republicans faulted Obama for taking credit for rising domestic oil production on private lands.

â The administration is supportive of increased production,â Chu said.

The Republicansâ 74-page report on the loan program found that two solar projects, developed by Tempe, Arizona-based First Solar Inc. (FSLR), werenâ t sufficiently innovative or different from one another to qualify for the guarantees.

Chu, who defended Solyndraâ s loan while testifying in November to a House Energy and Commerce Committee panel, said the department has largely met its mission to spend stimulus funding quickly, responsibly and transparently.

â We evaluate each loan application on its technical merits,â Chu said.

â Robustâ Dialogue

E-mails Republicans highlighted in the report were part of a â robustâ dialogue, he said. Ultimately, career professionals found the projects met Energy Department eligibility requirements, Chu said.

The projects under scrutiny are Antelope Solar Valley Ranch in California and Agua Caliente in Arizona. Exelon Corp. (EXC), based in Chicago, bought Antelope, and NRG Energy Inc. (NRG) in Princeton, New Jersey, purchased Agua Caliente immediately after First Solar won the awards.

In one e-mail cited by Republicans, Dong Kim, the loan programâ s technical director, said the Antelope projectâ s use of single axis tracker wasnâ t innovative. The technology lets the solar panels track the sun throughout the day.

â The record will show that we did not grade this as innovative during intake review,â Kim wrote in the June
23 e- mail.

Jonathan Silver, then the executive director of the loan program, in an e-mail dated Feb. 1, 2011, referred to the projects as alike in design.

â Carbon Copyâ

â Where are we with antelope valley?â Silver asked energy official David Frantz. â Isnâ t that a carbon copy of
agua caliente?â

â It is,â Frantz responded.

An Energy Department rule states a company can only submit one application using a particular technology, Republicans said.

Chu said he believed Silver and Frantz were discussing the projectsâ similar financial structure, and not comparing their technical components.

The department yesterday released an Aug. 4, 2010, memo from Dong Kim that said Agua Caliente included â new and innovative componentsâ and that Antelope was sufficiently different to be eligible for a loan guarantee.

The Republican report says the loan-guarantee program was too focused on solar energy, distributing about 80 percent of the loans to projects relying on the sun. More diversity in spending would have offered taxpayers better protections against market fluctuations, according to the Republican report.

Weatherization Faulted

Representative Jim Jordan, an Ohio Republican, said eight administration officials had ties to companies that won clean- energy loans. Chu said firewalls prevented officials who might gain from the awards from participating in decisions affecting the companies.

A separate report said a $5 billion weatherization program paid for shoddy work that in some cases actually damaged homes, in some cases repeating critical findings from the Energy Departmentâ s independent Inspector Generalâ s reports.

For example, contractors in Alabama sprayed insulation in a furnace compartment in a legally blind womanâ s
kitchen in a way that could have caused a fire.

Chu said the department had worked to correct mistakes identified by the agency watchdog. Overall, the program has worked well, improving the efficiency of 680,000 homes, including for a woman in Milwaukee who said the work made her home more comfortable, allowing her to eat breakfast in her kitchen for the first time in Wisconsinâ s cold winter months and cutting her energy costs, he said.

â It was overall a very successful program,â Chu said.

â â

Chu Gets Chewed Out: Youâ re Telling My Constituents They â Need to Buy a Nissan Leaf!?â

A House Committee on Oversight and Government Reform congressman became frustrated with the secretaryâ s testimony on what initiatives were being taken in order to lower gas prices at the pump.

CONGRESSMAN:

â My time is short, youâ ve listed a long list of things that this administration has done. I have not yet heard that there are trying to increase the supply of American oil or our refining capacity or limit the regulations in the diversity of blends that are required.

I have heard nothing from you today that indicates a policy this administration has put in place that will meaningful impact the price at the pumps, other than driving it up!

The policies this administration has put in place have actually increased the cost of fuel at the pumps. They have increased the cost of commuting for my constituents.

And to tell my constituents, with 10 percent unemployment, Western North Carolina, that you need to buy a Nissian Leaf? That in order to commute for 50 minutes a day youâ re going to have to have an employer who is wonderful enough to provide you a place to plug in your car, so you can get home? Is absolutely ridiculous.

And the anger my constituents have at the cost of the pumps is very real, and if the President doesnâ t get this and if the Secretary of energy doesnâ t get this then weâ ve got a real problem here. Weâ ve doubled the budget of the department of energy in 2009. And yet we are paying twice as much at the pumps. This is absolutely ridiculous!
Weâ ve seen Solyndras, but havenâ t seen a reduction at the pumps.â

â -

Energy Dept Cut Corners to Lend Arizona Solar Firm $1.6 Billion As Political Favor To Obama Financiers

(WASHINGTON) â House Republicans are preparing to grill Energy Secretary Steven Chu this week over $1.6 billion in loans to finance two massive solar energy projects planned for the desert Southwest, saying investigators have found evidence suggesting the administration cut corners in order to get the loans approved.

â The Department of Energy manipulated analysis, ignored objections from career professionals, and strategically modified loan evaluations in order to force project funding out the door,â House Oversight and

Government Reform Committee Chairman Darrell Issa, R-California, said in a statement provided to ABC News.

The Department of Energy says Chu will have plenty of material with him to rebut those allegations Tuesday when he comes to the Hill to testify before Issaâ s committee. Agency officials continued to characterize criticism from
House Republicans as misleading attacks that are aimed at scoring political points.

Energy Department spokesman Damien LaVera accused the committee of â inventing false and misleading controversy.â

â Decisions made on loan applications were made on the merits after extensive review by the experts in the loan program,â LaVera said.

â In this case, the Department backed loans for two innovative solar projects that will support hundreds of jobs and provide clean power to tens of thousands of homes.â

Two separate House committees have been investigating the Energy Departmentâ s loan program for more than a year. Their efforts gathered steam last fall when the first company to receive a federal green energy loan, Solyndra, filed for bankruptcy. This latest review delves into highly technical aspects of the administrationâ s sizeable bet on solar energy and the complex rules set up to help the administration pick the best projects to support.
Energy officials told ABC News the department followed a rigorous process to evaluate each applicant, and the two projects being scrutinized by Issaâ s committee are some of the most exciting solar ventures underway in the United States. If successful, the massive generating facilities would be by far the largest of their kind in the world â comprised of more than five million solar panels and 35,000 metric tons of steel.

Republicans say they sifted through tens of thousands of pages of internal records turned over by the Energy Department in response to their requests.

Investigators with the Committee on Oversight and Government Reform said the documents they reviewed have raised new questions about the administrationâ s decision to grant multiple loans to the solar energy giant First Solar, an Arizona-based company that both makes solar panels and assembles enormous solar generating facilities that are then turned over to utility companies to operate. Two of the companyâ s largest projects won federal loans â generating facilities called Agua Caliente, in Arizona, and the Antelope Valley Solar Ranch in California. (Two more First Solar facilities also qualified for another $2 billion in loan guarantees, making the company one of the
nationâ s largest beneficiaries of the Obama administrationâ s green energy initiative.)

In order to receive the loan money, First Solar had to provide evidence that each project would employ new and innovative technologies to generate energy. Republican investigators said Friday the records they reviewed raised doubts about whether the solar facilities actually do that. Among the documents they cite is an email from a top technical expert inside the department, written less than six weeks before the loans to First Solar were approved, in which he argues that one of the supposed advances â use of something called a â single axis trackerâ â was actually not all that new.

â Be clear this is not an innovation,â wrote Dong K. Kim, the director of the loan programâ s technical division. â The record will show we did not grade this as an innovation.â

Further, Kim writes that â someone keeps changingâ internal documents to hold out the tracking technology as innovative. And he warns that â whoever continues to make this change needs to understand that Technical does not support [identifying the trackers] as an innovative component.â A second aspect of the

solar plants that the Energy Department identified as innovative had already been in use in over 200 units in Europe, according to the internal documents.

â These facts make clear DOE substantively failed to fund innovation, and instead gambled with $3 billion taxpayer dollars on a single firm, First Solar,â said Becca Watkins, an oversight committee spokeswoman.

Energy Department officials told ABC News they believe the Republican investigators are looking at an incomplete picture, saying that Kim â the author of the email â ultimately signed off on the technical innovations in the two solar projects, as did senior loan officers who conducted their own thorough review. They also suggested the House investigators have misread the rules â that the innovations in the solar project meet the requirements.

The fact that some of the innovative technology has been used in projects in Europe, for instance, does not mean the project is not innovative under the rules the department set out to govern the loan program. Technology that has not been used commercially in the United States will qualify as innovative, the rules say. House Republicans counter that the rules explicitly call for technology that is â new or significantly improved.â

â For nearly a year, Congressional critics of the Departmentâ s loan programs have demonstrated a consistent pattern of cherry-picking individual emails from the hundreds of thousands of pages of documents the Department has provided to Congress with the sole purpose of inventing false and misleading controversy,â LaVera said.
â While the law that created the [green energy] loan program does not include any requirement to limit our support to innovative projects, the Department chose to apply a tougher standard that would ensure we were investing in the kind of projects that will help the United States compete for the clean energy jobs of the future,â he said. â After a careful review on the merits, the senior career official responsible for the loan programâ s technical reviews made clear these projects met that standard.â

For its part, First Solar officials say it considers the two projects funded with government loans to be revolutionary in the solar industry.

Both are â of unprecedented size and scale that will provide clean power for 175,000 average homes while displacing 360,000 metric tons of CO2 annually â equivalent to taking 70,000 cars off the road,â said Ted Meyer, the companyâ s vice president of global corporate communications.

Both projects are incorporating new technologies to â help to ensure the reliability and stability of transmission systems, which is imperative for the long-term integration of renewable energy into the grid. It is expected that these technologies will eventually become standard in the solar power industry,â he said. In addition, he added that the single-axis trackers at the Antelope Valley project â will enable the modules to rotate to capture more sunlight, typically resulting in 15-25 percent more annual energy yield, depending on location.â

First Solar officials say they are forecasting more than $3 billion in revenue this year, but they acknowledge the company has suffered along with the rest of the solar industry as European subsidies have dried up and China has flooded the market. The companyâ s stock has been sliding, and has become a favorite for so-called â short sellersâ â investors who are betting on the company to fail.

OVERNIGHT ENERGY: Chu, Issa face off over Obama's corrupt energy loans

By Andrew Restuccia and Ben Geman

State of play: Energy Secretary Steven Chu will be back on Capitol Hill Tuesday for the latest in a series of hearings on the departmentâ s embattled loan programs.

Chu will testify before the House Oversight and Government Reform Committee on what Republicans on the panel call the â management challengesâ in overseeing the loan program.

Republicans have made Chu a top target of their investigation into the loan program, alleging that he failed to adequately vet companies that receivedtaxpayer-backed loans.

The GOP probe reached a fever pitch in September when Solyndra, the California solar panel maker that received a $535 million loan guarantee in 2009, filed for bankruptcy.

If previews offered by Republicans and Democrats are any indication, the hearing is certain to be dramatic.

Committee Chairman Darrell Issa (R-Calif.) is slated to unveil a staff memo that alleges the department â manipulated analysis, ignored objections from careerprofessionals and strategically modified loan evaluations in order to force project funding out the door,â according to The New York Times.

The Energy Department Obama insiders aggressively pushed back on Issaâ s allegations Monday.

Meanwhile, committee Democrats will work to undercut Issaâ s credibility by arguing that Issa has launched â unsubstantiatedâ investigations into Energy Department projects.

Expect more of the same from Chu. In past hearings he has stood by the loan program, while expressing regret that Solyndra went belly up. The loan guarantee program, he says, is meant to support companies that might not
attract private financing, so it is inherently risky.

Chu will argue that the Energy Department is a job creator and has contributed to the economic recovery.

â We are supporting more than 15,000 projects across the country,â Chu will say, according to hiswritten testimony.
â And since the summer of 2010, we have consistently supported between 40,000 and 50,000 direct jobs each quarter, and likely thousands more throughout the supply chain.â

He will call oversight of the departmentâ s stimulus programs â a top priority,â while welcoming â sincereâ outside reviews by Congress and others.

â I have spent my career as a scientist. Rigorous peer review and double-checking someone elseâ s findings are fundamental to a sound scientific process â and I believe the same is true in government,â he will say.
â So I welcome any and every sincere effort at oversight, and where we find mistakes, we have and we will move swiftly to correct them. I hope today can be an opportunity to have a serious, substantive dialogue.â

Issaâ s investigation, which focuses on the loan program broadly, complements a year-long probe of the Solyndra loan being conducted by House Energy and Commerce Committee Republicans.

The Solyndra investigation has found no evidence that the loan was approved for political reasons. But the probe has uncovered information thatâ s embarrassing and politically damaging to the administration, including that top officials questioned the wisdom of issuing the loan.

Democrats and administration officials have alleged that Republicans are using their investigations of the Energy Department to score political points during an election year.

â â

PoliticalNews.me â Mar 14,2012 â **Sen. Paul Questions Energy Secretary on Solyndra Loans**

WASHINGTON, D.C. â Below is transcript of Senate Energy and Natural Resources Committee hearing on oversight of the Department of Energy loan guarantee program, in which Sen. Rand Paul questioned Energy Secretary Steven Chu on the origin of Solyndra loans and similar preferential treatment to other energy-related companies seeking government-backed loans.

TRANSCRIPT:

SEN. RAND PAUL: Thank you for coming, Secretary Chu. Have you met George Kaiser?

ENERGY SECRETARY STEVEN CHU: I think I might have at a roundtable meeting.

PAUL: More than once?

CHU: The only one I can recall at the time was during a roundtable session.

PAUL: Are you concerned about the propriety of giving money, $500 million to a billionaire, you know, and then sort of changing the rules some so he gets to, you know, maybe get a better deal than the taxpayers do?

CHU: Iâ m convinced nothing Iâ ve seen in the loan program or anything in the White House had â that any connection that George Kaiser had with raising of money had anything to do with the selection of the loan. As you well know, Solyndra was at the head of the line picked by the previous Department of Energy â under a previous administration and it was the one that the career people advanced forward as the one that had the most work done on that loan that satisfied the conditions of the intent of the loan, you knowâ ¦

PAUL: Thatâ s sort of troubling though that they were the best case scenario and met all the criteria best and then they went bankrupt. But also I think whatâ s troubling to most of us is that weâ re giving $500 million loans to a guy whoâ s a billionaire. Why in the world would we do that?

CHU: Well, there were other investors in Solyndra also very wealthy people, also, but associated with the Republican party and so again, theâ ¦

PAUL: I wouldnâ t give it to them either.

CHU:â ¦ the â the politics of the investors was not part of the decision whether to give a loan to Solyndra.

PAUL: Do you think thereâ s a question of propriety though when youâ ve got someone who works for you, whoâ s married to somebody who works for Solyndra, who you say there is this firewall at the beginning maybe but youâ re not insinuating that he never wrote e-mails and never corresponded with people in favor of Solyndra.

CHU: Well for exampleâ ¦

PAUL: He did, correct?

CHU: He â he was corresponding to â after the loan was approved, corresponding to the timingâ ¦

PAUL: Do you think thatâ s appropriate for him to be involved at any stage, not just â to say he wasnâ t involved in the beginning is a little bit of an excuse for him but he should have never, ever had a word â the word Solyndra should have never left his lips and never been in any writing and I think it was.

CHU: The Department of Energy
has very rigorous standards that we enforce on any potential conflict of interest and as you mentioned it, for example, his wife was actually firewalled from having to do any business with Solyndra as well.

PAUL: Have you met Robert Kennedy, Jr.?

CHU: Probably, Iâ m not sure.

PAUL: Do you recall how many times?

CHU: Well, since Iâ m not sureâ ¦

PAUL: Are you aware â are you aware the Kennedy family fortune that theyâ re pretty wealthy also, probably worth hundreds of millions of dollars and we gave Robert Kennedy, Jr.â s company $1.8 billion. Are you aware that someone works for you who used to work for the Kennedyâ s who people say was involved with that loan process?

CHU: Iâ m not aware of that.

PAUL: I think thatâ s something we need to look into as well and this suggestion will go on with the hearings in the House as well that really this revolving door from big business into the Department of Energy to get large loans â $1.8 billion is a lot of money given once again to a large campaign contributor of the presidentâ s. It looks unseemly and I donâ t think thatâ s your background but unfortunately, youâ re the head of this organization thatâ s been giving these loans to very wealthy people who are donors of the presidentâ s and it looks really bad.

Do you give loans to foreign companies?

CHU: We give loans for loans meant to manufacture in the United States.

PAUL: What about Fisker-Karma, are they spending any of our money in Finland?

CHU: We gave a loan that was to a design group in Los Angeles and thereâ s another tranche to the loan if they satisfied the covenants of the loan which would go to manufacturing in the United States. So the money we give in loans is very targeted to jobsâ ¦

PAUL: My understanding is they were struggling here and that this money was actually going to be used in Finland.

CHU: Well, as I said before the loans we give are for American jobs and weâ re very clear about that. So if they, you know, if itâ s a design groupâ ¦

PAUL: No money goes to Finland then, Fisker-Karmaâ s not allowed to use any of that money in Finland?

CHU: As I said, the â the â we give loans for â for jobs in America and weâ re very clear about that.

PAUL: So Fisker-Karma is not using any U.S. taxpayer dollars in Finland.

CHU: Well I can get back to you on the details on that but I know the overall scope of the loan is for manufacturing in the United States and for design and it went to a design groupâ ¦

PAUL: And you â you can see our concern, the whole idea of picking winners and losers. People are saying that windmills, which have subsidized for years and years now, that even though we have paid for the windmills, weâ ve got them up, weâ ve got them started, if you take away thesubsidies, theyâ ll never make a profit. They just arenâ t profitable.

You know talk about tilting at windmills, weâ re just throwing money at windmills and it â I just donâ t see the purpose and it really gets down fundamentally to what Senator Lee is talking about. We shouldnâ t be in this business at all and then thing is youâ re choosing, you know, $50 light bulbs. Nobody understands that in America and thereâ s a â thereâ s a real problem here and I donâ t think youâ re going to wind the perception war on this and my counseling and advice to you would be letâ s get out of this business, letâ s not be involved with stuff like this.

The â also the thing is by your involvement in it, it really looks unseemly and I â I donâ t question your character. Youâ re known for being an upright person from academia, I mean but the thing is, is youâ re overseeing something that really doesnâ t pass the smell test.

Thank you.

Chu Testifies He Might Have Met Obama Bundler George Kaiser And Chu Worked For George Soros

The Senate Energy and Natural Resources Committee held a full committee hearing today on Energy Department loan guarantees.

Department of Energy Secretary Steven Chu testified about his association with George Kaiser, billionaire and top Obama â bundlerâ whoâ s been accused of pushing the White House for the Solyndra loan, which squandered $535 million of stimulus money in a little over a year.

Senator Rand Paul asked Chu directly if he had met Mr. Kaiser to which Chu replied that he might have met him at â round table meetingâ once.

Paul pressed further on the topic, asking if Kaiser got a â better dealâ on the loan deal but Chu dismissed the notion stating that Solyndra was at the â head of the lineâ because it was â picked by the previous administrationâ

â â

Chu Backtracks on High Gas Prices Love

By Amy Harder

Energy Secretary Steven Chu on Tuesday retracted his now-infamous quote from 2008: â Somehow we have to figure out how to boost the price of gasoline to the levels in Europe.â

â I no longer share that view,â Chu said in response to questioning from Sen. Mike Lee, R-Utah, at a Senate Energy and Natural Resources Committee hearing on another topic related to DOEâ s loan-guarantee

program.

Chuâ s 2008 quote, initially included in a Wall Street Journal article, has formed the foundation for daily Republican attacks on President Obama over high gas prices.

Chu seemed to equivocate, pause, and stumble over his words when responding to Leeâ s question about high gas prices. Other comments Chu made at another hearing late last month put him in hot water on gas prices.

Politico reported on Feb. 28 that Chu told a House committee that he was not working to lower gasoline prices but to wean the United States off oil. That story has since been corrected to clarify that DOE is working to both lower gas prices and wean the country off oil. But that was only after the story was picked up by Republicans and used against the administration.

During his testimony before the Senate panel on Tuesday, after stopping and starting with a few thoughts on the economy and the departmentâ s commitment to alternatively fueled vehicles, Chu told Lee: â Of course we donâ t want the price of gasoline to go up. We want it to go down.â

New polling out this week found that the presidentâ s disapproval rating is going up alongside high gasoline prices, which averaged $3.80 per gallon nationwide on Tuesday.

After the hearing, Chu told reporters that he changed his view from 2008 because of the fragile economy. â There is a real hardship that Americans are suffering at the gasoline pump,â Chu said. â The recovery is fragile. Another spike in gasoline prices could put that recovery at jeopardy. So there are many, many reasons why we do not want the price of gasoline to go up.â

Energy Secretary Chu Testifies on Loan Guarantees

WASHINGTON, DC

The Senate Energy and Natural Resources Committee holds a full committee hearing on Energy Department loan
guarantees.

The hearing focuses on the â Report of the Independent Consultantâ s Review with Respect to the Department of
Energy Loan and Loan Guarantee Portfolio,â but will likely also examine Solyndra, which received more than half a
billion dollars in federal loan guarantees before it filed for bankruptcy last year.

House Republicans opened their investigation into Solyndra nearly 13 months ago, but this is the first time Democratic controlled Senate will examine the program since Solyndra went under.

Herbert Allison, author of the report and former Treasury assistant secretary, will testify along with Energy Secretary Steven Chu.

The White House commissioned the report last year at the height of the Solyndra scandal and it was released on Feb. 10 of this year.

It covers the current status of of loans and loan guarantees administered by the Energy Department to support alternative energy projects, as well as recommendations for managing and monitoring the programs and for

identifying and fixing potential problems with individual loans and loan guarantees.

It reviews the Energy Departmentâ s portfolio of 30 loans, worth just under $24 billion, and shows potential losses from the program will likely be less than Congress and the White House projected, according to the White House.
The report includes recommendations on how to improve the programs by filling key positions in management, clarifying authorities and accountabilities of managers and the establishing of a comprehensive information management system to inform the early warning system for troubled loans.

The report was limited to companies still in operation and did not include Solyndra.

Steven Chu forced out as Obama Energy secretary

BY BEN GEMAN - 02/01/13 04:41 PM EST 48

Energy Secretary Steven Chu, who oversaw expanded federal support for low-carbon energy and defended it against GOP attacks, announced Friday that he is stepping down.

Chu, in a letter to Energy Department employees, said he would remain with the department at least until the end of February, and perhaps beyond "so that I can leave the Department in the hands of the new Secretary."

"Serving the country as Secretary of Energy, and working alongside such an extraordinary team of people at the Department, has been the greatest privilege of my life. While the job has had many challenges, it has been an exciting time for the Department, the country, and for me personally," he wrote.

While he didnâ t announce specific plans, Chu said heâ s like to return to academic life and move back to the West Coast.

â While I will always remain dedicated to the missions of the Department, I informed the President of my decision a few days after the election that Jean and I were eager to return to California. I would like to return to an academic life of teaching and research, but will still work to advance the missions that we have been working on together for the last four years,â Chu writes.

President Obama thanked Chu in a statement Friday and said the outgoing secretary â brought to the Energy Department a unique understanding of both the urgent challenge presented by climate change and the tremendous opportunity that clean energy represents for our economy.â

â And during his time as Secretary, Steve helped my Administration move America towards real energy independence. Over the past four years, we have doubled the use of renewable energy, dramatically reduced our dependence on foreign oil, and put our country on a path to win the global race for clean energy jobs,â Obama said.

The Nobel Prize-wining physicist took the Energy Departmentâ s (DOE) helm shortly before the agency received $35 billion under the 2009 stimulus law.

The 64-year-old Chu, with White House support, backed a larger federal role in R&D and commercialization of renewable, energy efficiency and battery technologies.

But part of the effort â grants and loans to help specific green-energy companies take flight â brought big political headaches for Chu and Obama when a handful of them failed or struggled.

ADVERTISEMENT

In particular, the 2011 collapse of the solar panel manufacturer Solyndra, which received a half-billion-dollar federal loan in 2009, prompted GOP-led Capitol Hill hearings and an avalanche of election-season attacks.

Chuâ s departure has been widely expected and is part of a larger turnover of Obamaâ s energy and environment team.

Environmental Protection Agency Administrator Lisa Jackson announced in late December that she is leaving after Obamaâ s mid-February State of the Union speech, and Interior Secretary Ken Salazar will leave by the end of March.

The long list of potential nominees to replace Chu includes former Sen. Byron Dorgan (D-N.D.); former Michigan Gov. Jennifer Granholm (D), Deputy Energy Secretary Daniel Poneman; and Sue Tierney, a managing principal at the Analysis Group who was DOEâ s assistant secretary for policy under former President Clinton.

Others include former Colorado Gov. Bill Ritter (D); Center for American Progress founder John Podesta, who was Clintonâ s chief of staff; and Stanford Universityâ s Dan Reicher, who formerly headed climate and energy initiatives for Google and served on Obamaâ s transition team.

Whoever replaces Chu will face a number of challenges running the sprawling department at a time of fiscal pressure and budget battles.

Its missions range from overseeing the nationâ s nuclear weapons stockpile to managing strategic petroleum reserves to financing R&D into alternative energy and other sciences.

For instance, DOE is facing competing political pressures as it weighs a slew of industry applications to export liquefied natural gas.

Chu, for his part, arrived at DOE with scientific heft but scant political experience as the White House sought to jumpstart the green-energy sector and tackle climate change.

Chu is the son of Chinese immigrants who was focused heavily on green energy as director of Lawrence Berkeley National Laboratory when Obama picked him for DOE.

He worked to overhaul DOEâ s R&D programs.

Chu has frequently touted the model of the former AT&T Bell Laboratories â where his work in the mid-1980s would yield his 1997 Nobel Prize â for incubating and developing ideas.

Under Chu, DOE has launched various â energy innovation hubs,â or research centers, that focus on batteries and energy storage, advanced nuclear reactors and several other topics.

Chu also focused on two programs that were authorized before his arrival but really got rolling under the current administration.

One was the Advanced Research Projects Agency-Energy (ARPA-E), which funds so-called high-risk, high-reward research into breakthrough technologies. The agency was created in 2007 legislation but did not receive funding until 2009.

The other was the green technology loan-guarantee program, which had not finalized support for any companies before Chuâ s arrival.

It was created in a bipartisan 2005 energy law, and modified and funded through the 2009 stimulus, which ultimately provided support for Solyndra and many other power generation and manufacturing projects.

The demise of Solyndra and some other companies that received federal loans or grants â such as Abound Solar and battery maker A123 Systems â threw DOE on the defensive and fueled GOP arguments that the White House green-energy agenda has been a failure.

A House GOP probe of Solyndra, a company that Obama visited personally in 2010, brought Chu into high-profile collisions with lawmakers and unearthed information thatâ s politically embarrassing for the White House.

A White House-commissioned outside review completed in early 2012 called for several reforms to improve management of the loan program.

But the congressional Solyndra inquiry did not substantiate Republican allegations that federal backing for the California company was a political payoff for a wealthy campaign donation bundler for Obama.

Administration officials say the woes of a few companies should not obscure the wider successes of the loan program, which has backed more than two-dozen power-generation, manufacturing and other projects. More broadly, they frequently point out that U.S. renewable energy generation has risen sharply on their watch.

However, the green-energy push that the Obama administration launched in 2009 has had its share of stumbles.

Chu on Thursday acknowledged that the administration may not meet its goal of having one million electric vehicles on U.S. roads by 2015.

Throughout his tenure, Chu has warned often that the U.S. will cede growing green-technology markets to China and other nations absent muscular federal policies to nurture and support those industries.

Chu also played a role that few could have predicted.

He lent scientific expertise to the fraught, months-long effort to contain BPâ s runaway Macondo well in the Gulf of Mexico, which spewed several million barrels of oil after blowing out in April of 2010.

Washington Post reporter Joel Achenbachâ s book about the crisis, *A Hole At The Bottom Of The Sea*, recounted the arrival of the governmentâ s â alpha scientistâ at BPâ s Houston office in May of 2010.

Chu, who has been a professor at Stanford University and the University of California, won unanimous Senate confirmation in January of 2009.

He used the DOE perch to call for stronger action to fight climate change, including efforts to impose costs on carbon emissions that have stalled in Congress.

The outgoing secretary has been especially enthusiastic about solar technologies that he likes to point out are marching toward cost competitiveness with fossil fuels.

In 2011, Chu joked that addressing pressing energy and climate-change problems led to his â downward spiral from professor to administrator to government bureaucrat.â

â Justin Sink contributed.

By Terrence Scanlon - -

ANALYSIS/OPINION:

Steven Chu, who is leaving his position as secretary of energy, might have been a great pick for the job, if only the real world worked like bad science fiction.

In comedies and sci-fi, we often encounter the â generic professorâ character, the all-discipline scientist, the master of all areas of human knowledge. In real life, though, most scientists specialize. One might be an expert on the CCR5-Delta32 AIDS-resistance allele, another on the (mem)brane concept in string theory. The amount of study and the narrow focus needed to become a world-class scientist rarely allow scientists to move outside their fields.

When scientists get involved in politics and public policy, they often make fools of themselves. Scientists promoted now-discredited ideas about phrenology (linking traits such as criminality to the shapes of peopleâ s heads), eugenics, white supremacy, nuclear winter and the â impossibilityâ of missile defense.

All-star polymaths do exist, and some have become effective politicians. Thomas Jefferson and Benjamin Franklin come to mind.

Steven Chu is no Ben Franklin.

Thereâ s no question heâ s a great physicist. He won the Nobel Prize (with two other scientists) for the development of techniques for trapping and cooling atoms with laser beams. That research makes it easier for scientists to study individual atoms, notably to study biology at the single-atom level. To his credit, he did important work to bring together the fields of biomedicine and physics, and he defied political correctness by speaking out in support of nuclear power.

The problem was that Mr. Chu overreached and became an activist. Science is supposed to be based on replicable experimentation, but little scientific research is independently verified. So trust plays a big role in science. Thatâ s why so many scientists fell for the â evolutionary levelsâ concept that fed Nazism, and for the idea of catastrophic, man-made global warming.

President Obama, it is said, brags about having Mr. Chu among his top advisers. Never mind that the secretary of energy should know something about the oil and gas business, and that a random guy working a rig in the Gulf of Mexico is probably more qualified to be energy secretary. Mr. Chuis a famous scientist â and thus an expert on everything.

Inevitably, Secretary Chu fell for one con after another.

First, Solyndra, which received $535 million from taxpayers, is now bankrupt. Abound Solar ate up $374 million and is now bankrupt. Others include UniSolar, $100 million; Ener1, $118.5 million; and Nevada Geothermal, $98.5 million. All are bankrupt. Well, at least thereâ s A123 Systems, which was awarded $249 million and developed some impressive battery technology. Oh, wait â A123 was sold to the Chinese. How about LG Chem ($142 million)? The new jobs it promised ended up in South Korea.

Mr. Chu and his cohorts claim to have created 3.1 million â green jobsâ â a term that includes janitors at

solar-powered facilities, drivers of hybrid buses and people who fuel the buses, workers at antique shops and used-record stores, environmentalist professors, and oil company lobbyists. In other words, the term is a fraud.

What about â renewable energyâ ? Another fraud, given that wind and solar require, for example, rare-earth minerals that are most definitely not renewable.

The United States sits on massive energy reserves. Our country is the Saudi Arabia of both coal and natural gas and has abundant supplies of oil, but we canâ t exploit our resources fully because anti-hydrocarbon ideology stands in the way.

Mr. Chu prefers a â glucose economyâ based on glucose from tropical plants. Before his nomination he said, â Somehow we have to figure out how to boost the price of gasoline to the levels in Europe,â which would be $8 to $10 a gallon.

Most frighteningly, Mr. Chu dreams of a U.S.-China partnership, rooted in the theory of man-made global warming, that would set the course for the world economy.

Daniel Roth reported in Wired magazine (May 2010) that Mr. Chu considers China â the key to Americaâ s long-term energy future. Since the U.S. and China produce some 40 percent of the worldâ s carbon dioxide emissions, Chu argues that far-reaching multicountry agreements arenâ t really necessary â ¦. Itâ s smarter to deal with China alone.â

Just picture it: The United States, teamed up with a government that has killed more of its own people than any other government in world history, in order to bully the rest of the world.

With Mr. Chuâ s departure, we could have a new secretary of energy with real-world experience in the energy field and with sophisticated views about technology, business and dangerous nations such as China. More likely, though, weâ ll get someone like Mr. Chu â someone who reminds us that the term â know it allâ is usually sarcasm.

Sphinx-like Secretary of Energy Steven Chu may or may not be getting closer to approaching a plan to begin the process of preparing to lay the groundwork for issuing a preliminary statement on the Solyndra bankruptcy.

TheHill.com notes that the House Energy and Commerce Committeeâ s investigative panel is asking nicely for a comment from Chu:

> Rep. Michael Burgess (R-Texas) and other Republicans on the subcommittee have called on Chu to testify on the Solyndra loan guarantee.
>
> Republicans on the panel wrote to Chu last week to request all communications between the Energy Department and the White House on the Solyndra loan guarantee.
>
> The document request is part of a broader effort by Republicans to determine if the White House rushed consideration of the loan guarantee.
>
> The committee, which launched its investigation into Solyndra in February, has already received more than 35,000 documents and has released select emails that Republicans say show that the White House tried to rush a decision on the companyâ s financing so that the loan guarantee could be announced at the Sept. 2009 groundbreaking of the companyâ s factory.
>
> The administration has insisted that it thoroughly reviewed the project, and has strongly denied any wrongdoing.

In a striking example of overpromising and underdelivering, Politico takes a story that contains no new comments from Chu and some speculation about what the energy secretary might say here he inclined to say anything, then gives it the impressive title â On Solyndra, the buck stops with Secretary Steven Chu.â A sample:

> Chu will eventually get his chance to explain his role in the sequence of events when he appears â perhaps as early as October â at a House hearing on Solyndra. He can expect a politically charged atmosphere. Republicans, after all, have already called for Silver to be fired and haven't ruled out making the same case for Chu's dismissal.
>
> What the lawmakers will likely hear from the Nobel Prize-winning physicist is an explanation that heâ s always been the key decider in the Solyndra process, with a record articulated in dozens of public statements and interviews given over the last 2Â½ years.
>
> Chuâ s message has been clear: Hearing calls from top GOP and Democratic lawmakers, including during his Senate confirmation hearing, he wanted to break through red tape inside DOE and at rival Cabinet agencies that had resisted getting loan guarantees out the door for several years after their authorization by the Energy Policy Act of 2005.

I love that â eventually get his chance to explain.â Because Cthulhu knows itâ s impossible for a cabinet-level department head to get any airtime to make a statement, what with the fragmentation of media and all.

As Chu spends time with his family, we may have a clue to why the FBI launched its investigation of Solyndra: an investigation into possible inaccurate financial statements.

The DoEâ s impeccably timed $737 million loan to the Solar Energy Project is also smelling worse by the day. It canâ t be a good sign when one of the most prominent beneficiaries of the loan is former House speaker Nancy Pelosi (D-California)â s brother-in-law, and that isnâ t even the scandalous part. NROâ s Andrew Stiles expands:

> But thatâ s not all. [Santa Monica-based SEP developer] Solar Reserve is also investment partners with Argonaut Private Equity, an arm of the (George) Kaiser Family Foundation that was a major investor in Solyndra and was involved in negotiations with the DOE to

> restructure the failed companyâ s loan agreement. That agreement would ultimately give Argonaut and other private investors priority status over the American taxpayer with respect to the first $75 million recovered in the event of Solyndraâ s collapse. As Republicans argued at a recent House committee hearing, this arrangement was almost certainly a violation of federal statute.
>
> Argonautâ s managing director, Steven Mitchell, served on Solyndraâ s board when the restructuring took place, and reportedly still serves on the companyâ s board. He is also listed as a â board participantâ at Solar Reserve.

In other words: We have top men working on it right now.

Meanwhile, the *Wall Street Journal* reports that a new poll indicates few Americans are paying attention to the Solyndra scandal, and most still support so-called clean energy initiatives:

> Of 650 Ohio voters surveyed after Solyndraâ s bankruptcy, just 11% said they had heard â a great dealâ about the issue, the pollsters said. They also found that while 16% said they had heard â a little,â those people couldnâ t talk about the issue in any detail.
>
> California voters who participated in focus groups were more aware of the story, but still supported clean energy and considered Solyndra to be a bad apple rather than an indication of a systemic problem. Nearly two-thirds of voters in the Ohio poll expressed similar sentiment, saying their view was more aligned with a statement that problems with one failed company should not stop clean energy investments as a whole.

More surprising than the continued support for solar power is the apparent support for spending taxpayer dollars on it, which the report [pdf] from Public Opinion Strategies has at 62 percent, versus 31 percent opposed. However, Iâ m a little skeptical of the strongly leading questions:

I hope the remaining 7 percent answered, as I would have, â Both of these options are stupid.â I donâ t want my taxes subsidizing private companies of any kind, and Iâ m aware that the amount of energy conventional solar power generates is modest. But how the hell should I know whether solar businesses can compete or succeed without government assistance?

The only way to find out whether these companies can work in the marketplace is to let them compete without government assistance. In the wake of Solyndra a few companies have in fact come forward to brag about their subsidy-free business models, and I wish them well. If anything, the stunning longevity of the Mars rovers has impressed upon me the viability of solar power, on Mars.

Finally, this video has been in wide circulation for a few weeks, but seems to be getting a lot of attention today. Joe Biden, youâ ve done it again!

Media Contac

Steven Chu

Pon Patriot or Traitor

Steven Chu is a traitor.

Steven Chu is a traitor.

â The final decisions on Solyndra were mine,â said Secretary of Energy Steven Chu in his testimony before the House Energy and Commerce Oversight Committee on November 17, 2011. And this should be his political epitaph. Chuâ s decision to pour $528 million tax dollars into a failing green energy boondoggle that went belly-up in 2011 is indefensible and corrupt, especially in light of the fact that Solyndraâ s key investor (Tulsa billionaire George Kaiser) also happens to be a major Obama campaign donor.

On March 12, 2012, Rep. Darrell Issaâ s (R-CA) Energy and Oversight Committee exposed the full extent of Chuâ s incompetence and corruption in a report citing â numerous examples of dysfunction, negligence and mismanagement by DOE [Department of Energy] officials, raising troubling questions about the leadership at DOE and how it has administered its loan guarantee programs.â The report accused Chuâ s DOE of having â turned a blind eye to the risks that have been glaringly apparent since the inception of the program.â

Whether Chu indeed made the â finalâ decision on Solyndra, or is simply protecting the president and his donor, this is a scandal of a major magnitude. And yet, it is only the tip of the iceberg. As Peter Schweizer, author of the book Throw Them All Out wrote, â According to the Department of Energyâ s own numbers â ¦ In the 1705 government-backed-loan [green energy] program, $16.4 billion of the $20.5 billion in loans granted â ¦ went to companies either run by or primarily owned by Obama financial backersâ individuals who were bundlers, members of Obamaâ s National Finance Committee, or large donors to the Democratic Party.â

Stunning. How The Russians Got The Material To Destroy America

Marc by Jim Hoft 317 Comments

- **2.7K**Share
- **447**Tweet
- Email

On Wednesday Russian leader Vladimir Putin threatened the Westwith unstoppable intercontinental nuclear missiles.

Putin announced that Russia had developed an intercontinental nuclear missile that canâ t be stopped or shot down by any countryâ s defence system

The Russian leader said the rocket travels 20 times the speed of sound and has unlimited range.

Now we know where Putin gained the technology to build the missiles. â Hillary Clinton.

Diana West at The Daily Caller reported, via Andrew Bostom:

> This shocking set of emails that the Examiner reported on shows the nexus of Bill and Hillary Clintonâ s foundation, Hillary Clintonâ s State Department, Bill Clinton, Russian oligarch Vekselberg, and Skolkovo, â Russiaâ s Silicon Valley,â the Putin project to transfer Western technology to Russia that was championed and driven by Mrs. Clinton â and, what do you know, 17 out of 28 tech companies that hitched up with Skolkovo also contributed to the Clinton Foundation? What a coincidence. Meanwhile, Barack Obamaâ s support for Russian WTO membership made the whole global flow so much easier.
>
> No wonder Herd Media, the Uniparty Congress and FBI Director James Comey never noticed a thing. Oh, except that Putin â hatedâ Hillary Clinton, â wanted to do her harm,â as Comey told Congress this week. Grrr. Maybe hypersonic technology wasnâ t enough. But Iâ m getting ahead of the story.
>
> Letâ s pick up with an Army report on Skolkovo written in 2012 (released in 2013) to assess â the implications â ¦ for U.S. policymakers.â
>
> > Although military activities are not an official cluster of activity, the Skolkovo Foundation has, in fact, been involved in defense-related activities since December 2011, when it approved the first weapons-related projectâ the development of a hypersonic cruise missile engine. The project is a response to the U.S. Department of Defenseâ s Advanced Hypersonic

> Weapon, part of the Prompt Global Strike program.
>
> Fast forward to November 2016, shortly after Donald Trump was elected president when the US Air Force released a report on â *no way* â the Russian and Chinese hypersonic missile threat to the United States.
>
> > The United States is vulnerable to future attack by hypersonic missiles from China and Russia and is falling behind in the technology race to develop both defensive and offensive high-speed maneuvering arms, according to a new Air Force study.
> >
> > â The Peopleâ s Republic of China and the Russian Federation are already flight-testing high-speed maneuvering weapons (HSMWs) that may endanger both forward deployed U.S. forces and even the continental United States itself,â an executive summary of the report says.
> >
> > â These weapons appear to operate in regimes of speed and altitude, with maneuverability that could frustrate existing missile defense constructs and weapon capabilities.â
>
> In a functioning democratic republic, the executive branch decisions and procedures and corruption that led to this defense cataclysm would actually alarm security officials, lawmakers, and even arouse media curiosity, if nothing else. But Skolkovo, the money, the corruption, the treachery, the danger, inspire no reaction at all.

Hillary Clinton gave the Russians this technology to destroy American cities.
And she gets cheered at restaurants all over New York City.

Putin says Russia has nuclear weapons 'invulnerable to interception' Thanks Hillary (dailymail.co.uk)

TESLA BOSS CONFIRMS THAT OBAMA ENERGY DEPT AND ELON MUSK PARTNERED TO KILL OFF MUSK COMPETITORS

In Role as Kingmaker, the Energy Department Stifles Innovation To Protect Obama Financiers Musk, Et Al

Of all of the Department of Energy programs intended to advance the green agenda while stimulating the economy, the Advanced Technology Vehicle Manufacturing incentive to spur the development of cleaner, greener automobiles is perhaps the most ambitious. But it has a downside.

The energy department has approved direct loans to Nissan, Ford, Tesla Motors and Fisker Automotive totaling about $8 billion out of a budget of $25 billion. The magnitude of this program dwarfs other DOE campaigns like the $2.4 billion given to battery and electric vehicle component manufacturers and the $4 billion disbursed for â smart gridâ projects.

To the recipients the support is a vital and welcome boost. But this massive government intervention in private capital markets may have the unintended consequence of stifling innovation by reducing the flow of private capital into ventures that are not anointed by the DOE.

To understand this apparent contradiction, you have to look at the market from the perspective of venture capitalists looking to deploy investorsâ capital and startups looking to attract it.

Venture capitalists evaluate a company on the basis of whether they think it will succeed and generate returns for their portfolios. While this evaluation is a function of many things, one key question is how much more capital the company will need to get its product to market or a liquidity event so that the venture capitalist can see a return. The more capital it needs, the more dilutive it will be to the early investors.

In cleantech, and in particular alternative fuel vehicles, the capital requirements for companies bringing a car to market in significant numbers can be extraordinarily high, reaching into the hundreds of millions of dollars if the company wants to build its own manufacturing facilities.

To a venture capitalist, this capital requirement can be daunting. This is why government financing is so attractive. In the case of the advanced technology manufacturing loans, the DOE steps up for 80 percent of the total amount needed. Private sources fund the other 20 percent. This amounts to free leverage for the venture capitalist's bet, with no downside. Hedge funds historically used massive leverage to generate outsized returns, but if the trade turns against them, that same leverage multiplies their downside and can lead to financial ruin. In the case of the DOE loans or grants, the upside is multiplied and the downside remains the same since the most the equity investor can lose is the original investment.

The proposition is so irresistible that any reasonable person would prefer to back a company that has received a DOE loan or grant than a company that has not. It is this distortion of the market for private capital that will have a stifling effect on innovation, as private capital chases fewer deals and companies that do not have government backing have a harder time attracting private capital. This doesnâ t mean deals wonâ t get done outside of the energy department's umbrella, but it means fewer deals will be done and at worse terms.

According to Earth2Tech, venture capitalist John Doerr commented on this at the GreenBeat conference earlier this month, saying â If weâ d been able to foresee the crash of the market we wouldnâ t probably have launched a green initiative. Because these ventures really need capital. The only way in which we were lucky I think is that the government stepped in, particularly the Department of Energy. Led by this great administration that put in place these loan guarantees.â

Several sources within startup companies seeking DOE loans or grants have admitted that private fundraising is complicated by investor expectations of government support. None would speak publicly due to the

sensitivity of the issue and the ongoing application process.

Aptera Motors has struggled this year to raise money to fund production of the Aptera 2e, its innovative aerodynamic electric 3-wheeler, recently laying off 25 percent of its staff to focus on pursuing a DOE loan. According to a source close to the company, â all of the engineers are working on documentation for the DOE loan. Not on the vehicle itself.â Another highly placed source at Aptera told Wired.com many potential investors wanted to see approval of the DOE loan before committing to invest.

Startup companies that enjoy DOE support, most notably Tesla Motors and Fisker Automotive, have an extraordinary advantage over potential competitors since they have secured access to capital on very cheap terms. The magnitude of this advantage puts the DOE in the role of kingmaker with the power to vault a small startup with no product on the market -â as is the case with Fisker â into a potential global player on the back of government financial support.

As a result, the vibrant and competitive market for ideas chasing venture capital that has been the engine of innovation for decades in the United States is being subordinated to the judgments and political inclinations of a government bureaucracy that has never before wielded such market power.

A potential solution to this problem may seem counter-intuitive. The best way to avoid market distortion would be for the DOE to cast the net more broadly and provide loans and grants to a larger number of companies â which ironically means being less selective. Subject to the existing equity matching requirement, this would allow the private markets to function more effectively in funding a broader range of companies and driving more innovation. Several innovative companies with great potential have been in the DOE pipeline for many months. Perhaps it is time for the DOE to stop playing favorites and start spreading the love.

Wired.com contacted the Department of Energy for comment but did not receive a reply.

*Disclosure: Darryl Siry was the chief marketing officer of Tesla Motors from December 2006 until December 2008 and is a special advisor to Coda Automotive, which has not sought an Advanced Technology Vehicle Manufacturing loan.
*

Photo: Ford Motor Co. Energy Secretary Steven Chu addresses Ford employees on June 23, 2009, after announcing the automaker will receive a $5.9 billion loan.

Darryl Siry: How the Energy Department stifles innovation

Sebastian Blanco

Darryl Siry is making the most of his perch at Wired's Autopia to bring interesting discussion topics to the attention of the green car community. The latest: how the U.S. Department of Energy's Advanced Technology Vehicle Manufacturing Program (ATVMP) â intended to help put cleaner vehicles on the road â "has a downside."

The ATVMP has so far given out loans to Ford ($5.9 billion), Nissan ($1.6 billion) Fisker Automotive ($528.7 million), and Tesla Motors ($465 million). This is just about $8.5 billion of the program's $25 billion. As Siry points out, the ATVMP is much bigger than similar green car DOE programs. So, what's the problem? Siry worries that the DOE attention "may have the unintended consequence of stifling innovation by reducing the flow of private capital into ventures that are not anointed by the DOE." Basically, why would anyone invest in Aptera, which has not gotten funding, when they could invest in Tesla instead (when Tesla goes public, anyway). Apply this question to the broader green tech industry, and you can see that start-ups that haven't gotten DOE money won't look nearly as good as those that have, and thus their tech dies on the vine. Or so the theory goes.

We often hear the cliched refrain that the government should not be in the business of picking winners, that the market should decide which technologies make the most sense. Well, that's great except that the market for a long time has decided that gasoline is the winner, and is not all that concerned about the negative effects of its choice. The market has not functioned to bring enough alternative vehicles from start-ups â or cleaner cars from the big players â into production. The government has decided that gasoline's time is over and needs to be replaced. To do that, it needs to pick what it believes are the best alternatives, and thus it funds some technologies (plug-ins) over others (hydrogen, at least the current administration did so). Siry's possible solution to the stifling effect he foresees is "for the DOE to cast the net more broadly and provide loans and grants to a larger number of companies - which ironically means being less selective."

Siry Departed Tesla On Deposit Fraud Fears That Musk Was A Scammer

https://www.thetruthaboutcars.com/2009/02/siry-departed-tesla-on-deposit-fraud-fears/

Gawker reports that Tesla spinmeister Daryl **Siry** left the Silicon Valley startup because CEO Elon Musk (above) was pushing to accept deposits on the Model S sedan. The Model S (a.k.a. WhiteStar) exists only as a prototype. Tesla has no factory or financing with which to build it. When Musk announced that the DOE would approve Tesla's loan application (they haven't and likely won't) and ...

THE "HIT-LIST"

We hired CIA and FBI-Level experts to identify and hunt down (100% Legally) every single person and organization that used taxpayer resources to try to attack, kill, damage and sabotage us and now we are getting every single one of them fired, exposed, sued and placed under surveillance for the rest of their lives!

CRIME DOESN'T PAY.

THE ARM OF JUSTICE IS QUITE LONG!

THE CLEANTECH CRASH, SCANDAL UPDATES

Version Update 9/1/2015.B

Letâ s check out the latest news in the notorious ***â Cleantech Crash***â that brought you Solyndra, corruption scandals and political ruckus. Here is a quick overview of the latest findings.

What were the attacks and abuses of office:

- **Federal officials specifically assigned contract, and funding application, reviews to individuals known to already have political, financial and familial incentives to see the Plaintiffs fail. These federal officials knew, from the outset, that their associates would never pass anyone who competed with their friends, and who was not on a pre-approved list of â hard-wiredâ insiders. Most of these â reviewersâ were, themselves, competitors to Plaintiff, whose technology could have put some of their companies out of business.**
- What is the proof?:
- Financial, stock, employment, payment, asset, email and meeting documents confirm this. Government and media investigations provide additional proof.

==========

- **Federal records show that one of the Plaintiffs companies was in the #1 position to receive funding in the federal program. When the friends of federal officials discovered Plaintiffs lead position, and realized that they were also technology competitors, they ordered Dept. of Energy bosses to change the taken-in-order received rules so that Plaintiffs were no longer in the lead. This was done because White House and Department of Energy friends were the campaign financiers, competing applicants, business competitors and pre-arranged awardees**
- What is the proof?:
- Federal public records and DOE witnesses

==========

- **Department of Energy senior staff promised to provide a single one-sentence comment to Plaintiffs investors in order for those investors to provide the application fee, which the Department of Energy had required, from one of Plaintiffs Companies. The Senior Department of Energy official refused to provide the response until after the deadline for application receipt had passed. At the moment that the deadline had passed, the official, sent a time stamped email stating that it was too late to apply because we had missed the deadline which he had caused to be missed. This senior DOE staff member had intentionally sabotaged the application by refusing to respond, per his promise, to a huge number of emails, FedEx requests and phone calls; even though his secretary said he was in the next room, each time Plaintiffs attempted to**

follow-up. He was an associate of Plaintiffs competitors and ran part of the Department of Energy

- What is the proof?:
- Time stamped communications, Department of energy records and law enforcement surveillance.

==========

- **One of Plaintiffs Companies wrote a letter of complaint to Senator Bingaman and the Senate Committee that oversees the Department of Energy. Senator Bingaman forwarded the letter to Steven Chu, for his comment on the issue. Steven Chu wrote a letter back in which Chu specifically refused to comment on the issue.**
- What is the proof?:
- Library of Congress and Federal document records

==========

- **Steven Chu only awarded federal funds to his friends, who also were campaign financiers and business competitors of Plaintiffs companies.**
- What is the proof?:
- Federal records, email, stock market records, emails, investigative documents, surveillance.

==========

- **White House staff had pre-coordinated with Steven Chu, and the few awardees who actually received the funding, in advance of the beginning of the funding program, in order arrange quid-pro-quo kickback arrangements, while, at the same time, damaging their competition.**
- What is the proof?:
- Public records, news reports, stock evidence, PAC reports, family trust records, financial records, corporate records, ownership documents, and surveillance.

==========

- **Federal officials solicited independent applicants such as ZAP, Bright Automotive, Aptera, XPV and many others, to use them as cover stories in order to make the program look like it had not been rigged, in advance, when, in fact, it had been. Every applicant who was not on the pre-rigged insider list, and competed with those who were, was terminated by the actions of federal officials**
- What is the proof?:
- Retrospective records and federal documents prove that no independent company, who was not friends with, and financiers for, DOE and White House campaigns, was rejected. Emails, witnesses, financial documents, waterfall charts, surveillance, restaurant videos of meetings, and testimony records.

==========

- **White House and DOE officials ordered, coordinated, managed and supported media and economic financial assassination and character assassination attacks on applicants who reported misdeeds. They used their contractors: In-Q-Tel, New America Foundation, Think Progress, Gawker Media and certain other, specific, hired writers, and operatives to engage in this revenge and retribution attacks.**
- What is the proof?:

- The vast and clearly visible publicly published news coverage clearly proves that the attacks did happen. Numerous other citizens have recently filed lawsuits against federal officials proving that they were subjected to the same attacks by the same Administration. All of the above-mentioned attack contractors have been financially, politically, familiarly, asset, communications and activity traced back the same federal officials and their friends, who also happen to be the same friends who are the only ones to receive the cash from the funding programs and who also, coincidentally, happen to be competitors of the Plaintiffs; while, also coincidentally, being the campaign financiers of this Administration. Additionally, the particular scope, distribution and timing of the attacks specifically times out to be synchronous to the complaints filed by the Plaintiffs. All Plaintiffs had glowing reference and top standings until the attacks, for decades prior, proving the attack period to be an anomaly. Web published exhortations by the attackers show that they, exclusively, financed, managed and controlled the attacking contractors. IP and DNS server records.

==========

- **Federal officials control the search results of Google, for political purposes, and used Googleâ s monopolistic control of internet news and media to attack the Plaintiffs because they were competitors and because they reported the misdeeds of those federal officials and cooperated with federal investigators who were looking into their crimes.**
- What is the proof?:
- EU investigations have proven that Google rigs its search engine via manual manipulation. Kliener Perkins created Google, received some of the largest cash kickbacks from DOE and White House sources, funded The White House and West Coast Senators campaigns and can be financially, stock market, communications and witness-traced as the controlling party in most Google political search manipulations. Additionally, multiple research institutes, as well as Plaintiffs own private investigators, have revealed that they had placed thousands of internet servers across the internet to document and records Googleâ s malicious search engine manipulations, and political attacks, ever since 2009. Complete technical evidence now exists to prove that Google, specifically manipulated its search results, at the request of federal officials, in order to attack the Plaintiffs in revenge for helping investigators and to seek to minimize their credibility if a Special Prosecutor should ever be appointed.

==========

- **Eric Holder and Steven Chu were placed in office with orders to protect the Department of Energy and TARP kickback scheme from discovery.**
- What is the proof?:
- The law firm of Covington and Burling lobbied to place both of them in office under the direction and payroll of the very same people who were Steven Chuâ s friends and recipients of the DOE cash. Public records, family trust disclosures, emails, former Covington and Burling staff, surveillance and federal investigation files. Both are shown to have had personal, business and stock relationships with all of the financiers and their companies, before, during, and after their federal office roles.

==========

- **Lachlan Seward, Steven Chuâ s cash administrator at the Department of Energy, ordered federal record shredded and told his staff to ignore, and/or manipulate the records of the applicants who were not friends of Steven Chu.**
- What is the proof?:
- Previous, and later, documents for Tesla Motors show differences in the documents. DOE staff engaged in shredding order by Seward. DOE Maintenance records. DOE cameras. Emails. Missing evidence requested by Committees.

==========

- **Steven Chu waived Tesla Motors application fees on request of White House operatives.**
- What is the proof?:
- Tesla staff have been recorded confirming this. U.S. Treasury and OBM staff have, additionally, confirmed this.

==========

- **Elon Musk, at the time one of the richest men in America, has needed to receive tens of billions of dollars of taxpayer hand-outs as a kickback for him, and his friends, for funding Obamaâ s and Dianne Feinsteinâ s political efforts. He got his State & federal cash as part of a kick-back scheme**
- What is the proof?:
- For the Feinstein proof. Emails, surveillance, public records and witness testimony proves that the Feinstein family did lobby to put Solyndra and Tesla on the same plot of land that they controlled in Fremont, California. The real estate records, family trust documents, tax documents, emails, Fremont council meetings with Feinstein staff, Feinstein control of Newman Search HR for Tesla and Solyndra, Feinstein sharing of staff with Tesla/Solyndra, Feinstein inside stock trading, Feinstein adjacent property ownership, Feinstein construction company ownership, Feinstein leasing and contract rights ownerships, and related documents, Documents from Toyota, prove that the Feinsteinâ s got Solyndra and Tesla funded in exchange. For insider trading and cash kickbacks. Additionally, emails, phone records and surveillance show that Feinstein staff threatened some of the Plaintiffs and engaged in sabotage against their business efforts which competed with Tesla and Solyndra. Steven Chu and Elon Musk are personal friends and associates of the Feinstein family. The evidence and proof of the Feinstein/Tesla/Solyndra collusion is quite substantial. For the evidence of the White House/Musk collusion connects to both Musk and John Doerrâ s company: Kliener Perkins: Emails, family trusts, HSBC leaks, witnesses, other related lawsuit evidence, Goldman Sachs surveillance recordings, stock ownership and transaction records, and federal criminal investigation files provide ample proof. Additionally, simple math also provides verification. There is no record, in recorded history, of such a wealthy man receiving so many government handouts, in such sizes, with such minimal results, unless there was an organized crime scheme underway. Additional evidence and leak documents also verify these charges.

==========

- **The Plaintiffs had the best, most attractive debt-ratio standing of all applicants. Tesla had the worst debt-ratio standing, of all the applicants, yet Tesla received the award even though the federal section 136 law said that debt-ratio status was the key determination component.**
- What is the proof?:
- Elon Musk has been recorded in news articles, network TV and in his own emails testifying to the fact that, at the time of his application to DOE, Tesla was about to go bankrupt and he was preparing â Golden Parachuteâ massive payout packages for the end of Tesla. Teslaâ s own financial records and documents filed with Welles Fargo Bank prove that Tesla was mired in debt, had no demand for its product, and should file bankruptcy. In spite of these facts, Tesla, in violation of the Section 136 law, was awarded federal taxpayer cash when they had no hope of surviving without that cash. This was illegal. Federal criminal investigation records by multiple agencies and committees further prove this fact.

==========

- **White House and Federal Reserve Bank staff help keep Tesla afloat by shifting stock market**

metrics, stock pumps with buyback incentives and other special resources in order to do anything to keep Tesla from bankruptcy and investigation like its next-door twin: Solyndra.

- What is the proof?:
- When Solyndra died and was FBI raided, Presidential candidate Mitt Romney was recorded saying â Tesla and Solyndra were Losersâ . This is published widely in news broadcasts and publications. White House press staff became so fearful that the Steven Chu campaign finance kickback scheme would go public that they organized one of the biggest character assassination campaigns, ever created, against Romney, using the Google politics engine. Romney is recorded and documented, in many news broadcasts describing this character assassination attack on him by White House operatives. The ultimate crash of Tesla will vindicate the deeply White House hated Romney, provide steam to competing campaigns, and expose the whole kickback scheme. White House operatives have been shown to stop at nothing to keep Tesla alive in the media in order to avoid lethal embarrassment. While Tesla has had a record number of deaths, fires, crashes, drunk driving incidents, toxic vapors, divorces, fraud lawsuits and low demand; all of those downsides are covered up by Google and White House controlled media as proven in 5 years of side by side news story comparisons of actual news in non-controlled outlets vs. manipulated news in White House campaign financier controlled outlets such as Google.

==========

- **Federal officials had their contractors call Plaintiffs employers and get them fired, in revenge.**
- What is the proof?:
- Phone records, federal surveillance, HR services.

==========

- **Gary D. Conley, Rajeev Motwani, David Bird, Karl Slym, Ravi Kumar, and many other, mysteriously deceased, persons had personal competitive, investigative or business interactions with the Defendants?**
- What is the proof?:
- YouTube videos, family members, their own boogs, published communications, emails.

==========

- **Federal officials asked applicants to work on federal projects which involved toxic and lethal materials which Plaintiffs were exposed to working with the U.S. Department of Energy program. When Plaintiffs filed for federal offsets for their poisoning by toxic materials, their disability claims were stalled, manipulated and denied.**
- What is the proof?:
- MSDS records, federal contracts and NDAâ s, surveillance and security office records, nuclear secrets agreement documents filings, federal records, emails, phone communications, federal hearing records.

==========

- **Federal officials ordered their contractors to manipulate job hiring databases so that Plaintiffs who had reported mis-deeds would get â red flaggedâ when recruiters or employers tried to hire them; thus terminating any hopes they had for getting future employment.**
- What is the proof?:
- Klayman lawsuit records, Judicial Watch NSA lawsuit filings, database research, sting investigation, HR test via private investigators, Comparative analysis metrics.

==========

- **Part of Steven Chu's scam involved manipulating mining commodities with Goldman Sachs and Kleiner Perkins, using taxpayer money.**
- What is the proof?:

- The Frank Guistra disclosures, evidence in the Raj Gupta arrest, Steven Ratnerâ s indictment file, HSBC leak documents, origination records for the published articles entitled: "Afghanistan is the Saudi Arabia of Lithium" and "Trillions of dollars of lithium in Afghanistan". FBI records from the Solyndra raid. U.S. Senate investigation files from the Goldman Sachs metals commodity manipulation investigations. Stock ownership disclosures, family trust ownership documents, Cayman Islands banking disclosures, PAC forensic examination files, real estate and shipping ownership records, supplier contracts from Solyndra, Tesla Motors, A123 and related commodity exploiters, surveillance records, witness testimony, DOJ records and investigations, U.S. Treasury records and investigations. Goldman Sachs skimming of stock profits on almost every Steven Chu funded federal deal.

There are over 200 **additional** misdeeds and proof overviewsâ ¦ stay tuned.

Records, evidence and material provide by, and shared with: Law enforcement agencies, news bureaus, news aggregation sites, consumer rights organizations, taxpayer organizations, Grand Jury offices, subscribed voters and related entities.

Security Note: To protect Plaintiffs, All of the data exists in globally published, disguised, encrypted â Drawstringâ torrents which can be released on a momentâ s notice by multiple parties

THE FACTS IN THE FBI REPORT PRESENTED TO THE SAN FRANCISCO AND WASHINGTON DC FBI OFFICES:

- Famous San Francisco and Washington DC political figures, that we personally knew, shared homes with and worked with, use the government treasuries and stock market for illicit racketeer-class profiteering.

- They attacked us using taxpayer funded character assassination media and spy agency tools because we competed with their businesses, reported their crimes and refused to participate in their crimes.

- San Francisco Bay Area government has as many corrupt politicians as Chicago and relies on the same RICO-violating insider corruption network to operate; as proven by deep computerized AI searches of all of their covert financial records.

- Silicon Valley law enforcement records prove that these tech oligarchs engage in massive sex trafficking, tax evasion, anti-trust violations, spousal abuse, money laundering, black-listing, racism, political bribery, crony racketeering and other crimes.

- Famous U.S. Senators, Governors and their staff knowingly engage in, finance, operate and benefit from these crimes via stock market payola, revolving doors and search engine manipulations.

- Silicon Valley and Hollywood news media companies censor and cover-up news coverage of these crimes because they have a financial connection to the perpetrators.

WHAT DOES THIS EVIDENCE PRECISELY PROVE?

- - That these FBI-filed facts are not 'Conspiracy Theories' (https://www.zerohedge.com/news/2015-02-23/1967-he-cia-created-phrase-conspiracy-theorists-and-ways-attac)but daily occurrences in politics as proven by every major news outlet in the world, federal court records, FBI records and Congressional investigation reports.
- - That we are federal whistle-blowers and business competitors of public officials who operated illegal and Constitutional-rights-violating reprisal hit-jobs and attacks (https://www.breitbart.com/politics/2019/10/03/flashback-obamas-war-on-whistleblowers-more-prosecuted-as-) against us using taxpayer financed resources.
- - That State and Federal agencies owe us money, and other consideration, to pay for our: 1.)Damages (https://en.wikipedia.org/wiki/Damages), 2.)losses, 3.) benefits blockades, 4.) witness fees, 5.) whistle-blower fees, 6.) informant fees, 7.) punitive compensation, 8.) legal costs and other items caused by criminal corruption, reprisal attacks and illicit quid-pro-quo operations within their government offices by their government employees, contractors and covert financiers.
- - That a Smedley Butler-style 'Business Plot' (https://en.wikipedia.org/wiki/Business_Plot)crime program exists between Silicon Valley Tech Oligarch (https://www.vanityfair.com/news/2018/01/brotopia-silicon-valley-secretive-orgiastic-inner-sanctum)billionaires, investment banks, U.S. Senators, government agency staff and White House staff to engage in these crimes.
- - That public officials knowingly participate in these crimes by failing to report their associates who engage in these illicit actions and by hiring Google, Fusion-GPS and Black Cube-type suppliers who operate these illicit activities in revolving door schemes.
- - That the suspects manipulate (https://www.washingtontimes.com/news/2012/jan/26/obamas-crony-capitalism-667847839/)government funds for their personal profiteering at the expense of domestic citizen taxpayers like us and acquire what the U.S. Treasury calls: "unjust gain".
- - That the suspects operate a vast stock market manipulation (https://safehaven.com/article/45213/The-Most-Common-Market-Manipulation-Techniques)program, as a core function of their operations, and exchange most of their bribes via the stock market and those illicit deeds function at the expense of the public.
- - That the suspects contract a known group of lobbyists, corrupt law firms, unethical CPA's, corrupt investment banks and specialized corruption (https://www.armstrongeconomics.com/world-news/govt-incompetence/endless-cycle-of-corruption/)services providers to attack, defame, physically harm, character assassinate (Using their Google, Youtube, Gizmodo, Fusion GPS, Black Cube, Media Matters, et al, "kill" services), black-list and harm those they dislike and that they harmed us with those actions.
- - That the suspects operate an Epstein-like sex-trafficking network (https://www.washingtonpost.com/opinions/sex-slavery-isnt-just-a-problem-overseas/2016/01/15/bc3acb04-bac)of prostitutes and sexual extortion activities and locations for the engagement of said activities and for the bribery of cohorts via sex workers.
- - That the suspects engage in electronic attacks (https://www.privacytools.io) and manipulations including hacking, election manipulation, media censorship and internet search results manipulation in order to mask their schemes.
- - That we have yet to find a single Palo Alto Sandhill Road VC in this group who is not involved in

bribery, racism, sexism (https://www.theatlantic.com/magazine/archive/2017/04/why-is-silicon-valley-so-awful-to-women/517788/) , tax evasion, sex (https://www.newsweek.com/metoo-microsoft-amazon-trafficking-prostitution-sex-silicon-valley-755611)trafficking, black-listing, securities law violations, violent abuse (https://www.thedailybeast.com/video-of-silicon-valley-mogul-kicking-his-girlfriend-117-times-could-send-hin off-shore money-laundering, FEC violations, search engine manipulation, massive anti-trust violations, patent theft and other crimes!

- - That the suspects engage in 'Lois Lerner' IRS-like (https://en.wikipedia.org/wiki/IRS_targeting_controversy), SPYGATE-like, VA whistleblower-like reprisal and retribution attacks by manipulating resources within government agencies like SSA, DOJ, FBI, LSC, HUD, HHS, DOE, Etc.
- We have millions of pages of additional evidence proving these assertions provided by FBI, GAO, Congressional, journalism, leaker and whistle-blower sources.

THE CURRENT ASSERTIONS AND THE EVIDENCE PROVING THOSE CHARGES PER QUESTIONS AND COMMENTS FROM LAW ENFORCEMENT STAFF, CONGRESS, THE PUBLIC AND JOURNALISTS. CHECK BACK DAILY FOR NEW EVIDENCE UPDATES IN THE REPOSITORIES:

If you have any evidence disproving any of these assertions please submit that evidence in FBI SD 302-form narrative structure and it will be included in these files.

Additional statements from victims:

"SILICON VALLEY OLIGARCHS AND OBAMA WHITE HOUSE STAFF HIRE CHARACTER ASSASSINS, LIKE THOSE REVEALED IN RONAN FARROW'S BOOK "CATCH AND KILL", ON A DAILY BASIS AND HAVE THEM ATTACK INNOCENT VOTERS AND SMALL BUSINESS COMPETITORS"

"SILICON VALLEY CEO'S AND VENTURE CAPITAL FIRMS ON PALO ALTO'S SANDHILL ROAD OPERATE AN ORGANIZED CRIME RING BASED ON BRIBERY, TAX EVASION, SEX CRIMES, STOCK MARKET RIGGING AND OTHER CRIMINAL COLLUSION. THE SILICON VALLEY MOB CONSPIRES AND COORDINATES THE GLOBAL MANIPULATION OF MEDIA, NEWS AND INFORMATION IN ORDER TO HIDE AND HARM COMPETITORS AND EXCLUSIVELY PUMP THEIR OWN STOCKS"

"TYCOONS AND SILICON VALLEY TECH OLIGARCHS HIRE PRIVATE INVESTIGATORS AND SPIES TO FOLLOW ALL THE WOMEN THEY LIKE AND THE COMPETITORS THEY HATE?"

" MEDIA REPORTS SAY THAT ELON MUSK IS A 'LYING', 'NARCISSIST', 'SOCIOPATH', 'JEFFREY EPSTEIN SEX ADDICT', 'FRAUD' WHO BRIBES POLITICIANS FOR TAX HAND-OUTS, IS PROTECTED BY BROMANTIC RELATIONS WITH GOOGLE'S LARRY PAGE AND ORDERS HIT-JOBS ON HIS COMPETITORS."

"CHARACTER ASSASSINATIONS AND DEFAMATION ATTACKS WERE ORDERED, OPERATED AND PAID FOR BY WHITE HOUSE, CALIFORNIA SENATORS AND GOOGLE EXECUTIVES"

"THE EVIDENCE PROVES THAT GOOGLE IS A CRIMINAL CARTEL, AN UNREGULATED POLITICAL PAC AND A TAX EVADING, SENATOR BRIBING ILLICIT DOMESTIC SPYING OPERATION."

"THE EVIDENCE PROVES THAT SILICON VALLEY OLIGARCHS HIRE CROOKED LOBBYISTS AND BIG TECH LAW FIRMS THAT THEY PAY COVERT COMPENSATION TO FOR THEIR SERVICES TO MANIPULATE THE GOVERNMENT."

"LITHIUM ION BATTERIES ARE PART OF A TRILLION DOLLAR+ RARE EARTH MINING SCAM. THEIR KNOWN DANGERS ARE COVERED UP BY LEFTIST PRESS IN ORDER TO PROTECT ELON MUSK'S AND GOOGLE'S INVESTMENTS IN THEM. CALIFORNIA SENATORS OWN STOCK IN THEM AND COVER UP THE DEADLY TOXIC AND EXPLOSIVE DANGERS OF THEM. Elon Musk and Panasonic engaged in "product dumping" because they both knew, over a decade ago, that the 18650 lithium ion batteries would 1.) degrade and explode due to faulty chemistry and dendrite expansion, 2.) Had toxic cancer-causing fumes when ignited, 3.) used child labor and genocide regions for mining the raw materials, 4.) could never hold up in auto powerplant use, 5.) sickened and killed the workers making them; and other horrific things that were covered up in an epic, and ongoing, safety scam because U.S. Senator's and CIA executives own stock in lithium ion batteries. These facts are easily proven in court!"

"SILICON VALLEY EXECUTIVES, FAMOUS POLITICIANS AND VENTURE CAPITALISTS OPERATE A SEX CULT AND SEX TRAFFICKING RING"

"THE SO CALLED "PAYPAL MAFIA" AND "THE DEEP STATE" ARE THE SAME GROUP OF PEOPLE"

"SILICON VALLEY WEB COMPANIES USE SPYING-ON-THE-PUBLIC TO SEEK TO RIG ELECTIONS AND CONTROL THE MASSES FOR THEIR PERSONAL IDEOLOGIES. THE TRADE THOSE ILLICIT SERVICES WITH FAMOUS POLITICIANS IN EXCHANGE FOR GOVERNMENT CONTRACTS, GRANTS, LOANS AND FAVORS.."

"GOVERNMENT AGENCIES, IN PARTICULAR THE U.S. DEPARTMENT OF ENERGY, SSA, FTC, ETC, ARE USED AS POLITICAL SLUSH FUNDS TO PAYOLA OBAMA CAMPAIGN FINANCIERS AND SABOTAGE THOSE FINANCIERS COMPETITORS..."

"THERE ARE FULLY LEGAL, INTELLIGENCE AGENCY CREATED, FBI-CLASS TACTICS, FORENSICS METHODOLOGIES, MASS PUBLIC CROWD-SOURCED INVESTIGATION TOOLS AND TECHNOLOGIES THAT THE PUBLIC CAN USE TO DESTROY THESE CORRUPT OLIGARCHS... HERE ARE PUBLIC TACTICS THAT REGULAR FOLKS HAVE USED IN THE PAST TO TAKE-DOWN THESE KINDS OF CORRUPT OLIGARCHS AND THEIR DIRTY COMPANIES..."

"MOST CALIFORNIA POLITICIANS HAVE BEEN TAKING BRIBES, MOSTLY IN THE FORM OF STOCK TRADES, IN EXCHANGE FOR HELPING THEIR FRIENDS COMPANIES AND HARMING THEIR FRIENDS COMPETITORS"

"Certain California State officials, Obama White House Staff and Federal Agency staff accepted bribes from Silicon Valley Oligarchs and Investment Bank Cartels. They were bribed with: Billions of dollars of Google, Twitter, Facebook, Tesla, Netflix and Sony Pictures stock and stock warrants which is never reported to the FEC; Billions of dollars of Google, Twitter, Facebook, Tesla, Netflix and Sony Pictures search engine rigging and shadow-banning which is never reported to the FEC; Free rent; Male and female prostitutes; Cars; Dinners; Party Financing; Sports Event Tickets; Political campaign printing and mailing services "Donations"; Secret PAC Financing; Jobs in Corporations in Silicon Valley For The Family Members of Those Who Take Bribes And Those Who Take Bribes; "Consulting" contracts from McKinsey as fronted pay-off gigs; Overpriced "Speaking Engagements" which are really just pay-offs conduited for donors; Gallery art; Private jet rides and the use of Government fuel depots (ie: Google handed out NASA jet fuel to staff); Recreational drugs; Real Estate; Fake mortgages; The use of Cayman, Boca Des Tores, Swiss and related money-laundering accounts; The use of HSBC, Wells Fargo, Goldman Sachs and Deustche Bank money laundering accounts and covert stock accounts; Free spam and bulk mailing services owned by Silicon

Valley corporations; Use of high tech law firms such as Perkins Coie, Wilson Sonsini, MoFo, Covington & Burling, etc. to conduit bribes to officials; and other means now documented by us, The FBI, the FTC, The SEC, The FEC and journalists..."

"A typical boondoggle in this case is exampled by one of the many victims: "...We owned a global vehicle design and manufacturing business and a global clean energy production and storage business financed by the U.S. Government. White House and California politicians owned our competitors and re-routed our funding to our competitors, who were the friends and campaign financiers of those politicians. Those politicians contracted Fusion GPS, Black Cube, Gawker/Gizmodo, Crowd-strike, etc. to run hit-jobs on us to blockade our business for their benefit. Those politicians engaged in felony bribery, anti-trust violations and racketeering and they are still being protected by regulators who have conflict-of-interest relations with those politicians..."
